FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

VOL. I.

PHILADELPHIA, JANUARY 1, 1874.

No. 1.

INTRODUCTION.

It is no new idea with the Editor to publish a "*Weekly Fanciers' Journal*," but it has been under consideration for many years. Being one of the pioneers in the poultry and almost the pioneer in the pigeon fancy of later years, I have long seen the necessity for more frequent visits of a Journal devoted to the interests of the Fancier. Not only that of poultry, pigeons, and dogs, &c., but a Journal that will treat on every subject relating to the breeding, management, and treatment of pets of every description. Hence, the name "*Fanciers' Journal*," which covers everything pertaining to the fancy. Every human being has a fancy of some kind. The boy's first pets are usually white mice, which are soon replaced by guinea-pigs, then rabbits, finally pigeons. Should he become a mechanic he will be content with the toys of moderate price. But should he be more successful in life, he will soon have his loft stocked with something better, such as almonds, carriers, pouters, &c. Almost every lady has her pet canary; some have many, and will carry their fancy so far as to keep goldfinches, and probably a piping bullfinch, talking parrot, &c., &c. The Journal will be illustrated by the best English artists from time to time as circumstances require. And the Editor has the promise of the assistance of some of the best writers in this country. Foreign writers will be secured as soon as practicable. It is hoped to make the Journal a welcome weekly visitor to every household. The advertiser cannot fail to see the advantage in a weekly for offering his surplus stock to the public. Hoping for a generous share of patronage,

I am most respectfully yours,
JOS. M. WADE.

(For Fanciers' Journal.)

FANCIES.

WE all have our fancies. Some of us fancy beautiful women, others fine horses, and many others poultry and pigeons. Sometimes these fancies occur at different periods in the life of the individual, at other times they all exist at the same moment. Then we pity that individual. He may humor himself in his fancy for the poultry, the pigeons or horses, but that other fancy: ah! we cannot always humor ourselves there. Too much depends upon the creature herself, and we all know the uncertainties, the vagaries of a capricious beauty who knows herself the fancied of a lord of creation. Put from you as soon as you can such a fancy; the heart may throb, the hand may tremble when you hear her voice, but root it out; let not your happiness depend on one. Go to your horse and down the road you fly; click, click, click; steady, boy, now and away. The open nostril, flashing eye, and flying hoofs yield to the touch of the finger as does the lightning to the point of the rod. There is a fancy for you, from which you return with the live blood bounding through your veins, and the glow of health

painted upon your cheeks. But all have not the inclination or means to indulge in a fast horse, and some fancies run in a quieter channel. There are the chickens; first among which we place the Game fowl, with his glorious crest and undaunted eye, the monarch of the farmyard; then the golden, silvered Poland, and Hamburgs, diminutive Bantam, and immense Brahma and Cochin. You are hard to please if among the list of poultry you cannot find one variety to reach your sympathies. Do you want vigorous action, gorgeous plumage, and a spirit that will dare all ill, you find it with the Game. Do you wish your lawn illumined with gold or silver, accept the Hamburgs or Polands. Have you a ten-foot yard and wish a trio of pets, take the Brahma or Cochin, and your neighbors will admire your birds and curse your "volcanoes of crow."

But you have no yard or may have no such fancy; go then to the pigeons. An unused room or a few boxes by your window and your enjoyment is insured. Do you wish a familiar friend who will wink a comical eye at you from over his bag of wind, he can be obtained from the Pouters. The Fantail will fly to your shoulder and bend its graceful neck to eat the corn from your lips. A whistle, and the Tumbler mounts the air and wantons among its billows as a fish does on the waves of ocean. The most exquisite coloring is to be found with the pigeons; the most quiet placid enjoyment is obtained from watching their movements. A beautiful woman may turn your life to bitterness; a grand horse may dash you in pieces; but your chickens and pigeons are always ready to settle on your knee, peck corn from your hand or lips, and cultivate in you that contented disposition which insures happiness, regardless alike of east winds or financial panics.

DR. W. P. M.

(For Fanciers' Journal.)

CHICKEN CHOLERA.

PROBABLY no drawback, rump excepted, proves more discouraging to one anxious to rear fine poultry than the above-named disease, and the most discouraging part of it seems to be the fact that there is no infallible cure, though there may possibly be preventives.

I felt sure at one time that I had found a cure, and in individual cases it worked well, rarely failing; but when half a dozen or more of the flock became diseased, all efforts to cure them became ineffectual. It is not a pleasant thing to find, morning after morning, for a week or more, from five to eight of your best fowls lying stiff, the victims of this scourge. To say nothing of the value of fifty or more well-marked Cochins or Brahmas, it makes one feel a little gloomy to find the size of his flock so suddenly and so unceremoniously diminished. Did this disease always take the weakest and poorest specimens it were perhaps no bad thing, but it does not discriminate. Your fifty dollar cock is just as likely to fall by it as the scrawniest specimen in the yard.

As to its cause, nothing definite is as yet known. It may be from want of variety in food, and it may arise from want of cleanliness. In almost every case brought to my notice, I have found it directly traceable to some filth either in the water or in the food. In some instances the fowls were fed where the grain mingled with their own droppings, and this particularly in rainy weather, when the yards were muddy, and the droppings mingled with the mud. In one instance, where a friend of mine lost almost his whole flock, he found on examination that some of his neighbors, whose fowls had died of cholera, had thrown the carcasses into the brook from which his fowls drank. The result was as above stated, his own fowls were poisoned by the water, and died rapidly. In two instances which have come to my notice, the disease broke out immediately after autumn rains, when the droppings of the fowls became incorporated with the soil of the yard. In one of these cases fifty-four, and in the other thirty-six fowls were lost.

In individual cases I have given a blue pill the size of a large currant, and next day a large teaspoonful of castor-oil. With this treatment I have lost but few fowls in some thirty cases. It, however, requires great watchfulness. As soon as one detects droppings of a thin, slimy character, and a greenish yellow color, the fowls should be sought out at once, and the treatment commenced. Generally they can be detected by their mopish and sleepy look. It is doubtful, however, whether the disease can be checked by this cure when once a whole flock becomes infected. I say frankly that while it has succeeded with me, others who have tried it fail to find it effective. Let those interested try the experiment, and report their success; and by all means if any one has found either a cure or a perfect preventive, let the public have the benefit through our poultry journals.

A. N. R.

(For Fanciers' Journal.)

POULTRY DISEASE.

WE have a disease affecting the poultry of this Chemung Valley, proving fatal to many.

Symptoms.—The comb becomes gradually a dark purple, crop hard, the fowl is very dull and inactive, and not inclined to eat much. Continuing to droop, they often die in an hour or two after the owner discovers something wrong.

Remedy.—Give once or twice per day equal parts sulphur and Cayenne pepper, mixed with lard to a thick paste; put into the mouth a piece the size of a chestnut; feed light digestible food. Also put an ounce of camphor gum or assa-fœtida into the pail from which you fill their drinking-pans. Give no other water for a few days.

I give you the result of one trial. I purchased a buff Cochin cock a year and a half old; in a day or so the back part of his comb became purple. I watched him until I concluded that he also had the fatal disease that had killed so many of my neighbors' fowls; so I gave him according to the above directions, and he soon came out with his usual lusty crow, and was all right again.

The fowls of my own raising are very free from this disease, which I attribute to an occasional use, during the summer, of the Douglass mixture. I hope the statement communicated through your paper will be of some use to others in saving of choice poultry.

WILLIAM ATWOOD.

(For Fanciers' Journal.)

CORRESPONDENCE.

CONCORD, N. H., October 27th, 1873.

MR. WADE: The fact that you are about to commence the publication of a Journal in the interest of fanciers and poultry men, is a new evidence that the public are appreciating the efforts to improve in these departments of animated nature. A half dozen regular Journals do not now meet the demand which ten years ago was insufficient to support a single publication. The political, miscellaneous, and even religious newspapers meet with warmer favor if they devote a column to these specialties.

Even up here in cold New Hampshire has the improvement in all kinds of poultry and domestic pets been marked and gratifying. Ten years ago, a man who would pay \$25 for a trio of birds was deemed a fit subject for the insane asylum, or for legal guardianship. Now it is no uncommon thing to find beautiful specimens of all approved breeds of fowls in the yards of mechanics, merchants, and professional gentlemen, and even the incredulous and slow-moving farmer has often caught the fever, set apart a section of his lands, build poultry houses, and gone into the business of breeding for the market. It pays if rightly managed. A majority lose money for the first year or two, or as the governor said a few days ago at a fair, his eggs cost him a dollar a dozen and his chickens \$1.50 per pound.

The leading varieties in the State the last dozen years have been the Brahmas and the Black Spanish; and these are still the most common. The old Light Brahmas alone have had a welcome here until within a few years. Now the Dark Brahmas are frequently seen; though they are majestic birds, and rather generous in their supply of eggs, they are not regarded as special favorites. The Cochin family in its several branches, white, buff, or black, is now held in higher estimation than any other of the large breeds, and the inclination towards the Partridge and Cinnamon is more and more marked. Of the French fowls we run very strongly on the Houdans, but few *Creves* and no *La Fleche* being found. The Leghorns, especially the white, are favorites. The Polish breeds have generally had their day; and though, by no means uncommon, are not in great demand. The Games of some class or other are found everywhere; and they possess the three requisites to make them popular—great pluck, many eggs, and nice food for the table. The Dorkings are sought for crossing with the Brahmas, and our poultry men maintain that more meat is thus produced. The old Bolton Grays are seldom seen, though they are confessedly better birds than many that have crowded them away. Of other breeds there are occasional samples, as the Dominiques, the Plymouth Rock, Sicilians, Bredas, Guel-dres, Sultans, Hamburgs, Silkies, Rumpless, and Frizzled. But of Bantams there are an abundance of every variety.

In water fowls there is as lively an interest, while in the line of turkeys, pigeons, and rabbits, much attention has been shown.

The increased value of poultry and its accompaniments in our State, within ten years, has been more than doubled; and we consider this new interest and coupled with that of fish-breeding, we find a very profitable resource, one almost entirely disregarded.

JAS. C. ADAMS,

Secretary State Board of Agriculture.

(For Fanciers' Journal.)

AMERICAN POULTRY ASSOCIATION.

WORCESTER, MASS., November 15th, 1873.

JOSEPH M. WADE, Esq.,

Secretary American Poultry Association.

DEAR SIR: In a recent number of the *Poultry World*, you invite suggestions from any person upon the revision of our standard of excellence for fowls. I feel somewhat diffident in responding to your invitation, because I am aware that the views which I entertain in relation to a standard are in antagonism with the prevailing opinions of our poultry men, and yet, having given considerable thought to this subject, and having carefully noted the workings of our present system of judging our exhibitions, I feel assured that my views are not only well grounded in theory but also well sustained by careful observation and actual experience. There seems to be a very prevalent idea among poultry men, that the standard has been made for the purpose of guiding the judges in their arbitrations of our exhibitions. Now, it seems to me that this idea has led to many serious errors, and given rise to much dissatisfaction in regard to judging. My own idea is, that a standard is made, or ought to be made for the exclusive purpose of giving expression to our highest idea of a perfect specimen in each variety of fowl, or whatever the specimen may be. In order to produce perfect specimens we must of necessity have a well-defined idea of what shall constitute such specimens, and we must, of necessity, lay down in some unmistakable form certain points as conditions, style, form, and color; but in order to do this, it does not become necessary that we should give any numeral value to these points in order to judge them correctly. For example, let us take the highest ideal which we have of beauty of form,—the human figure. The Greeks, who have given us our highest types, have also given us certain ideal measurements for the several parts; as for instance, so many lengths of the head for the entire length of the body; so many for an arm, a leg, or a foot. Now if we follow the measurements accurately and construct a drawing or a statue of the human form, does it follow that our work is perfect because it conforms to these measurements? By no means; for the beauty or the grace of the figure cannot be expressed by numbers, and without these essentials our work would prove a decided failure. The same rule will apply in forming our ideal of a perfect bird. We can state what shall constitute a perfect specimen in condition, style, shape, and color; but we cannot lay down any fixed number or numbers which shall express these points, because these points can only be felt, they cannot be expressed. I would, therefore, respectfully suggest to the gentlemen who represent our poultry interests at the coming convention, that they lay down as perfect an ideal as is possible for the guidance of those who would prepare for our exhibitions, but that they would omit any fixed numeral values to any of the specified points.

In seems to me that in making this revision of our standard we should endeavor to make it as perfect as possible, and in so doing we cannot ignore the fact, that after many years of study upon this subject, and many efforts on the part of such an authority as Mr. Wright, to get round the difficulties which constantly present themselves, he has at last decided that any numeral standard must of necessity be a failure, and the additional fact that all the prominent judges in England have decided against them as impractical and unreliable.

I have thus, in the limit of a letter to you, given a brief sketch of my views of what a standard should be, and what it should not be, or rather what it should not try to be; and I trust you will see some force in my position.

Yours, very truly,

H. WOODWARD.

(For Fanciers' Journal.)

ON A SCALE OF POINTS FOR JUDGING EXHIBITION POULTRY.

I do not take up my pen with a view of dictating to the American Poultry Association, to whom we brother fanciers have wisely left the formation of a new and correct "American Standard of Excellence," and I hope it *will* be a *correct* and *American* standard. We have worked too long in the dark already under that erroneous work, the existing "Standard." We spend time and money to get a little finer penciling, more perfect points or a purer color; we get it after much study and pains; we exhibit our birds, confident of their superiority over all others we have ever seen, and anticipate getting the first or at least the second prize; we wait for the prize cards to be placed on the winning coops, and find we have taken fourth or perhaps no prize at all; and why is this? Because a faulty "Standard of Excellence" allows to size in its "scale of points," a numerical value inconsistent as regards the comparison of the same; with the value of other points and with the number given as the standard of perfection; in some breeds this value is as high as *one-quarter* of the ideal number, and in one instance over *one-third*; the consequence is, the man who has only paid attention to early hatching and inordinate feeding, walks off with the highest honors with his "beefy," pampered, and useless "meat machines." I think I can safely affirm that they are not "egg machines."

This is only one of the errors of the above-mentioned work, but I will not enlarge on them; the whole system of a scale of points as there laid down is wrong. The best method which has as yet been proposed or offered to the public, is that originated by Mr. L. Wright, and published in his *Illustrated Book of Poultry*; his theory of valuing defects solely I consider correct, and upon trial have found his scales remarkably easy of application and certain in their results, except that in some of the scales as therein published I do not agree with the comparative value as given to some points in proportion to the value of other features, or relatively to the ideal number.

However, the principle is correct, as are also, *in the main*, the scale or plan of comparative rank, and while I hope to see them adopted in the new "Standard of Excellence," I also hope that the scales will be modified where necessary to represent American ideas.

GEORGE F. CLARKE.

BOSTON, November 26th, 1873.

(For Fanciers' Journal.)

MARYLAND POULTRY ASSOCIATIONS.

WE have made many attempts to accomplish a poultry show in the Monumental City, as yet without success. In the beginning of this year a number of gentlemen started the Maryland State Poultry Association, and a grand exhibition was to have been given, in conjunction with the State Fair at Pimlico. An excellent premium list was arranged by the

committee empowered to act for the Society, and all things bid fair to produce satisfactory results, when discontent appeared among the rank and file of the Association. The premium list was withdrawn, and instead of a grand display of first-class birds by amateurs and dealers from abroad, the exhibition narrowed down to the stocks of but three or four dealers, who did what they could to add to the interest of the State Show (and here let us say the poultry and pigeon classes attracted more attention than all the other classes together).

The officers and many of the members of the Maryland State Poultry Association resigned their memberships, and started a new society, entitled the "Poultry Association of Maryland," electing as officers the following gentlemen: President, Mr. Baker; Secretary, Mr. Koons; Standing Committee, Messrs. Mordecai, Thompson, Stephens, Powell, and Parker. This Association has had under consideration an exhibition of the first class, to be held at the Masonic Temple some time during December, and quite a number of subscriptions were handed in; but in consideration of the "panic," and its attendant scarcity of money, it has been deemed advisable to postpone the design until a more auspicious season.

The "Maryland State Poultry Association" (don't mix the two, this is the old one), or what was left of it, called a meeting, declared all offices vacant, and proceeded to the election of the following gentlemen: President, J. B. Town; Vice-Presidents, F. Hine, J. M. Wade, and A. Miller; Recording Secretary, A. Rommel; Corresponding Secretary, Charles Schwin; Treasurer, George Schwin.

It was decided to give an exhibition of poultry, pigeons, dogs, rabbits, birds, &c., during the first week of January, 1874.

The premiums are to comprise ten gold medals, forty-two silver medals, and a number of diplomas for the varieties, and special premiums for best collections and single specimens of pigeons; also specials for fine poultry, guinea-pigs, birds, &c.

With two societies working towards the same end, it is possible something may occur. When the first Association was organized, no one would have supposed that before the New Year there would be two organizations. So will it be with exhibitions; after the start they will grow of themselves. Ten years hence they will be established necessities. We wish the exhibition success, and if it is placed prominently before the public, and in an accessible place, there is no doubt of its satisfying the hopes of its friends.

GLAMORGAN.

(For Fanciers' Journal.)

SCIENTIFIC BREEDING OF LIGHT BRAHMAS FOR EXHIBITION.

ARTICLE I.

SELECTION OF BREEDING STOCK.

Few, excepting the most successful breeders, realize how important a part the proper selection and mating of their breeding stock plays in the rearing of exhibition fowls. To produce exhibition birds no pains should be considered too great in the mating of a breeding pen to have the faults, however small, in cock, counterbalanced by the perfection of those points in the hen; if possible have each point represented by perfection on one side at least. I should much rather if there must be a failing in one of the birds, that it

should be in the hen, as the cock with one exception exerts the most influence over the color of the plumage, and over the external points or marks in general, while the hen governs the form and size. The exception in the cock is this: if the hen had not a distinct black stripe in her hackle, I should expect to breed very few if any good birds from her, even if the cock had a good hackle. I will endeavor to give a few rules for the benefit of the amateur. In selecting a cock, choose a bird with a small head, which should be surmounted with a small pea-comb. The neck should be rather long with a full sweeping hackle, which should have a distinct black stripe in the centre of each feather. His back should be wide and flat without any apparent length; the saddle commencing almost at the base of the hackle, cannot be too broad, and should continue to rise until it merges into the tail, which should be carried nearly upright and open out wide. His breast ought to be broad, deep, and full, and carried well forward. His wings should be well folded with the points pressed well into the fluff. The fluff should be very abundant, so as to give the bird a broad and deep appearance from behind. His legs should be thick and rather short, and of bright reddish-yellow color, well feathered with white feathers mottled with black near the toes. Perfectly white leg feathering is if possible to be avoided; never breed from a bird with crooked toes.

Next in order comes the hen. Her head should be small and fine with a very low pea-comb. Her hackle must have a broad black stripe down the middle of each feather, which I like to see end in a sharp point at the base of the neck; the neck rather long. Back flat and wide, with a broad cushion, which should rise until it almost buries the nearly upright tail. Her breast ought to be deep, broad, and full, carried rather low in comparison with the cock. Her wings should be short, tightly folded, with the points dipped up between the cushion and fluff. The fluff should be ample, covering the thighs, and giving the bird a broad, deep appearance. The hen must be short in the leg, and viewed from behind they should stand so far apart as to indicate a capacious chest, which is necessary to afford room for the heart, lungs, and other vital organs, which will insure vigor and stamina. The legs of the hen should be of a reddish-yellow color, well feathered with white feathers mottled with black near the toes; the toes should be straight and strong.

W. E. FLOWER.

SHOEMAKERTOWN, November, 1873.

A VERY SINGULAR STORY OF A WEASEL.

THE following story was told to us as being a positive fact, the narrator professing to be one of the workingmen who witnessed the performance of the said weasel: A party of men were prying stone in a field, and found under a large rock a nest containing four young weasels, which they captured, and put to one side. Upon the return of the old weasel, quite a scene ensued. She became very much excited, and very angry, and at once set off, but soon returned, and going straight to the little pail containing the drinking-water for the men, she spit something in it, and was about to go off a second time, when she discovered her nest and her young, all alive and unharmed. She immediately returned to the pail, and continued jumping and pushing at it until it was overturned, thus saving the lives of the men she evidently meant to punish for the destruction of her offspring.—*Farmers' Club.*

SETTER DOG (GROUSE),

OWNED BY MESSRS. SCHREIBER & SON, PHILADELPHIA.

(For Fanciers' Journal.)

SETTER DOG "GROUSE."

(ILLUSTRATED.)

OUR illustration represents the well-known setter dog "Grouse," owned by Messrs. Schreiber & Son, photographers, of this city. The dog and position were thought to be so good, that the "Sportsman's Club" of this city adopted it as a seal for their Society.

"Grouse" was born June, 1868. Color, orange and white. When in good condition, his hair is from 5 to 7 inches long, of very fine silky texture. He stands $24\frac{1}{2}$ inches high, and is 41 inches from the end of nose to the root of tail; 31 inches around the chest; length of head $10\frac{3}{4}$ inches; circumference of head 18 inches. His sire and dam were raised in New Jersey from imported parents. He has a fine disposition, and is thoroughly broken on all the game birds of this section of country; will stand, back, and retrieve English snipe, woodcock, quail, and partridges. As an instance of his good qualities, when three years old, during a sporting trip in Virginia, he pointed within half an hour on woodcock, quail, and English snipe.

(For Fanciers' Journal.)

WHAT FOWLS PAY THE BEST.

I SHALL endeavor to give through the *Fanciers' Journal and Poultry Exchange* my views and experience in regard to what fowls pay the best, how to make them pay, &c., &c.

My first investment in poultry outside of the common dung-hill breed, was made in the spring of 1865, by purchasing six or seven spotted fowls, called by their former owner Silver Pheasants, at one dollar per head. A few weeks later I called at the residence of Mr. Benjamin Haines, in Elizabeth, N. J., and added one trio of silver-spangled Hamburgs, and one trio of White Leghorn, to my "choice" collection. So much for a start in the poultry business. My object this week is to show, to the best of my ability, and by my own experience, the foolish idea of amateurs in not selecting the best stock, and seeing what they get before paying for it. Of course there are numerous instances where parties have been *known* to get good stock by answering some of the many advertisements that crowd the agricultural and stock papers of the present day, but I truly believe that the poultry fancy has suffered more, in this country, by the rascality of unprincipled parties, than by any other way. However, we will return to our subject. I had the hen fever badly; Burnham was nowhere. Never shall I forget with what anxiety I watched and waited for the necessary twenty-one days to elapse, when the careful old dung-hill (selected expressly for the occasion), should present me with my first clutch of Hamburgs; but as everything must have an ending, so it was in my case. But oh, horror! what was my dismay when going into the henery one morning, to find my much-looked-for brood of Hamburgs almost *black*! What could have been the cause? I had kept them separate, the Hamburgs in one coop and the Leghorns in another; so where did the mongrels come from? and they were mongrels of the first water. But I was young, and trouble did not sit long upon me. The Leghorns had to report yet. Perhaps I may have better luck in that quarter; *they* certainly cannot come *black*; neither did they; but out of fifteen eggs the hen hatched twelve chicks, five white and seven *Dominique*. So

much for my first year's experience in the poultry business. In the next number I shall give my experience with the different breeds in regard to laying qualities, profits, &c.

THOS. S. ARMSTRONG.

TRENTON, N. J.

MARKETING POULTRY.

ALL poultry intended for market should be well fattened, especially that sent for the holidays. The best manner of killing fowls is by bleeding in the neck; never wring the neck. Poultry intended for market should be dry picked, and if the feathers are plucked before the bodies are cold, this can be easily done. If poultry is scalded in the old-fashioned way it lessens the value full one-third. After the fowl is dry picked plunge it in a kettle of very hot water, holding it there only long enough to cause the bird to plump, then hang it up, turkeys and chickens by the foot, and ducks and geese by the head, until thoroughly cooled. This scalding makes the fat look bright and clear, and the fowl appear nice and plump. In packing, use clean packages, lining the sides and ends with paper and cover over, between the layers, with clean rye straw. Pack as closely as possible, so there will be no chance for the poultry to move about and become bruised. Good poultry will always sell for a full price, while common and inferior grades invariably sell low, and in most cases at a loss to shippers.—*Rural Home*.

PECULIARITIES OF BIRDS.

RECENT adepts in natural history state some curious facts about birds. It is said that among other "mental qualities" which our winged friends possess, they have a wonderful power of "calculating distances." As new weapons of destruction are invented, many species of birds narrowly observe their range, and keep out of the dangerous distance, without troubling themselves to fly farther than necessary. Some birds, an English authority maintains, have studied "rifle practice," and give themselves a longer distance from a rifle barrel than is necessary when a "smooth bore," is pointed at them. This may be true, for the wonderful sagacity which animals possess may be admitted within bounds.

Domestic poultry, losing much, do not still lose all their aptness, though "Tiff," in the story, pronounces them "shallow things." They will avoid a carriage-wheel, at the last moment, seldom moving more than three or four inches out of the way. But their aptness at "calculation," when a steam-engine is the "motor," is not creditable. Railroad trains through rural districts immolate large numbers of chickens. The birds can "time" a horse, but not a steam-engine.

Birds have a fine eye, it is noted, for beauty and adornment—domestic fowls always excepted—and some varieties are great imitators. Their character is summed by the writer already referred to as follows: "It may be safely said that birds seem to have more capacity for perceiving beauty, much more gift for social enjoyment, a finer knowledge of distance and direction, and more power of vocal imitation, than any other order of animals of which we know anything. On the other hand, they have less sense of power and sympathy than the dog, and therefore much less sense of responsibility to their superiors, whom they often love

but seldom serve. . . . They are too fast, too migratory in their habits to learn anything which needs perfect fidelity and vigilance. . . . They are the musicians, and we might almost say the sensuous poets of the animal world; but musicians and sensuous poets do not conduce to progressive knowledge and ethical culture."

ITEMS

INTERESTING AND AMUSING.

THE proprietors of the *Liberté*, of Paris, established a pigeon express between the office of the journal and Trianon, to carry the news of the proceedings of the Bazaine court-martial. The proprietors had a pigeon-house constructed on the roof of their premises, and every morning a man starts for Versailles with a certain number of these birds. The reporter attaches his account of the proceedings to a bird's body, portions of the report being so brought as the carriers are successively let loose. The average time these winged messengers take for the transit is six minutes.

DISCOVERY.—A few days since, while workmen were engaged in digging and making an opening in the sewer on Sixth Street, Philadelphia, in front of the Odd Fellows' Hall, to connect with a smaller one on Cresson Street, a large-sized hog made its appearance at the opening, endeavoring to get out from its dark pen. The laborers hauled the animal out after considerable trouble, and it is at present in the possession of the Hall Association, who are puzzled to know what to do with it. How it came into the sewer and how long it had been there is not known.

SOME months ago a Lithuanian lynx escaped from a travelling menagerie at Altona, Holstein, and \$20 reward was offered for its capture, but in vain. Not long ago a sentinel at Kiel observed a strange cat-like animal coming out of the mouth of a large cannon on the ramparts, and after a short time returning with a duck in its jaws. The man got assistance; a net was spread over the muzzle of the gun, and the missing lynx was recaptured, together with a domestic cat and a litter of three young ones. These curious kittens have been transferred to the botanical garden of Hamburg, where they have been visited by many naturalists.

AN expert lays down the following rule for telling the age of eggs: Take an egg carefully between the thumb and the forefinger of the left hand, carry it to the further end of the back yard, look carefully around to see that no one is watching you, tap the egg gently with a knife or other edged instrument held in the right hand, and jump back with alacrity. Then take the others one at a time and try them in a like manner. After a little practice in this art, a quick ear can detect the difference in sound, the one that pops the loudest being the oldest egg.

A PRINTER was boasting the other day about his wonderful ability to set type. "I know what you can't set," said a comrade. "What is it?" "Two hens on one nest."

AN AFFECTIONATE RAT.—The Whitehall (N. Y.) *Times* relates the following story of affection in a rat: There is in Whitehall village a family who have a little daughter 2½ years old, who has formed a singular attachment for a rat. Every day this little one goes into the wood-shed adjoining the house, where a large, venerable-looking rat makes its appearance, when the innocent-looking child proceeds to

feed it from her chubby hand. The parents have caught their little one feeding its *protégé* several times of late, yet, on the approach of any other than the little girl, the rat scampers off to its hole. Several efforts have been made by the child's parents to despatch the singular companion of their darling, for it was feared that the child may get bitten by it. Last Sunday the rat showed its affection and guardian care of the little one's comfort, as the following will show: The child's mother put it to sleep in its cradle in the kitchen, going to another room in the house, leaving the sleeping child alone. She was gone some time. On her return she cast her eye at the child, when she was surprised to observe the rat standing perched upon the top of the cradle, moving its tail over the little sleeper. The mother, wishing to see what the "varmint was up to," stood and watched its movements, peeping through the door, which was only partly opened. She observed a number of flies above the child's face, when two lit on the little one, whereat the kind rat whisked them off with its tail. Wishing to make sure, the lady quietly called her husband, and the two stood watching the proceedings for at least ten minutes. Every time that a fly dared to alight on the little one's face that old rat's friendly tail would brush it away, like the guardian angel hovering about us, who, we believe, is constantly brushing away dangers that threaten us poor mortals. It was thought safe by the child's parents to leave the child in charge of its singular nurse, and for one hour the little one slept. When it awoke its mother went to take it up, and the rat jumped from the cradle and sped away through the half-opened door to the wood shed. Since that time the child has been put to sleep in the kitchen to ascertain if the experiment would be repeated. Each time, when left alone, with the shed door partially open, the old rat would enter and take up its position over the top of the cradle, watching the little sleeper and brushing away the flies who dared to trouble its precious charge.

THE DAHLIA, now a common flower, easily cultivated, and as pretty as common, commanded a large price when it was rare. A gentleman sending home a few bulbs, was astonished to find them served among his vegetables, at dinner. The curious fact about this mistake is that it was a repetition of the blunder which introduced the flower into England. An English lady sent a bulb from abroad home to her gardener, supposing it to be an artichoke, and intending it for the kitchen garden. "When a beautiful flower came up, instead of a succulent vegetable, she gazed on it with a feeling akin to that of the fox hunter, who complained that the smell of the violets spoiled the scent." The offer of thirty guineas for a root, made by a London florist, reconciled her to the disappointment.

TEXAS RABBITS.

In the vicinity of Austin, and throughout a large portion of Central and Western Texas, there is a small gray rabbit, which is probably *Lepus sylvaticus* of Bachman. We say rabbit (although English authors tell us that hare is the correct and proper name), because hare is never used in speaking of this animal in Texas. These animals are very destructive to young fruit trees, and also rose bushes, especially those which have been recently planted and have branches near the ground. The damage is done in the winter-time, not generally by gnawing the bark from the body of the

tree, which they seldom do, but they cut off the lower limbs to the height of two feet, and sometimes even as high as three, which last they probably do by jumping up. The limbs are cut off as smooth as if done by a sharp knife, and what is rather singular, all are cut at about an angle of forty-five degrees. At first we did not know who had been cutting off the limbs of our trees, but we soon discovered the authors of the mischief. Previous to that we had been their friends, and permitted them to go unharmed about the place, and even stay under the house, but when we saw the injury they had done our dwarf pear and dwarf apple trees, our friendship was turned to deadly hatred. We wished every rabbit in the neighborhood was dead, and since then we have killed all we could. At first we killed a good many by rubbing strychnine on large slices of sweet potatoes; but some only ate enough of the poison to make themselves very sick, and they told others to shun potatoes, until, finally, the rabbits would not eat the sweet potatoes which we had prepared for them.

Fortunately, we obtained a good cat, which began to catch the young growing rabbits for her kittens. After a little time, she caught those which were nearly full grown, and sometimes she has even caught full-grown rabbits. We now have two such cats, and have seen but one rabbit on the place during the last six months.

The rabbits cut off the limbs to get the buds, of which they are very fond. In the spring, when the leaves are partly grown, or just unfolding from the bud, rabbits consider them as a great delicacy. We have had more than one hundred dwarf pear trees killed by the rascals, beside much damage done to apple trees and young rose bushes. The buds and young leaves of these they seem to prefer, but for a change they sometimes eat those of the apricot and peach.—S. B. BUCKLEY, in *Country Gentleman*.

CANARY AND GOLDFINCH CROSS.

THE age is immaterial, the main object being to get a hen from a strain which, from some inexplicable cause, has a tendency to throw birds more nearly allied to the canary in plumage than to the finch. By far the greater proportion of goldfinch mules are dark, self-colored birds, not half so bright in plumage as the finch himself; but where the canary shows itself, either by giving brilliancy of color to the naturally dark feathers of the self-colored bird, or by causing it to break into a beautifully variegated specimen, the mule becomes valuable according to the amount of brilliancy so bestowed, or the exactness of the markings; or if the mule be perfectly clear, a cock of good color—if it have a bright blaze on its face—the breeder may write himself down among the lucky men of the nineteenth century. I can give no opinion as to the best age for pairing canaries. Breeders never wait for breeding stock to reach any particular age. You cannot go far wrong by following nature, but put your birds up in the spring, about the time when they are beginning to make love out of doors. Young birds of last season will breed this year, and breeders are only too glad to get nests from them while in the heyday of their strength. I have read somewhere, I do not know where, that certain disparities in the ages of the sexes have a tendency to produce more cocks or more hens in a nest, as the case may be, but I have never recorded any statistics, and seldom relate any experience but my own.—W. A. BLAKSTON, in *Journal of Horticulture*.

GOLD FISH IN AN AQUARIUM.

"I HAVE kept gold fish for two years or more. The first six months, or thereabouts, I lost eight fish by following the instructions of parties from whom I purchased. I then thought I would use my own judgment in the matter, and see if feeding would kill them, as I had been informed by the aforesaid dealer. I now have five gold fish, three minnows, one crawfish or crab, and four turtles, in an aquarium 30 by 16 inches, and 12 inches deep. I have on the bottom about two inches of fine lake sand, and scattered here and there stones built up or piled so as to form run-ways. I feed them about twice a week with fresh beef, cut into small pieces and dropped on the water, when, quick as a trout after a fly, they will seize the pieces until satisfied. I have often seen them jump three inches above the water trying to catch a fly on the side of the glass. I keep a small plant of *Calla* in a pot standing in the water all the time. Some say it helps to keep the water pure. I change and renew the water twice a week during the winter, and three times during the summer."

BUILDING UP A RACE.

FRAZER'S Magazine communicates a plan, from the pen of Mr. Galton, the author of "Hereditary Genius," for scientifically transmitting certain desirable qualities of mind and body combined, and afterwards accumulating them in the form of a distinct class or caste; so that, after a given time, a superior race of men and women will be secured for the world's direction and government, and matters on the earth be made to go at a better pace, and with far more profitable results to confiding humanity. The theory is simply the one of stirpiculture, which undeniably contains a living idea that is susceptible of being successfully developed. The writer in Frazer wants merely to make the rule of the best the rule of the earth. This would be a real aristocracy, the meaning of that much-abused word being only the rule of the best. Now we are ruled by those who, to say the least, are not wholly of the superior class. The majority of those who are at the top belong rightfully at the bottom. The writer wants to base the new experiment on facts that are well attested in regard to ancestry and virtuous character, and then to promote a strict intermarriage among such, none to go outside of the rank, or class, to which their acquired or inherited superiority entitles them.

The plan proposed has some points so ingenious that they deserve more particular consideration. To begin with, it would have proper persons, in different localities, to pursue a thorough inquiry into the facts relative to human heredity, to be compared with facts in regard to heredity in lower animals, and even in plants; this merely to demonstrate, beyond the shadow of a question, that man is subject strictly to the same laws which govern the growth and improvement of the lower order of beings. Then would follow, by way of a convincing illustration, statistics of families that have long shown signs of improvement, and in consequence, have naturally come to set upon themselves a higher estimate than upon the average humans around them. It would be made to appear, from these facts, that such families cherish a higher and more consistent pride than others, so as to make them inclined of themselves to intermarry only within their own class. Upon such a plan, perfectly simple and natural as it is, and entirely regulated by a scientific law, the world could secure a race of poets, of orators, of statesmen, and philosophers; or it could continually supply itself with wise and noble rulers, unselfish public servants, and a band of benevolent men and women whose united power in the state would be irresistible.

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

FANCIERS' JOURNAL AND POULTRY EXCHANGE,

JOSEPH M. WADE, Editor and Proprietor.

ADVERTISEMENTS

From reliable parties, on any subjects interesting to Fanciers, will be inserted at 10 cents per line, set solid; if displayed, 15 cents per line will be charged.

Advertisements from unknown parties must be paid for in advance.

SHERMAN & CO., PRINTERS, PHILADELPHIA.

OUR ILLUSTRATIONS.

OUR illustrations this week, representing the setter dog "Grouse," and pair of light Brahmas, "Gladiator" and "Grand Duchess," are photo-lithographs from pen-and-ink sketches, made by Theophilus P. Chandler (architect to the Zoological Society of this city), from photographs taken from life. We hope to be able to give *one or more* of these full-page engravings weekly. As this style of illustration is more or less an experiment, we hope to improve with every issue; all we ask is a generous support from fanciers, and we will make the Journal all they could wish for.

ONE HUNDRED DOLLAR PRIZE.

MR. WM. H. CHURCHMAN, President of the American Poultry Association, offers a special prize of one hundred dollars (\$100), for the best dark Brahma hen, regardless of age, to be exhibited at the Buffalo show, January 15th, 1874. For each entry a fee of \$5 will be charged for the benefit of the Society. Each exhibitor, when making his entry, relinquishes all claim over his fowl. No matter how many fowls are entered for this prize, the winner is to take them all, in addition to the \$100 in gold.

AMERICAN POULTRY ASSOCIATION.

OFFICE OF AMERICAN POULTRY ASSOCIATION,
39 N. Ninth Street, Philadelphia.

A meeting of the above Association will be held in the city of Buffalo, New York, commencing on January 15th, at 2 P.M., at which time the American Standard of Excellence will be thoroughly revised to suit the present views of Fanciers. All persons not members of the above Association are cordially invited to be present, to give their views and assist in the above work. Further information will be cheerfully given by addressing

JOSEPH M. WADE,
Secretary, Philadelphia.

WILLIAM H. CHURCHMAN,
President.

(For Fanciers' Journal.)

CONNECTICUT STATE POULTRY SOCIETY.

THE Fifth Annual Exhibition of this Society will be held at Hartford on the 16th, 17th, 18th, and 19th of December. From evidences already shown it will be the finest exhibition ever held in Connecticut.

Committees of the Society have been actively at work for months past, and nothing has been left undone which could add to the attractions of the exhibition. The work of these committees is most manifest in the list of special premiums. The Society presents one of the handsomest lists of specials ever yet offered. Its amount has already swelled to upwards of \$1500.

A new plan has been adopted by the Society in regard to awarding premiums, which cannot fail to please exhibitors. All premiums offered by the Society, also all special premiums, will be on exhibition during the Fair, at the end of which they will be distributed to the winners. Silver-ware will be engraved, and diplomas filled out as fast as the decisions of the judges are rendered.

This system of awarding premiums will be sure to meet the approbation of every fancier who has ever exhibited fowls and taken premiums.

Entries of fowls should be made as early as possible, in order to prevent any confusion at a late date.

Persons wishing to exhibit, and not being supplied with the requisite blanks, can obtain them by sending to my address,

S. E. CLARK,
Corresponding Secretary.

HARTFORD, CONN.

JONQUE, BUFF, AND MEALY DEFINED.

A JONQUE canary is what an uninitiated person would call a yellow one, and a buff or mealy bird is what would ordinarily be called a white one. But there are many shades of color between the pale lemon-yellow of a common canary and the rich orange of a jonque, and in the same way there are as many shades of color between the almost colorless-white bird and the deep buff. Yellow birds are bright; buff are dull; yellow birds are of one uniform brilliant color; buff are, as it were, dusted over with meal, hence the synonym mealy. The terms yellow and buff, jonque and mealy, are used with a general application also (irrespective of the idea of yellow and buff considered as colors), dividing all varieties of canaries into two classes. For example: A green canary, if bright, is said to be a yellow-green, and if of a dull, opaque sort of color, is said to be a buff-green. A bright cinnamon is called a yellow cinnamon, and a dull one a buff cinnamon, and so on through every variety. A clear bird is one which shows no dark marks—that is, has no dark feathers, and which also has white under flue; the underneath portion of the feathers, which in some apparently clear birds is quite black. There is no probability of a canary show at the Crystal Palace in the summer. The birds are not in condition for exhibition, and are very busily engaged in rearing little olive plants for future shows.—W. A. BLAKSTON, in *Journal of Horticulture*.

THE baby hippopotamus in the London Zoological Garden was given a male name, although it afterwards proved to be a female.

POULTRY ON A LARGE SCALE.

It seems to be conceded that the general result in attempting to breed poultry on a large scale has been unfortunate. At the same time it is also apparent that in nearly all these experiments the true conditions of success have not been observed. The proportion of care and room given to small flocks has not usually been extended to these large ones, and hence epidemics were more easily engendered, and when started, spread with such power and rapidity as to break up the plan, and discourage others from attempting it. The cost of feeding a large flock is an item calculated to frighten timid breeders without abundant capital, particularly during seasons when fowls are not remunerative, and this had aided not a little in prematurely closing up some establishments where more or less of success might have been achieved.

What I have seen of these experiments on a large scale, I remember only one instance where the space assigned a large flock seemed at all adequate—that of Warren Leland, who gave his flock fifteen acres of rough land, and provided them with ample shelter for bad weather, and all the conveniences for laying and hatching without unnecessary crowding. This was sensible; and it certainly seems plausible that if others would do likewise as to space and care, this problem of poultry as an occasional specialty in farming might receive a satisfactory solution. The kind of land needed in poultry farming does not matter much; what is wanted more than anything else is *room*—a wide range. If rough, rocky and bushy, no matter; if there are streams through it, so much the better; if the land is good enough for grain or grass, it becomes simply a question of profit between cultivated crops or a crop of chickens, and that can be tested. Until proof is brought to the contrary, I have faith to believe that if chickens are ever profitable in flocks exceeding a size sufficient to dispose of the table refuse usually given them, and the grain and insects they can pick up in their ordinary range—they will also be profitable in the case of a man who will manage them in the same liberal spirit with which cattle are managed. Due regard must be had to the value of the land assigned them, but in regions where rough land is plenty, as in New England, and much of it literally good for nothing at all except to grow bushes or furnish a range for something which needs space more than cattle do, plenty of poultry farms might be established, and that on a basis which would lift the business out of its present haphazard category. It will of course require skill and patience, close observation as to habits and breeds, a judicious selection of stock, good judgment in feeding and the rearing of chickens, and above all, a thorough taste—natural or acquired—for such work; but *with* these conditions, who will say that it will not succeed?—*Country Gentleman*.

DOMESTICATING ANIMALS.

WHATEVER of original instinct remains with domestic animals, is generally shown in full force in the case of their young; and, so strong is the maternal affection, that instances have occurred of their voluntarily adopting others than their own. I have known a cat to adopt a squirrel among her kittens. A remarkable story is told of a terrier which took charge of a brood of young ducks, having lost her own young. She was greatly alarmed, however, when they went into the water, and when they came to land she took them up, one by one, and carried them to her kennel. Singularly

enough, the next year she adopted two cock chickens; but when they began to crow she was as much alarmed as she had been by the waywardness of the ducklings; and always suppressed, by some manner of discipline, every such attempt!

If we consider the injury we should suffer if the vermin on which the cat preys were allowed to increase without that check, her domestication will appear of no slight importance. The estimation in which Whittington's famous cat was held by the foreign king is quite credible. The service which this sly, prowling character renders, is an interesting illustration of the inherent virtue, in the great plan of nature, of elements which appear from some points of view unmitigatedly evil.

The taming of solitary specimens of different species is not uncommon. Though the taming itself is easy, the lack of hereditary familiarity and subjection gives the creature's manners much eccentricity; and his moral conduct as a member of civilized society is rather exceptionable. He is continually relapsing into the old paganism, and his instincts break out in a very amusing manner.

The beaver is easily made a household pet; but he will set himself at work, with many a wise look, in the proper season, at building a dam—perhaps across a corner of the parlor, with toys, books, newspapers, and whatever else he can lay paws upon. The crow is very proficient under training; but his hereditary propensities do not forsake him, and he becomes an adroit "snapper-up of unconsidered trifles." A tame woodchuck, I knew of, was wont to bury himself on the hearth, leaving only the tip of his nose visible out of the ashes.

We have been told of an old negro who had built his house in a wild and mountainous place at a distance from other dwellings. He was a singular, lonely man; but he enticed numerous wild creatures out of the woods for companionship. Hares, gray squirrels, flying squirrels, birds of various kinds, foxes, raccoons, &c., were his household pets. But such of his rude neighbors as occasionally came to his house, began to shrug their shoulders at the appearance of a formidable-looking rattlesnake in the midst of the happy family.—*Germantown Telegraph*.

(For Fanciers' Journal.)

CHILDREN'S LITERATURE.

Does any one that has the control of children (either parent or guardian) stop for a moment to consider the bad effect that the stupid nonsense contained in the children's literature of the present day has upon the minds of their little ones? *Mother Goose's Melodies*, *Jack the Giant-Killer*, and other trash of the same order are, in my opinion, merely stepping-stones to such works as *Jack Sheppard*, *Dick Turpin*, &c. Nor do they stop here. We even find in our Sunday-schools, books that are but a type of the above-mentioned works (although under a different name), wherein the writers try (by working up their imagination to the highest pitch), to tell how good little Harry, after living a few years in this wicked world, was brought on his death-bed, and after converting a drunken father, was suddenly spirited away to some far-off place, beyond the bounds of time and space; or how bad Dick lived to be a man, and after killing some friend in a street fight, met himself some horrible fate, ending by being consigned to some subterranean place (the exact locality not mentioned) to be tortured forever.

All such works are calculated to do more harm than good. Far better encourage them to turn their minds to the beauties of nature and the handiwork of their Creator; encourage them in their fancies; a few pairs of pigeons or rabbits, some good work on the same, will be of far more benefit than reading the hobgoblin stuff such as the country is flooded with at the present time.

THOMAS S. ARMSTRONG.

TRENTON, N. J.

HOW I MANAGE MY POULTRY.

I WILL tell you how I manage my hens, and they always lay the year round, in winter as well as in summer. The first of April I had two broods of chickens hatched. As soon as they were large enough, I killed all the old hens. When one wanted to set, I had her killed. I think young hens lay better than old ones. The chickens are a cross between Brahma hens and Leghorn crower. My coop is on the north side of the barn, but the south side is much better, if one can have it so. I give them warm water two or three times a day, and keep corn by them all the time, and also give them a few oats occasionally, and what crumbs are left from the table. I throw old bones to them to pick, as they are fond of them. Three of the pullets commenced to lay the first of September; the other four the last of September. These have laid three, four, and five eggs a day ever since. They haven't been outdoors once since snow came. I think hens won't lay unless they have bones, meat, sun, and a little salt in their food.—MRS. R. G. BENNETT, in *Maine Farmer*.

BREEDING TURKEYS FOR PROFIT.

THE *Land and Water* says: No kind of poultry will yield a profit unless they are attended to with some degree of common sense and in a business-like manner. The absolute rule has hitherto been for farmers to consider poultry as the least remunerative part of their farm stock. Most of them know no reason for saying so, but "they say so," consequently they receive little or no attention. We were lately at a large farm where this was most truly exemplified. The pigs, 160 in number, were well housed, well littered down, and well fed; the cows 87 in number, the same; and even the punkabs, worked by steam power, were continually fanning the poor beasts to keep them cool and drive the flies off; but the poor fowls, and especially the turkeys, had not where to lay their heads. Definitely, the poor creatures invariably roosted upon the iron hurdles near the back of the steam engine-room, and the owner said, in reply to some questions as to how many he had reared, "Oh, drat the things! They are no use to any one; I wish the foxes had the lot." The common-sense way to have turned the turkeys to a good account would be first to make a proper roosting and set of laying compartments in a large, perfectly dry, and airy building; and on the premises alluded to a good cart-shed abutted on to the engine-room, which could have been converted, at a small cost, into a most excellent house, and, from its contiguity to the warm room in question, it would have been most invaluable for such a purpose, while the carts could have been far better provided for away from the warmth. If the soil is tolerably dry and the farm well drained, turkeys may be raised with considerable profit. The hens lay freely, and if properly attended to they lay

early, which is one of the great secrets towards success, as the hens soon become broody and ready to take their nest of eggs. They are most exemplary sitters, and when once broody they may be kept on sitting for four months on any kind of eggs, and if they are made to take proper exercise to find their food and water twice a day, they do not take any harm from the continuous sitting; on the contrary, nearly always come off in better condition at the end of the time than when first set to hatch. The young are not more difficult to rear than other poultry. They must not be allowed to become saturated with rain too often while young (neither should any other poultry), and they must have an unlimited supply of fresh varied green food, specially lettuce, dandelion leaves, dock, young nettles, and onion tops; and they must be entirely fed on soft food for some weeks, very gradually introducing whole grain, in small portions for the first few months; even when six months old they should not have an entire meal of hard grain, as their powers for grinding their food are very limited at first, and it is those persons who force on with the unground grain at too early an age, to save themselves a little trouble, that complain of the delicacy of turkeys. Look at the beautiful barley and maize meal, and the fine and coarse food the farmers lavish on their pigs; the same would rear turkeys well; and, by the time the corn is being carried, the young birds will be ready to subsist almost wholly upon what they glean from the fields; a small boy or girl should be trained to know them, and quietly drive them to the fields required to be cleared, and should remain among them to protect and watch them, and to drive them back to their properly sheltered quarters for the night. With this kind of management turkeys may be bred in large numbers on a mixed farm, with profit.

A CODE ON POULTRY-KEEPING.

SHOWING HOW EVERY PULLET REARED MAY BE MADE TO RETURN A PROFIT OF £1 IN EIGHTEEN MONTHS.

THE French are pre-eminently celebrated for their poultry, both as to the quality and quantity they produce.

The principle adopted by them in their successful and economical rearing may be explained in a few words—early hatching, early killing, liberal feeding, stimulating food, both for fattening and egg-producing. They keep only the best breeds, celebrated either as egg-layers, or quick growth to maturity. They keep their stock always young, and by liberal feeding with stimulating food, both flesh and eggs are produced with the regularity of machinery; risk of disease being prevented by the rapidity with which they fatten and realize, keeping up a constant succession.

The domestic fowl is admittedly of all birds the most generally useful; but although so commonly kept, and highly appreciated, it is quite a rare exception to find any in this country who know how to rear, and keep them profitably, even at the exorbitant prices they at present command.

The object in keeping poultry should be to produce their flesh and eggs as *expeditiously* as possible, and at the *smallest* cost; and it is only from want of proper knowledge of their management that eggs and poultry are the rich man's delicacy, rather than what they should be—food for the million. I say want of knowledge alone, because no greater trouble, and far less expense, is involved in making them a source of profit than of loss.

Fowls should be looked upon as mere machines for con-

verting one material of smaller value into another of greater value. A man who expects a good return of flesh and eggs from fowls insufficiently fed and cared for, is like a miller expecting to get meal from a neglected mill, to which he does not supply grain.

The common plan amongst farmers and cottagers is to keep fowls indiscriminately year after year, of various breeds, sizes, and ages, feeding them irregularly, generally insufficiently, sometimes not at all; bestowing little or no care upon them, their wants, or comforts; chickens being hatched at all times throughout the summer, late rather than early.

Now the pullet chickens so reared, with the exception of the very few that may be hatched in March, or early in April, are fed, and make no return whatever, until the following spring or summer, involving on an average *ten months'* unprofitable keep, before they produce eggs; and even then, often owing to insufficiency of food, degeneracy of breed, and want of proper care, produce less than one-half the eggs they otherwise would, or are capable of doing; and further, produce their eggs at a time when they only command the lowest price, returning thereby often but little more than the cost of the food they consume.

So with the cockerel chickens (except those few hatched early in the spring), they are not considered sufficiently large and full-grown to kill before the following spring; for unless they are fit to dispose of about harvest-time, they are not likely to improve in condition as the winter comes on; their age increases, and their appetites become voracious. They are consequently kept until the following spring, when they have attained the age of nine or ten months, or nearly their full growth; but by this time it will be found, on calculation, that the cost of their food will have exceeded the value of the fowl sold.

With *such* management it may be *truly* said that "poultry don't pay."

I will now as briefly as possible explain a system whereby fowls may be kept, and made to return a *quick and certain* profit—larger profit, indeed, than any other farm stock possibly can—and with the greatest of all advantages, requiring but the most trifling outlay.

There is no family, rich or poor, living in the country or town suburb, that may not with advantage keep poultry. It must with ordinary care prove highly remunerative, and be a means of consuming quantities of kitchen and table refuse, which in suburban houses and cottages is often thrown away.

The principles to be acted upon are these:

1st. Good stock, size of frame, and delicacy of flesh, combined, for producing *cockerels*; early and productive layers for producing *pullets*.

2d. *Regularity and liberality* of feeding, combined with general care and attention.

3d. Hatch *pullet* chickens *only* during the months of March and April.

4th. Encourage by proper feeding every pullet to lay as soon as she attains the age of six months.

5th. Always fatten and dispose of your hens at about nineteen months old, just before their first (adult) moult.

6th. Never allow a cockerel to *exceed* the age of fourteen weeks before being fattened and disposed of.

By such a system it will be found that *every* pullet reared becomes a source of profit at the age of *six* months, and every cockerel at the age of fourteen weeks. During these months of chickenhood they cost but *very little* to keep.

The return made for their food up to this time is *enormous*; but after this it will steadily decrease, and, before the cockerels are full-grown, they will not pay for their keep.

Mr. Mechi also says that he cannot understand upon what grounds farmers can say that poultry does not pay, when the selling price of beef, mutton, and pork is only 4½d. per lb., and fowl 1s. "I am sure (he says) it costs no more to produce a pound of fowl than a pound of beef or mutton. The whole question of producing more poultry is a national and important one. Commend me to poultry as the farmers' best friend."

The cost of a chicken during the first two months of its existence does not, *certainly* need not, exceed ½d. per week; the second two months ¾d., and afterwards 1d. per week; making the total cost of a pullet to the time she becomes profitable, 1s. 6d., and that of a cockerel only 1s. 2d. From the time a pullet commences to lay, she should, on an average, during the following twelve months, produce from 220 to 234 eggs; one-half of which will be produced during the dearest time (winter), making the average value of her eggs, at 1s. 3d. per dozen, a total of £1 4s. 6d. This average price may be obtained in any of the large towns in England. Indeed, although I live in the depths of Wales, I am able to dispose of all my eggs by contract by the year at a *fixed* price of 1s. 3d. per dozen.

It may be considered by some that 234 eggs is an excessive estimate. No doubt it would be so under existing management, but quite the reverse under proper treatment. In an egg-producing establishment near Paris, where no less than 100,000 hens are kept, the average number of eggs produced annually by each fowl is 300. Horseflesh is here largely used as a stimulating food, and without any ill effects. (*Stephens's Book of the Farm.*) 131 days, or 4½ months, is ample allowance for non-productive days. The average yield from the Hamburg breed would be at least 250. Two authorities, writing lately to a poultry journal, say, the one, "My Hamburgs, although kept in *close confinement*, average 220 eggs to each bird;" the other, "I can thoroughly confirm Mr. E.'s statements; my 70 hens on 1d. per week average over 220 eggs per bird." The eminent authorities and writers, James Dickson and Captain Hornby, place the average yield of Hamburgs at 240, and Spanish at 210.

After producing this quantity of eggs, and directly before her moulting sets in, she must be cooped for a fortnight and fattened, when she will be worth about 2s. 6d. to 3s., or 8d. per lb., as she ought to weigh at least 4 lbs., and not exceed 19 months in age. A fat young fowl ought certainly *everywhere* to command per lb. the price of a neck or forequarter of mutton. By now disposing of her, you save the expense of an often protracted moulting season, and a winter of unprofitable keep; disposing of her carcase before age has deteriorated its value; and you also make room for the next succession of pullets, reared the past spring, and now about to commence laying.

Fowls are often from two to three months before they thoroughly regain their feathers, and the later they moult the longer and more severe it becomes, and in cold weather they seldom commence again to lay for some months after regaining them. After twelve months' prolific production of eggs, followed by the severe ordeal of moulting, it is but reasonable to expect that a fowl will require a certain amount of rest. I have always found that 4 lbs. of barley or other

meal (together with potatoes) moistened with milk, is sufficient to fatten any fowl during the 14 days she is cooped.

The profit and loss account will stand thus :

DR.	s. d.	CR.	£ s. d.
Cost of eggs,	0 1	234 new laid eggs at 1s. 3d.	
Cost of rearing chicken to egg-producing time,	1 6	per dozen,	1 4 6
Cost of feeding during the 12 months she is laying,	4 2	Produce of fowl 2s. 6d. to 3s.,	0 3 0
Fortnight's fattening,	0 6	Excrements,*	0 2 4
	6 3		£1 9 10
		Deduct cost,	0 6 3
		Total profit,	£1 3 7

Leaving a profit on each pullet of £1 3s. 7d., or 300 per cent. The profit and loss account on the cockerels will be as follows :

DR.	£ s. d.	CR.	£ s. d.
Cost of egg,	0 0 1	Value of cockerel, weight 5½ lbs., 3s. 6d. to	0 3 9
Cost of 12 weeks' keep,	0 0 7	Excrements,*	0 0 5
Cost of two weeks' fattening,	0 0 6		0 4 2
	£0 1 2	Deduct cost,	0 1 2
		Total profit,	£0 3 0

Leaving a profit on each cockerel of 3s., or over 150 per cent.

Now, from actual experiments, it has been proved *over and over again*, that the finest fowls can be kept in the highest state of perfection at the cost of 1d. to 1½d. per week; and this, without even the advantage of anything of a run, beyond an inclosed yard or small garden.

Those who doubt the sufficiency of such allowance had better refer to Mr. Mowbray's standard work, or to the comprehensive experiments of M. Réaumer, M. Parmentier, &c. I can certify to its sufficiency from my own experience, having kept nearly 100 *large* fowls during the past twelve months upon a weighed and measured allowance of food, and which never exceeded ¾d. per week. They were the whole time in laying condition, and in the highest state of perfection as to plumage, &c.

This sum will allow of the best quality of food being given, and such will always prove the cheapest.

Wheat at 5s. 9d., barley at 4s. 6d., oats 3s., buckwheat 4s. 9d., maize 4s. 3d. per bushel; broken rice, 1½d. per lb.; small potatoes (siftings), 2s. per cwt.; bullock's liver and sheep's pluck, 1½d. per lb.; will enable you to keep your fowls in the highest possible perfection, within the price named, averaging the value of one grain against another.

In Ireland, Scotland, and parts of Wales, where fowls can have liberty, and milk and potatoes are plentiful and cheap (as well as corn), fowls may be kept at probably one-half the cost named, producing eggs at ¾d. per dozen, and flesh at 1½d. per lb. It is owing to the liberal feeding of warm potatoes, accompanied with *warm housing*, that the poultry in Ireland are good egg-producers, and this, in spite of the

most miserable puny breeds, deteriorating year after year from breeding in and in and with absence of fresh blood.

To encourage and keep the pullets laying through the winter months, it is *necessary* that they should be kept warm at night, fed liberally, and on stimulating food. In the morning each pullet should have 1½ oz. of barley, buckwheat, or meal; midday, boiled potatoes warm, or boiled rice, with scraps of meat, suet, or fat, bullock's liver, or sheep's pluck; at night, 1½ oz. of wheat, Indian corn, or heavy oats. Such feeding will keep them in such a condition as will enable them to continue to lay regularly until the spring, when 2 or 2½ oz. of grain per day may be resorted to, without the assistance of meat or cooked food.

Fowls in winter, owing to the absence of worms, grubs, flies, &c., require more hand-feeding than in summer, but where they have the advantage of an extended run, 1d. per week will be found an *ample* allowance, and allow for liberal feeding, of the best food, averaging winter against the summer.

A wise selection of stock, and such as may be suited to your soil, is of paramount importance. The Houdan, Creve, Dorking, and Brahma are all excellent for the table, and come early to maturity, being easily fattened. The Hamburgs, Houdans, Polands, Spanish, and Brahma excel as egg-layers, all except the two latter being non-sitters.

Two or three hatches of cockerel chicks may with advantage be made throughout the summer, as they only require fourteen weeks before they are fit to be disposed of.

Those who desire to act upon the best and *most economical* principles will avoid the expense involved by allowing a hen to rear her own chickens, which will amount in eight weeks, by loss of eggs and keep, to 4s. 8d. A capon may be easily trained to undertake the brooding and rearing of chickens as well as the best hen. A large, full-feathered capon can brood and care twenty-five to thirty chickens at a time, and will continue the careful charge of *brood after brood throughout the year*, irrespective of age, size, or color.—*Mascal, Réaumer, Parmentier.*

Chickens may also be reared by what is termed an "artificial" mother, which is a simply-constructed shallow box, the perforated lid being lined with lamb's-skin, or goose-down; and by the application of heat to the lid, either by hot water or hot air, chickens in any number can be reared, with far greater ease and certainty than by the natural mother. The author will be glad to furnish particulars as to the training of capons, or show a plan of rearing-box or "artificial" mother.—*Réaumer, Bonnemain, Parmentier.*

So precocious are the Creve Cœur fowls in their growth and disposition to fatten, that they are fit to be put up to fatten at the age of two and a half to three months, and be ready for table fifteen days after.—*Pringle, Murray.*

A succession may, therefore, always be kept up ready for the coop, and thus a large number may be disposed of in the year, without having any quantity on hand at one time; and in this way one's limited capital may be continually turned over, each time realizing 150 per cent., or 600 per cent. if followed by three successions through the summer.

No doubt it will be considered a bold assertion to say that fowls are capable of making a return of 600 per cent. in twelve months, at a time when the popular belief is that "poultry don't pay." It is true that fowls don't pay as often managed, but, at the same time, I affirm, without fear of contradiction, that they can be made to pay, and to pay as no other stock possibly can.

(To be continued.)

* A fowl will void at least 1 oz. of dry dung in 24 hours, and which is worth 7s. per cwt. (*Stephens.*) Those who cannot find a market for this valuable manure at such a price, let them use it themselves in their own gardens, and make *as much again*. I can speak with confidence of the power of 1 cwt. to produce from 4 to 5 cwt. of potatoes, value 25s.

LIGHT BRAHMA FOWLS.

OWNED BY WILLIAM H. KERN, PHILADELPHIA.

(For the Fanciers' Journal.)

LIGHT BRAHMAS.

(ILLUSTRATED.)

OUR illustration is not a mere fancy sketch of what a Light Brahma should be; but is from a photograph of a noted pair of fowls, owned by William H. Kern, of this city. The cock "Gladiator" was raised by Dr. S. P. Jones, at the Insane Asylum, in this city, from the best Philadelphia stock. Gladiator, while a cockerel, passed into the hands of Messrs. Nevius & Darlington, of this city, and was exhibited by them at the Philadelphia show of 1871, where he took second premium, and was much admired. Forty coops of Light Brahmas competed at this show. The cock was then sold to Mr. J. E. Phillips, of Baltimore, Md., who exhibited him, in the fall of 1872, at the Maryland State Fair, where he was again victorious, taking second premium in a spirited competition. He again passed into the hands of his former owners, who resold him to his present owner, William H. Kern, who exhibited him at the Philadelphia show of 1872, when he took first premium, and the pen in which he was exhibited also took special, as the best pen of Light Brahmas, regardless of age. He is a good representative of the Philadelphia type of this breed.

The hen, "Grand Duchess," is a model of beauty, as can be seen by a close examination of her portrait. Besides assisting Gladiator to win his honors, she also took special premium for the best Light Brahma hen, regardless of age, at the Philadelphia show of 1872.

WHAT THE FANCIERS SAY OF A WEEKLY JOURNAL.

HARTFORD, CONN., October 27th, 1873.

MR. JOS. M. WADE.

DEAR SIR: Your prospectus of the *new paper* received this morning. I think it will be a success, and you have my best wishes. You can put me down as one subscriber, and I will advertise with you all I can.

Respectfully yours,

WM. H. LOCKWOOD.

GEORGETOWN, MASS., November 1st, 1873.

MR. JOS. M. WADE.

DEAR SIR: Your prospectus received with much pleasure. Your paper is just what I have long thought was needed.

Yours sincerely,

WM. W. MERRILL.

CAMBRIDGEPORT, MASS., November 3d, 1873.

MR. JOS. M. WADE.

DEAR SIR: I like the idea very much of a weekly journal devoted to fancy and pet stock, and I trust you will make it a success, both literally and financially.

Yours sincerely,

H. K. OSBORN.

HARTFORD, CONN., November 3d, 1873.

MR. JOS. M. WADE.

DEAR SIR: Your prospectus is at hand, and I welcome the advent of your journal. We are in need of it, and it is my earnest hope that the fraternity will support what it needs most. . . . Although I have never met you, I shall take an interest in your new publication, and hold myself in readiness to perform any little task that will benefit the *Fanciers' Journal and Poultry Exchange*. Wishing you godspeed, I am,

Most respectfully yours,

S. E. CLARK.

BALTIMORE, October 28th, 1873.

MR. JOS. M. WADE.

DEAR SIR: Your circular was received a day or two ago. Send along some numbers of your new publication as early as you can; and I will do all I can to give you a start. I am glad to hear of this new poultry and pigeon paper, and hope it may prove a success.

Truly yours,

J. E. KOONS.

HARTFORD, CONN., November 13th, 1873.

MR. JOS. M. WADE.

DEAR SIR: I received one of your circulars in regard to a "weekly journal," about to be published by yourself. Allow me to wish you success in your endeavors, for I think that it is something long needed. . . .

I remain, yours sincerely,

WM. T. FULLER.

ATLANTA, GA.

MR. JOS. M. WADE.

DEAR SIR: I received your circular and am very glad that you are introducing a paper of that kind, as it is needed very much. . . .

Respectfully yours,

S. NATHANS.

BERNVILLE, PA., October 31st, 1873.

MR. JOS. M. WADE.

DEAR SIR: Your circular in behalf of the *Fanciers' Journal and Poultry Exchange* is at hand, and I am well pleased with the idea. . . .

Most respectfully yours,

F. H. SCHWARTZ.

WARREN, OHIO, October 31st, 1873.

MR. JOS. M. WADE.

DEAR SIR: . . . I think that I can get a good list of names for you. It is a paper that we have needed for some time, and it will take the place of the monthlies, and in less than one year you will have more subscribers than all the monthlies combined.

Yours, &c.,

G. W. DICKINSON.

PORTLAND, ME., October 24th, 1873.

MR. JOS. M. WADE.

DEAR SIR: . . . I think a weekly would give much better satisfaction to our people.

Yours sincerely,

E. DANA, JR.

BOSTON, MASS., October 24th, 1871.

MR. JOS. M. WADE.

DEAR SIR: Notice of the *Fanciers' Journal and Poultry Exchange* is at hand; we shall give you an advertisement shortly. . . . Think we can secure a good many subscribers for you, as we come in contact with about all of the poultry men in this part of the country.

Yours sincerely,

JACOB GROVES & Co.

SAN FRANCISCO, November 4th, 1871.

MR. JOS. M. WADE.

DEAR SIR: I inclose you \$2.50, for which mail me *Fanciers' Journal and Poultry Exchange*. My best wishes for your success in the enterprise. You should roll up a good list on this coast. I will render all the assistance in my power.

Yours respectfully,

C. L. MAST.

SELINGSGROVE PA., November 1st, 1871.

MR. JOS. M. WADE.

DEAR SIR: . . . I hope your poultry paper may succeed.
I will be a subscriber and give you an advertisement. . .

Very sincerely yours,

A. M. CAREY.

BOSTON, MASS.

MR. JOS. M. WADE.

DEAR SIR: Your prospectus of *Fanciers' Journal and Poultry Exchange* is received, and I send you herewith an advertisement to be published in first and second numbers. . . A weekly is very desirable, and I wish you great success.

Yours truly,

WM. H. BRACHETTE.

BALTIMORE, MD.

MR. JOS. M. WADE.

DEAR SIR: Your kind letter at hand; glad to hear from you. Put my advertisement in for one month. . . I will do all I can to make your paper a welcome weekly visitor to this place.

Respectfully yours,

J. B. TOWN.

LOCK HAVEN, PA.

MR. JOS. M. WADE.

DEAR SIR: As to the weekly journal I hardly feel that my experience would warrant me in giving an opinion. It seems to me, however, that if it was illustrated and put at a price that all could subscribe, and not made too large, that it ought to pay. I agree with you that as advertising mediums the monthly journals are generally too slow.

Yours sincerely,

A. N. RAUB.

LOCK HAVEN, PA., September 26th, 1873.

MR. JOS. M. WADE.

DEAR SIR: . . . I think your price for the journal, \$2.50, not too high for an illustrated paper of its class. . . I like your idea on the advertising question (10 cents per line). One can describe his pets more accurately and yet at less cost than when giving a shorter advertisement. . . Better have more advertisers and make a little less, because the greater the number and variety of the advertisements, the more the circulation of the paper will be extended.

Yours, &c.,

A. N. RAUB.

152D STREET, N. Y.

MR. JOS. M. WADE.

DEAR SIR: I don't know what to say about your proposed weekly publication. I think it is very hazardous, but don't want to discourage you. It takes a great deal of capital to keep such an affair afloat. All I can do is to subscribe for it myself, which I will do most cheerfully. Wishing you all success, I am,

Very truly yours,

GEO. C. ATHOLE.

BALTIMORE, MD., November 12th, 1873.

MR. JOS. M. WADE.

DEAR SIR: Put me down as a subscriber to your paper, and I will get as many more here as possible; we want a paper, &c. . . I will advertise too, at such times as seems best; will remit when you desire.

Yours cordially,

CHAS. D. PARKER.

CENTRAL NEW YORK POULTRY ASSOCIATION.

OFFICERS.

President.—Hon. M. C. Comstock.

Vice-Presidents.—T. R. Proctor, G. H. Warner, C. W. Hutchinson, E. P. Howlett, A. B. Johnson.

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

VOL. I.

PHILADELPHIA, JANUARY 8, 1874.

No. 2.

CORRESPONDENCE.

SHOEMAKERTOWN, PA., December 15, 1873.

EDITOR FANCIERS' JOURNAL.

I noticed on page 4 of the Fanciers' Journal that the Maryland State Poultry Association intend to offer as premiums ten gold medals, forty silver medals, and a number of diplomas. Now, if my presumption may be excused, I would suggest to the officers of the above association that they give exhibitors the equivalent of the medals which they may win in greenbacks, if they desire it.

Medals and diplomas are very nice things in their way, but are not current on the Philadelphia, Wilmington and Baltimore Railroad. Hoping the officers of the above association will give this matter due consideration,

I am very respectfully yours,

WM. E. FLOWERS.

(For Fanciers' Journal.)

CHARLESTON, S. C., December 15, 1873.

MR. JOS. M. WADE.

DEAR SIR:—It may not be known that the use of tobacco will drive away lice from poultry. No fancier should allow these vermin to get among his birds. I mean what is commonly known as "fowl-lice." Due attention to the houses and coops will prevent it. But on one occasion these insects took possession of my pigeons. They killed all the young and at last drove me from the cot. I tried everything I could think of,—turpentine, kerosene, carbolic soap. Killed numbers of my young birds by one or another of these, and millions of lice no doubt. But their increase was not even checked. In despair I was about selling out my stock, when some one suggested tobacco. I bought one-half pound of Durham's smoking tobacco; sprinkled it carefully in the nests and all over the house. In three days the lice were gone. In one or two nests they were found a month afterward. These were again sprinkled with tobacco, and now my birds are entirely free from them. The lice peculiar to the pigeon are also driven away by it.

Very respectfully,

J. G.

LIGHT BRAHMA STANDARD.

(For Fanciers' Journal.)

NATICK, MASS.

MR. JOS. M. WADE,

Secretary American Poultry Association.

DEAR SIR: As the Convention will soon be in session at Buffalo for the purpose of making a standard of excellence, I present my views on the subject of light Brahmas for consideration. There has not been a day for twenty-three years that I have not had them in my possession, and they have been my especially favored pets. I feel that I know them thoroughly, and that my opinion should have some weight and consideration during the discussions.

To my mind the present standard appears to be very nearly right. Though I will not attempt to exercise any influence whatever in regard to any other breed, but in *this* I have a

strong feeling. Sickness alone prevents my attendance. [NOTE.—Mr. F. has mistaken the time, which really is one month later.] If the standard is revised, or altered at all, I suggest that, in the department I refer to especially, "size" should read "weight," and that five points be taken off and added to "legs" and feathering thereof, excepting the feathering of middle toe, to which I most emphatically object. The reason for which is, ten to fifteen per cent. of such chicks will necessarily prove to be vulture-hocked, which no first-class breeder desires to see about his premises. The legs should be of medium length, of a rich reddish-yellow color, and well feathered to the tip of the outer toe. Let the Brahma have a perfect pea comb, with seven serrations in the middle section, and in the two side sections five serrations each. The size of the comb to be in proportion to the size, vigor, and general symmetry of the fowl, and set straight and firmly on the head. Ear-lobes and wattles must be well defined, of equal length, and, like the comb, of a rich red color. Head not so small as to indicate a lack of brain room, but also in proportion to the size of the body. We should not expect all the seven or eight-pound birds to have heads and combs the same size of one weighing ten or twelve pounds in the same "condition." The *beak* to form a perfect arch from point to nostril, strong, with a dark stripe down the middle of the same, which, to be perfect, should cover one-fourth its surface. Neck well arched, of fair length, covered with a profusion of hackle feathers, that flow well over the back and shoulders, each feather of which must be striped with black, running to a point at the point of the feather, the sides of the stripe to be in a straight line, and not running parallel with the edge of the feather. Body round, carrying the breast well forward; the feathering to be of that shade of white seen in new milk, with bluish-white under-color, neither of which is to be given the preference in judging. Back broad, and of sufficient length when fairly viewed from the side, and combined with the neck-hackle and tail coverts, to define the curved form of an egg, the front part representing the curve toward the large end. Tail to be well developed, black in color, well spread like a fan or the letter A, well filled in with rich, curly feathers, which may be white, or white and blacklaced. The coverts to be black, or laced with white; the feathering part of the coverts should be in keeping with a moderate fluff. I like the richness of the fluff feathering, but we must not, for any consideration, attempt to increase the quantity, for if we do the consequence is the individuality of the fowl will be destroyed, the true Brahma shape lost, which I insist on maintaining. We cannot improve the wing.

DISQUALIFICATIONS.

Not matched in pen, vulture-hock legs any other color than orange or reddish-yellow, or not feathered. Under-color of body any other than milk or bluish-white. Comb other than pea-comb, or lopping to either side of head. Cock without wattles.

I would have symmetry last in the classification, and explained to apply to the form and type, subject to be cut down at the rate of one point for every three points the fowl fails in all other points, except in color, and further subject to reduction by the judges as it shall be affected by ill-shaped hackle and tail. Condition to be applied to perfect growth, of feathering, and to that condition of fowl which makes it the most fit to fulfil the function of reproduction. Over-fattening to suffer in loss of condition in the same ratio that an ill-fed, poor fowl does. We must do something to stop this over-feeding for exhibition purposes, or suffer an early loss of our best fowls.

LATER.

DECEMBER 15.

Mr. WADE: Please add the following to complete my letter of yesterday, which I wrote hurriedly, thinking the Convention would meet this week. I may possibly attend.

"POINTS" IN LIGHT BRAHMAS.

Weight.....	10
Color.....	20
Head.....	5
Comb, ear-lobe and wattles.....	10
Wings, primaries well tucked under secondaries.....	10
Tail, form and carriage of same.....	10
Legs, coloring and feathering to end of outer toe.....	10
Fluff.....	5
Condition.....	10
Symmetry.....	10

Respectfully submitted,

I. K. FELCH.

(For Fanciers' Journal)

CHARLESTON, S. C., December 15, 1873.

MR. JOS. M. WADE.

DEAR SIR: Your first number of the "Fanciers' Journal and Poultry Exchange" has been kindly sent me. I am much interested in the subjects there discussed, and, no doubt, will take the liberty of saying something myself, if you will allow me.

By way of beginning let me say that "chicken cholera," as well as "cholera" of all kinds of poultry, has been a subject perplexing to me in past years. As the writer, who here remarks upon it, says it very frequently occurs after heavy rains, in summer or fall. The birds are unquestionably poisoned by something. The indications about the head and eyes, the weakness in the back, as well as the fact that their feathers come away at the slightest touch are proofs of this. How are they poisoned? I am satisfied that it is either by putrescent water, or by some poisonous mushroom springing up immediately after these rains. Now, on this supposition, what is the remedy to be applied? An antidote for poison, of course, or some medicine to carry it out of the system.

With chickens I have tried epsom salts, about $1\frac{1}{2}$ tablespoonfuls of the liquid a day; in doses of 2 teaspoonfuls every $1\frac{1}{2}$ hours.

With ducks Ferry's magnesia, moistened, a teaspoonful three times a day.

In using these I have had such success as would make a reputation for any of our city physicians.

It has not proved a certain cure. Why expect it? The attack with these birds is almost equal to black vomit in the human family.

I will risk my reputation on it, that no medical man has cured as many cases of yellow fever as I have of this disease by this treatment.

Very respectfully,

J. G.

CEDAR RAPIDS, October 30, 1873.

JOS. M. WADE, Esq.

DEAR SIR: I am glad you have undertaken the enterprise of a weekly poultry paper, and think you will succeed in building up a large circulation. The interest taken in poultry breeding is continually increasing, and the demand for reliable information concerning it is increasing also. I have long felt the want of a weekly paper devoted to poultry affairs, and will do all I can to help you in obtaining subscribers in this part of the country, for I believe the more light the public get regarding the pure breeds of fowls the greater will be the demand for them. We of the West have been in the dark long enough, and are now awakening to the importance of learning more of the characteristics of the different breeds, and ways of breeding successfully, both for pleasure and profit. While I shall never "go back" on my old favorites, the Bulletin, World, and Record, I still hail with pleasure the new journal, and wish it abundant success. Send me some sample copies to distribute at our exhibition.

Yours in haste,

C. J. WARD,

Secretary, I. S. P. A.

MONTVUE POULTRY YARDS,
BROOKLANDVILLE, MD., December 16, 1873.

J. M. WADE, Esq.

DEAR SIR: Have just received a copy of your new paper and am much pleased with both contents and style. It is just the size to make a handsome bound book. The monthlies are good, but we all want something good more than once a month. The poultry business is increasing steadily but surely; the barnyard mongrels are being replaced with "blooded stock," and *pleasure* and profit are the results, where "eyesores and didn't pay," once were supreme. I am confident your enterprise will meet with the encouragement it so justly merits, and I sincerely trust breeders and dealers will freely give their experience, in such a manner that the young beginner and amateur fancier may be instructed. I am particularly pleased with your liberal advertising terms, for it allows a margin, and gives an opening to those whose means may be limited. As soon as I get stock, &c., ready, I shall send on my advertisement.

Very truly yours,

G. O. BROWN.

RUMPLESS FOWLS.

MR. JOS. M. WADE.

I cannot give you the desired information concerning the rumpless fowls. Mr. Arey, the only breeder in this place, has bred them expressly for their laying qualities, without regard to color. He says they are great layers and splendid table fowls of medium size. They dress more showy than any other fowl, the hinder parts being more plump and round, without projection for tail, as in others. He says, also, the original ones obtained by him (from the Provinces) were of a reddish-brown color, something like the brown leghorn; legs rather light-colored; bodies yellow; comb single. He further says they were first introduced into this country by the Dutch, in a northwestern state (Wis.), called there Dutch water-fowls or falls. That they are not the common barnyard fowls I know by their laying qualities, and power of transmitting their mark as tailless fowls. A cockerel will transmit his strong points to many successive generations. If you think them worthy I would be pleased to have them

placed upon the standard; we propose to obtain some which are pure. Perhaps some fanciers in Massachusetts can give you the desired information.

Very respectfully yours,

ALLEN CARTER,
Hampden Centre, Penobscot Co., Maine.

(For Fanciers' Journal.)

WHAT FOWLS PAY THE BEST.

ARTICLE II.

AFTER my terrible mishap with silver-spangled Hamburgs and White Leghorns, nothing more was done in the way of breeding until the following spring, my whole attention being turned to building a hennery, and getting better breeding stock. My short experience proved to my utmost satisfaction the foolishness and impracticability in buying inferior stock to breed from; but every one must live and learn, and, taking everything into consideration, I think I bought my whistle cheap.

The ground occupied by my poultry yards consisted of three building lots, with a front of 54 x 80 feet, on a street in the northwest portion of the city of Philadelphia. I had the whole area sodded and planted with fruit trees interspersed with a few evergreens.

My hennery was built of brick, excepting the front (above eighteen inches from the ground), which was composed of glass covered with a wire screen. The building was twenty feet long and ten feet in width, being divided into two well-ventilated compartments, with a frame upper story, which was devoted exclusively to pigeons of the tumbler variety. I had made up my mind to spare no expense, and everything usually found in a well-conducted poultry establishment could be seen in mine. The building when completed cost me \$250.

Seeing an advertisement in the *Country Gentleman* where Mr. George Chapin, of Providence, Rhode Island, offered to dispose of an imported trio of silver-spangled Hamburgs, I wrote to him, and, on his word, purchased the fowls—and a fine trio of birds they were. In addition, I received two trios from Mr. Charles S. Haines, of Elizabeth, N. J., and by selecting from other breeders, increased my stock of silvers to ten hens and two cocks. By the time I was fairly under way I was pretty well known throughout Philadelphia and vicinity as a Hamburg fancier. Applications for eggs were numerous, and I soon began to realize enough profit to at least repay me for the cost of stock; and before the year had closed, my twelve silver-spangled Hamburgs had repaid me for cost of buildings, appurtenances, feed, &c., besides leaving a handsome surplus to be placed to their credit for the following year.

My estimation of profits will extend from December 25th, 1868, to December 25th, 1869.

Trenton, N. J.

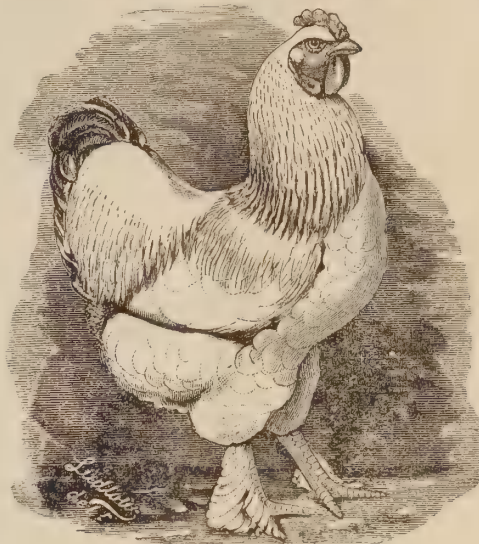

THOS. S. ARMSTRONG.

REMARKS.—Yes, that will pay very well for the services of your teacher, "Experience," and we would add our ap-

proval of the plan suggested of planting fruit trees in the yards, believing that while the fowls are searching for their "grub" in the shade which they afford, the chances are that the fruit will be fairer and more abundant, on account of so much insect life being destroyed. We should like our readers to be benefited by the still larger experience of others who have tried the effects of combining the fruit orchard and hennery.

QUERY? We should like to know if a *Guinea* fowl is worth about "21 shillings"? If it is, of course a *Guinea* pig ought to have a similar value.

SUPPOSING you are walking in town with your mother's sister and she gets tired, what ought you to do? Why take her to a rest-u-r-ant, of course, and get a lunch.

(For Fanciers' Journal.)

SCIENTIFIC BREEDING OF LIGHT BRAHMAS FOR EXHIBITION.

ARTICLE II.

MANAGEMENT OF BREEDING STOCK DURING THE BREEDING SEASON.

HAVING selected your stock, the next question that presents itself is, how to feed and care for them during the breeding season. I have always obtained the best results by placing the stock birds in small pens, which are made six feet long and three feet wide; two and one-half feet should be boarded in, and the remaining three and a half feet covered with lath or wire netting. The sides under the eaves are twenty-four inches high, the framing to be made of one and a half inch stuff. The inclosed part should have a floor; the nests should be placed on one side of the inclosed portion and the perch on the other; the door should be in the centre of the back part, for convenience in getting at the nests and cleaning out the droppings, which must be done daily. These pens can be constructed very cheaply by using old dry goods boxes having approximate dimensions. I always put a single bird in each pen. It would not do to put a cock and hen in the same pen, as the cock would worry and harass the hen so as to greatly diminish the supply and fertility of the eggs. By keeping the birds separate in this manner I am convinced that the hens will look better and lay more eggs, which is an item not to be overlooked, especially if you have but one or two hens. My method is to take the hen out of her pen and

put her in with the cock once a day, and only allow her to remain five or ten minutes. I have always found the eggs to hatch better this way than when the birds had a large yard together. Another advantage in this plan is this: if you want to establish a pedigree you know just what you are doing, because you know which hen lays the eggs and what cock she was mated with. Some may object to this method, thinking it too much trouble. To such I would say, no one should undertake to breed prize fowls unless they have a genuine love for them; the attempt will only end in disappointment and disgust. To one who really loves his fowls, nothing will be a trouble that will add to the beauty or comfort of his pets. With regard to feeding I would recommend soft food in the morning, mixed into a stiff mass; it should be thoroughly wet, but not made in a thin batter. I think it advisable to change their food as often as possible, by feeding corn meal one morning, wheat middlings the next, corn and oats ground together the next, and at noon give grain of some kind; at night I think the feed should consist of whole corn. I usually vary the noonday meal in the following manner: oats one day, buckwheat the next, wheat the next, &c., in rotation. I think wheat at two dollars per bushel is cheaper than screenings at fifty cents per bushel for laying hens.

Never stint your fowls in feed. Remember egg-making is hard work, and if you expect your fowls to produce many you must supply them with abundant material; but be careful not to give them more at one time than they will pick up clean. They should have an unlimited supply of green food given to them once a day, of which grass, chopped into chaff with a hatchet, is the best; if grass cannot be had, cabbage is good, or raw potatoes chopped fine. Give plenty of gravel, pounded oyster shells, ground bone, and plenty of fresh water.

W. E. FLOWER.

SHOEMAKERTOWN, PA.

NOTE.—The small pens mentioned above are very useful after the laying season for the purpose of keeping a hen and chickens; and still later are just the thing for young cocks, or for keeping the breeding cocks of the year which are to be carried over. (See article on "What Fowls Pay the Best." No. 3.)

CLEANLINESS.

AMATEURS vs. DEALERS.

A VERY mistaken idea exists in the minds of many young fanciers (young in the fancy if not in years) in regard to the scrupulous cleanliness which they suppose must be preserved to keep fowls healthy, from which they sometimes have a very rude and abrupt awakening—as in the case occurring at 39 North Ninth Street, Philadelphia. Two gentlemen were conversing in regard to scurvy legs in fowls; one of them very dogmatically asserted that there was no excuse for this trouble, that it arose *entirely* from dirty pens and yards; the neglect to cleanse them causing impurity of blood, and also inducing the disease called scurvy legs. A gentleman standing by at once replied to this, saying, "I have as nice a poultry house and yard, for its cost, as could be found, and have plenty of spare time to properly attend to them. The house is swept clean and kept free from taint, but, in spite of all my care, my fowls are fairly rotten with this disease, and I have been obliged to kill a number in consequence."

Where fowls are kept cooped up for any length of time, there is no doubt but that cleanliness is imperatively necessary to keep them in a thriving condition, but where they have a good run on grass, it is *not* absolutely essential that the pens should be cleaned daily or even weekly. Amateurs with a few fowls, which are pets, may, and very often do, follow this practice; but there is not one *dealer* or *professional breeder* in a hundred who cleans out his houses with any regularity.

A gentleman, not long since, after visiting the yards of a well-known fancier, in conversing with a friend, said, "Why the manure and dirt in —'s poultry house is from two to three inches deep on the floor."

I have no doubt but that he was perfectly correct in his statement, as I have seen the houses to which he referred in a similar condition; and yet I must say that the party in question has not had a case of roup in his yard for years, has never had but one case of cholera, and has not a scurvy-legged fowl on his premises, excepting one cock which he states was purchased in that condition last spring. He further says that he has no regular time for cleaning his yards; it is done when he can get time, perhaps once in three months. But his floors are of plank, elevated eighteen inches above the ground, and are perfectly dry, and his fowls have a good-sized grass run.

While the writer values cleanliness in the poultry house as much as any one, he does not attribute to it an undue importance; but is convinced, from both experience and observation, that fowls can be kept healthy and thriving under the above circumstances. It is not any discredit to a breeder that he does not sweep out his houses every day or even every week. Many, very many, of our best and most successful fanciers are men of small means, who are engaged in mechanical or other daily avocations, and they *cannot* get the time. The amateur, who has a country place, and who keeps a gardener and possibly other help, finds it easy to instruct his help to sweep out the poultry house every morning. Yet with all his care, his fowls seem quite as liable to disease as are those of his less fortunate but equally enthusiastic neighbor.

A. M. HALSTED.

NOTE.—When there is not time to clean the coop as often and thoroughly as one could wish, we think it a good plan to have saved in a dry, convenient place, sandy loam, or ashes mixed with carbolic powder, or even hay and straw which is equally good. Throw a few handfuls over the floor daily.

GOOD ADVICE.

WHEN you wish to be jovial and entertaining to your friends, and cannot say anything really witty which is to the point, try to say something sensible, so that you may not become the butt of a joke "pointed" at yourself.

Do not speak too emphatically of the merits of your own work, thus apparently forbidding suggestions for its improvement which you might find it profitable to solicit.

WHEN you notice faults in your dependents which will admit of a remedy, do not waste your time in impatient remarks, but kindly suggest improvements, which will benefit them as well as yourself, thus making instead of alienating friends.

ITEMS

INTERESTING AND AMUSING.

A GOOSE, known to be 70 years old, died recently in Scotland.

A TRAVELER says there are no singing birds in Japan, but that the crows are very numerous and bold, making a hideous noise all day long. A fine country.

It is reported that a number of rabbit-breeding establishments have been started near London; the scarcity and consequent high price of animal food having created a demand for, and made profitable the breeding of, rabbits on a large scale.

A RURAL society of naturalists in New Hampshire was recently presented with a beautiful specimen of a hornet's nest, twelve feet in circumference. A day was appointed to investigate the treasure, but unforeseen business engagements prevented any of the members attending.

CRUELTY TO CHICKENS.—William Connelly was taken before Recorder Given recently, on complaint of Messrs. Kilpatrick and Zarracher, agents of the society for preventing cruelty to animals. The defendant was charged with keeping a number of chickens and other poultry in coops not large enough to allow the feathered tribe to stand. He was also charged with cruelty in not feeding the poultry. The magistrate imposed a fine of \$10 and costs on the accused.

DRESSING RABBIT SKINS.—Rabbits' skins may be cured so as to remain soft and pliable, by the following method:

Soak them for a short time in water, and then, if they require it, thin them on the inside by scraping. Then place them for three or four days in a bath made by mixing 2 lbs. of bran in one gallon of water. Next a paste made with 1 lb. of alum, and 3 ozs. of common salt, moistened with water and worked together, is spread on the inside of the skin and left for about eighteen hours. Then hang up the skins to dry, with the fleece or hair outermost, and, if possible, in the sun. After this smooth the inside with pumice-stone, then switch or brush the outside.

THE editor of the *Peoria Review* recently lost his dog, which sad occurrence is thus described: If anybody has seen a black-and-tan dog, answering to the name of Judge, going down the street, in company with a hard-shell turtle, that won't answer to anything, and certainly won't answer to tackle, as the dog will tell you if you can only get him to stop long enough, please to halt the eloping pair, as they are the property of the editor of this paper. We are fondly attached to the dog on account of his vagabondish, Bohemianish habits. He knows every dog in Peoria by name, and is on speaking terms with nine-tenths of the dogs that come in under the wagons, and he knows more of the inhabitants of this city than the tax collector does. The turtle is a more recent acquisition. It was placed in the back yard yesterday, and the dog spent an hour and a half trying to induce it to come out of its shell and be comfortable. The old iron-clad maintained his reserve, however, until the dog crammed his nose against the forward part and commenced to sniff. The pair seemed to come to some sort of an

understanding at once, for the dog made an impetuous remark on a very high key and then they both started on a trip together. The dog was last seen sauntering along like a whirlwind, the turtle staying right by him. We should be very sorry to lose the dog now, as he has acquired another important and valuable quality. He knows more about turtles than any other dog in the country, and it is mighty hard to find a real good turtle dog.

MATERNAL LOVE IN A RAT.—The following incident is related in the Covington (Ky.) *Journal*, illustrative of that maternal affection which pervades all animal life:

In removing the last boards of a stack of planks, a rat's nest, with nine young ones, was found underneath. The little rodents were about the size of mice, and were able to crawl about at a lively rate. An old-fashioned wire trap was procured, the young rats put into it, a weight put on the top, and it was left on the nest and watched. The trap was a semisphere with a funnel-shaped entrance in the top and a lifting door in the side.

After waiting about half an hour the mother rat made her appearance, showing evident anxiety about her litter. She hesitated some time before approaching the trap, but finally her affection prevailed, and she boldly ventured out, within twenty feet and in full view of the watchers. She ran several times around the prison that contained her young, tried the wires with her teeth, and made demonstrations of solicitude and distress. At length, finding that she could not get in to the young ones, she determined to bring them out to her. The manner in which she accomplished this showed something akin to that reason of which man is wont to boast that he is the only possessor.

Placing herself close against the wires she made a peculiar noise—a kind of gentle squeak—which immediately attracted the attention of her young, and they came to the familiar call. First one little fellow put his nose between the wires, and, being a little encouraged and helped by the mother, who pressed her own nose between the same wires, thus spreading them a little wider apart, he squeezed his head through. In an instant she caught him by the back of the neck, and, in spite of his squealing and crying under the painful process, she pulled him forcibly through the wires and ran off with him under a pile of lumber near by. Probably a minute elapsed before she reappeared, having deposited her rescued young one in safety. She was evidently encouraged by her success, and, emboldened by the fact that she had not been molested, proceeded to rescue one after another of her young in the same manner until she had taken out eight.

The watchers then half buried the trap in the loose dirt, and for a while the devoted mother was in great distress about how to get out the last of her litter. But she soon found that the little fellow couldn't reach her through the top, and she commenced digging down to him, throwing out the dirt eagerly as if incited to extra exertions by the lamentations of her young one. She burrowed just in front of the lifting door, on reaching which she immediately entered, and to her surprise found herself a prisoner. She had sacrificed her own liberty to her mother-love, and, as the event proved, her life also, for she was killed, through her labors and courage in behalf of that feeling which is instinct in all, and which is probably the most sacred impulse of the human heart, should have won mercy from her captors, and secured her from harm.

THE LION AND HIS PECULIARITIES.

THE lion is the most powerful beast of prey. Carnivorous in diet and distinctive in habit, his immense strength enables him completely to carry out nature's instinct.

He belongs to the feline tribe, and like the cat is stealthy, quick of sight and hearing, and swift in movement. The form of his teeth strongly point to his carnivorous habit, and has no flat or quending surface; his under jaw is so articulated as not to allow lateral or quending motion, consequently he cannot masticate like vegetable feeders, but eats by tearing his food like the domestic cat.

His mode of walking indicates agility and strength; the weight of the body rests entirely on the toes and not on the surface of the foot. Nature has beautifully devised an antagonistic structure of muscles, by which the claws are elevated until desired to employ them in seizing prey.

Another peculiarity of this tribe is the dry roughness of their tongue, which has often been noticed in pussey's licking caresses, which contrasts strongly with the smooth moist tongue of the dog.

The surface of the lion's tongue is studded with innumerable conical projections, curved and pointing backward, rising higher from the edges towards the centre. This aids in stripping the particles of flesh from bones.

A lion's tongue in licking the naked skin of man will abrade the skin, and cause the blood to flow. I have somewhere read of a gentleman who had domesticated a lion's whelp, which became fond of his master, and sported like a kitten in his presence. One day while napping the master's hand happened to hang over the side of the couch. The young lion began caressingly to lick the hand, his rasping tongue abraded the skin and caused a copious flow of blood. The pain excited awakened the sleeper, and he endeavored to withdraw his hand; the ferocious nature of the lion was instantly aroused by the taste of blood, when a deep and menacing growl warned the master that it was unsafe to take his hand away, seeing that the animal had suddenly been transformed from an amiable pet to a ferocious brute. Then the man quickly comprehended his danger, and quietly slipped his free hand under his pillow, where there was a ready-loaded pistol, drew trigger, and the coursing bullet put an end to the creature's existence.

The lion formerly inhabited the three divisions of the ancient world, but it now appears to be confined to Africa and the neighboring parts of Asia. Its uniform tawny color, the tufts of black hair at the extremity of its tail, the flowing mane which clothes the head, neck and shoulders of the male, are the distinguishing features from animals of the feline tribe. It is, however, subject to considerable variation, chiefly as regards the quantity and length of the mane and hair on the parts. The lions of Guizerat are almost destitute of any. The African lion has the largest mane, and even they differ somewhat from each other. They also differ in physiognomy. The Asiatic lion is paler in color and less courageous, while the size and strength of each are equal.

Various opinions are expressed by writers in reference to the lion's courage and energy in conflict with the strong; some declaring him to be a cowardly and sneaking animal, attacking the weak and defenceless, while others say he is brave and "acts like a lion." Circumstances undoubtedly would render the same creature at times ferocious, and at other times cowardly.

Hunger seems to stimulate his energy, fierceness and defiance of danger. When well supplied with food he seldom attacks man; and, while capable of great muscular effort, can by a single blow capture and fell an ox or a buffalo, yet when his necessities for food have passed, he seems overcome with lethargy, seeks his lair, and yields himself to quiet and repose like the domestic cat. As a foe he is not open, not even swift of foot; he prefers to steal cat-like upon his prey, and with a tremendous leap to strike and crush his victim. In approaching his prey, great caution is exhibited by screening himself from sight by keeping every bush between him, always taking advantage of the underwood side to conceal his pungent odor for fear of giving alarm.

The reverberating thundering roar of the lion is also used to secure prey. He places his mouth close to the earth, and his terrified voice rolls along the earth, frightening every animal within its sound, causing them to fly precipitately, not knowing from whence it came. Some pass within his reach, who fall an easy prey to his prodigious leaps and powerful paws.

It is said that when man has been bitten by a lion, that he suffers from the effect of the injury long after it has apparently healed, and that yearly there is an outbreak of the wound. The same peculiarity the writer has observed from the bite of a serpent, which is due to the lodgment of some poison in the system.

Caution is wonderfully developed in the creature, and he has an irrepressible fear of a trap. Instances are recorded when he has been deterred from attacking a loose horse, from the fact that the bridle reins were dangling from the neck. This fact being known to hunters, they avail themselves of the strategy, by placing over slaughtered game a handkerchief, or shreds of cloth hanging from a pole, to protect it from being devoured by the lion.

In Mexico and portions of Texas adjacent to Mexico, there exists an animal called the Mexican lion.

In General Sidney Johnson's life-time, and before the late war, he owned a plantation about or near Houston, on Buffalo Bayou; upon it he kept a young Mexican lion, presented to him by some friends. It seemed thoroughly tame and domesticated, and used to follow him in his rambles about his plantation like a dog. It was really a favorite, and inhabited the domicile as a part of the household. One day the General gave a dinner, and when his invited guests had assembled about the festive board, General Johnson noticed his pet sitting behind him waiting for his turn, when he carved a bit of roast, which happened to be underdone, and handed it to him. The smell of blood caused the lion to catch the General's hand, and when he coolly commanded, "Let go Dan, let go Dan!" he lashed his tail and growled. A portion of the guests fled; ladies fainted; but the resolute master, with wonderful coolness, drew his six shooter, shot him through the head, and the tame lion paid the death penalty for his rashness.

General Johnson never recovered fully the use of the maimed member, and it constantly reminded him of the folly of domesticating so ferocious and savage a creature.

JAMES S. BAILEY, M.D.

Now put your bait on the treacherous hook, and cast it in the shady brook, for when the sunfish sees it squirm, he'll surely go for that angle worm.

LION SHOOTING IN AFRICA.

LOST—A GOBBLER.

THE Christmas days are here, the saddest of the year. In the still small hour, when the new morn broke its egg shell, I heard the shriek of the gobbler and the wail of the turkey hen. The bark of the dog had aroused me, the call of the cat had alarmed me, the moonlight was glaring through the window, the screaming mice tore along the passage way, the braying of the mule shuddered on the night air; all nature was horrible. Murder was being done. Tucking the blankets about me I swore no power on earth could move me; I closed my eyes, but not to sleep, the soothing God had left me, I layed on the thorns of unquiet, and was impaled on a lance of thought. The morning broke heavily, the mist arose from the river; I wended my way into my breeches, jerked on my old top coat and made for the turkey pastures. Pe, pe, pe, tuck, tuck, tuck, tuck. "Not a sound was heard, not a funeral note." I strained my eyes through the grayish fog and earnestly besought them to answer. Oh! for one gobble, gobble to ease my aching heart. I called them softly, I called them loudly, though far in the distance I heard the ba-a of the neighbor's sheep. From his long night's rest the aged sun came creeping from out the East; he lay on the clouds like a golden dream, but he gave not my heart delight; he forced his rays through the sombre haze, but his light put my brain in a maze. Before me lay on the cold damp ground, the head of my turkey cock, his eye half shut with a ghastly wink and his mouth was open wide. Beside him wept the turkey hen whose body had disappeared. I turned me away with a silent tear to wrestle with my grief alone, for the day was cold and dark and dreary, my turkies were gone and I was weary. The feathers were wafted right and left by the rascals in their flight, but never a luscious bird was left to carve on Christmas day. I dug them a grave in the frozen earth and buried them side by side, and over their tomb I vowed I'd raise a statue bold and clear.

"The day goes by like a shadow o'er my cake
With sorrow where all was delight;
The hours are coming which the turkies were to bake,
But their bodies are gone out of sight.
Oh play no more my children,
O play no more to day.
We must weep some tears for the gobbler, and the hen,
That were 'wisked away from our pen."

Many's the day and long, we fed them the best old corn, and now, to lie awake and think that from their roof they're torn. Our thoughts were wedded to their fat and often on the coop we sat, in the days that are no more a listening to the mornful howl of our ancient thomas-cat. Farewell old turks, the night comes on and its gloom is sad to see, for never more from the green will I hear thy gobble, gobble—pe, pe, pe,

Softly through the still night the zephyrs whisper to me that the saddest words of all are these:

The gobbler is stolen away,
There is nought for Christmas day.

—W. P. MORGAN in *Saturday Night*

"WHAT'S the matter there, Alice? Don't your shoes fit?"
"No, papa, they don't fit me at all," replied the little one. And then she enumerated all the faults of the shoes in set terms, and reached the climax thus—"Why, they don't even squeak when I go out for a walk."

TIGER TRAPS.

STRONG posts are fixed in the ground so as to form a circle of palisades ten or twelve feet in diameter. Another large circle is formed in the same way outside the other, leaving a space of a foot and a half between the two. In the outer circle a small door is made of a width equal to the space between the circles. A goat or calf is tied to a post in the centre, and the door is opened, so that it stands across the space between the circles. The tiger comes and walks around the outer circle till he finds the entrance. He enters, and walks around the space till he reaches the open door, which he pushes back into its place. The space is too narrow for him to turn round or exert his great strength, and he continues to walk round and round till morning, when he is easily killed, and the bait extricated unhurt.—*London Times*.

(For *Fanciers' Journal*.)

WANTED!—GRASS.

DOMESTIC fowls of all kinds seem to be, in a measure, both carnivorous and granivorous; partaking in this respect of the character of both those whose food consists entirely of insects and slugs, as well as those whose food consists of grain alone. Ducks and geese incline more to grain, and turkeys probably more to insects. Chickens seem to hold an intermediate place; they cannot thrive on either flesh or grain alone, although life may, for a time, be supported on either one or the other diet; if confined strictly to the one diet, however, disease will ultimately be the result.

The nearer we can fix on the natural diet of fowls, the nearer shall we reach success in preserving their health. Of course our plan of confining poultry in small coops and yards is an unnatural restriction on their liberty and habits, and as a result, there must be some care taken that we supply the lacking elements in their food, or in other words, make recompense for that of which we deprive them by their confinement. One of these elements, and probably the most important, is grass, including under this head vegetable food for winter.

I have been experimenting the past summer with a view to testing the merits of a grass run for fowls. I never had a doubt as to the importance of allowing my fowls a free run on the turf, but I was anxious, further, to see to what extent the difference in treatment would affect the fowls. Accordingly while I hatched and reared a brood of chicks in my limited town quarters, I at the same time had several broods of the same stock hatched and reared in the country by a farmer friend of mine; one of the conditions being, that the chicks should not be brought in till they were six months old. No extra care was to be given in the way of food or attention. A few weeks ago these chicks, which have had an unlimited grass run all summer, but very little feed, were returned to me; my own have been carefully fed the whole season, and given limited freedom on a small grass run. Now as to the difference, I find those reared on the farm not only in better condition, weighing at least a pound each more than the home-raised ones, but their plumage is much finer and they seem to be more healthy, because more active.

I have carried this experiment further by having another friend, a dairyman, rear a few for me, giving him half. These were fed first on skim-milk and afterwards with grain, and at the same time given the freedom of a meadow. Here again both grass and feed show how much superior the advantages of farmers are in rearing good stock to those of us who are compelled to give small space.

Under all circumstances if we want the best from our fowls, they should have a *grass run*. Cabbages and the like thrown into their yards will help of course, but the grass is the best. When I have found it impossible to give mine a grass run, I have either dug turf for them or cut grass from my lawn and carried it to them, and in every case I have found it pay.

ADVERTISEMENTS

From reliable parties, on any subjects interesting to Fanciers, will be inserted at 10 cents per line, set solid; if displayed, 15 cents per line will be charged.

Advertisements from unknown parties must be paid for in advance.

SHERMAN & Co., PRINTERS, PHILADELPHIA.

CONTRIBUTORS.

To such as have original and meritorious ideas to offer, and having but little, if any, experience in writing for publication, we would suggest that they write as plainly as possible, giving us the facts, skipping one line in two, to leave room for corrections which we will cheerfully attend to before going to press. Write only on one side of the paper.—ED.

A NEW DEPARTURE.

ONE of the marked features of the premium list offered by the *Western New York Poultry Society*, whose exhibition is to be held at Buffalo, January 14 to 21 inclusive, is what they are pleased to call a "New Departure," which is a

SINGLE BIRD PREMIUM LIST.

This system has been the prevailing one in England from time immemorial, but we think the *Western New York Poultry Society* are the first to attempt its inauguration in this country; its merits over a premium list for pairs or trios will hardly be questioned by breeders or fanciers.

Under the old plan of awarding premiums to trios, how often is it the case that a trio of birds are awarded first premium, when if exhibited singly, some one or may be two of the birds would only command a second or third premium? yet, they are awarded first premium, simply because the three birds taken together figure a higher average number of points than any other trio in their class on exhibition, and this highest average is often made so because of the very superior qualities of some one bird composing the trio; so that under the old plan the two inferior birds are awarded first premium, not on their own merits, not because they are in fact the best birds in their class on exhibition, but because they are fortunate enough to be found in good company; or in other words, they are awarded first premium, and it is so published and advertised to the world, because one bird out of the three figures points enough to make the trio, taken as a whole, overcome the defects of the two inferior birds and all are awarded first premiums, when in fact there is only one first class bird in the coop.

The Single Bird Premium List enables the purchaser of breeding stock to purchase his birds singly, and thereby purchase all first-premium birds if he desires; and he more readily obtain birds not akin, which is very desirable in mating breeding stock; under the old plan of exhibiting in pairs or trios exhibitors usually decline separating a trio to sell single birds. These are only a few of the many arguments in favor of a single bird premium list. We wish the new plan success; and we learn from the officers of the Society that from all sources they have received words of congratulation and encouragement, and the present indications are that they will be rewarded by drawing together a very large number of exhibitors, as well as a large show of unusually fine birds.

PREMIUMS.

WE do not propose to buy our subscribers with Premiums; but, as we have been very successful the past season in raising a large quantity of Fancy Pigeons of rare kinds, we will allow, in Pigeons, thirty per cent. when five subscribers or more are sent at one time at \$2.50 each.

(For Fanciers' Journal.)

HIGH PRICES FOR RABBITS.

THE most of our readers are probably not aware that the Japanese are passing through a mania on this subject. Every steamer leaving San Francisco carries over from 500 to 1000 rabbits, for which the Japs pay most extravagant prices. An instance of the intensity of the fever was lately recorded in the California press. A person in the poorer ranks of life, after raising enough money, by unusual exertions, purchased a pair, which unfortunately died on his hand. His grief and disappointment was so great that his daughter sold herself into servitude, and presented her father with the proceeds. He speedily bought another pair of rabbits, and these also dying, he, in despair, committed suicide. His daughter, hearing the sad news, also killed herself.

A correspondent states that an officer on one of these steamers told him that on his last trip he saw 1200 Mexican dollars counted down on the deck of the ship as the price of one rabbit. Probably this is the highest price recorded in this fancy.

ORGANIZATION OF A POULTRY AND PIGEON CLUB.

A MEETING was held at the store of Mr. John Spealler, No. 1415 North Fourth Street, Philadelphia, on Saturday evening, December 6th, and a club formed under the name and style of *The Keystone Poultry and Pigeon Club* of Philadelphia. The following officers were elected for the ensuing year: Paul M. Baker, Pres't., Thos. S. Armstrong, Sec'y, Wm. M. Scattergood, Treas. The Club intend holding an Exhibition sometime during the month of February. All communication on the subject should be addressed to

THOS. S. ARMSTRONG,
Trenton, N. J.

A YOUNG man was struck by lightning near Trenton, N. J., recently, and when the neighbors began to flock to the spot to view the body, they found a man standing beside it trying to sell lightning rods.

DRINKING FOUNTAINS.

I HAVE been a fancier for twenty-five or thirty years, and during that time have tested or examined nearly everything offered in the shape of a fountain or drinking vessel for fowls and pigeons. In the years of my boyhood I was satisfied with a brick hollowed out, in the form of a trough, which I then thought perfection; later or rather soon after, I heard of and adopted the rather ancient discovery of an inverted jug, filled with water and turned over a pan or saucer, putting a chip or nail under the mouth of the jug for the gradual escape of the water as required. Finally, I had an earthen fountain made in a similar shape, somewhat resembling the present improved stone fountain, but without cover to the water-trough. These lasted but a short time, exposure to the weather, slight frosts, and rain will soon operate on them so as to cause them to crumble to pieces.

Then came the tinware fountains, which, when well made, lasted a short time, with indifferent care. After that, the iron ones, galvanized, which I believe were recommended to stand the frost, which no fountain will do unprotected in northern latitudes. Even if it would stand solid freezing, of what use would such "hard water" be to the fowls, they cannot drink ice; an open iron (if made very strong) or tin dish is better suited to the coldest, freezing weather, and the fountains kept laid away, clean and dry, until spring or summer, when their great value in keeping the water *clean, cool, and pure* can be appreciated all through the warm season until frost reappears.

The best fountain for this purpose I discovered in moderate use in Philadelphia, about seven years ago. It is well made of stoneware (see cut) and will last a lifetime; it is easily filled and kept clean; there is no patent on it, and it can be ordered at any stoneware pottery—earthenware will do but will not last so long. The two-gallon size is made by using a two-gallon jug, the front or bulging part of which is composed of a half section of a gallon jug and fitted on, with an opening made in lower part for drinking-trough, while in the soft clayey state. When complete it is, in my opinion, all points considered, the best kind of fountain existing for fowls and pigeons, or any small pets.

To fill them, place them in a horizontal position and pour or pump the water into the opening. To prevent dirt being scratched or thrown into the trough, where there are many fowls confined, let it be elevated on a box or stool within reach of them all; but always rinse well before refilling.

A BOARDER at one of our city boarding houses the other day remarked to a fellow-boarder at the table: "This must be a healthy place for chickens." "Why?" asked the other. "Because I never see any dead ones hereabouts."

DOMESTIC DEPARTMENT.

HOUSEHOLD RECIPES.

THE principal contributor to this department proposes to make it valuable for reference to those who desire to furnish their table in a healthy and economical manner. Dyspeptics, and those who are in danger of becoming so, will generally be able to select something agreeable to their taste which they can digest easily.

We do not solicit directions for cooking pork, or rich pastry of any kind. Even for pie crust, if it must be eaten, we prefer fat beef drippings and mashed potatoes for shortening in preference to lard. The absurd mixtures called French cookery, in which the principal substance is made to taste like nothing above or below the earth, we are content to leave to the eating and digesting of those who can relish it on account of a fashionable name, yet we are ever glad of friendly suggestions, criticisms, or information. Our own living consists principally of beef, cooked in various ways, according to the piece selected; mutton, very little veal, tripe, oysters, and beans (generally limas), from which we make our principal meals in winter; and puddings of rice, bread, tapioca, sago, corn starch, corn meal, and oat meal, the latter often in the form of mush which is served with milk for supper. We keep on hand for lunch, when required, gingerbread, ginger cakes, custards, blanc mange, sponge cake, apples, cheese, &c., with milk, ale, or water having a tablespoonful of vinegar to the tumblerful, which all can drink to their own health, in moderate quantities, when water alone disagrees with them.

Directions for Cooking Beef in an economical way, that will relish.—After you tire of your nice roast, a portion of which you have eaten both hot and cold sliced, and still have remnants which you would serve for breakfast, chop them finely, and form into round cakes, after adding equal parts of potato mashed with a spoonful of butter and salt to taste. Fry to a rich brown on a hot griddle; eat with corn meal and flour cake. For a change, next time add to the cold relicts, the gravy left, a little warm water, piece of butter, a little black pepper, salt, if necessary, and a thick upper crust, baking together in the form of a pie. We do not expect to offer much that is new, but our object is to remind cooks of healthy preparations, materials for which, by careless ones, are often discarded.

Breakfast Cake.—In absence of potatoes; or, to be eaten with butter while warm. Equal parts sifted corn meal and flour; stir or sift in carefully while dry one teaspoonful of cream of tartar. Dissolve in milk (sufficient to mix, and form a batter that will pour easily into baking tins), one level teaspoonful each of carbonate of soda and salt, sweeten to taste. Lastly, add one or two (according to supply) well-beaten eggs to one cake, and bake in a quick oven to a nice brown. Do not scald and spoil your meal.

(For Fanciers' Journal.)

THE PIGEON FANCY.

The pigeon fancy is assuming vast proportions in the United States. Within the last twenty years the buying, selling, and importation of pigeons has caused to spring up a number of business houses devoted entirely to the purpose of supplying the demand for such pets. Germany and England are the countries from which the largest number of birds are exported. The love for pets evinced by the people of both nations has produced, within the last five centuries, numberless combinations of colors, and points of greater interest, in this class of the feathered tribe. Each of these people has, however, had its own peculiar fancy. The Germans, living so near the birth-place of fine art, have devoted their time and skill to the production of brilliancy of coloring, or odd contrasts of colors, and the toy birds have issued from their hands in every conceivable combination of the hues natural to pigeons, or striking to the eye. The English, on the contrary, turned their attention to shape, or whatever was odd and curious, and by long selection and careful breeding have obtained what are called the high fancy birds, namely, the English Pouter, Carrier, and Almond Tumbler, or, as it should be called, the Short-faced Tumbler. We Americans should be thankful that those two nations devoted themselves to such opposite purposes. Between them they have worked to our advantage. We now have all the varieties ready-made to our hands; whereas, if both had worked towards the same desires, there would have been a much shorter and more imperfect list to choose from. We do not propose to discuss the probable origin of the different varieties, as Dundreary says, "that is one of those things a fellow never can find out," and if he did, what good would it do him?

That the toy birds mostly originated in Germany is conceded, and that the high fancies were perfected in England is beyond doubt, though some say the name *Almond* is but a contraction of *Allmand*, signifying German, therefore it must be of German origin. Supposing it was, it did not become short-faced until it passed through generations in England, and we cannot say much for its surety of coloring even at this late day.

But we must return to the fanciers here. As a nation grows older its inhabitants become more settled; instead of the hurry and push of new settlements, its towns present the appearance of stability, order, and ease. Its habitations collect more of the accessories of old homes. The people move more leisurely, and pets of all kinds make themselves perfectly happy in the homes provided by their contented owners. One of the surest signs of content and ease is an old dove-cote, with numerous and tame inhabitants.

Our country is growing old, and many symptoms of its age are showing themselves by the fancies that its people are finding time to enjoy; that is, its people upon the eastern seaboard, for upon the western shore all is yet new and agitated.

These fancies express themselves in various ways. A man must have leisure to enjoy a fancy, or money to pay for it, and either presupposes a state of society where one does not have to work himself to death to obtain a living, or one where, mayhap, fortunes are accumulated, and hereditarily descend to the one who possesses the fancy. Therefore, when we observe that fancies for pets are rife in a community, we

may know that the community is emerging from barbarism, and reaching towards the humanizing and cultivated interests.

When a man emerges by his own efforts from poverty, the first thing he does after making his fortune is to indulge himself in little fancies. He buys small pictures and good furniture, books find their way into his house, but when he finds time to rest entirely from his labors, and cultivate his æsthetic feelings, the commoner things are banished, and none but fine specimens of art or literature give him pleasure. As a self-made man once remarked to us, "he grows away from the minor things that once contented him, and, his fortune established, inclination and time are his to indulge in anything that cultivates or increases happiness, chief among which is the fancy for pets."

Thus we see the life of man is but an epitome of the life of a nation. As soon as the one has a living assured fancies crop out, as soon as the other is sufficiently old to have internal economies established, and a certain amount of leisure divided among its people, hen fevers, horse fevers, and pigeon fevers run their course. The hen fever or fancy is a thing of the past; it combined the useful with the ornamental. It was thought in our practical country to be showing too much weakness to give way entirely to a desire for the ornamental, and many a lover of the beautiful covered his shamefacedness with expressions concerning the great number of eggs, &c., which were to balance the account, useful *versus* ornamental. We wonder how many "got their money back"—no true fancier we will venture to say. And why? A fancier gives up to his fancy because of the enjoyment it yields him. When he wishes to make by it, his dreams become connected with dollars and cents, then it is a business and not a fancy, and the love for that massive Brahma, elegant game, or exquisite almond, is adulterated by, "How much will I sell him for?"

In speaking of the hen fever as a thing of the past, we do not mean that it has passed away. No, no, on the contrary it still rages, but it commenced suddenly about thirty years ago, just as the pigeon fancy began within the last few years.

The pigeon fancy is ornamental. It is of the same class as those of the florist, the artist, or the musician. There is no more *use* in it than in them, yet who denies the great worth of either or all. A constant communion with these fancies is known to be the surest mode of refining and tempering the indifferent clay of which mankind is made.

The pigeon fancy is peculiarly adapted to humanize the rougher elements of our natures. The quietness necessary in the loft acts by imperceptible degrees upon the one in charge of the birds. Gentleness becomes a distinguishing trait in his nature, and he forms habits that accompany him into the ordinary routine of life.

It is noticeable that children, especially babies, know by instinct the fancier. They will leave their mother's arms and go to him when nothing can draw them to others. How many a rough, boisterous boy has been toned down by the present of a pair of birds, and more than one man has grown to be a more devoted father and purer husband by reason of his love for pigeons.

We advise any lady looking for a husband never to let a fancier slip; their motto seems to be "Let us have peace." The most henpecked man we know is an old gentleman eighty years old, who steals off to his loft to sit among his pigeons, and escape from his wife's tongue. What a glorious thing

it is to have such a haven of rest, especially when the wife and little ones are anxious to be there too, and only wait for the coming of papa to tread tiptoe to the sacred spot where the ever-pleasing pets are kept.

Many years ago, in a neighboring State, there was a home we often visited, for a common sympathy bound our soul to the occupants of that house. Our school-boy friend had grown to man's estate, had taken to himself a wife, whose cheerful smile and pleasant voice oft bade us welcome to their charming fireside, while their children gathered about us to lisp their happy tales of tumbling pigeons. Many a day did we watch the tumblers sporting in the air, the sunlight glittering on their burnished plumage. Then came the thunders and lightnings of the cloud that swept our land and drifted us so far apart. Four years, and with trepidations we turned our steps towards that home. It was late in the evening when the corner of the woods that veiled for a time the cherished spot was turned. The sun was drawing the golden twilight after him as he sank to rest, the lengthened shadows were falling upon the ragged sward, and one of them lay at our feet. We followed its sombre outline until our eyes discovered the dilapidated chimney that stood like a lonely sentinel to mark the death of happiness. As we stood by the charred gateway, looking upon all that was left of that home, a bird shot through the air and rested upon the ruined tower. It was one of the old tumblers, whose gambollings we had so often watched in "the days that are no more."

DR. W. P. MORGAN.

RABBIT-KEEPING.

THIS subject is one that is as yet in its infancy; in fact, public interest can hardly be said to have been excited; measuring the attention paid to this fancy, by that which has been devoted to poultry. Still that there is a growing fondness for these pretty pets, is evident from the very large number of letters received daily by the writer, and other fanciers; and the inquiries coming from places so remote from each other, lead to the conclusion that it will not be long before every portion of the country which has its poultry fanciers, will also add to their local exhibitions a class for rabbits.

Many would-be fanciers are deterred from becoming so by the prevalent opinion that rabbit-keeping is a very troublesome, expensive, and annoying occupation. Troublesome in the care necessarily bestowed upon them, and the watchfulness required to protect them from cats, rats and other preying vermin. Expensive, in the outlay required to secure good stock and suitable accommodations. Annoying, in the injury resulting to fruit trees where the animals are allowed to run at large, and in the mishaps attendant to the does burrowing in the earth and nesting out of the sight and reach of the owner. All of which objections are easily overcome, and are in fact without foundation, if a proper system of rabbit-keeping is followed.

In my boyhood days I kept the common white rabbit in pits or courts, frequently accumulating upwards of fifty together; and in later years, when the fancy came back to me, and led me to invest in the newer and "fancy" varieties, I have held on to the same system, although much modified and improved by more mature judgment and experience. In answer to the objection of the trouble required, I find them no more care than poultry; and in the rearing

of young, poultry really NEED the greatest attention. Regularity in feeding at morning and night, and a change of diet, together with close attention to cleanliness, being all the care required to insure success. If kept in hutches or in rooms, it must be apparent to any observer that cats and rats *must be kept out*, which is certainly no difficult matter. Covering the windows with wire cloth, effectually excludes cats, and yet allows perfect ventilation, while tinning the floors all around the edges of the room, a width of eight inches, and allowing the tin to extend up the sides some three or four inches, is a sure stopper to the entrance of the rats. I find, however, that rats are *not* as destructive in this fancy as in that of chickens and pigeons. During some repairs and alterations to my rabbitry, which was in an incomplete state for upwards of a month, the rats had free ingress to the floor of the house. The wires of my breeding hutches were one and one quarter inches apart, so that access to the young was comparatively easy; yet, although rats were swarming through that and other buildings adjoining, and devoured any grain that was left on the floor or remaining in the feeding pail they did not touch the young rabbits, of which I had nearly one hundred in the room at that time. I would not, however, recommend the amateur to run any such risk; in the present case it was unavoidable, and I would not willingly repeat it. Prevention is so easy, that it would be folly to invite disaster. I must not omit to state that on one night one of my Angora bucks, about five months old, got out of his hutch, and the next morning a large rat was found dead on the floor, which was evidently the result of an encounter. Possibly, attempts to enter the hutches may have been made, and repulsed by the does, which will often fight savagely in defence of their young.

Next as to the plea of expensiveness, \$50 will not go far towards putting up a poultry house and run, and stocking it with choice fowls; but the same amount will purchase a choice pair of rabbits, and build a hutch, with four apartments; one for the bucks, and three for the doe and young ones. The comparison between the two fancies as to which proves the soonest remunerative is again in favor of the rabbits. In the poultry fancy we must wait a whole season before the result of our labor is apparent, and before we can breed from the progeny of the original stock; and they are rarely less than eight months of age when sufficiently developed to offer for sale.

With rabbits, the progeny is salable at two months old, and sufficiently developed for breeding purposes at five or six months. Taking six litters a year, and four young at a litter, which is a very low average, and putting the progeny into the breeding pens at six months old, the amateur will have a stock of over one hundred animals at the expiration of the year; this is allowing the litters to be equally divided in sex; half bucks and half does.

When it is known that eight or nine litters *can* be produced during the season, and that it is not unusual for the does to bring forth eight or ten at a litter, the above estimate will be seen to be very low. Taking eight litters as the yearly production, and six the number produced each time, and allowing the same reproductiveness as above, the stock at the expiration of the year would number *two hundred and thirty*.

With poultry it must be an unusual pair of fowls that will produce one hundred eggs and a clutch of chickens in one season. The result of the comparison is apparent, and largely in favor of the rabbits.

Lastly, as to the annoyance. To succeed in rabbit-breeding the stock must NOT be allowed to run at will. In breeding large numbers for the market, it may be necessary to resort to the former English system of warrens; but even in this case the ground should be inclosed by a tight board fence, with the ends set at least three feet deep in the earth to prevent burrowing out. A better plan would be to use large courts paved with stone or cement, and that lightly covered with earth. Bred for fancy, or with a view of sale as fancy stock, they should be kept in hutches, or on the floor of some vermin-proof building, divided into suitable compartments. Thus cared for, they can never be an annoyance, but rather a source of profit, as well as of pleasure.—HALSTED in *Poultry Bulletin*.

A GAME STANDARD.

IN the month of March last I published my standard of the requisite qualifications that make up a perfect game-fowl, and restricted my scale of points to the number 50. The Convention that met in New York to revise the standard did not take up the game-fowl for some reason, and I concluded to make up a standard of this variety of fowls, as well as to correct many of the mistakes that were made in the other classes. I consider the scale I adopted of 50 points, more simple and convenient than the present one, consisting of 100 points. These numbers are merely arbitrary signs; and the number 50 will express as much as the number 100, and only half the number of figures are used. I found that the judges at fairs would pay no respect to the present scale on account of its complications and the time it consumed in studying it out. The one I have adopted is so short and simple that any one can carry it in his head without continually referring to the book. The number 5 expresses the highest number in my standard. The figure 2 stands for *Good*; 3, *Better*; 5, *Best*, since perfection is rarely attainable, and is only so by comparison. If we have a fowl that does not rank as high as *good*, but approximates it, we can designate it by "*Highly Commended*," and one degree lower by "*Commended*." If the fowl does not commend itself to the judges at all, the exhibitor had better cut off its head. I submit the following as a game standard for Black Reds:

THE COCK.

- Head, Neck and Hackle.—Orange-red to the points, and entirely free from black stripes, 5
- Face, Comb, Wattles and Deaf-ear.—Bright red, 5
- Eye.—Vermilion, 5
- Beak.—Dark-greenish horn-color, 5
- Back and Wing-Bow.—Rich, clear bright crimson, gradually shading into orange on the rump-hackles, which should match the neck, 5
- Flight Coverts.—Clear rich bay, 5
- Wing-Bar.—Steel-blue, and tail rich black, with slight purple-bronze shade in secondary sickles, 5
- Breast and Thighs.—A bright blue-black, free from any mixture of color, 5
- Legs and Feet.—Willow or olive-green, 5
- Style and Condition.—Shape of the bird; carriage of the head, wings and tail; brilliancy of plumage; health, size and weight, 5

THE HEN.

- Head and Neck.—Gold and black, principally gold, each feather having a golden shaft and margin, with narrow, black stripes between. In other words the hackle is striped black down the centre, the shaft being the same in color as the margin; the gold and black should not run into each other, 5
- Comb, Wattles, Face and Ear-lobes.—Bright red, 5
- Eye, Beak, Legs and Feet.—To match the cock, 5
- Back and Wings.—A light drab-brown, very finely marked with a small, wavy, irregular marking like that of the back of a partridge. Brown, yellowish, or penciled or rusty wings are objectionable, 5
- Breast.—Rich salmon color, the centre of each feather being one shade lighter, 5
- Belly.—Ashy gray, tinged with salmon, 5
- Tail.—Black, 5
- Body-color.—Partridge, or as near to the color of that bird as possible, running up the outside or top feathers of the tail, 5
- Style.—Shape of the bird, general carriage, brilliancy and accuracy of plumage, 5
- Condition.—Health, size and weight, 5

ISAAC VAN WINKLE.

GREENVILLE, N. J.

THE San Diego (Cal.) *Union* says: "A miner from Arizona, whose name we were unable to ascertain, went fishing down on Culverwell's wharf, between four and five o'clock last evening. He had been fishing but a short time when he drew up on the wharf an ordinary sized black liquor bottle. He was not frightened at the bottle, but he was wonderfully perplexed as to what had 'bitten' and how and by whom the bottle had been attached to his line about a foot above the hook. The miner called out, and several other persons who were fishing near him ran to see the wonderful catch. An examination showed that there was a devil-fish inside the bottle, and that one of his arms extended out of the neck, and was firmly entwined around the line. The devil-fish had probably crawled into the bottle when young, and finding it a nice, comfortable residence, he had committed the indiscretion of remaining there until he had grown so large he could not get out. He had grown to nearly the size of his glass house, and, in fact, was rather cramped for room. The miner was very much elated over his prize, and, in spite of the protestations of the crowd, he broke the bottle to get a better view of the monster."

THE PENNSYLVANIA STATE POULTRY ASSOCIATION.—Some years ago when the society was formed, the members not only appointed officers, but attorneys also. They selected Theodore Cuyler and Constant Guillou, Esqs., as their attorneys. The first announcement that these gentlemen received of the exalted consideration in which they were held in chickendom was in the newspapers of the next morning. Some of their brethren of the bar addressed them a roguish letter, purporting to come from the society, asking their opinion upon the question, whether an unnaturalized Shanghai rooster was entitled to the jurisdiction of the Federal courts. The learned counsel are said to have replied that he might be entitled to sue in the law side of the court; but that a court of equity, which abhors the approach of the fowl, would not sustain a bill filed by the rooster.

At the time the matter made a little spirit at the bar, and a humorous paper on the subject, from the fluent pen of Mr. Guillou, is still extant.

A CODE ON POULTRY KEEPING.

SHOWING HOW EVERY PULLET MAY BE MADE TO RETURN A PROFIT OF
1£ IN 18 MOS. (SEE NO 1.)

(Continued from page 12.)

Let a farmer care for his cows and pigs as he does for his poultry, and he will find they also "don't pay;" let him house them in a confined, ill-ventilated house, clean them once a year, and feed them occasionally upon a little *light* corn, or other *refuse*, if such is on hand, and if not, let them "do for themselves," and at the end of twelve months (if his cows and pigs are alive at all) let him say if they pay him better than his fowls.—*Stephen's Book of the Farm.*

As cockerels are more profitable than pullets to fatten, owing to their hardiness and extra size, it will be well to hatch as many of this sex as possible for this purpose.

The flesh of large fowls may be as delicate, juicy, and well-flavored as that of smaller breeds. It is as absurd to say larger breeds must necessarily be inferior, as to say that the splendid prize breeds of Leicester sheep, or shorthorn oxen, must be coarse owing to their size. The best-shaped and most delicately-flavored chicken I ever ate was a cross between a large Brahma cock and Dorking hen, and weighed at the age of four months six pounds.

Select only those eggs pointed at the ends, avoiding any that have a tendency to roundness of form; also examine the position of the air cavities in the eggs, and only retain those that have them placed directly at the apex of the blunt or larger end, avoiding all that have them placed at all to the side. In this way eight eggs out of ten will produce cockerels.—*Columella, Mascall, Stephanus, Réaumer, Parmentier, Stephens, Sketchley, &c.*

In hatching chickens for the purpose of producing eggs, it is very important to select eggs *only* from those hens that have proved themselves prolific egg-producers. Egg-laying is often as much a specialty of individual *birds* as it is of particular *breeds*. In the same way the *offspring* of individual cows celebrated as milkers very generally inherit their good qualities.

It is always well to keep a few large full-feathered Cochins for hatching purposes, they being only too often ready to undertake the task. They are also the best for hatching duck's eggs.

It is very important, and a fact not at all generally known, that a hen may be induced to sit at *any* season, by confining her in a dark room in a covered basket, only large enough to contain her nest. She *must* be kept warm, and fed on stimulating food.—*MM. Bosc, Parmentier.*

A passing remark as to ducks will not be out of place. Never be so foolish or extravagant as to keep a drake and two ducks (as many people do) throughout the year, for the purpose of supplying a brood or two of ducks in the spring. These three ducks will cost you, through the twelve months you keep them, not less than 2½d. per week each (probably more). This in twelve months will amount to £1 12s. 6d. The proverb says: "Fools build houses for wise men to live in," so let fools keep ducks to supply the wise with eggs. A sitting of eggs can generally be procured for 1s. per dozen. Ducks are most voracious, and there is no satisfying their craving appetites. The best eggs to procure are the Brazilian and Rouen. From my own observation of them in Brazil, I can speak as to their being ready for the table at ten or twelve weeks old.

In my calculations of profit I have taken no account whatever of the great benefit obtained by fowls from the destruction of innumerable worms, grubs, flies, beetles, insects, &c., and which Mr. Mechi (no mean authority) considers invaluable. Nor have I taken into consideration the value of their feathers when killed, or of the (occasional only, it may be) high and fancy price that may be obtained in disposing of one's best birds for stock purposes, as well as eggs for hatching; and, indeed, where really good stock is *known* to be kept, applications for such will soon prove numerous; and this last item is often found important and highly remunerative, and it in no way interferes with the general routine of market business.

K. B. EDWARDS.

THE BUCKS COUNTY POULTRY ASSOCIATION.

Organized Nov. 15, 1873. Officers for the year 1873-4. President: A. M. Dickie, Doylestown. Vice-Presidents: E. T. Ochs, Quakertown; E. G. Harrison, Hulmeville. Corresponding Secretary: T. H. Walton (P. O. Box 130), Doylestown. Recording Secretary: Theodore P. Harvey, Doylestown. Treasurer: H. M. Twining, Doylestown. Executive Committee: A. M. Dickie, Doylestown; E. T. Ochs, Quakertown; E. G. Harrison, Hulmeville; T. H. Walton, Theo. P. Harvey, H. M. Twining, W. T. Rogers, W. T. Eisenhart, Charles Rotzell, Wm. FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

VOL. I.

PHILADELPHIA, JANUARY 15, 1874.

No. 3.

OUR WEEKLY JOURNAL.

"A NEW POULTRY JOURNAL.—We are in the receipt of the first number of the *Fanciers' Journal and Poultry Exchange*, published weekly, by JOSEPH M. WADE, Philadelphia, Pa. The typography of the Journal is neat, but we doubt the feasibility of publishing a weekly journal in the poultry interest at the present time. We do not believe the demands of the breeders require a weekly journal, still we hope it may prove a success, but very much doubt it. Price, \$2.50 a year."—*The Rural Home*.

We are obliged to our friend for its praise relating to our typographical appearance. It is very natural and easy to believe nearly all said in our favor, but we do not exactly understand the nature of the ground upon which it doubts the feasibility of publishing a weekly journal in the poultry interest, as relating to this, the "*Fanciers' Journal*," which certainly does not design to limit its columns or contributors to the subject of poultry keeping. As its name indicates, it includes and will eventually treat of all subjects of interest to fanciers, of all descriptions of animals, and the various departments of animated nature. We may even feel called upon to increase its interest by adding a department of horticulture, or culture of any sort, having a tendency to enlighten and improve the inquiring mind, especially of the young, thus distracting the attention from less worthy pleasures and pursuits, which are ever drawing the young and inexperienced into whirlpools of vice and ruin. We would cultivate in them a love of pets of some kind, which also may be found profitable, financially, thus frequently adding new attractions to the home associations.

In regard to the ultimate success of the Journal, we base our faith somewhat also on its only *special* feature, that of making it a cheap and desirable weekly for advertising and exchange of such stock as our fanciers wish to fully describe and dispose of, at a less cost in the weekly, previous to the reappearance of the slower monthly journals. Our prospect of "success" in this direction is most flattering, as a glance at the advertising columns will show, considering the fact that we have not yet had occasion to especially solicit the "ad's" offered. We have, as yet, printed only a small portion of the favorable notices and cheering words of correspondents who are anxious to contribute to its success, claiming that a *weekly* fanciers' journal is in every way desirable; at all events, it is an experiment which we see no good reason to repent of, and shall contribute all the means and energy that we can command to promote its success.

"THE FANCIERS' JOURNAL AND POULTRY EXCHANGE is a new weekly journal, containing sixteen pages of reading matter, published at 39 North Ninth Street, and devoted to the scientific breeding and management of poultry, &c., &c. It is owned and ably edited by J. M. WADE. Subscription price, \$2.50 per annum."—*Commercial List and Price Current*.

A BISHOP fond of hunting, being reminded that the apostles never hunted, replied: "No, shooting was very bad in Palestine—so they went fishing instead."

(For Fanciers' Journal.)

BUFFALO EXHIBITION.

The Fourth Annual Show of the Western New York Poultry Society is to be held at Buffalo, January 15th to 21st, inclusive, Sunday excepted.

All specimens entered should be shipped in time to reach the Exhibition Hall January 14th, as that day is set apart for the reception of specimens and arranging the Hall in order to open the exhibition to the public on the morning of January 15th.

Any person who may not have received a premium list, will receive one by applying to the Secretary.

We offer a premium list amounting in the aggregate to about five thousand dollars *in cash*, which is the largest ever offered in this country.

We have adopted the English plan of offering premiums on *single birds* instead of trios, the old stereotyped plan, and we believe the *single-bird* premium list recommends itself to every breeder and fancier in the country. From all sections we have letters of indorsement of the new plan, and we confidently expect the result of this change will be to call together at our show a larger number of good birds, and a far less percentage of poor birds, than ever before collected at one show in America. We also have the assurance of many of the best breeders in the country that they will be present in person, which will add largely to the interest of the occasion.

The premium extraordinary, of one hundred dollars in gold, offered by Wm. H. Churchman, Esq., for the best dark Brahma hen, from twenty to twenty-four months old, will draw together without doubt the best collection of this valuable class ever seen in one exhibition. This is a grand sweepstakes premium, in which every hen entered becomes a part; thus the owner of the successful specimen will not only receive the one hundred dollars in gold, but will also receive the entire collection of hens entered for this premium. Then, should he invest the one hundred dollars in gold for the best cock that can be procured, he would have a breeding pen of dark Brahmas that would be the envy of every lover of this beautiful and valuable variety.

Our Society has always found it convenient to settle with and pay all foreign exhibitors who may remain till after awards are made before they go home, and there never has been any delay in settling with those who have not been present, and we mean that all our shows shall be characterized with the same promptitude. Yours, &c.,

GEO. W. WHITE,
Secretary.

(For Fanciers' Journal.)

VEGETABLE FOOD FOR FOWLS.

Now that winter has laid his icy hand upon the grass and other succulent herbs with which the fowls supply themselves in summer, all having these pets under their care

should see that they have a plentiful supply of green food of some kind.

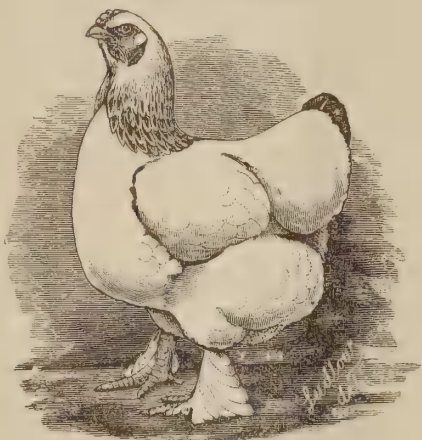

There is among the refuse garbage of almost every family cabbage leaves, celery tops, potato parings, &c., enough to furnish a supply for a few fowls. But if you have many, there will also be a demand for potatoes and turnips, or any other vegetables, chopped fine, as excellent substitutes for grass and herbs at this season of the year, all of which will be highly relished, and contribute to the health and profits of the poultry-yard inhabitants. WM. E. FLOWERS.

NOTE.—See article "Hay for Fowls in Winter."

(For Fanciers' Journal.)

HAY FOR FOWLS IN WINTER.

MANY years ago, when a young fancier, I often noticed that after making new nests, in pens where the fowls were confined in winter, that they would gradually disappear. It was sometime before I discovered what became of them, the fact was they were eaten by the fowls. Since then, when vegetable food was scarce, I have always kept good sweet hay within their reach. It should be kept in a rack or tied in a bundle and hung up. It must not be allowed to get in the dirt and trampled on. I do not think it any advantage to cut the hay fine.

(For Fanciers' Journal.)

SCIENTIFIC BREEDING OF LIGHT BRAHMAS FOR EXHIBITION.

ARTICLE III.

CARE AND SELECTION OF EGGS, MANAGEMENT OF SETTING HENS, ETC.

To some the question may arise, How shall I keep my eggs fresh if I keep each hen's eggs separate until she has laid enough for a setting? After trying various methods, experience has satisfied me that eggs can be kept fresh and fertile for two or three weeks by simply placing them, butt end down, in a shallow dish filled with oats or bran. They should be kept in a moderately cold moist place; I usually keep mine in the cellar. With regard to selecting eggs, I will quote a few words from Wright, on page 110, Chapter IV, of "The Brahma Fowl." He says: "So many follies have been uttered concerning this matter that we almost fear to hazard a fresh assertion. But in our own experience we have generally found that the best shaped Brahma chickens were hatched from eggs rather short and round; whilst very long eggs, especially if much pointed at the small end, almost always bred birds with some awkwardness in style or carriage—probably from the chick being incased in the shell.

We had one hen which always laid such eggs, and although she and her sultan were free from the fault, all her chicks had backs drooping to the tail. It may be different with others; we give the hint for what it is worth. It is, however, certain that smooth-shelled eggs alone are proper for hatching in this variety, rough shells generally showing some derangement of the organs, and being often sterile. The color is of little importance; we prefer a rather dark egg, but the best hen we ever possessed for breeding laid eggs perfectly white. Eggs should be chosen of the fair average size usually laid by the hen they are from, any unusually large or small being rejected. The absolute size is of little importance, some hens laying immense eggs and others small ones."

In regard to the management of setting hens, I think the best results will be obtained by using small pens, similar to the breeding pens, in which to set the hens; by pursuing this plan each hen will have undisturbed possession of her own nest, besides having a small yard for exercise, dust-bath, &c. The perch of course will be removed. The nest-box should be about fourteen inches square, and eight inches deep. Now fill it two-thirds full of damp earth, pick out all the hard lumps and stones, scoop out enough to make it hollow in the centre, sufficiently large for the eggs, but not deep enough to cause the eggs to roll on top of each other. Now cut a sod the size of the box, shave it down thin, and fit it in the box, grass side up, and your nest is made. There is no difficulty in making a hen set just where you want her to; a little patience and tact is all that is required. Be sure that your hen wants to set. This fact being ascertained, go to her at night, lift her gently and quietly from her nest and carry her to the nest you have prepared for her. Carefully place her upon it, first putting three or four porcelain nest-eggs under her, then cover her over with a box, and let her remain until the afternoon of the following day, then quietly remove the cover. If she does not come off the nest herself, lift her off as gently as possible. Place food and water before her, and leave her alone for twenty minutes or half an hour; in nine cases out of ten she will go back to the nest of her own accord. If she does not seem inclined to do so at the expiration of half an hour, place her on the nest, and cover her up as before, which labor will seldom have to be repeated more than twice. As soon as she takes rightly to the nest, put your choice eggs under her, eleven of which are sufficient for an ordinary sized hen. After the hen has set upon her eggs ten or twelve days, go to her at night with a lamp, and examine the eggs by holding them up before a strong light between the thumb and forefinger of the one hand, and shading the eyes with the other. The unfertile eggs can easily be detected; those having chicks in them will be dark, except a small portion near the butt end of the egg. The sterile ones will be quite transparent, the light showing through them quite plainly. If any of the unfertile ones are allowed to remain in the nest they frequently get broken, and their contents smeared over the other eggs, closing up the pores of the shells, and smothering the embryo chick. After the hen has set fourteen days, visit her again in the evening, gently lift her off, and sprinkle the eggs and nest thoroughly with tepid water; repeat this operation again on the eighteenth day, and the night before they are to hatch. I do not think it advisable to remove any of the chicks while the hen is hatching. Let them remain with the hen on the nest until they are twenty-four hours old, then remove the hen and her brood to a warm and dry coop.

W. E. FLOWER.

SHOEMAKERTOWN, December 24th, 1873.

Items Interesting and Amusing.

THE dog tax in England amounted to \$1,510,098 last year.

FASHIONABLE poodles, in New York, have adopted the Elizabethan ruff.

A DAY in the moon is fourteen times as long as a day on earth. What a place in which to give a six months' note!—but what a bore to the *Lunatics*, when they work by the day!

A WOMAN living near Altoona recently entered a stable attached to the house in which she lived, when a horse caught her by the nose and bit it off.

A TITUSVILLE paper says a man called at one of our shoe stores yesterday and vainly essayed to get on either numbers 11, 12, or 13 shoes. The storekeeper then suggested that he should put on a thinner pair of stockings and try on the box.

THE bear of the arctic region does not hug, but bites his opponent, declining to eat his captive until life is extinct. Like a cat he plays with his victim, whose only refuge when attacked is to "play dead," so that when the bear retreats to enjoy the prospect of his meal, the gun can be got ready for him when he returns.

A RUSSIAN naturalist claims to have found living mammoths in Siberia. He has seen five small ones, twelve feet high, eighteen feet long, and having tusks eight or ten feet in length. The brute haunts great caves, and feeds on grass, etc. It may as well be mentioned that the grass in Siberia is small, but the caves must be large.

It is worth mentioning that three of the produce of the imported Jersey cow Duchess, belonging to Mr. C. L. Sharpless, Philadelphia, have been sold for an aggregate of *fourteen hundred dollars*, and Mr. S., has a daughter, Duchess 3d, and a son, Chelton Duke, that he would not part with. The service charge for Chelton Duke is \$100.

THE following piece of Oriental flattery is quoted by the *Moniteur* (Paris): "An American diplomatist, Mr. Wade, having lately died at Pekin, the Chinese attributed his decease to the inexpressible emotion which he experienced at seeing the august face of the emperor." [*The above Mr. Wade was no relative of the Editor of this Journal, or he would not have died from any such cause.*]

NEAR Knoxville, Tenn., it is said there is a mule which has been but one time outside of its stable in twenty years, and then it was taken out by the soldiers during the war, and as they could not use the animal, it was immediately replaced. It is said that its hoofs have grown to the length of about 12 inches, turning up at the ends, while its mane reaches to the ground.

ONE of those miserable boys whose sole object in life appears to be the making of extraordinary faces at honest and industrious store clerks, mistook a roll of oil cloth for a roll of carpet, hanging in front of a Main street establishment, Saturday evening, and making a sickening grimace at the clerk, who stood in the door, doubled his fists and struck the inoffensive roll a tremendous blow. Then he put the fist under the other arm, and doubling up his body, ambled swiftly away, while the clerk retired to the store to dry the tears of a new found joy.—*Danbury News.*

A WRITER in *Harper's Bazar* says: "We do not believe there is much human affection wasted upon the spider; nevertheless it is a very useful creature, and should not be despised. Its specific office is to prevent the dangerous multiplication of winged insects. Entrapping flies is its forte, and it has been remarked that 'if spiders should strike, and for a single month in summer refuse to set their traps, we could hardly defend ourselves against armies of noxious insects that would take possession of our dwellings.' Nevertheless there may be such a thing as too many spiders in the world—a possibility against which Nature has provided. When spiders are thickest and busiest catching flies, a large, peculiar looking fly appears upon the stage of action, and adroitly seizes the spiders wherever found. These spiders are stowed away in secret cells to be food for young flies. Thus there is compensation all around."

THE Chinese have trained cormorants to fish for them. The birds are tied to floats, and have collars around their necks to keep them from swallowing the fish they may catch. When the cormorant rises to the surface with a fish in his mouth, the fisherman catches the float with a hooked stick, draws the bird to him, and secures its prey. The cormorant is made to work from eight to ten hours a day, and is fed on small pieces of the fish he catches. Sometimes he strikes for more wages or fewer working hours, but the yelling of his master frightens him to such an extent that he instantly resumes work. Isaac Walton would probably have no greater liking for this method of fishing than Californians have for other Mongolian eccentricities; and yet after all it has its advantages. Isaac Walton was a "Micawber," waiting for a bite, but the Chinaman takes the bite himself or gets the cormorant to do it for him.

A NEWFOUNDLAND CUTTLE FISH.—On the 26th of October, two fishermen who were out in a small boat, observed some object floating at a short distance, which they supposed to be a large sail or the debris of a wreck. On reaching it one of the men struck it with his "gaff," when immediately it showed signs of life and reared a parrot-like beak, which they said was as big as a six-gallon keg, with which it struck the bottom of the boat violently. It then shot out from about its head, two huge, livid arms, and began to twine them round the boat. One of the men seized a small axe and cut off both arms as they lay over the gunwale, whereupon the fish backed off to a considerable distance and ejected an immense quantity of inky fluid that darkened the water for a great distance around. The men saw it for a short time afterward, and observed its tail in the air, which they thought to be 10 feet across. They estimate the body to have been 60 feet in length, and five feet in diameter, of the same shape and color as the common squid, and moving in the same way as the squid, both backward and forward. As usual in the cuttle-fish, the under surface of the extremity of the arm is covered with sucking disks, the largest of which are an inch and a quarter in diameter.

A WELL-ORGANIZED man or woman cannot live long and happily without congenial employment; and so it is of importance that young men and women should find out early what they can do best, and then prepare themselves to do it. Most of our happiness comes from work done in the spirit of love; most of our unhappiness from work done in the spirit of hate.

CARRIER PIGEONS—CONSTRUCTING A BREEDING LOFT.

I HAVE been several times requested to give my ideas with respect to the construction of a loft for breeding Carriers, and thinking they may be of service to your readers I forward them to you.

I believe non-success in breeding this noble variety of Pigeon is chiefly owing to several pairs being crowded together in a small space, the result being a great amount of damage to the adult birds by fighting—so frequently the cause of wing disease and canker—and the loss of numbers of eggs and young ones in the nest. Carriers are a prolific variety, and a good proportion of young birds may easily be reared. By adopting the plan I recommend, these misfortunes are entirely avoided, and, so far as I have myself practiced it, I found it to answer remarkably well.

The building may be erected at a very moderate cost. The erection is like an ordinary shed. A wall 9 or 10 feet high, with a south aspect, will answer for the back. The front of the shed should be 6 feet high, which allows of a 3-feet fall in the roof to carry off wet. The roof should be boarded flat with 1-inch deals (I mean of course with the above-mentioned inclination), felted, well tarred, and spouted. The ends of the shed, and the back, if there is no wall to work on, should be double-boarded, leaving about 3 inches between the inner and outer boards, and the vacancy well filled with sawdust. Such walls retain a more even temperature than brick or stone, being neither so cold in winter nor so hot in summer, and are besides, less expensive. In width the loft may be 12 or 14 feet; the front boarded-up from the ground 3 feet high, the remainder to the roof wire netting. Inside under the roof shutters should hang on hinges, to fall down and cover the wire front during the cold nights, and at other times when necessary. When out of use they swing up and lie flat to the roof, where they are fastened, and are then quite out of the way.

At the back of the loft (there is no limit to the length except in the number of breeding pens required), is a platform 4 feet in width, half way between the floor and roof, to form the bottom of the pens. Thin iron rods, 1 inch apart, running from the platform up to the roof, form the front of the pens, each pen being 4 or 5 feet long (the longer the better) furnished with door, nest-box, &c. The loft at the length of every three pens should be divided, so that the occupants of every three pens may have their flight, bath, &c., in the area in front in turns. Thus the pairs are always separate, and breed undisturbed. Under these three breeding pens, which constitute one section of the loft, the front from the outer edge of the platform to the ground should be wired, with a door, and fitted with perches; so that will form a most convenient place to draft the young ones into as they are fit to leave their parents. As there will be two or three such compartments in a loft of any pretensions, the sexes can be separated when desired. In this arrangement the birds are always under command, and easily caught when required.

The finish of such a building is, of course, a matter of taste and outlay. The exterior may be planed and painted, or only in the rough and tarred, the inside in either case being well lime-washed annually, at the commencement and close of the breeding season.—W. MASSEY, in *Journal of Horticulture*.

(For Fanciers' Journal.)

GOOD STOCK v. MONGRELS.

"DON'T you find your big chickens more sickly than the dunghills?" and "Don't they eat more than the common fowls?" These are the two main questions asked and urged against improved stock in fowls. My answer has been, "No, not with the same attention." Dunghills will eat more and lay less than any of the improved breeds of the same size if confined to small pens, as improved breeds usually are, with little range and less variety of food.

Brahmas and Cochins are liberal feeders, I admit. But in order to preserve their purity, and prevent admixture of dunghill blood, most of us are compelled to confine the hens particularly to small yards and close quarters, and thus having prevented the gratification of their natural desire to gather their own food, and deprived them of health-giving exercise, we naturally must supply the deficiency by feeding properly, and look for a smaller supply of eggs, and a less healthy and perfect development. Could farmers fairly estimate the amount of food consumed by an ordinary barnyard fowl, in the shape of grubs, worms, and grain, it would astound them, particularly if they looked upon this as what might have been had grain alone been substituted for it.

All stock will pay for extra care, and particularly is this true of blooded or improved stock. Farmers in the main regard poultry, and particularly chickens, as a great nuisance, and were it not for the good sense of their good wives, it is hard to tell what would become of the pets. The great wonder, under existing circumstances, and the lack of care in the treatment of fowls is, that chickens pay expenses at all. To those of us who love our pets, and give them proper attention, the matter is perfectly plain that they do pay, and that improved stock pays better than common fowls, from the fact that we are able to secure much higher prices for even ordinary specimens. Of course the outlay in the beginning is greater, and this is probably the greatest objection which the advocates of common stock find to the introduction of that which is blooded.

In general, however, a single pair, or a trio, will, with economical management, be sufficient to give one a fine stock of fowls to begin with the second season, and enough may be made by selling the surplus stock to neighbors to pay the cost of the original trio. Neighbors can always be found who will be ready to pay at least twice as much for the surplus fowls as for ordinary fowls. Besides, a double good will be done in the way of giving one a start, and at the same time distributing good stock, and creating an interest in the community.

It is with much satisfaction that one notices the increasingly wide distribution of many of our best breeds. Of course the most beautiful, and the most highly and perfectly developed birds will remain in the hands of the fanciers, because these, in the main, are the only ones who thoroughly understand the principles of mating and breeding to produce beautiful birds. But so far as the utility of the fowls is concerned—and this, after all, is the main item of interest to the general poultry raiser—it need not and will not be limited to fanciers alone. No one will be more pleased in fact than the fancier to have a general and wide-spread interest in poultry developed among all classes of poultry breeders,

A. N. R.

PHEASANT IN COVERT.

THE FIRST OF OCTOBER—PHEASANT IN COVERT.

THE lower animals are fortunate in being apparently totally destitute of that faculty with which human beings are gifted, which enables us to judge of the future by the past, and which, consequently, causes us to anticipate innumerable calamities. Take, for example, those gorgeously-plumaged, long-tailed creatures, to whom the first of October is a veritable eve of St. Bartholomew, and imagine that on the previous evening some ancient cock, who has survived the massacre of the year before, should suddenly be endowed with human intelligence. With what feelings of anguish would he survey the ladies of his seraglio, as they stood greedily pecking up their evening repast of barley. "My darlings," we can fancy him saying, "if you knew the horrors that are impending, you would not eat another grain. To-morrow is the day on which the human race goes periodically mad. Dick, the keeper, in his velveteen coat and gaiters, whom you think such a nice man, who used to bring you dainty ant's eggs when you were little—Dick, my dears, will to-morrow morning develop into a perfect fiend. Hosts of other men will assemble—the squire, who looks so benevolent as he walks to church on a Sunday morning, will be among them—each man will carry a breechloader in his hand; you know what breechloaders are? sharp-nosed spaniels and retrievers will be sent to hunt you out of your most secret haunts; suddenly, the air will be filled with fire and smoke, and hideous noise, and hundreds of our nation will fall to the earth, mangled, bleeding, and dying.

"Even the Squire's daughters, who look so gentle and pretty, will feel no compassion; on the contrary, they will laugh and jest, a few days after, as they eat your flesh, and they will wear my loveliest feathers in their hats."—*London Graphic*.

(For Fanciers' Journal.)

MR. EDITOR: Wishing to invest some of my hard earnings in the acquisition of fine-bred fowls, I would inquire of your experienced contributors which plan would probably ultimate in the most profit: the purchase of a trio of the best, or to lay out the amount of their cost in eggs for hatching the same breed.

Respectfully yours,

BALTIMORE.

A. E. B.

VALLEY FALLS, R. I., December 22d, 1873.

JOSEPH M. WADE.

DEAR SIR: At a meeting of the Rhode Island Poultry and Columbarian Society, the following officers were elected. President: J. T. Peckham, Providence. Vice-Presidents: W. E. O. Roberts, South Scituate; Samuel W. Clark, Warwick. Secretary: W. L. Tobey, Lincoln. Treasurer: E. B. Whitmarsh, Providence. Executive Committee: T. P. Burlingame, Providence Co.; Caleb Wescott, Kent Co.; Thomas J. Gough, Washington Co.; John H. Chase, Newport Co.

It was resolved to hold a meeting on January 1st, 1874, at 10 o'clock.

Yours, &c.,

W. L. Tobey,
Secretary.

FOUR varieties of fish are said to have been discovered in Lake Superior, good, bad, indifferent, and bullheads.

WE are indebted to E. C. Skinner of Detroit, for Premium List, Catalogue of Entries, and the following list of Awards of Premiums of the Michigan State Poultry Association, which we give in full. He has our thanks for the same.

HOBBIES AND REST.

EVERY hard-working man should have a hobby. This is sound doctrine. Especially should the professional man and the active business man remember this. He whose mind is occupied during the day with severe labor will find it impossible at evening to abandon his work. The responsibilities of the day will weigh on him at night; he cannot rid himself of them. Social enjoyment, conversation, ordinary amusement and recreation will serve but a temporary purpose, and cannot be relied on to divert the mind from anxiety and care. Try the experiment. Take to collecting engravings or coins or shells or anything else, so it be a subject to interest you, and make a hobby of it. It will absorb the mind, enable it to throw off all business thought, afford sensible relief and refreshment, and be a great insurance against those diseases of the brain which close the labor and usefulness of so many strong intellects.

The summer vacation, which is about the only recreation an American professional or business man allows himself, is apt to be wasted entirely by the want of mental refreshment which cannot be found in the ordinary resorts of summer pleasure seekers. The vacation does little good to him who carries his business on his brain; and it too frequently happens that men go to places where they have no resort for amusement except to the newspapers and the business talk of other weary men like themselves. It is not every man who should go a-fishing, but there are many who would find this their true rest and recreation of body and mind.

(For Fanciers Journal.)

THE DUST-BATH FOR FOWLS.

It has been noticed by many breeders that a great many Asiatic fowls raised and kept in a city have white legs, and particularly the light Brahmas of this city. It is often remarked by the owners of these fowls that if they had a grass run for awhile they would come all right, but could not give

a reason for their legs being white. It is a well-known fact that nearly all fowls kept in large cities have no grass runs, and the yards in which they are kept are usually on a strata of ashes, and as their dust-bath is composed of ashes also, a great portion of which is from wood, the alkali I am satisfied is what causes the mischief; and, having no grass run, the natural color of the legs does not return, and so many an otherwise good fowl has been condemned for this, which is no fault at all. City fanciers, cover your yards with sandy loam or road dust. Make your dust-bath of the same material, into which a little carbolate of lime may be put, and my word for it, you will have no more white-legged Asiatic fowls. This is no theory, but has been proved by actual test.

(For Fanciers' Journal.)

THE NEW DEPARTURE.

MR. EDITOR: I am glad to know that the Buffalo Show, which is now the largest and most prosperous in this country, adopts what you call the "New Departure," in offering society premiums for single specimens instead of trios. A few years ago I wrote several articles for one of our poultry journals advocating this departure from our usual mode at least so far as giving premiums for pairs in preference to trios is concerned. I am glad to know that the Western New York Society takes the lead in this matter, and sets up the true standard for the country.

When you or I come to purchase a fowl, as when we come to purchase a blooded cow or a blooded horse, we examine into the individual merits of the specimen. It has always been a mystery to me why fowls, particularly chickens, should be exhibited and be made to compete for premiums in trios, while every species of animal, cows, horses, sheep, dogs, and all, were made to compete by single specimens.

The Connecticut society has for several years been exhibiting in pairs, and I have wondered why their plan has not been followed by other Societies; in fact, all the Societies have, in a great measure, acknowledged the truth of this principle, by securing and offering special premiums for single specimens.

The result will certainly be to bring out the best individual specimens. There is many a one who may have an excellent specimen, or a number of them, and yet they may not match as perfectly as some one's trio of much less beauty or perfection, and yet, by the old method, the inferior birds would carry off the prize, and the best bird be made to accept the second, or possibly a lower premium. Single specimens of excellence now have a chance, and let us hope that advantage will be taken of this new departure, and the best fowls in the country be brought forward at Buffalo, and doubtless the remaining Societies in general will not be slow to adopt the same plan if it prove good in practice.

Another suggestion in this connection and I have done. Now that this plan bids fair to be adopted, would it not be well always to have the number of points adjudged the first premium bird published in the report of the exhibition? It seems to me, as I have argued before, that this would have a tendency to encourage many to exhibit who now keep their fowls at home, believing that they will have no chance to win. When it is generally known that even a first premium bird may not carry more than eighty-five or ninety points, the tendency will be to call out birds of excellence which have never been before the public.

A. N. R.

LOCK HAVEN, PA.

A REVISION OF THE AMERICAN STANDARD.

EDITOR OF THE FANCIERS' JOURNAL.

DEAR SIR: In the first number of your journal appears a communication from Mr. H. Woodward, and also in the December issue of the *Poultry Bulletin* an article of the same tenor, under the above heading, in which he endeavors to answer these two questions, viz.: "What is the use of a standard?" and, "How can a standard be applied to be most effective?" The writer goes on to speak about the errors in judging at exhibitions, and the dissatisfaction which arises from this evil; the failure of the English "standard of excellence" to correct these errors, and also of our American "standard," for the same reason—"that it was powerless to reach the existing evil." He then answers the questions in this wise: "That a standard, which should be the result of long and deliberate study of our wants, founded upon the ripest experience which can be brought to bear upon the subject, may be a necessity in breeding for the exhibition, no one who is conversant with poultry fancying will probably deny; but such a standard should only be used, and can only be used to be of any service, in assisting the breeder to bring his stock, of whatever kind, up to the highest ideal. Beyond this we cannot go with the most perfect standard which can be devised, and any attempt to do more than this will result in inevitable failure, because we cannot make any arbitrary standard sufficiently flexible to meet all the circumstances of time, place, and occasion."

After reading these articles they leave a rather obscure impression of exactly what Mr. W. intends to express, if he means that judges should be bound by no fixed standard, but make their awards according to their own views, I think he is wrong. If a standard is necessary for the breeder, it is also necessary for the judge. What is the use of breeding to a standard if the fowls so bred are not to be judged in accordance with the same? By this system we should be worse off than we are by our present method, as it would not even have the merit of consistency which the other has; it would be different were all the exhibitions judged by the same men, and even this would be on a par with the English "standard," which Mr. Wright characterizes as the opinion of one or two individuals. But in this country of great distances, very few good judges can afford the time and money to visit even the most important of the numerous exhibitions, and therefore committee-men and amateurs in the "fancy," of only perhaps a single year, are allotted the task of judging a certain breed which they are acquainted (?) with. If these judges are authorized to award according to their own opinions, which have probably been formed from acquaintance with one strain or style of the breed, with all probability their awards will be biased by this knowledge, and it would be as likely that birds which were put last at this exhibition would receive first prize at another show with the same competition, through the views and opinions of some other judge, whose opinions have been formed by acquaintance with another strain of the breed. "Everybody to their taste," as the old woman said when she kissed the pig; likewise of opinions, they are as apt to differ.

The only way in which this method of judging, without regard to the "standard," could be carried out with any expectation of success, would be to have professional judges thoroughly posted in everything pertaining to each and every variety of fowl, whose business it should be to officiate at all the exhibitions in the country; their awards would have the

merit of being consistent at least, and fanciers could breed to the standard expressed in these awards, resting assured that future awards would be in conformity with the standard bred to.

But this system of judging is not the best that can be devised. A *proper* standard of excellence and scale of defects combined with it, is decidedly the best basis to judge our exhibitions upon; and I have devised a plan for such a criterion, and a method of applying the same, which appears to me to present the best possible results attainable with our present light on the subject, and I will endeavor to present it in as clear a manner as possible.

I have felt the want of some radical change in the scale of points of our "standard of excellence," which resulted in my article in the first number of your journal. In that communication I advocated the adoption of Mr. Wright's method of valuing defects solely, and also of his scales with what alteration would appear desirable. I had applied his scale for Brahmas some time ago, when I first received the number of his work containing it, and found it much preferable to ours in general principles, and ease of application; but, since writing the article mentioned above, in attempting to make a standard for Houdans, on the same basis as his, I at once found that among the defects in his scale no notice was taken of any wrong color of legs, except that "yellow shanks" was put among the disqualifications; this omission would allow any other wrong color to go unnoticed; and again, that no account was taken of "fifth toe not perfect in form and development," while in Dorkings a numerical value of ten is given to this defect; now supposing the comparative value of the defect to be the same in both cases, in Houdans it would have to be taken out of "want of symmetry," and in a case so bad as to barely escape disqualification, by taking this amount from "want of symmetry," which is put at twelve, it would leave but two for defects in the rest of the body. It immediately occurred to me that in endeavoring to be concise, and make his scales or tables apparently simple, and easy of application, the author had failed in making them sufficiently flexible, and, consequently, they are not so accurate as is desirable. I have, therefore, come to the conclusion, that a scale of defects to be correct in this particular, should go more into *detail*, and in fact take cognizance of *all* the characteristics, both of general shape and color; that is, the standards of general shape and color, and the scale of defects should be combined and not separated.

The plan I propose is, that the scale of points in the "American standard of excellence" be *struck out entirely*; that the standards of "general shape" and of "color" be *united* in one schedule; that under each point or characteristics of the various birds, in the schedules thus formed, there be enumerated special and general *defects* pertaining to it, and a numerical value given to them which should be in the proportion that the various defects bear to each other; and *no arbitrary number whatever should be given as the value of the "standard of perfection."*

It is the height of absurdity to judge by an idea, a conception, by nothing tangible; we do not care to know how near our birds come to the judge's ideal of a perfect bird; judging is more a matter of excellence between two or more specimens, and *each* should be judged by the *other*. To illustrate: supposing two cock birds were entered for a special premium—the question for the judges to decide is, which of the two is most deserving of the prize in respect to the various points of the breed as laid down in the

"standard of excellence," in view of the requirements of which both birds have been bred. Now, with such a standard as I propose above, this decision would be arrived at in the following manner: Take the first point mentioned in the standard of the breed, which we will suppose to be "comb." Of the two birds to which it is to be applied, the one having the most perfect comb, according to the description in the schedule, should be marked as correct; now we have something we can see, which is before our eyes, by which to judge the other; and we mark against him, according to the amount of defect which his comb exhibits as compared with the more perfect one, which for the occasion we have taken as the standard; in this way we proceed with all the points applying each in turn, by taking the bird having the point in the greatest perfection as the standard to judge the other by, marking against him such proportion of the value as given to that point, as the point bears to the more perfect one; then by adding up the figures the one having the least will carry a majority of the most valuable points in the greatest perfection, and will of course be the better bird.

In like manner this method can be used in judging a large class; first going through the class, marking off all disqualified pens; then going through again, marking off such defective specimens which, as can at once be seen, would have no chance of winning, until the competition is reduced down to a comparatively small number of pens. These pens which are now left for arbitration, should be taken out from among the others and placed altogether, so that they can be compared by the judges with the least amount of trouble, and to the best possible advantage. They can then be figured as in the case of the two birds mentioned above, and the awards made in conformity. In connection with this, I should like, also, to propose a plan, by which we may be enabled to correct such errors as might appear in the new standard; and also, that we may make such necessary changes as will, from time to time, appear desirable in consequence of the advancement made in breeding. The fact that the existing "standard" has become so impracticable and unreliable in the short period of two years, will furnish sufficient evidence of the necessity of something of this kind. I therefore make the following suggestion: That upon the request of any fancier or breeder that a certain change be made in the standard of excellence, with his reasons for the same, the American Poultry Association shall cause the request to be published in as many of the poultry papers as is deemed desirable, or who will publish it free of charge, inviting all persons interested on the question to communicate with the Secretary of the Association, their views on the subject, or their reasons why the request should not be granted. At the annual meeting, a committee shall be appointed, its members having no personal interest in the matter, to examine the evidence presented to them, and to make a report to be acted upon in full meeting; or if it is thought best the committee shall have full power to decide the question at issue. If the alteration is made, the Association should cause it to be published in the poultry papers, and the poultry societies notified; so that the judging can be in conformity with the same.

I think that the best results would accrue from the adoption, by the American Poultry Association, of an article in their constitution founded upon some plan similar to the above; it would do away, in a great measure, with the ill-effects of a "fixed" standard. I am very glad that Mr.

Woodward has expressed his opinions on this question, as they will undoubtedly cause considerable study and thought to be given to the subject, which will probably result in some satisfactory solution at the meeting to be held in Buffalo, on the 15th proximo.

GEORGE F. CLARKE.

Boston, December, 1873.

NEW HAMPSHIRE POULTRY SOCIETY.

THE seventh annual exhibition will be held in the City Hall, Manchester, February 24, 25, and 26, 1874. The Society and special premiums amount to nearly one thousand dollars, which are open to the competition of the world.

For rules, premium lists, entry blanks, &c., address

WM. G. GARMON, *Secretary*,
Manchester, N. H.

OFFICE OF THE IOWA STATE POULTRY ASSOCIATION,
CEDAR RAPIDS, December 21, 1873.

JOS. M. WADE, Esq.

DEAR SIR: Our exhibition is over, and has been a success. The show of birds was all our hall could hold, and though there was a lack of some of the rarer varieties, the quality of those shown was excellent, and every one was both gratified and surprised to see so many fine birds, owned almost entirely in our State. Financially we are all right, and already have a good *bid* for the location next year.

I showed the *Journal* you sent me to all the fanciers present I could find, and every one liked it very much, and I think you will get quite a number of subscribers and advertisements from this state.

The *Journal* is just what I have long wished for. The monthly journals are first-rate, but I get hungry for news in regard to our specialties between the time of publication, and I welcome the *Fanciers' Journal* as the one thing needed to supply a long-felt want. May success crown your effort is my heartfelt wish.

Very truly yours,

C. J. WARD,
Secretary I. S. P. A.

N.B.—Please find inclosed list of Premiums awarded at

The Iowa State Poultry Association.

Light Brahma Fowls. First, E. I. Purdy, Blainstown, Iowa; third, George Richardson, Atlantic, Iowa.

Light Brahma Chicks. First and second, C. J. Ward, Cedar Rapids; third, E. I. Purdy; fourth, F. S. Hedges, Fairfax, Iowa; fifth, H. C. Piatt, Tipton, Iowa.

Dark Brahma Fowls. First, W. D. Watrous, Cedar Rapids; second, H. C. Piatt, Tipton.

Dark Brahma Chicks. First, C. J. Ward, Cedar Rapids; second, L. H. Barnes, Blainstown, Iowa; third, H. C. Darrah, Dubuque; fourth, O. Jay Ferree, DeWitt, Iowa; fifth, J. H. Streeter, Cedar Rapids.

Buff Cochins. First, H. C. Piatt, Tipton; second, Ferguson Brothers, Cedar Rapids.

Buff Cochins Chicks. First, C. J. Ward, Cedar Rapids; second, H. C. Darrah, Dubuque; third, H. C. Piatt, Tipton.

Partridge Cochins. First, Z. C. Luse & Son, Iowa City; second, Miss Madge Tupper, Des Moines.

Partridge Cochins Chicks. First, L. H. Barnes, Blainstown; second, Z. C. Luse & Son, Iowa City; third, H. C. Piatt, Tipton; fourth, O. C. Leonard, Cedar Rapids.

Black Cochins. First, Z. C. Luse & Son.
 Plymouth Rocks. First, C. J. Ward.
 Dominiques. First, Thomas E. Pearson, Cedar Rapids;
 second, O. C. Leonard, Cedar Rapids.
 White Leghorns. First and second, Law & Mills, Clinton, Iowa.
 Brown Leghorns. First, Henry W. Cornish, Cedar Rapids.
 Black Spanish Fowls. Second, Geo. Richardson.
 Black Spanish Chicks. First, Geo. Richardson; second, O. C. Leonard.
 Silver Gray Dorking Fowls. First, O. C. Leonard.
 Silver Spangled Polish Fowls. First, A. B. Kendig, Cedar Falls.
 Silver Spangled Polish Chicks. First, A. B. Kendig; second, John Weare, Cedar Rapids; Third, O. C. Leonard.
 W. C. B. Polish Fowls. Second, O. C. Leonard.
 Silver Penciled Hamburgs. First, J. H. Streeter.
 Golden Spangled Hamburgs. First, H. C. Darrah.
 B. B. Red, Game. First, Ely E. Weare, Cedar Rapids.
 Earl of Derby, Game. First, Edward R. Bradford, Cedar Rapids.
 Black Red Game Bantam Chicks. First, C. W. Ward; second, Madge Tupper; third, O. C. Leonard; fourth, W. D. Watrous.
 Y. Duck Wing Game Bantams, Chicks. First, C. J. Ward; second, J. R. Newton, Cedar Rapids.
 Mexican Bantam Fowls. First, H. C. Darrah, Dubuque.
 White Bantam Fowls. First, O. C. Leonard.
 White Bantam Chicks. First, O. C. Leonard; second, B. E. Burtis, Cedar Rapids.
 Black Bantams. First, W. W. Dowart, Cedar Rapids.
 White Crested Bantams. First, O. C. Leonard.
 Golden Seabright Bantam Fowls. First J. F. Hotchkiss, Cedar Rapids.
 Houdan Fowls, First, Geo. Richardson; second, Miss Madge Tupper; third, H. C. Piatt.
 Houdan Chicks. First, H. C. Darrah; second, Miss Madge Tupper.
 Bronze Turkeys. First, E. I. Purdy; second, H. C. Darrah; third, C. J. Ward.
 Aylesbury Ducks. First, H. C. Darrah.
 Rouen Ducks. First, Mrs. S. G. Livermore, Robin, Iowa; second, E. I. Purdy.
 Muscovy Ducks. First, W. W. Dorwart.
 Birds—Song Canary. First, L. Louis Billau, Cedar Rapids; second, W. L. Weller, Cedar Rapids.
 Bullfinch. First, Mrs. Jeff. Phillips, Cedar Rapids.
 Mocking. First, C. E. Calder, Cedar Rapids.
 Pigeons. P. Newcomb, Cedar Rapids, first on White Jacobins, Red Jacobins, Yellow Pouters, Black Pouters, White Pouters, White Fantails, and Carriers; second on May Flowers, Holland Tumblers. [Premiums would have been awarded on other varieties, but the Judges could not get the birds in hand to examine them, owing to the bad construction of the cage.—Sec.]
 Stuffed Birds. First, Geo. Oliver; second, G. R. West, Cedar Rapids.
 Exhibition Coop. First, H. C. Darrah.
 Drinking Fountain. First, H. C. Darrah.

YOUNG FANCIERS' DIVISION.

Josie Ward, Cedar Rapids, first on Red Game Bantam chicks.

O. C. Leonard, Jr., first on White Bantam chicks; second on Partridge Cochins chicks; second on White Leghorn chicks; first on Houdan chicks; first on Light Brahma chicks.

W. F. G. Benett, Cedar Rapids, first on Partridge Cochins chicks.

John Krebs, Cedar Rapids, second on Buff Cochins chicks; second on Light Brahma chicks; second on Dark Brahmas.

E. E. Day, Cedar Rapids, first on Dark Brahma chicks, and first on Buff Cochins chicks.

B. F. Smith, Cedar Rapids, second on Gold Spangled Polish; first on White Leghorn chicks.

E. Benjamin, Cedar Rapids, first on B. B. Red Game chicks.

Henry Whiting, Cedar Rapids, second on Creepers.

SPECIAL PREMIUMS.

The Special Premiums were awarded as follows: C. J. Ward, for the best pair Light Brahma chicks, a trio of Black Cochins, value, \$30; for best Light Brahma cockerel, \$2; for the Light Brahma cockerel marking the most points, Farmer's Barometer and Thermometer attached, \$15; for best Light Brahma pullet, one bound volume Poultry World, \$2; for best Buff Cochins pullet, one bound volume Poultry World, \$2; for best collection Bantams, one bound volume Poultry Record, 1873, \$2; for the best Plymouth Rocks, a silver cup, value \$15; for the best pair of Dark Brahma chicks, a trio Partridge Cochins, value \$25; for the best pair Plymouth Rocks, \$5; for best pair Dark Brahmas, the Fanciers' Journal, \$2.50; best pair Y. D. Wing Game Bantams, \$5.

Josie Ward, Cedar Rapids, for best pair Black Red Game Bantam chickens, \$5.

W. D. Watrous, Cedar Rapids, for the heaviest Dark Brahma hen, Fanciers' Journal, \$2.50; for best pair Dark Brahmas, with two pairs of their progeny, \$5.

Rev. A. B. Kendig, Cedar Falls, for best pair Silver-Spangled Polish chickens, Farmers' Union, \$2; for best pair Silver-Spangled Polish fowls, \$5; for best pair Silver Polish, Fanciers' Journal, \$2.50.

E. I. Purdy, Blairstown, for best pair Bronze turkeys, \$10; for best and heaviest Bronze turkeys, Farmer's Barometer, value \$10; for best pair Bronze turkeys, bound volume Poultry Record, \$2.

Mrs. H. C. Darrah, Dubuque, for best article on Prevention and Cure of Cholera, Roup, and Catarrh in fowls, ten yearly subscriptions to Northwestern Poultry Journal.

Thos. E. Pearson, Cedar Rapids, for best American Dominiques, \$5.

Miss Madge Tupper, Des Moines, for best Partridge Cochins pullet, bound volume Poultry World, \$2; for second best pair Houdans, \$1.

Z. C. Luse & Son, Iowa, for best pair of Partridge Cochins, \$5; for best pair Black Cochins, \$5; for best collection of Cochins, not less than three varieties, silver cup, \$10; for best pair of fowls or chickens of any variety,—one pair Black Red Game Bantams, \$10.

H. C. Piatt, Tipton, Iowa, for best pair Houdan chickens, Dubuque Weekly Herald, \$2.50.

H. C. Darrah, Dubuque, for best pair Houdans, \$3; for best pair Aylesbury ducks, Farmers' Union, \$2; for best collection of ducks, bound volume Poultry Record, \$2.

George Richardson, Atlantic, Iowa, for best pair Houdans, Iowa Homestead, \$2.50; for best pair Black Spanish, 1000 business cards.

Ely E. Weare, Cedar Rapids, for best pair Black Red Game chickens, silver cup, \$5.

O. C. Leonard, Cedar Rapids, for best pair Colored Dorkings, Farmers' Union, \$2.

Jan Gkerke, Colony, for best pair Toulouse geese, \$5.

Mrs. S. G. Livermore, Robin, for best pair Rouen ducks, \$5.

P. Newcomb, Cedar Rapids, for best collection of Pigeons, not less than six varieties, Fanciers' Journal, \$2 50.

O. C. Leonard, Cedar Rapids, for best pair Light Brahmas, by exhibitor under eighteen years of age, Western Agriculturist, \$1.

Ernest E. Day, Cedar Rapids, for best pair Buff Cochins, by exhibitor under eighteen years of age, Western Agriculturist, \$1; for best pair Buff Cochins, exhibited by breeder under eighteen years of age, Farmers' Union, \$2.

C. E. Calder, Cedar Rapids, for best male Mocking Bird, \$5.

J. Louis Billau, Cedar Rapids, for best singing Canary, \$5.

Mrs. Jeff. Phillips, for best Bullfinch, \$5.

W. G. F. Benett, Cedar Rapids, for best pair Partridge Cochins, exhibited by a breeder under eighteen years of age, Farmers' Union, \$2.

(For Fanciers' Journal.)

CHICKEN CHOLERA AND ROUP.

THE writer is an old breeder of poultry in Massachusetts, having for more than thirty years been an importer, and fancier in rearing the Asiatics, principally; as well as a free experimenter with *all* varieties, from the petite bantam to the gigantic Cochin and Shanghai.

Looking over the pages of the *Fanciers' Journal*, I noted allusions to what is termed "chicken cholera," among other fowl diseases, with proposals for its prevention or cure. I do not know how many thousands of domestic birds I have raised successfully in the past three decades, but certainly a great many. I never saw a case of chicken cholera in my own experience with fowls, and never had a dozen cases of roup in my yards to my knowledge.

As to the "cholera" (so called), I think it must perhaps be limited to Pennsylvania or the Middle States; and I judge, from the fact that *all* the accounts I have ever read (where this disease prevailed to any extent), related to the existence of this poultry scourge in that region only, we certainly have never been troubled with it in New England. I therefore conclude that chicken cholera does not occur with us, on account, probably, of the difference in climate. We get a good many fowls here, in later years, from Pennsylvania, Philadelphia, &c., and I do not see but that they thrive subsequently with us as well as any birds we import or obtain out of New England. I am, consequently, curious to know why it is, that in all our numerous purchases from your vicinity (and there certainly have been sent hither from your part of the country hundreds of fowls) we do not get this disease communicated among our poultry.

As to roup, we do meet with this frequently; but it may invariably be accounted for where it occurs with any severity. The loose and heedless manner in which our poultry is too commonly cared for; the hiving of any given number in close, foul quarters; the exposure to rain, snow, cold winds, storms, &c., at all seasons; the neglect to keep fowls decently comfortable by night; the absence in their limited coops of fresh, clean water daily, which is a desideratum to their health; and other similar neglects occasion roup nineteen times out of twenty, when it occurs.

But these diseases are epidemic, say most breeders. Very good—admitted; yet they must have a starting point. If you purchase a rousy fowl accidentally, kill and bury him; or return him, on sight, whence he came. If you note its presence, *at once* remove the infected fowl from among your flock; and if another shows the symptoms, serve him, or her, in the same summary way. That is my course invariably; and I have had very few sick fowls in my extensive poultry yards, in the past more than a quarter of a century.

"Expensive work, this!" says one. Yes, so it is; if you suffer it to continue and spread among your flocks. Not otherwise, comparatively. It is an evil; but of the two evils always choose the least. Roup once under headway in your poultry houses, will kill ten, and miserably befoul, sicken, and render useless, for weeks or months, twenty or fifty, while you are destroying but one or two. And if you do not believe this, try to *cure* this disease after it fairly gets under headway among your broods, and see how you come out.

Fowls that are huddled together in masses, in close, filthy quarters at night; that are ill-fed and foul-watered, or exposed to cold draughts of winds or storms, will generate among themselves roup and lice, with astonishing celerity and certainty. *Prevent this*, by the opposite kind of care and shelter, and the breeder, in my opinion, will have little or no roup or cholera among his chickens. At least, such is the experience of an

OLD BREEDER.

MITCHELL, ONT., CANADA, December 24, 1873.

FRIEND WADE.

Since last hearing from you, I have had the misfortune to be burned out on the 12th of November. My premises were totally destroyed by fire.

I need scarcely say this has to a small extent upset my calculations, and for a short time demoralized the "Mitchell Columbarium." However, nothing daunted, I have again built, and my birds are comfortably housed. Most of my birds were got out on the same principle that pianos are from third floor windows, nothing the worse for it. Many died in the bags in which they were carried; some were burned after getting them out of the fire; some flew into the flames; many perished with the cold, and some of the hardier kinds are flying wild to this day.

My high hopes of a pleasant time as an exhibitor and visitor at the approaching Buffalo show, which is within easy reach, have crumbled into pieces. I fully intended to be there, and to have again greeted the ring friends. I anticipated meeting yourself among the number. I received the *Fanciers' Journal and Poultry Exchange*, and am much pleased to find that we have now a medium through which we can find what we want, and tell what we have, once a week.

You have my best wishes for its success and prosperity. Put me down as a subscriber and find herewith my advertisement.

Before closing my letter, allow me to say to those who are no doubt surprised at not receiving answers to their letters, and still more at the non-receipt of birds which have been paid for, as ordered, that I sincerely regret the inconvenience and unpleasantness it may have occasioned them, and ask under the circumstances, their kind forbearance.

Those who have not countermanded their orders will have them filled this week.

Yours truly,

F. F. POLE.

BE CHEERFUL.—Emerson says: "Do not hang a dismal picture on the wall, and do not deal with sables and gloom in your conversation." Beecher follows with: "Away with these fellows who go howling through life and all the while passing for birds of paradise. He that cannot laugh and be gay should look well to himself. He should fast and pray until his face breaks forth into light." Talmage then takes up the strain: "Some people have an idea that they comfort the afflicted when they groan over them. Don't drive a hearse through a man's soul. When you bind up a broken bone of a soul, and you want splints, do not make them of cast-iron."

THE BUCKS COUNTY POULTRY ASSOCIATION.

Organized Nov. 15, 1873. Officers for the year 1873-4. President: A. M. Dickie, Doylestown. Vice-Presidents: E. T. Ochs, Quakertown; E. G. Harrison, Hulmeville. Corresponding Secretary: T. H. Walton (P. O. Box 130), Doylestown. Recording Secretary: Theodore P. Harvey, Doylestown. Treasurer: H. M. Twining, Doylestown. Executive Committee: A. M. Dickie, Doylestown; E. T. Ochs, Quakertown; E. G. Harrison, Hulmeville; T. H. Walton, Theo. P. Harvey, H. M. Twining, W. T. Rogers, W. T. Eisenhart, Charles Rotzell, Wm. Frankenfield, Doylestown; Ingham Smith, Doylestown Township; John J. Moore, Quakertown; Wm. H. Gruver, Springfield; Charles D. Mathews, New Britain; John Kitchen, Solebury; Edwin Johnson, Upper Makefield; Isaac Dudbridge, Warwick.

POULTRY SHOWS.

Maine, Portland, January 13th, 14th, 15th, 16th.
 Pennsylvania, Philadelphia, January 26th to 31st.
 Pennsylvania, Pittsburgh, Jan. 6th, 7th, 8th, 9th, 10th. A. A. Miller, Secretary.
 Pennsylvania, Doylestown, first week in February. Thos. Walton, Secretary.
 Western New York, Buffalo, January 15th to 20th. G. W. White, Secretary. Entries close January 5th.
 Central New York, Utica, January 6th, 7th, 8th, 9th. L. B. Root, Secretary.
 New England, Worcester, January 20th, 21st, 22d.

LIGHT BRAHMAS AND WHITE LEGHORNS.—Very fine young birds, from the finest strain in this country. For sale at \$5 per pair, to reduce stock. Seven Cocks, \$3 each, or will exchange for good Light Brahmas, or Houdan Pullets. T. J. WOOLDRIDGE, M.D., French Hay, Hanover Co., Va.

FANCY PIGEONS.—MARBLE, 13 South Liberty St., Baltimore, Md., having selected his Breeding Stock, will be glad to dispose of his surplus stock of Pigeons, all of which have been bred with the greatest care for purity of strain and markings, namely: pair Yellow Swallows, \$12; pair ditto, \$15; pair ditto, \$25. Pair Red Swallows, \$10; pair ditto, \$15. Pair Black Swallows, \$10; pair ditto, \$12.50. Pair Blue Swallows, black bars, \$15; pair ditto, without bars (very scarce), \$30; odd cocks and hens of above colors, \$4 to \$7.50 each. Pair Blue Magpies (capped), \$12. Pair Black Magpies (capped), \$12. Pair Yellow Magpies (capped), \$20. Also, Blue Cock, \$7.50; Black Cock, \$5; Red Hen, \$4. Pair Nuns (yellow cock, red hen), \$15. Yellow Nun Hen, \$5. Pair Red Turbits (Points), \$10; pair ditto, \$12.50; pair ditto, \$15; pair ditto (shellcrests), \$6; pair ditto, \$8. Pair Red Priests (well feather-footed), \$10*; pair ditto, \$15*; Red Cock, and Yellow Hen, \$10; pair Yellow ditto, \$20*. Red Chequer Cock, Golden Dun Hen Priests, \$8. Pair Spangled Priests, very pretty, \$15*. Pair Black Starling Priests, white heads, half-moon breasts and bars, good crests, \$15*; Pair Archangels, \$12*; pair ditto, \$15*; pair black mottled Trumpeters (imported), \$50*; pair cks (imported), \$40*; Cock, light-mottled (imported), \$15; all have splendid crests, rose, and feathered feet, winners of many prizes in England. Forty Shortfaced Tumblers, Almonds, Red and Yellow Agate Mottles, Splashes, Kites, and Whole-feather, from \$6 to \$30 per pair; for head and beak properties, as well as carriage and style, there are none better. Three pairs Buff Tumblers, pleasant-faced birds, very pretty, at \$5 per pair. All the above are in health and warranted breeders. No extra charge for coops. A liberal discount to dealers. Express charges must be prepaid.

N.B.—Birds marked thus * are first-class exhibition birds, fit to win in good company.

L. T. & W. CHARLES, HORNELLVILLE, N. Y.,

Breeders of Plymouth Rocks, and Partridge Cochins; Eggs, \$3.50 per doz. White Leghorns, and Dominiques; Eggs, \$3 per doz. Houdans, W. C. Black Polish, W. Georgian Games, S. P. Hamburgs, and White Guineas; Eggs, \$2 per doz Dark and Pearl Guineas, and White Bantams; Eggs, \$1.75. Aylesbury

Ducks; Eggs, \$4 per doz. Rouen, Cayuga, and Plata Ducks; Eggs, \$3.50 per doz. Fancy Pigeons, in great variety, from 50c. to \$20 per pair. Agents for Fancy Poultry, Books, and appliances.

C. B. ELBEN,

PITTSBURGH, PA.,

Will make a specialty of the following breeds of Fowls and Ducks, for the season of 1874; no others kept. Light and Dark Brahmas, Dominiques, Black African Bantams, and Aylesbury Ducks. No orders solicited except from responsible parties, when time for examination and payment will be given.

POUTERS FOR SALE.

IMPORTED POUTERS FOR SALE.—1 pair Blue Pied, Cock 20 inches long, good legs and well booted, plain on the wings, and fine breast-mark; Hen, 18½ inches long, good legs, nicely booted, and in marking is well suited to breed with the cock. The pair bred three good young ones in England the past summer. Price, the pair, \$120. Also, two trios of good AYLESBURY DUCKS at \$12 and \$15 per trio.

Address POUTER, 39 N. Ninth St., Philadelphia.

POUTERS FOR SALE.—1 pair of Black Pied Pouters, Cock 18½ inches long, well marked on the wings, good blower, well booted, and a very showy bird. Hen 17½ inches long, quite well marked, well booted, and a good breeder. The pair have raised six fine young the past season. Price, \$30. Address POUTER, 39 N. Ninth St., Philadelphia.

MITCHELL COLUMBARY.—Fancy Pigeons in great variety; Yellow, Black, and Blue Fantails, and Carriers, a specialty. I would call attention to my stock of IMPORTED TOYS ICE PIGEONS, FRILL BACKS, &c. There are few birds more beautiful or delicate in plumage than the two varieties named; an opportunity to procure them is rarely afforded. Send 6 cents for Circular. F. F. POLE, Mitchell, Ont., Canada.

A. L. DORR, Box 995, Haverhill, Mass., offers for sale, Pure Bred Partridge Cochins, at \$1.50 each, or would exchange for some Fine White Leghorn Cocks. Eggs for sale, from Partridge Cochins, at \$2; White Leghorns, at \$1.50. Also, have nearly every known variety of Pigeons for sale cheap.

EGGS FOR EARLY HATCHING, \$6, FROM OAK LANE POULTRY YARDS.—Immediate application from those who have a suitable place in which to raise early chicks for exhibition purposes, will secure a few sittings from my BEST LIGHT BRAHMA STOCK, which will be ready for delivery in time to be hatched in February. Specimens of this celebrated premium stock were considered worthy of illustration in Wright's New Book of Poultry, No. 22. Cash orders booked and filled in rotation. Mrs. J. M. WADE, 39 N. Ninth St., Philadelphia.

WHITE BANTAMS.—A trio of these pretty pets for sale low. They are good layers, cost little to keep, and excellent for the table, and can be kept without mixing with the Asiatic breeds, in the same pen if necessary. Price, only \$8. Eggs for hatching, per setting, \$1. Also, for sale, a pair of GUINEA PIGS. The male is entirely white, the female nearly so, only having a small spot of color about the head, in which respect they are quite rare, \$5. Mrs. J. M. WADE, 39 N. Ninth Street, Philadelphia.

GRAVES' INCUBATOR can be seen in working order at 26 N. Market Street, Boston, Mass. Send for Circulars. JACOB GRAVES.

W. W. ELLIOTT, McEwensville, Pa., Breeder of Light and Dark Brahmas, from the best strains. Also, Houdans from Cooper, Ireland.

YOUR NAME Displayed in large type, with list of fowls kept, inserted in *Poultry Breeders' Directory* for fifty cents, to be issued about January 1st, 1874. Price 15c., post-paid. H. S. BINGHAM, Sparta, Wis.

FOR SALE.—One pair of Imported Fantail Bantams. Price \$10. E. C. Osborn, Box 165, Albany, N. Y.

GOLDEN AND SILVER-SPANGLED HAMBURGS. GOLDEN AND SILVER SEBRIGHT BANTAMS. White, Black, and Yellow Fantails; Almond, Mottled, and Kite Tumblers; Black and Mottled Carriers; Blue-Winged Turbits. GEO. F. SEAVEY, Cambridgeport, Mass.

"THE POULTRY RECORD,"

AN ILLUSTRATED MONTHLY MAGAZINE, edited by C. W. HEATON, Farmington, Ill. *One Dollar per year; single copies, Ten cents.* THE POULTRY RECORD contains each month fine illustrations of the popular breeds of fowls; also, plans of houses, yards, and necessary appliances, with contributions relating to all branches of the business of poultry-raising, from writers of experience and ability. The low price at which it is offered should induce you to subscribe for it at once. It has the unqualified indorsement of the leading Breeders and Fanciers of the country, and also of Farmers and Market Poultrymen who raise fowls for profit alone. Send for a copy before subscribing for any other paper.

Address "POULTRY RECORD," Farmington, Ills.

BUFF COCHINS.

PHILADELPHIA, August 20, 1873.

No. 4.

PHILADELPHIA ZOOLOGICAL GARDENS.

ZOOLOGICAL Gardens for Philadelphia have been a dream for many years, and spasmodic efforts have been made from

time to time, to produce the reality, but, until recently, nothing tangible has resulted. The idea has been too inchoate to develop much enthusiasm, and year after year our citizens

have returned from enjoying the delights of foreign gardens, and mildly wondered, in the true Philadelphia style, why we should not have them. In connection with the Industrial Exhibition, by which it is intended to celebrate the century of the nation, and to gather together the products, inventions, and other indications of our national progress and wealth, the Zoological Garden of Philadelphia deserves immediate attention as an additional, and next to the grand exhibition itself the principal, attraction to the hundreds of thousands who will visit the City of Brotherly Love in 1876. The plan herewith annexed, prepared by Mr. H. G. Schwazman, Landscape Engineer, now chief engineer of the proposed Centennial buildings, shows the ground which has been granted by the Commissioners of the Fairmount Park to the Philadelphia Zoological Society, and the manner in which it is proposed to lay it out. The gentleman who have taken the matter in hand are well-known for their energy and breadth of view, and if sustained in their endeavors will carry out the scheme in a manner worthy of this great and growing city.

In undertaking this work they have the advantage of the experience and counsel of similar societies in the old world, and particularly of the magnificent London Zoological Gardens, the officers of which are extremely interested in the success of the enterprise here, and are prepared to aid, by advice and contributions, the Philadelphia Garden. A description of the English society may be useful in forming an opinion of the feasibility and advantages of the proposed schemes. The London Zoological Society was organized in 1826, under the auspices of Sir Humphrey Davy, Sir Stamford Raffles, and other of eminent men, for the advancement of zoology and animal physiology,

PLAN OF THE PROPOSED ZOOLOGICAL GARDENS.

and for the introduction and acclimatization of subjects of the animal kingdom. By the charter, granted March 27, 1829, Henry, Marquis of Lansdowne, George, Lord Auckland, Charles Baring Wall, Joseph Sabine, and Nicholas Aylward Vigors, Esqs., were created the first fellows. These gentlemen were empowered to admit such other persons to be fellows, honorary members, foreign members, and corresponding members as they might think fit, and to appoint twenty-one of the fellows to be the council, which should manage the entire affairs of the Society and elect members thereof until the 29th of May following; at which time and annually thereafter the Society should hold a meeting, and by ballot remove five of this council, and elect five others in their place, being fellows of the Society, who, with those remaining, should constitute the council for the ensuing year. It will thus be seen that every year five of the council are voted out, and five others elected in their stead, thus retaining a large proportion of managers acquainted with the workings of the organization.

By the by-laws fellows are required to pay twenty-five dollars initiation fee and fifteen dollars per annum, or one hundred and fifty dollars at once in lieu of such dues. Annual subscribers pay the same amount yearly, but no initiation fee, and they are not permitted to vote at elections. Ladies are admitted as fellows upon the same terms and with the same privileges; with the addition, however, that they are allowed to vote by proxy.

Fellows have personal admission to the Gardens, with two companions, daily, and receive orders, to be signed by them, admitting two persons on each Saturday and Sunday in the year. They are also entitled to twenty free tickets of admission. Sundays are set apart specially for fellow and their friends, the general public not being admitted.

The Society has business and scientific meetings—the latter monthly—and these are very largely attended and of the most interesting character. New and remarkable subjects of zoology are exhibited, papers and communications on animal physiology and zoology are read, and animated discussions carried on. An abstract of the proceedings is regularly forwarded to the scientific journals and newspapers. The Society also publishes a large variety of zoological matter, which is furnished to fellows at one-fourth less than the price to strangers. Every addition to the collection of the Society has its picture taken upon its entrance, and very handsome colored plates of those which are rare or curious are inserted in these publications. The sales from this source realized last year over thirty-seven hundred dollars.

In 1871 the income of the Society was \$123,101, of which \$69,000 were from admissions to the Gardens, \$9507 from Garden sales and rent of refreshment rooms, \$3750 from the Society's publications, and \$39,415 from dues of fellows and annual subscribers. The expenses for the same year were \$106,840, the principal items being—salaries, wages and pensions, \$21,790; cost and carriage of animals, \$10,560; provisions, \$20,430; menagerie expenses, \$10,480; Garden expenses, \$3465. The annual income has so much exceeded the expenses during the last ten years that the Society has been able to devote over two hundred and thirty thousand dollars of such surplus to the permanent embellishment of its Gardens, and still retain some fifty thousand dollars as a reserve fund.

In the collection of the Society are 590 quadrupeds, 1227 birds and 255 reptiles—altogether 2072. The quantity and various kinds of food—the knowledge of the tastes and ne-

cessities of the animals—the temperature, ventilation, habitations and so on of such a large assortment of different species—necessitate the employment of trained and skilful servants and scientific officers. It has been seen that the provisions and menagerie expenses alone exceed \$30,000, and it must be remembered that the most difficult part, the brain-work, the knowledge—without which the whole would be a failure—is furnished the Society by its council entirely free.

The collection of living animals is the finest in existence, and is daily increasing. Scattered everywhere are its corresponding members, keeping it advised of every opportunity to augment its stores. Its agents have penetrated and are still exploring the desert and the jungle, braving the heats of the equator, and the terrible winters of the ice-bound regions of the globe, to furnish every possible link in the grand procession of organized life.

A large proportion of the most wonderful and valuable part of the collection has been presented by crowned heads and governors of different countries, British consuls, other zoological societies, British naval and military officers stationed in foreign ports and posts, Englishmen of wealth and travelers. The donations to the Society for the year 1872 would alone be sufficient to establish a Garden at Fairmount Park which would be the finest in America. They amounted to over five hundred in number, and include almost every description of animal, from a tiger to a monkey, and from an imperial eagle to a humming bird. With our present connection by rail and steamer with the East and West Indies, and other distant regions, let it only be generally known that a Zoological Garden now exists in Philadelphia, and it will receive contributions from all parts of the world. The Philadelphia society has already had numerous offers of animals, birds and reptiles, and the promise of any number for the mere cost of transportation. The officers of the Smithsonian Institution at Washington have expressed their willingness and desire to hand over to any proper association the many curious animals constantly offered it. The societies of Europe, many of whose managers have been in communication with the one started here, are extremely anxious that a collection of American animals, birds, reptiles and fishes shall be made. It will be wholly unique, and will attract zoologists from every part of the world, permitting them, for the first time, to study the habits of many new species. This continent has a wealth of subjects of the animal kingdom as yet almost unexplored. The birds are absolutely innumerable, and the immense rivers produce fishes of the most marvelous character and but little known. In the Berlin Garden, rapidly becoming a rival to the one in London, one of the greatest attractions, if not the chief, is the American beaver; an assemblage of a number of these on the banks of the Schuylkill, giving an opportunity of witnessing their astonishing sagacity, would of itself be an attractive exhibition.

The Zoological Society of Philadelphia was incorporated by Act of the Legislature of Pennsylvania, approved March 21, 1859. The site selected at that time, and approved by City Councils, was five acres of the extreme south eastern corner of the then Park, consisting of Sedgeley and Lemon Hill, and containing about two hundred acres. A meeting of certain prominent and influential citizens interested in the subject was held, and the matter carefully discussed. At subsequent meetings a constitution and by-laws were

adopted, officers elected, and plans proposed for raising the necessary funds.

Soon after this the rebellion broke out, and in the clash of arms, the terrible anxieties of the times, and the fevered pursuit of wealth that followed the inflation of the currency, the subject of zoological gardens entirely disappeared. Many of those whose names appear as officially connected with the association, and whose purses and influence would now be warmly exerted in its favor, have passed away, to the irreparable loss of the Society. Those who remain have revived the project with every prospect of its complete accomplishment. The increased wealth since the inception of the idea in 1859, the enlarged size of the Park, the growth of the city and the prospect of the Centennial, have widened the views of the Society and it is confidently anticipated that the Garden now established will equal in a few years the superb one of London. The strangers that will flock here in 1876 will one and all visit the Zoological Garden. In 1851, the year of the great Exhibition of London, the number of visitors to the Zoological Gardens increased from 360,402 in the year before to 667,243; and in 1862, the time of the second and International Exhibition, it leaped from 381,337 in 1861 to 682,205. The number has been steadily on the increase since its foundation. In 1863 the largest number up to that time, except the Exhibition years, was 468,700, and by regular progression annually it reached in 1871 the large amount of 595,917 persons.

The situation of the Philadelphia Garden is most admirable in every way. Stretching along the west bank of the Schuylkill river for nearly a third of a mile; opposite the principal entrance to the Park on one side over the Girard Avenue bridge and the West Philadelphia approach by Thirty-fifth street on the other; directly on the route to the Centennial Exhibition; contiguous to the great railroad artery of the United States, the Pennsylvania Central, a siding from which will enter the receiving-house of the Society (marked D on the plan), and thus enable animals and curiosities from all parts of the United States to be carried without change of cars directly to the Garden, or from the East Indies, China, Japan, South America and the Pacific islands with but one trans-shipment; while the canal alongside enables freights of all kinds and from any part of the world to be deposited at the very entrance-gates; the ground rolling and fertile, rising in the centre, and sufficiently elevated to be away from the floods of the river; larger by some acres than the Zoological Garden of London; interspersed with handsome trees, many of them of noble size, planted by John Penn, whose family mansion, "Solitude," still stands (35) within the proposed inclosure, and has been carefully restored to its original appearance by the Society; the old West Philadelphia Waterworks (20) only needing an engine to force the water into the lake, around which will be the abodes of the aquatic animals, and from whence the natural slope of the land will permit the irrigation of the whole tract; the great sewer for the use of the western portion of the city, now in process of construction, passing through the southern end of the Garden, and running along the bank of the river to empty below the dam; convenient to all parts of the city by means of the city railways and the Reading Railroad;—these and many other advantages, which an examination of the illustration of the grounds will naturally suggest, produce a combination unsurpassed and unsurpassable anywhere.

Is it exaggeration to say that the Philadelphia Zoological

Gardens, once properly established, will be regarded with pride and affection by the citizens, and will very materially benefit the whole city? The grounds handsomely laid out in walks and drives, bordered with grass and flowers, terraced from the river; tables and chairs scattered about on the green sward under the trees; a band of music; the cool breezes from the Schuylkill; opposite, the beautiful Lemon Hill Park, with its broad drive alongside the bank—could anything be more attractive and wholesome to the hundreds of thousands who through the hot months are obliged to remain in the city?

The advantages of a zoological garden will hardly be disputed, not only as a place of amusement, but of recreation and instruction, nor, with the experience of other institutions of like character, situated in cities much smaller than Philadelphia, will it be asserted that, if properly managed, it will not be not only self-supporting, but profitable. Like all public projects, however, it is up-hill work to procure the necessary funds to place it upon a solid basis. In these days of railroad securities and of large dividend-paying stocks and bonds, an immediate return is expected, and investments in zoological stock seem to the American people money thrown away. Amsterdam, much smaller than Philadelphia, supports an admirable garden, almost rivaling London. Hamburg rejoices in an excellent one, and so does Frankfort; and many others might be named, all less in size and without the trade and visitors of Philadelphia. London, Paris, Berlin, Vienna, and the larger cities of the world, as is well known, have collections of living animals which are the pleasure and wonder of their citizens and of all travellers.

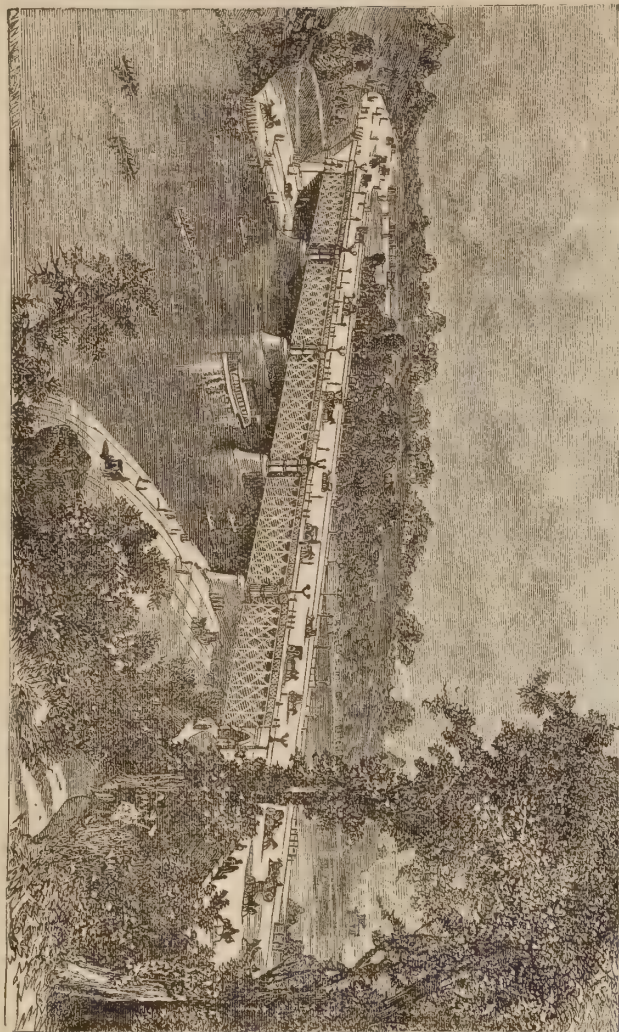

The gentlemen who were obliged to relinquish the plan of a zoological garden for Philadelphia upon the breaking out of the war, revived it again when affairs became settled, and in the spring of this year received the grant of land which has been described, and energetically proceeded to raise the requisite money to insure success.

By the rules of the Society, members are elected upon application, and upon the payment of five dollars initiation fee and five dollars per annum thereafter, become entitled to admission to the garden and a vote in the proceedings of the Society, or they may commute all dues by the payment of fifty dollars upon election.

It was evident to the officers of the Society that increasing the membership was too slow a method of achieving any financial success, and they adopted the following plan for securing money: The Society issues certificates of stock of \$100 each, upon which they agree to pay six per cent. in cash, and two and a half per cent. in tickets of admission to the garden. The cash interest is subject to the condition that the income of the Society shall first be applied to the maintenance of its collection, and the balance only is pledged to the stockholders. Admission to the garden has been fixed at twenty-five cents for an adult, half price for children, and upon certain days in the week, a nominal sum. These arrangements are of course subject to change, and may be altered before the opening of the garden. Persons making donations to the collection receive a complimentary annual ticket.

It is important for those desiring to invest in the Society's stock to consider the probability of the receipts exceeding the expenditures, and this can be demonstrated with almost mathematical accuracy in favor of the Society. The main entrance to the garden is directly opposite to the Lands-

downe drive, where the GIRARD AVENUE BRIDGE touches the west bank of the Schuylkill River, and this is the principal

approach to the park. The Commissioners' report for 1872 gives the recorded number of pleasure carriages and sleighs entering the park at this point and at the Green Street gate, during the year, as 363,138, of equestrians, 26,255, and of pedestrians, 385,832. These, in the words of the report (p. 60), "allowing three persons for each vehicle, will make a total of one million five hundred and one thousand four hundred and ten visitors passing these two entrances; and supposing the number of persons coming by the other ten entrances to be not more than those recorded at these two, we shall have three millions as the approximate number of visitors."

(To be continued.)

(For Fanciers' Journal.)

THE PIGEON FANCY.

It is a very simple thing to enter the pigeon fancy; the intricate problem is how to escape from it when once a fancier. We have tried to solve it ourselves, but our weakness is notorious, and to-day we stand where we did twenty years ago, a slave to a fancy. Well, it is better to acknowledge shortcomings and confess to a human weakness, than to surround ourselves with an atmosphere of selfishness and vanity, under the impression that strength of character is shown by sneering at the little enjoyments of life that tend to dispel its gloom, and to nurture in the heart of man the affections that bring their own reward, whether exhibited towards birds, beasts, or humanity. The great trouble with us Americans is time enough is not wasted. The engine is kept under full press of steam all the while, until the parts are worn out and the whole apparatus goes to pieces. That is very well for anything composed of iron, but for a machine such as the human frame, where the parts are being continually renewed by their own efforts, time must be allowed for the supply to be procured for the demand, and that can only be done by change of occupation from the business

requiring the exercise of the reason to the fancies which release the strain from the mind, and admit of an artistic period of loafing. The pigeon fancy is peculiarly adapted to give the rest so needed. It flows in a quiet channel, and soothes the unquiet mind by the gentleness with which alone it can be successfully followed.

After an hour in the pigeon-room the man of business sees clearly, for the first time, the bearings of his ventures; what was dark to him amid the turmoils of his working hours is elucidated by a few minutes' rest and quiet. The literary person, arising from his books, bears with him to his loft a dazed brain, and returns with a vivid conception of the questions that have resolved themselves in that hour of repose. It may be thought these pictures are overdrawn, but it is not so; some of the clearest headed men in our city are inveterate fanciers. Indeed one of our most noted bankers scarcely ever decides a knotty question until it passes the ordeal of an hour's consultation with an old white rooster of unknown pedigree, but which knows the moment of its master's return from bank, and awaits his coming at the head of the stairs to welcome him with a chuckle or two.

A physician of our acquaintance has often successfully practiced upon his human patients a plan of treatment suggested by his success with it on his feathered pets.

As the fancy is so useful, how shall it be entered.

Have you an unused room at the top of the house, or, better yet, a stable loft? First of all tin over the rat holes, and make the loft secure from cats, for these two are the enemies of the pigeons. Then get a lot of boards one foot wide, and long enough to make shelves on the sides of the room; have also a number of these boards sawed into pieces sixteen inches long for partitions, which it is best to place eighteen inches apart. Having put up your shelves with the partitions against the wall, you must nail a strip, four inches wide, and as long as the shelves, along the lower ends of the partitions to keep the eggs and young from falling out of the nests. The birds will build their own nests if short straws or hay is kept in the room, or nest-pans may be placed in the compartments.

The floor should be sanded, and if running water cannot be had, a fountain should be used. A very good kind is sold by dealers, or a bottle can be turned into a deep saucer, and held in its position by wires, the mouth of the bottle being placed just below the edge of the saucer. The pigeons are best fed twice a day, and no more given them than they will eat at the time. Corn, wheat, and peas are the usual articles of food. Gravel and broken mortar are necessary, and a lump of rock or alum salt is very conducive to health.

Having prepared a place for their reception, nothing more is necessary than to buy a pair of pigeons. It makes little difference what kind you purchase at first; your knowledge will have to come by experience, and it will have to be paid for. Some of these times we may give you "The Confessions of a Fancier," and then you will see your experience and ours will have been the same.

DR. W. P. MORGAN.

(For Fanciers' Journal.)

CURE FOR CHOLERA.

I HAVE tried, in many aggravated cases of this disease, castor oil, and have found it superior to all other remedies. When an astringent is used to no effect, to check the diarrhoea (which is the forerunner of cholera), use the oil abundantly.

dantly, and a cure is certain. As an astringent and preventive of cholera, I use alum and saltpetre, about two parts of the one and one of the other, dissolved in hot water, and mix them a feed of bran or oatmeal and bran with the water; not too wet. After giving this feed for two or three times, and some of the fowls are still mopish, single them out and give a large tablespoonful of castor oil to a grown chicken. To a large turkey, give from two to four tablespoonfuls at a dose. I have seldom to repeat the treatment.

A friend of mine says, a few drops of tincture of iron on the oil is a great benefit; but in the absence of the iron I saved some fine Maine turkeys by one dose of oil, when, without the knowledge of this cure, I would not have given anything for them.

At a future date I will give my method for treating roup. Also the causes, under my observation, of both these diseases.

Excuse the lengthiness of my letter, as it is one of my many faults.

L. R. P.

(For Fanciers' Journal.)

RUMPLESS FOWLS.

IN the *Practical Poultry Keeper*, page 170, Mr. Lewis Wright thus discusses concerning the Rumpless fowl:

"Rumpless fowls are of various colors, the only essential characteristic being the absolute want of a tail, or of any approach to one. It is, indeed, exceedingly difficult to breed any particular color, as few persons have interest in the breed sufficient to persevere long enough for securing uniformity.

"The handsomest are white; black also look well; but speckled are the most common. The size also varies very much, ranging from three to seven pounds."

During the years 1845 to 1850 I resided in Canada, and in those years bred the Rumpless fowl, and the farmer living adjacent bred them very extensively. With the exception of pure white, I found them as varied in plumage as the common barnyard fowl, and averaged the same weight. The prevailing color of my fowls was that of black-breasted red games. Combs rather large and thin; legs usually lead color, but occasionally yellow.

In breeding Rumpless fowls, the black-breasted red is what I should strive for in the way of color, and when thus bred are pretty fowls. As layers and sitters, I found them identical with the barnyard fowls.

I think their shape commends them for a table fowl.

Wishing to try the effect of crossing, I put a fine plumaged, rose-combed Dominique cock with five partridge-colored single-combed Rumpless hens. From that cross I raised twenty-eight chickens. Part of the chickens had double combs; all were Dominique in plumage, with a good deal of yellow in hackle and saddle, and none showed the least approach to a tail.

This fact I have observed, that where Rumpless cocks are mated to tailed hens, or *vice versa*, the progeny is either decidedly Rumpless or otherwise in shape, however much the plumage may vary; and I cannot, with all my experience, call to mind a single fowl whose form appeared to be changed by crossing.

Wright further observes that "the eggs, however, are very apt to prove sterile," an observation my experience does not corroborate.

R. J. H.

WATERTOWN, N. Y., January 7, 1874.

(For Fanciers' Journal.)

RUMPLESS FOWLS.

CARBONDALE, PA., December 30, 1873.

MR. JOS. M. WADE.

DEAR SIR: Noticing in your issue of the *Fanciers' Journal and Poultry Exchange* of the 8th January, 1874, a letter addressed to you by Mr. Allen Carter, of Maine, with regard to "Rumpless Fowl," I think that I can afford you the information you require, having seen that breed of fowl several years past in the Isle of Man, Irish Channel, and from their hardy nature, superior laying qualities, tender, plump flesh (fully equal to the best English Dorking for the table), I consider them on a par with any of the domestic poultry in the States, and far surpassing Cochins, Brahmas, Poutras, or any of the Asiatic breed. The "Rumpy," as it is called in its native place, The Isle of Man, is a strong, plump-looking bird, with single comb, short legs, handsome plumage (minus the tail), especially the cock bird. I believe it would well repay you to introduce this breed of fowl, that is, if you can procure it pure, for which I presume you would have to pay an extra price, as I am aware the breed is becoming scarce, and those who possess these birds duly appreciate their profitable qualities. In the northern part of the island, among some few of the native farmers, I think your agents could procure you a few of the genuine breed.

I have often heard the question asked, but never heard it solved, "Why are the fowl, sheep, and cats, natives of this island, without tails?" It is, however, a fact that they are so, and visitors on their return to England generally take with them one or two "Rumpy Kittens" as a curiosity.

Yours,

A. CARR.

Items Interesting and Amusing.

A RAT-HOLE in a Duluth elevator discharged 600 bushels of wheat last month.

A YOUNG lady at Athol, Mass., has a tame duck which follows its mistress about like a dog. It escorts her to church on Sunday, and remains outside until the service is over, when it escorts her back home.

POULTERER'S SUCCESS.—Miss Annie Kirk, of Bethel, Pa., kept last year (1872) eighty fowls, Cochins and Brahmas, from which she cleared \$330 net. She fed from seven to ten bushels of corn per week to the old fowls and cracked corn to the young chickens.

A MINNESOTA TROUT POND.—The trout pond started below town last spring has become one of the attractive institutions of our city. On visiting the pond a few days ago, we were informed by the proprietors that they had already placed in position for hatching 135,000 eggs, from which they expect to save 100,000 at least. Already 15,000 have hatched out in forty-five days—about the shortest time on record. It will be remembered that they procured from 1000 to 2000 breeding trout out of the streams about Lake City the past summer, and as soon as the season opens again they will endeavor to add as many more. This number of breeders, together with the young fry which will be coming along, will enable them to supply the markets about here in a few years; but not until the stock is amply sufficient will they attempt it.—*Lake City Sentinel*.

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

THE BUFFALO CONVENTION OF FANCIERS.

EDITOR FANCIERS' JOURNAL: I hope that the gentlemen about to meet at Buffalo, to establish an "American Standard of Excellence" for poultry, will apply themselves to this work with earnestness, casting aside all personal crotchets, and produce something in the practical, the true, and the beautiful—creditable to American taste and genius. I also hope they will show their good sense in abolishing the present scale of points. Neither judges nor any other class of persons will feel inclined to study a table of *logarithms*, to get at the beauty or usefulness of a cock or hen. We should rather simplify than complicate. We should endeavor to lessen, rather than to increase labor. If the number 5 will express as much as the number 10 or 20, why not use the lesser number? I can see no more advantage in using the number 100 than the number 50, and if the number 100 expresses the highest limit in the scale, what sense is there in using plus 100? I really cannot see that a scale is any more "*flexible*" by using large numbers than by using small numbers, since the small number designates the same degree of excellence. I cannot see that 100 is any more flexible than 50; if so, then 200 would be better than 100, and 500 better than 200, and so on *ad infinitum*. If "Piscator's" rod is so limber that it will bend double with a fish of two pounds, he had better use a cord, since its flexibility is lost in its limberness. A slight attention to the degrees of comparison in the English language, will aid very much in judging of the relative quality of fowls, since quality is only relative, and perfection only comparative. What Lewis Wright means by 100 plus, or best plus, or perfection plus, is more than I can understand. I can comprehend minus good or minus perfection, but not minus bad or worse than bad. Nor do I agree with those persons who believe that judging *really* is a question more of defects than excellencies. You have got to have some idea of perfection before you can arrive at what is imperfection. You have got to study the normal condition of an animal before you are

able to get at its abnormal condition. Science teaches us to judge of the ill health of a subject by studying it first in its healthy condition. You can form no idea of a perfect thing by its imperfections. I would suggest a word to some of our light Brahma fanciers, especially to those wise men of the East, that admire a cock of this variety with a neck as long as a crane's, a breast as flat as a shingle, and a body of the size of a large pigeon. Such an animal has no beauty in my eye, and less of usefulness. Such a bird always reminds me of those fowls of the air that boys call "kite pokes."

Horace, one of the most celebrated of ancient critics, in his "*Ars Poetica*," says that beauty and utility are inseparable, and tersely expresses it in his elegant Latin, "*Utile cum dulce*;" the ornamental must be accompanied with the useful. What is a game fowl, with all its perfection of plumage, without its game qualities? What merit is there in a Brahma cock, when from its head to its feet it is shaped like an inclined plane? Of what advantage is it to a Leghorn cock to carry a comb on its head of the size of a porterhouse steak? It does not contribute any beauty to the bird, but it is a decided inconvenience. A medium-sized comb, nicely arched over the head, and evenly serrated, is to my taste. Why should we keep up the Dorking toe in the Houdan, when it is such an incumbrance to the bird, and so mars the beauty of its legs? The Roman epicures always gave a preference to the fowls of five toes, believing their flesh to be the best; but our modern epicures do not need an extra toe to recommend the meat of a Houdan. And let us abolish the whimsical idea of calling black-breasted red game fowls, with flesh-colored legs, Derbys.

There is not a game fowl of the present day that partakes of any of the genuine characteristics of the ancient Derby, except in the color of its legs; and since this class of fowl and the flesh-colored legs are entirely repudiated in England, where they know it best, let us drop this foolish notion, and call them by their right names and breed them willow-olive or yellow legs.

There are seventeen varieties of game fowl that can be bred true to their kind, and let us have a standard for them all, viz.:

PETS FOR CHILDREN.

GET pets for the little folks. One of the first elements of success in home government, and it is a question of vital interest to all of us who are so fortunate as to be surrounded with growing families, is that of making home pleasant, a place which shall be more enticing to the little ones than the street-corners of the present or the club-rooms of the future ever can be. The child wants something that it may call its own. What shall it be? Shall it be a gaudy toy, which in a short time loses its novelty, or shall it be a pet

which day after day grows in interest as it grows in life? It may be a favorite fruit tree, a melon-patch; or it may be a dog, a rabbit, a pair of doves, or some pet fowls. Whatever it may be, let the boy or the girl have undisputed possession and ownership. Will not the boy cherish it? Ah! how I remember the Shanghai fever of years ago and the interest I took in it. I was a boy of nine or ten, and when my brother presented me with a pair of snow-white ones I think I was one of the happiest boys in the world. Day after day I worked with dull hatchet and saw, shaping and fitting up a sugar-hogshead as their coop, and then as carefully and patiently built about it a fence. Both the coop and the fence were original, nay, uncouth in design, but then the work was my own, and I looked on it with no little pride. And that first egg; yes, that first clutch of eggs; how eagerly I waited till I found a proper nest and a careful mother to whose care to intrust them. And then all the weary watching and waiting, till the eggs should chip, and when nine little downy balls of snow rolled from the shells and began to cheep; I doubt if there was a prouder and happier boy to be found anywhere. Why, the receipt of my annual salary, while it may give me greater permanent satisfaction, never gave me half the pleasure I experienced as I lifted that hen with her nine little chicks from the nest and carried her to a coop prepared for her. And then, again, when I could not get a hatching-hen at home, haven't I carried my eggs for miles to some farmer's wife, who promised to lend me one for the time being? Nor was my experience as a boy in any way different from that of other boys under similar circumstances.

Can you find a boy anywhere prouder than the one who drives his span of goats down the street, or makes old Carlo haul him round the yard? But, beyond this, your boys or girls will still more gladly accept and care for such pets as pigeons or fowls; pets which, while they give them great pleasure, will at the same time yield them a substantial profit when properly cared for. And, by all means, permit them to glean the profits for themselves. It will teach them business, and they will love their homes all the better. Give your little folks pets, and teach them to love and cherish their homes above all other places on earth.

Correspondence.

(For Fanciers' Journal.)

How many pigeons may be successfully kept in a loft 10 x 14 feet, and well lighted? Should they be confined to one variety? or would it be safe to keep two or three varieties in such a place, providing they were properly mated before putting them in the loft? What varieties bear confinement best, as it is unsafe to fly them in this locality?

R. J. H.

WATERTOWN, N. Y., Jan. 7, 1874.

NEW YORK, January 8, 1874.

MR. JOSEPH M. WADE.

DEAR SIR: In your valuable journal of the 8th instant, I noticed an article by your correspondent, J. G., in which the writer speaks of tobacco as being a fine agent as the destroyer of the lice on pigeons. Permit me to say, as a sufferer from the above infliction, that I have used tobacco, well dusted on the birds and in the nests, with the greatest

success, and in my opinion there is no better destroyer of the insects so common to pigeons. Last summer my birds were infested with the small red lice, and had they not been taken in hand in good time, large numbers of young birds would have been lost, by the lice getting in their ears. I tried everything for their extermination that I could think of, and, as a last resort, turned to tobacco; and, after reducing it to a fine dust, spread it on the birds and nests with a generous hand, and in an instant the bugs were running in all directions. I then followed the matter up by having the coop well whitewashed, and have not seen up to this time a single insect, having effectually put a stop to one of the pigeons' greatest enemies.

Yours truly,

B.

MILLERSBURG, PA., December 31, 1873.

JOS. M. WADE.

DEAR SIR: The *Fanciers' Journal and Poultry Exchange* is a decided "hit." Please find inclosed \$2.50, for which send it to my address for one year.

Permit me through the columns of the same to say something about the advice which is sometimes given by persons who have not tried the remedies which they propose. I heard or read that coal oil is just the thing to kill lice on fowls. I tried it with the following results: It surely killed lice, but it also killed a valuable rooster, and crippled two hens, so that I was tempted to kill them, in order to rid them of their suffering.

Now it does seem to me necessary to warn all interested not to employ such a remedy to destroy lice in cases where animal life must be sacrificed, which they also wish to preserve.

I find tobacco to be far better, and not so injurious to the fowls.

H. A. NEITZ.

NOTE.—We have no doubt that tobacco is a better and safer remedy than coal oil, excepting the latter is used with skill and care. We presume that those who have tried coal oil with success forgot to state how it should be used. It is necessary to mix with it a larger proportion of lard or other oil, and then employ the mixture with discretion. It is one of the best cures that we know of for scurvy legs.

(For Fanciers' Journal.)

EDITOR POULTRY FANCIER: An account of how Charlie, Eddie, and their papa spent the first hour of daylight in the New Year, may not be *inappropo* to the object of your paper.

The engrossing pleasures and labors of the last week of the old year, had induced the neglect of our usual daily attention to the poultry-house; but on New Year's morning we determined it should have a thorough cleansing, and be put in readiness to receive New Year's calls, and to make a respectable *entre* upon 1874. We ought here to give you an idea of our somewhat unique poultry-house. In a future paper we will endeavor to give you some descriptive drawings of it, without which only a very imperfect notion of the structure can be given. Suffice it for the present, that the house consists of three parts: the *day*, or *living-room*, the chamber, and the hall.

The first is quite a large apartment, and is promenade, sitting-room, and dining hall combined. Between this apartment and the hall, and extending the whole length of the building, excepting a small space for a door, is first on the floor, a row of movable nest-boxes, each with a small opening on the side next to the hall, and a large one on the side

next to the living-room. The hens enter the nests from one side, and the eggs are removed from the other.

Above the row of nest-boxes is a platform, three feet broad, and so projecting into the living-room two feet beyond the boxes. This constitutes the dining-table, and it has on the side next to the hall, and extending the whole length of it, a trough for the reception of soft food.

Above the dining-table, again, at the distance of three feet, is another platform not so wide as the lower one, which serves as a shelf for the reception of various boxes, pans, &c., used in connection with the culinary department, but especially and designedly the support of three boxes, with handles, placed at equal intervals, under as many round holes in a large trough. This trough is a principal feature of the "chamber," or sleeping apartment, which must be briefly described. It consists of this wide trough, with a floor slanting from its inner edge to the sloping roof of the building.

The perches, three in number, extend, two of them, right over the trough, and the other along the slanting floor; so that the droppings fall either into the trough or on the floor, and thence into the trough.

But we are going more into description than we intended. Some people carpet their floors with wool, some with sand; but our poultry family seem to delight most in having their floor well littered with clean straw. But it must be renewed at least once a week, and so this morning the old straw was to be replaced by new. The boys were to do this, while their papa was to scrape and brush off the dining-table, and sweep the contents of the trough into the three boxes and carry them out. When Charlie began to rake the straw, he found it all dry, and said he thought there was no need of changing it; but his papa told him that although it looked pretty well, yet, in fact, it was quite filthy, and the fowls had ceased to pick among it. He would see how industriously they would go to work, scratching, pecking at, and eating the little fibrous stems of the fresh straw as soon as it was furnished.

By the time papa had the dining-table and the sleeping chamber nicely cleaned, using dry ashes to absorb any moisture that existed in places, Charlie had the old straw all raked up in a heap by one of the windows, ready to be thrown out; and Eddie had some new ready to take its place. Papa helped them to finish their work, and then all enjoyed seeing the whole family of "Cockey Lockkeys" and "Henny Pennies" eat their breakfast.

This consisted of a trough full of scalded bran and shorts, mixed and seasoned with a little salt and pepper; their drink being a basin of pure, tepid water. They ate with great relish, their soft feed, and then went to work with great satisfaction, as was predicted, scratching and pecking at their new carpet, while the boys and their papa responded to their call to breakfast; and so ended their first hours' work in the New Year.

J. L. DAYMUDE.

DAVENPORT, Jan. 1, 1874.

PIGEONS OF EGYPT.

THE Egyptians are great admirers of pigeons. M. De Norr says, "The houses of Upper Egypt are vast dove-cots, in which the owner reserves only a chamber for himself, and there he lodges with the hens, chickens, &c., exposed to the devouring insects which beset these animals." The Egyptians spend much time on pigeons. They have many

singular varieties, but, like most earnest fanciers, they keep the best for themselves, so that it is difficult to obtain even a sight of their best birds. Out of the varieties which are to be found in Egypt may be mentioned Turbits, Owls, Turn-crown Barbs, Tumblers, Lahores, Swifts, and hosts of others, no doubt, with which I am not familiar. Lahores are said to be Indian pigeons; such may be the case, but I know they are cultivated extensively in Alexandria, for I have on several occasions seen them unshipped at Liverpool from that place. Swifts are Egyptian birds, and remarkable ones; they are almost unknown in England, therefore I briefly describe them. They have a round head, short thick beak, and a very singular-looking pale yellow eye. They are actually small birds, though in appearance they are large. Their wings and tail are unusually long, and give the bird a novel appearance. The legs of these birds are short. Their colors are various; the most striking are those with a bronzed appearance and light hackle. Pied and spangled ones seem the most numerous. Why they are called Swifts I cannot comprehend. It cannot be from the speed at which they fly, for, like most birds with long pinions, they cannot fly fast. The long wing is most desirable in birds that have to perform great distances, but the short and sharp-pointed wing for speed. Owls, of course—that is, the smaller and better kind, are peculiar to Africa, as most fanciers know; in fact, that fruitful portion of Africa abounds in high-class pigeons.—J. W. Ludlow, in *Journal of Horticulture*.

THE CARRIER-PIGEONS.

REMARKABLE FLIGHT OF "ARIEL"—SIXTY-FOUR MILES IN THIRTY MINUTES.

WE last week expressed the opinion when "Ariel" was again flown he would make the distance to Rivercliff, sixty-four miles, in half an hour. The prediction met with little favor; but incredible as such a performance seems, it was actually verified in the bird's flight on Saturday last.

A gentleman who is to form part of *The Daily Graphic* transatlantic balloon staff, was at the Domestic Sewing Machine Company's establishment at three o'clock, and took the birds in charge.

A crowd had assembled to witness the starting of the birds. At 3:10 the first bird was tossed up. It was a female home-bred, and appeared to be very much confused with the houses and the noise and movement on the streets. She flew about quite rapidly at first, and then began to fly in circles. She flew in this way until lost sight of. The second bird was a male home bred. He was freed five minutes after the other one. He lingered upon the hand of the starter, and seemed rather averse to flying. When tossed up he also flew wildly about, and presently began to circle, and finally was lost sight of, as in the former case. At 3:20 the third bird was tossed up, [He was one of the imported birds, Gold Ring, "No. 6."] His performance, on feeling his wings, was most remarkable. He rose in a very narrow spiral ("just like a corkscrew," said the starter) to an immense height, so as to be nearly lost to view. Then, catching sight of some distant familiar object on the Sound, he darted off homeward with great velocity. At 3:30 the bold and beautiful "Ariel" was taken from the cage. He comprehended the situation at once; and on being tossed up he unhesitatingly took his course across Fourteenth Street and the Opera House, and was soon on the road home. All the birds had

red ribbons upon the right leg. Telegrams were immediately sent to James Bond, the farmer at Rivercliff (Mr. Hubbell being at his business establishment in Philadelphia), announcing the despatch of the birds, and requesting information immediately upon their arrival. Accordingly, shortly before five o'clock, the following telegram was received:

RIVERCLIFF, August 16th, 1873.

Ariel and No. 6 arrived at four. The other two birds came shortly afterwards.
JAMES BOND.

It will thus be seen that Ariel performed the journey of sixty-four miles in the remarkable time of thirty minutes. "No. 6" is not inferior; and, indeed, when we consider the unavoidable delay caused by his first scrutiny of the ground, it appears very much as if Ariel would have to look sharp after his laurels.—*Graphic*, Aug. 18th.

DECREASE OF DUCKS ON THE CHESAPEAKE.

A BELAIR paper, in speaking of the gradual thinning out of the wild ducks on the Chesapeake, gives some hints for the preservation of the game. The writer says:

"The present season thus far has not been remarkably successful for the duckers, many of whom make the better part of their living by shooting ducks on the Susquehanna flats. It is a disputed question among sportsmen whether the sink-boat gunning on the flats is not gradually driving the ducks away from their accustomed feeding grounds, to seek more secure locations. The sink-box men contend that of the millions of ducks which visit the Chesapeake and its tributaries in their migratory excursions, the few hundreds or thousands which are killed on the flats are not missed, and that the loss by the guns of the sportsmen is many times made up by the natural increase of the birds in their Northern breeding grounds.

"On the other hand, those opposed to the sink-box shooting contend that any wild animal which is persistently disturbed and killed on its feeding grounds, will most assuredly desert their old haunts and seek other quarters where they will be less exposed to danger and steady annoyance, and although the actual killing of the birds may not be sufficient to diminish their numbers, the constant warfare kept up on them will tend to induce them to seek new and safer routes and resting places in their periodical pilgrimages north and south. The theory of the latter party seems the more plausible, and the fact of the gradual diminution of the ducks goes very far toward substantiating it.

"The arrangement entered into by the Havre de Grace duckers to shoot every other day, and which has been embodied into a law regulating the duck shooting on the flats, is intended as a protection, which, by giving the birds a short respite from danger, it is hoped they will be encouraged to continue to visit their favorite grounds in the same countless myriads as in former years. But the complaints that they leave the flats and take up their course for regions further south after a much shorter sojourn than formerly, seems to indicate that these old haunts on the Susquehanna flats are getting too warm for the canvas-back. In respect to three days' shooting and four days' respite, Seth Green, who is a standard authority on all subjects connected with sporting, suggests that the three days' shooting should be consecutive in place of alternate, leaving the birds four days of quiet in which to feed and recover from the fright of being

shot at whenever they attempted to alight. This plan seems to be an improvement on the one adopted by our duckers. The probability is, if the ducking business is pursued in its present mode for a few years more, that the game killed will not justify the outfit necessary to engage in the business successfully. If the gunning days were reduced to two in the week, and those two succeeding days, considerable protection would be afforded the ducks, while under the present law there is next thing to no protection."

Domestic Department.

HOUSEHOLD RECIPES.

Beef.—A good and cheap beef stew can be made from the second or third cut of neck piece, which wash and divide into small pieces and cover with hot water, cooking slowly and steadily three hours, or until very tender, adding water and skimming when necessary; salt to taste during the last hour of cooking. When nearly done, and the water reduced to a sufficient quantity for thin gravy, I sprinkle over it black pepper to taste, and sometimes cover with a crust, made as for short biscuit, rolled to about half an inch in thickness, and call it a "pot-pie," which we relish with any sort of vegetables, in winter or summer.

Mashed potatoes can always be warmed over by browning in a hot oven, or on a griddle, and will be equal to those newly cooked for breakfast, or a hurried meal.

A quick dish for breakfast.—Pare, over night, a sufficient quantity of apples and cover with cold water. In the morning quarter them, and fill the pan or kettle two-thirds full, to which add half a cup of warm water, a large pinch of salt, nutmeg, sugar to taste, and spread over them a soft dough, mix the same as for biscuits, but rather thinner, cover lightly.

Should there be any dough left, add a little flour and bake as biscuits; which to be eaten warm should be made with one quart flour, two teaspoonsful cream of tartar sifted with it, one level teaspoonful salt, one tablespoonful of butter (or warm suet well worked in), mix with milk and water, in which a teaspoonful of soda is dissolved.

Cold Beefsteak can be transformed into an economical and palatable dish, by chopping it finely and adding a pint or so of water and cooking until reduced to the consistency of hash; to which add butter or cream and a little milk, salt, pepper, and boil up once and serve with baked potatoes and buckwheat cakes.

Cold steak has generally been regarded as a doubtful consideration, while waiting for disposal, and Rover generally gets the benefit of the doubt.

Ginger Crackers.—One pint of molasses, one cup of sugar, quarter pound butter, one tablespoonful ginger, flour enough to roll out and cut. To make *soft gingerbread*, vary the above by adding a cup of hot or cold water, a teaspoonful of soda, and two eggs.

A quick and rich Toast is made by soaking slices of stale bread in milk, to which has been added a well-beaten egg and a small pinch of salt; fry to a rich brown, in butter. Another way for stale bread: soak the crumbs in milk, when soft add one teaspoonful soda, salt, flour, for a good batter, and a well-beaten egg; fry as griddle cakes.

(For Fanciers' Journal.)

WHAT FOWLS PAY THE BEST.

ARTICLE III.

My experience in golden-spangled Hamburgs was also a decided success. I spared neither trouble or expense to procure the best stock in the market. My breeding stock was selected from three different strains. I took first premiums at the different exhibitions held in Philadelphia under the auspices of the Pennsylvania Poultry Society; in fact, my stock of silver and golden-spangled Hamburgs were considered by competent judges to be second to none in the country. I have always considered it cheapest in the end to feed well. Many a bushel of good wheat have I purchased when the prices have reached \$2.50 per bushel. This, in addition to buckwheat, oats, corn, and a plentiful supply of animal food, kept my fowls in a healthy condition. As I remarked, in a former article, my pens were ten feet square, in each pen were placed ten hens and one cock. They were allowed the range of the yard on alternate days; consequently, as I seldom kept less than three different breeds at a time, each kind had but two days in a week for exercise, but on days of confinement they had all that fowls could wish for in the way of food, cut grass, ground bone, and oyster shells, and well they repaid me for what would perhaps seem to some people unnecessary trouble and care. Many a day I would receive, as a reward for my devotion to their health and comfort, ten eggs from either one of the coops. When the breeding season was over, I would place all the hens in one large coop, and they would lay equally as well as when running with the cocks, besides they had the yard to themselves constantly. The cocks kept over for the next season were placed in movable coops, without any bottom, and set around the yard (at a proper distance from one another of course to prevent any pugilistic fancy they might see fit to indulge in). I always had the birds hatched on my own premises, and when about three or four weeks old would send them out on a walk, to be returned in time for fall sales. For fecundity, the Hamburgs as a class cannot be beaten, at least not as far as my experience goes. In settings of fifteen eggs (I never placed more under one hen), I invariably got from twelve to thirteen chicks, and sometimes the whole fifteen. From eggs furnished to other parties the same results have followed.

For beauty nothing can surpass a flock of Hamburgs, of either one of the varieties. Fanciers of the clumsy Asiatics may differ in the beauties of their huge pets as long as they please, but nothing could change my opinion as to the merits of my favorites. Hamburgs are no more to be compared to the larger breeds than the graceful antelope to the ugly rhinoceros.

THOMAS S. ARMSTRONG.

TRENTON, N. J.

(For Fanciers' Journal.)

CHICKEN CHOLERA.

In the copy of the *Fanciers' Journal* which you sent me (for which accept my thanks), I see a piece about this great scourge of almost every section of our country at present. The writer, like almost every other whose opinions I have read, attributes the disease to uncleanness. This cause has been harped upon until it has about worn out the patience of all those who try to keep their fowls in fine condition, and know that the disease arises from some other cause than this.

A dissection of a number of fowls at different times proves,

beyond a doubt (besides the other signs), that the disease, instead of being cholera at all, is neither more or less than a bilious intermittent fever, joined with an inactive state of the liver, which is greatly enlarged, and, in nine-tenths of the cases, very much congested. Prior to the introduction of the Asiatic varieties this disease was entirely unknown, and it may safely be set down as introduced by them, or that they are not as yet acclimated here. This last I believe to be the cause. But let the cause be what it may, it is not uncleanness that breeds it alone. Having been a number of years troubled with the cholera among my fancy fowls, causing much loss, I thought that, like all other diseases, there must be some preventive or cure, or both. I searched for some remedy which would prove successful in treating it, and, after many failures, I hit upon the following, which I think will surely prevent it, and cure nine-tenths of those that may have it: To 1 lb. pulv. alum add $\frac{1}{4}$ lb. B. antimony, 2 oz. Epsom salts, 2 oz. flowers of sulphur, 2 oz. pulv. camphor, with a handful of linseed meal. Mix two tablespoonfuls in meal dough for every ten fowls; increase the dose for sick ones. Once a week is enough for prevention; twice a day for sick ones.

Hoping the above may be of benefit to the fowls, and to the poultry fraternity in general, I am, respectfully,

JOHN RUMBOLD.

HOW TO PLUCK POULTRY.

I HAVE known persons on market-day to go out and kill twelve or fifteen fowls, and to bring them into a room where there would be half a dozen women and boys pulling a few feathers at a time, between thumb and forefinger to prevent tearing them. Now, for the benefit of such, I give our plan: Hang the fowl by the feet by a small cord; then with a small knife give one cut across the upper jaw, opposite the corners of the mouth; after the blood has stopped running a stream, place the point of the knife in the groove in the upper part of the mouth, run the blade up into the back part of the head, which will cause a quivering and twitching of the muscles. Now is your time, for every feather yields as if by magic, and there is no danger of tearing the most tender chick. Before he attempts to flap, you can have him as bare as the day he came out of the egg.—*Journal of Horticulture.*

THE Rules and Price Lists for the Third Annual Exhibition of the Massachusetts Poultry Association, to be held February 4th to 11th, 1874, in Boston Music Hall, are in press, and will soon be ready for distribution. Copies will be mailed to persons who make request by letter addressed to E. H. Hartshorn, Corresponding Secretary, P. O. Box 2725, Boston, Mass.

POULTRY SHOWS.

Pennsylvania, Philadelphia, January 26th to 31st.
 Pennsylvania, Doylestown, first week in February. Thos. Walton, Secretary.
 Western New York, Buffalo, January 15th to 20th. G. W. White, Secretary. Entries close January 5th.
 New England, Worcester, January 20th, 21st, 22d.
 Northern Ohio, Cleveland, January 23d to 29th.
 Massachusetts, Boston Music Hall, February 4th to 11th.
 New Hampshire Poultry Society, Manchester, Feb. 24th, 25th, and 26th. Wm. G. Garmon, Secretary.

THE BUCKS COUNTY POULTRY ASSOCIATION.

Organized Nov. 15, 1873. Officers for the year 1873-4. President: A. M. Dickie, Doylestown. Vice-Presidents: E. T. Ochs, Quakertown; E. G. Harrison, Hulmeville. Corresponding Secretary: T. H. Walton (P. O. Box 130), Doylestown. Recording Secretary: Theodore P. Harvey, Doylestown. Treasurer: H. M. Twining, Doylestown. Executive Committee: A. M. Dickie, Doylestown; E. T. Ochs, Quakertown; E. G. Harrison, Hulmeville; T. H. Walton, Theo. P. Harvey, H. M. Twining, W. T. Rogers, W. T. Eisenhart, Charles Rotzell, Wm. Frankfield, Doylestown; Ingham Smith, Doylestown Township; John J. Moore, Quakertown; Wm. H. Gruver, Springfield; Charles D. Mathews, New Britain; John Kitchen, Solebury; Edwin Johnson, Upper Makefield; Isaac Dudbridge, Warwick.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR SIXTY WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

GOLDEN SPANGLED HAMBURGS, from Imported Stock, and comparing favorably with the best, will be exchanged for Dark Brahmas and Partridge Cochins. Address
WM. ATWOOD, Big Flats, New York.

TWELVE FINE DARK BRAHMA HENS (Wade and Williams' Strain), will exchange for Light Brahmas of the same strains, or will sell at much below their value, for cash. Address
E. R. FRAZIER, Plattsburg, N. Y.

CHOICE POULTRY (of nearly all the leading varieties), will be exchanged for first-class FANCY PIGEONS—Tumblers, Pouters, and Carriers especially desired. Send description of stock to C. W. BOYCE, Albion, Mich. Or Brown Leghorn Cockerels will be exchanged for Pullets. Stock is first-class, *white* ear-lobes. Pullets must be the same.

WANTED, in exchange for Light Brahmas, White Leghorns, Japan Bantams, White Guinea Fowls, &c., one pair Lop-eared Rabbits, Guinea Pigs, Fancy Pigeons, &c.
C. E. L. HAYWARD,
Peterboro, N. H.

DARK BRAHMAS.—A pair of Dark Brahma chicks will be exchanged for either Silver Spangled Hamburgs, or Black-Red Game Bantams. Address
A. GAINES, Castle, N. Y.

WANTED.—Golden Spangled Polands. THOMAS PARKER,
Palsborough, Gloucester Co., N. J.

FANCY PIGEONS.—MARBLE, 13 South Liberty St., Baltimore, Md., having selected his Breeding Stock, will be glad to dispose of his surplus stock of Pigeons, all of which have been bred with the greatest care for purity of strain and markings, namely: pair Yellow Swallows, \$12; pair ditto, \$15; pair ditto, \$25. Pair Red Swallows, \$10; pair ditto, \$15. Pair Black Swallows, \$10; pair ditto, \$12.50. Pair Blue Swallows, black bars, \$15; pair ditto, without bars (very scarce), \$30; odd cocks and hens of above colors, \$4 to \$7.50 each. Pair Blue Magpies (capped), \$12. Pair Black Magpies (capped), \$12. Pair Yellow Magpies (capped), \$20. Also, Blue Cock, \$7.50; Black Cock, \$5; Red Hen, \$4. Pair Nuns (yellow cock, red hen), \$15. Yellow Nun Hen, \$5. Pair Red Turbints (Points), \$10; pair ditto, \$12.50; pair ditto, \$15; pair ditto (shellcrests), \$6; pair ditto, \$8. Pair Red Priests (well feather-footed), \$10*; pair ditto, \$15*; Red Cock, and Yellow Hen, \$10; pair Yellow ditto, \$20*. Red Chequer Cock, Golden Dun Hen Priests, \$8. Pair Spangled Priests, very pretty, \$15*. Pair Black Starling Priests, white heads, half-moon breasts and bars, good crests, \$15*; Pair Archangels, \$12*; pair ditto, \$15*; pair black mottled Trumpeters (imported), \$50*; pair "cks (imported), \$40*; Cock, light-mottled (imported), \$15; all have splendid crests, rose, and feathered feet, winners of many prizes in England. Forty Shortfaced Tumblers, Almonds, Red and Yellow Agate Mottles, Splashes, Kites, and Whole-feather, from \$6 to \$30 per pair; for head and beak properties, as well as carriage and style, there are none better. Three pairs Buff Tumblers, pleasant-faced birds, very pretty, at \$5 per pair. All the above are in health and warranted breeders. No extra charge for coops. A liberal discount to dealers. Express charges must be prepaid.

N.B.—Birds marked thus * are first-class exhibition birds, fit to win in good company.

Ducks; Eggs, \$4 per doz. Rouen, Cayuga, and Plata Ducks; Eggs, \$3.50 per doz. Fancy Pigeons, in great variety, from 50c. to \$20 per pair. Agents for Fancy Poultry, Books, and appliances.

C. B. ELBEN,

PITTSBURGH, PA.

Will make a specialty of the following breeds of Fowls and Ducks, for the season of 1874; no others kept. Light and Dark Brahmas, Dominiques, Black African Bantams, and Aylesbury Ducks. No orders solicited except from responsible parties, when time for examination and payment will be given.

POUTERS FOR SALE.

IMPORTED POUTERS FOR SALE.—1 pair Blue Pied, Cock 20 inches long, good legs and well booted, plain on the wings, and fine breast-mark; Hen, 18½ inches long, good legs, nicely booted, and in marking is well suited to breed with the cock. The pair bred three good young ones in England the past summer. Price, the pair, \$120. Also, two trios of good AYLESBURY DUCKS at \$12 and \$15 per trio.

Address

POUTER, 39 N. Ninth St., Philadelphia.

POUTERS FOR SALE.—1 pair of Black Pied Pouters, Cock 18½ inches long, well marked on the wings, good blower, well booted, and a very showy bird. Hen 17½ inches long, quite well marked, well booted, and a good breeder. The pair have raised six fine young the past season. Price, \$30. Address
POUTER, 39 N. Ninth St., Philadelphia.

MITCHELL COLUMBARY.—Fancy Pigeons in great variety; Yellow, Black, and Blue Fantails, and Carriers, a specialty. I would call attention to my stock of IMPORTED TOYS ICE PIGEONS, FRILL BACKS, &c. There are few birds more beautiful or delicate in plumage than the two varieties named; an opportunity to procure them is rarely afforded. Send 6 cents for Circular. F. F. POLE,
Mitchell, Ont., Canada.

A. L. DORR, Box 995, Haverhill, Mass., offers for sale, Pure Bred Partridge Cochins, at \$1.50 each, or would exchange for some Fine White Leghorn Cocks. Eggs for sale, from Partridge Cochins, at \$2; White Leghorns, at \$1.50. Also, have nearly every known variety of Pigeons for sale cheap.

EGGS FOR EARLY HATCHING, \$6, FROM OAK LANE POULTRY YARDS.—Immediate application from those who have a suitable place in which to raise early chicks for exhibition purposes, will secure a few sittings from my BEST LIGHT BRAHMA STOCK, which will be ready for delivery in time to be hatched in February. Specimens of this celebrated premium stock were considered worthy of illustration in Wright's New Book of Poultry, No. 22. Cash orders booked and filled in rotation. Mrs. J. M. WADE, 39 N. Ninth St., Philadelphia.

WHITE BANTAMS.—A trio of these pretty pets for sale low. They are good layers, cost little to keep, and excellent for the table, and can be kept without mixing with the Asiatic breeds, in the same pen if necessary. Price, only \$8. Eggs for hatching, per setting, \$1. Also, for sale, a pair of GUINEA PIGS. The male is entirely *white*, the female nearly so, only having a small spot of color about the head, in which respect they are quite rare, \$5. Mrs. J. M. WADE,
39 N. Ninth Street, Philadelphia.

GRAVES' INCUBATOR can be seen in working order at 26 N. Market Street, Boston, Mass. Send for Circulars. JACOB GRAVES.

W. W. ELLIOTT, McEwensville, Pa., Breeder of Light and Dark Brahmas, from the best strains. Also, Houdans from Cooper, Ireland.

LIGHT BRAHMAS AND WHITE LEGHORNS.—Very fine young birds, from the finest strain in this country. For sale at \$5 per pair, to reduce stock. Seven Cocks, \$3 each, or will exchange for good Light Brahmas, or Houdan Pullets. T. J. WOOLDRIDGE, M.D.,
French Hay, Hanover Co., Va.

FOWLS AND EGGS.—I can furnish now a few trios of Light Brahmas, Dark Brahmas, and Partridge Cochins. Eggs of above in season. And White and Buff Cochins, Houdans, Silver-Spangled Hamburgs, Silver-Spangled Polands, Gray and White Dorkings, B. B. Red Games, White Leghorns, Gold Sebright Bantams, Bronze Turkeys, Bremen Geese, Aylesbury, Cayuga, and Rouen Ducks, &c. Mode of transporting eggs is as good as the best. My Fowls and Chicks was awarded over \$500 in premiums the past FALL. Send me two 3 cent stamps for new Descriptive Catalogue of Poultry, worth dollars to a beginner. Will exchange NURSERY STOCK for standard *pure bred* Poultry. For information and PRICE LIST, address
JAS. M. WILLS,
Bloomington, Ills.

"THE POULTRY RECORD,"

AN ILLUSTRATED MONTHLY MAGAZINE, edited by C. W. HEATON, Farmington, Ill. *One Dollar per year; single copies, Ten cents.* THE POULTRY RECORD contains each month fine illustrations of the popular breeds of fowls; also, plans of houses, yards, and necessary appliances, with contributions relating to all branches of the business of poultry-raising, from writers of experience and ability. The low price at which it is offered should induce you to subscribe for it at once. It has the unqualified indorsement of the leading Breeders and Fanciers of the country, and also of Farmers and Market Poultrymen who raise fowls for profit alone. Send for a copy before subscribing for any other paper.

Address "POULTRY RECORD,"
Farmington, Ills.

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

VOL. I.

PHILADELPHIA, JANUARY 29, 1874.

No. 5.

AMERICAN POULTRY ASSOCIATION PROCEEDINGS, 1874.

IN accordance with previous announcement, the second annual meeting of the American Poultry Association convened January 16th, at the office of the Western New York Poultry Society, temporarily situated in St. James Hall. The convention was called to order shortly after 2 o'clock, P.M., by the President of the Association, Mr. W. H. Churchman, of Wilmington, Del., Mr. J. M. Wade, of Philadelphia, acting as Secretary. The attendance was composed principally of delegates from state and county associations, prominent breeders and fanciers from different parts of the United States and Canada, and others interested.

After calling the convention to order, Mr. Churchman proceeded to make the following remarks:

THE PRESIDENT'S REMARKS.

Gentlemen and Brother Fanciers:

It affords me much pleasure to see so many of the active breeders of this broad land assembled here to-day to demonstrate the fact that the work that lies before us is of no ordinary character, but that it is a work of the greatest importance.

I would impress upon you the fact that the action of this convention is watched, not only by this whole country, but that it is watched as earnestly by the fanciers of foreign countries. Has not the fact that we formed a national organization for the benefit and protection of our American breeders been received in England, and inspired them with the idea that they must have a national organization? Are we not, then, entitled as Americans to the first honors, that we have taken the advanced step in this matter?

I hope that every gentleman in the room (who is not already a member of this Association) will come forward at the proper time and enroll his name, and give this Association his active support. It is for your individual interest alone that I ask this of you. I extend to you this cordial invitation because it has been imagined that this Association was composed of a clique or ring, and that this clique or ring was going to revise the standard to suit themselves. Never was there such a preposterous idea entertained by any human mind that God Almighty gifted with the power of thought and reason.

I hope that no man here present to-day entertains any such idea. Do you suppose for one moment that the gentlemen who represent officially this Association would sanction their names to any such proceeding? I answer for them—No, never! They are gentlemen of integrity and honor, whose reputation is above reproach. I ask you again to come forward and join us, and put your shoulder to our shoulders, and show to the world that we are a national organization recognized by the highest authority in this country—the Congress of the United States—and that we shall send forth our influence through every state in the land.

MR. CHARLES A. SWEET

being called upon to express his opinion with regard to the falsehood above referred to, declared that the idea of the Association being managed to the advantage of a particular clique or ring was a surprise to him. The notion, he thought, was such a one as no sensible man would entertain for a moment. The affairs of the Association were directed with the utmost fairness and impartiality; and, in conclusion, Mr. Sweet advised every breeder and fancier present who was not a member to come forward at once and attach his name to the rolls.

At the close of Mr. Sweet's remarks, it was moved and carried that a certificate of membership

BE ABSOLUTELY REQUIRED,

to entitle any person to a vote on the questions brought before the convention.

The calling of the roll was the next business in order, each man, as his name was pronounced, answering whether or not he was a member of the Association. Large numbers of those present, not previously connected with the Association, after the roll call had been concluded, paid the usual admission fee, and were forthwith enrolled as members. The real business of the day, that of establishing a standard of excellence, was then taken into consideration, and the delegates were invited to express their opinions as to the best means of founding such a standard.

A motion of Mr. Williams, that the doings with respect to the standard be the exclusive property of the Association, was carried.

It was moved that the President appoint

A COMMITTEE OF FIVE PERSONS

to divide the members of the convention into sub-committees on the different varieties of fowl, and that the said sub-committees be empowered to make such amendments to the standard as they deem necessary—the said amendments to be afterwards adopted or rejected by the convention. This motion was carried, and the President appointed Messrs. J. M. Wade, Philadelphia, Pa., H. H. Stoddard, Hartford, Ct., and P. Williams, Taunton, Mass.

While the committee were preparing their report, the convention was occupied with listening to the reading of a large amount of correspondence which had been received from the leading fanciers of the country, including the following:

OFFICE OF THE IOWA STATE POULTRY ASSOCIATION,

CEDAR RAPIDS, Jan. 14, 1874.

JOS. M. WADE, Esq.,

Sec'y of the National American Poultry Association:

DEAR SIR: Please give the officers and members of the American Association the assurances of the hearty co-operation of the Iowa State Association in all their efforts to revise the standard, and in all other matters calculated to elevate the character and impress the importance of our specialties on the mind of the public. We intend to keep

in the front rank of the progressive Association of this country, and though small in number, we feel large for our size and age.

Wishing the Association abundant success and harmony in its councils, I am

Very respectfully yours,

C. J. WARD,
Secretary I. S. P. A.

HO! FOR A GRANGER'S EXPRESS, OR THE GREAT NATIONAL EXPRESS.

TERREBONNE STATION, LA., January 6th, 1874.

JOS. M. WADE, ESQ.

DEAR SIR: I "owe you one," as Cornet Ollipod says in the play. Specimens of the *Fanciers' Journal and Poultry Exchange* have come duly to hand, and contents greedily noted; and this is to return thanks to you for the same; that is, the favor you have thus conferred. May the journal prove a success, as the fever-heat of the fancy should not be allowed to wane because of a scarcity of good reading on the subject.

A subject which is of vital importance is some cheap system of transportation. Now the expressage on fowls is intolerably heavy. A coop of fowls will cost nearly double their value when shipped across the States. Many who would like to indulge their fancy South find this a great drawback. So it stands all interested in hand to bring about a reduction in prices, and establish a regular schedule of freights on live stock. Thousands and thousands of stock would "change hands" were it not for this oppressive "grinding" on the part of the express companies. How is it that poultry societies do not make an effort to secure some lower and certain rates of charges?

Now if fowls be sent that are costly, the expressman seems to note the fact, and piles on the big charge. It is true that parties sending fowls may manage to higgie with agents, and get a coop or two through at a reduced price, but if he neglects this precaution look out, for a big bill will be handed in of charges as a consequence.

I think it stands the Grangers in hand to urge upon the government the establishment of a national express, which being a governmental affair would control the whole system of expressage throughout the country, and which would redound greatly to the benefit of the commonwealth. Then animals, seeds, trees, farm implements, &c., &c., could, at moderate prices, be disseminated over the length and breadth of the land, with great facility, to the great behoof and prosperity of every one. The government has its postal department, its agricultural departments, but it now needs the great national express department; I think it would prove a big thing if run in connection with the mail system.

In the journal of the 8th instant, J. G. alludes to the statement that "cholera" succeeds to rainy weather. This may be, but in 1872 I lost nearly every fowl I had during a very dry spell, and in spite of all precautions and doctering, the disease persisted until a few heavy showers drenched the ground. The disease then was checked in a day's time. But my opinions and views upon this disease I will endeavor to give you at another time.

Respectfully yours,

L. L. HOLCOMBE, M.D.

CEDAR RAPIDS, January 14th, 1874.

JOS. M. WADE, ESQ.,

Secretary of the American Poultry Association.

DEAR SIR: At the regular annual meeting of the Iowa State Poultry Association, held in Cedar Rapids, Iowa,

December the 18th, 1873, the following resolution was unanimously adopted, and the Secretary instructed to forward a copy to the Secretary of the American Poultry Association for the consideration of that body, at their meeting, during the continuance of the Poultry Exhibition in Buffalo, N. Y.

C. J. WARD,
Secretary I. S. P. A.

Whereas, The development of the poultry interest of this country is being much retarded by the exorbitant charges, and the careless and neglectful manner of the handling of the same by the express companies in its transportation, therefore be it

Resolved, by the Iowa State Poultry Association, That it is their wish and special request that at the next meeting of the National American Association, to be held in the city of Buffalo, New York, January, 1874, said association take such steps or measures to remedy this evil as may seem to them most expedient and proper in the premises.

Resolved, That the Secretary of this Association forward to the Secretary of the American Association a copy of these resolutions, with an earnest request that the matter be at an early date placed before said association for their action.

H. C. DARRAH,
BYRON WEBSTER,
Committee.

C. J. WARD,
Secretary I. S. P. A.

The committee of five next presented their report, which was as follows:

The following

LIST OF SUB-COMMITTEES

on the different varieties of fowl were then submitted by the Chairman of the General Committee, Mr. Philander Williams, of Taunton, Mass., and the report was accepted without debate.

Light Brahmas—I. K. Felch, Natick, Mass.; J. M. Wade, Philadelphia, Pa.; P. Williams, Taunton, Mass.

Dark Brahmas—Wm. H. Churchman, Wilmington, Del.; E. C. Skinner, Detroit, Mich.; A. B. Estes, New York.

Buff Cochins—Geo. L. Williams, Buffalo, N. Y.; David Jones, Tecumseh, Mich.; H. M. Thomas, Brooklin, Ont.

Partridge Cochins—C. H. Crosby, Danbury, Ct.; W. H. Todd, Vermilion, Ohio; P. Williams, Taunton, Mass.

Black and White Cochins—Daniel Allen, Galt, Ont.; Wm. Wright, Detroit, Mich.; A. M. Halsted, Rye, N. Y.

Plymouth Rocks and Dominiques—Wm. H. Lockwood, Hartford, Ct.; C. B. Elben, Pittsburg, Pa.; M. I. Ellis, Norwood, Mass.

Dorkings—Fred. Sturdy, Guelph, Ont.; R. M. Griffith, Wilmington, Del.; H. H. Stoddard, Hartford, Ct.

Hamburges—H. H. Stoddard, Hartford, Ct.; Andrew J. Tuck, Nashua, N. H.; E. S. Ongley, Auburn, N. Y.

Black Spanish—A. M. Halsted, Rye, N. Y.; E. B. Smith, Buffalo, N. Y.; I. K. Felch, Natick, Mass.

White, Brown, Black, and Dominique Leghorns—Wm. H. Lockwood, Hartford, Ct.; E. J. Kinney, Worcester, Mass.; W. B. Atkinson, Erie, Pa.

Polish—R. M. Griffith, Wilmington, Del.; E. P. Howlett, Syracuse, N. Y.; H. M. Thomas, Brooklin, Ont.

Houdans, Creve Coeurs, La Fleche, and Guilders—Wm. P. Atkinson, Erie, Pa.; Geo. W. White, Buffalo, N. Y.; A. M. Halsted, Rye, N. Y.

Games and Game Bantams—P. W. Hudson, North Manchester, Conn.; M. H. Cryer, Massillon, Ohio; A. D. Warren, Worcester, Mass.

Bantams other than Games—E. P. Howlett, Syracuse, N. Y. ; E. S. Ongley, Auburn, N. Y. ; P. Williams, Taunton, Mass.

Various Class—Rev. Wm. Atwood, Big Flats, N. Y. ; W. H. Todd, Vermilion, Ohio ; S. H. Seamans, Wauwatosa, Wis.

Turkeys—Geo. Vanderveer, Port Jackson, N. Y. ; J. Y. Bicknell, Westmoreland, N. Y. ; M. H. Cryer, Massillon, Ohio ; W. H. Todd, Vermilion, Ohio.

Geese and Ducks—W. H. Todd, Vermilion, Ohio ; C. B. Elben, Pittsburg, Pa. ; Daniel Allen, Galt, Ont.

Your committee recommend that the Association instruct the committees on the respective breeds to make their reports on the numerical basis of one hundred.

Mr. Williams moved that all correspondence relating to the alteration of the standard, be passed over to these committees, and the motion was carried without opposition.

Mr. Halsted moved that the Committee on Asiatics be instructed to make the word *size* mean *weight*.

Mr. Churchman thinks this should be discussed by the committee on all classes of birds.

Mr. Halsted's motion that the size of Asiatics be made uniform, discussed by Mr. Felch, and thinks ten is a small enough number to allow for weight.

Mr. Halsted thinks *size* should be independent from weight.

Mr. Lockwood thinks the matter should be discussed after the report of the sub-committees.

Mr. Halsted thinks the birds should be judged as they *are* in size, and not as they may be in future development.

Mr. Felch thinks *weight* should prevail, rather than a large *frame* not yet developed or matured.

Mr. Williams speaks on the improvement in size of birds at recent shows, and thinks size and weight should remain in the standard as at present, and thinks fifteen is the better number.

Mr. Halsted wants the number fifteen and not twenty on all Asiatics.

Mr. Hudson suggests *size and weight* rather than either alone should be in the standard.

Carried.

Report of the committee accepted as read, with the amendment of Mr. Hudson.

Adjourned till 2 P.M. to-morrow, with instructions to committees to report at that hour.

Jan. 15th, 1874.

JANUARY 16th, 1874, 3 P.M.

Called to order by the President.

Mr. Churchman wished no minutes taken by outside parties, and would expel any member violating this rule.

No reporters will be allowed here at the meeting this evening.

Mr. Warren moves adjournment till 7 P.M.

Mr. Williams named S. Merry, W. H. Todd, D. Allen, and C. H. Crosby, as a committee to revise the standard on the general shape of Cochins. Nominations of said committee confirmed.

Adjourned on motion of Mr. Warren till 7 P.M. this day.

JANUARY 16th, 7½ P.M.

Convention called to order. President Churchman in the Chair.

Mr. Warren moves the appointment of a committee of three on Transportation by this Association. Carried. A.

D. Warren made Chairman, E. C. Skinner and W. H. Churchman added.

Letters of C. J. Ward ordered, accepted, and filed, and the Secretary directed to communicate with them in relation to the matter.

Mr. Williams moves to add Mr. Sweet to the Committee on Transportation.

Moved that former committee be empowered to select their associates as occasion may offer.

Mr. Hudson moved that the committee consist of a member of each State Society.

Mr. Warren would like the committee to consist of nine, all to be members of the A. P. A.

Six members added, Todd, Gregg, Hudson, D. Allen, P. Williams, and Jos. M. Wade.

Mr. Halsted suggests the appointment of members to act as judges at the various shows.

Mr. Churchman supports the suggestion.

Mr. Williams suggests a petition of one hundred or more names to the express companies to reduce their rates.

Mr. Kinney complains of want of care on the part of the express companies.

Mr. Halsted thinks much more blame should attach to the shipper.

Committees on Revision of Standard called on to report.

Mr. Halsted's report received on French Class and Black Spanish. Accepted on Black Spanish. Accepted on Creve Coeurs. Accepted on Houdans. Accepted on La Fleche. Committee discharged.

Committee on Light Brahmas report read and accepted. Committee discharged.

Report of Committee on Dark Brahmas accepted. Committee discharged.

Report on Buff Cochins read and accepted. Committee discharged.

On motion of Mr. Atwood, the reports so far accepted are adopted by the Convention.

Report on Partridge Cochins read and accepted and adopted. Committee discharged.

(Continued in our next.)

(For Fanciers' Journal.)

ON SCALES OF POINTS FOR JUDGING POULTRY.

By L. WRIGHT.

As American fanciers appear at present to be considerably "exercised" about the revision of their Standard of Excellence, and two of your correspondents have referred directly to my views upon the subject of a standard for judging birds, I have thought that a fuller expression of them may not be thought presumptuous, and may, perhaps, prove of some use; the more so that Mr. Woodward, while referring to me in terms far more flattering than I deserve, has, to some extent, misunderstood my meaning in coming to the conclusion that, "after many attempts to get around the difficulties which constantly present themselves, I have at last decided that any numeral standard must of necessity be a failure."

The remarks in an English journal, to which I have no doubt Mr. Woodward alludes, referred particularly to a ridiculous proposal on the part of a small clique, not including at most more than half a dozen competent breeders, to meet and "fix" a standard of points by mere opinion. This experiment had been already tried once, with a result known

as well in the United States as in England, and the proposal to repeat it met with deserved ridicule from every one who knew what fowls and judging really were. The idea is a fascinating one to those who have *not* any practical knowledge of such things; but nearly all skilled fanciers have long given it up. This may be called the "empirical" method of making a scale, and I do, as Mr. Woodward remarks, consider that all such attempts "must be failures." For their course must be somewhat as follows: Either the old scale of points, or some one prepared by a deputed authority, must be brought as a basis before the meeting or convention. Then the numerical values given to the various points must be discussed; and one skilled breeder thinks some one point, perhaps color, "ought" to have more numerical value given to it than the draft scale allots. After some debate, perhaps, this is unanimously agreed to. Then some one else thinks that another point "ought" not to have so much; and this too is settled one way or another. At last the various values are all decided as the convention, or at least the majority of it, think they "ought" to be; and there will always be a little weakness for arranging these values in even "fives," and to bring them to add up exactly the 100, so that the scale may be symmetrical, compact, and "look" well.

Now what I mean is, that such purely *theoretical* scales thus "fixed" by meetings or conventions will be found useless. If a really good and heavy class is judged by them—*really, practically, and truly*, and not any professedly—the awards that result will be evidently *wrong* to any first-rate authority on the breed which may be so judged. It will be found that the real values *cannot* be thus "fixed" round a table, and by what people think they "ought" to be. Some will be nearer than others, no doubt; but it will be found that mere opinions, taken in this way, in more or less ludicrously out in its reckoning. Real, evident, good judging somehow *won't* square with it. It is very provoking; it "ought" to, but it won't. I began myself, of course, with the very best theoretical scales I could frame, but I do not remember one among them all which had not to be extensively modified; my own mere "opinion" of the values in a scale shared the same fate as those which had gone before me. My "views" would not, any more than those of others, square with the practice of good judges, and very soon I had to confess the fact.

But, on the other hand, I did find that *good* judging was *pretty consistent*; there is always a proposition of judging that is evidently *not* good, and whenever I came across a case of this kind I never hesitated to strike it out of the calculation altogether. My principle was this: Taking any scale as corrected to that time so far as I could perfect it, I came to any given class, and considered whether it was consistent with the awards. If it was, I took courage; if not, I considered whether the awards were correct or not, and very possibly found that I should myself have allotted the awards in the same way. They were evidently right, but they would not square with my scale. Then I had to alter something in the scale, and perhaps found that such alteration harmonized the judging in that particular class—say a class of pullets—but perhaps made the awards in a class of hens of the very same breed more inconsistent than ever. I would at last find that some point must be divided into two separate features, or some entirely new point added to the old standard; and thus, by degrees, I felt my way along. It was weary work enough, and whether the

result be worth the trouble I must leave for others to decide, only saying that at last scales did emerge from the process which gave myself tolerable satisfaction.

Now, I do not think scales formed in *this* way, "must of necessity be failures;" if I did, I should certainly not have given them. I doubt much if *any* scale can meet *every possible case*. I do not think those I have given are beyond improvement. I do not think any "fixing" of values by collecting *opinions* will ever produce a scale of real use. But I do think that all *good practice* will be found pretty harmonious. I do think such *good practice* can be patiently studied, and *its* values for the various points compared and analyzed, and thus by slow degrees tabulated. And while I do not think classes can ever be really judged by such scales, merely for want of time, besides other reasons, I think that for checking grossly erroneous awards, or for private study or guidance, they may be, to the young fancier especially, almost invaluable. It will be seen at once that much loving study, and considerable *time*, must be consumed in constructing a scale in this way; but I should have, after my own experience, very small respect for any other; and I would at least attempt earnestly to dissuade from any other method, the fanciers of America.

Such are my views, which I hope I have made clear enough to be understood. Let it not be thought for a moment that I wish to offer my own set of scales for the adoption of Americans. I believe they do, as correctly as scales can, represent good and correct judging, but it is correct *English* judging. I was gratified beyond expression by the favorable experience of them expressed by Mr. George F. Clark, but not at all surprised to find that in "some" he "does not agree" with my comparative values. It would conclusively have shown error in them if he had, since it was English and *not American* values which alone I could express. I have not a shadow of doubt, that did I for two years analyze the best American, judging the values as I have given them, would be in some points considerably altered. I can see no very especial reason why the standards of our two hemispheres should exactly coincide. All I have at heart is to dissuade fanciers from the useless form of putting their mere "opinions" into figures, and deciding the final values by a "majority;" and to convince them that the only way to have an American standard worth the paper it is written on, is to spend upon it the needful time, patience, and study, to tabulate the *practice* of American judges. Wherever an award is evidently wrong, throw it out; but if right, however far your scale be from squaring with it, study *where* it is wrong till you get it right. Check one good judge by another in this way, and by degrees you will come right, and if you can thus get sound *practice* analyzed and reduced to correct values, you will have accomplished a work worthy of the effort, and which shall well repay you for all it has cost.

BUFFALO POULTRY SHOW.

LIST OF AWARDS.

THE following is a complete list of the awards made at the Fourth Annual Exhibition of the Western New York Poultry Society:

CLASS 1—ASIATICS.

LIGHT BRAHMAS.

Cocks—1st special premium, W. H. Todd, Vermilion, Ohio.
2d premium, George Furness, Auburn, N. Y.
3d premium, P. Williams, Taunton, Mass.

4th premium, Philander Williams, Brantford, Ontario.
 Hens—1st special premium, S. Merry, Ilion, N. Y.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, John W. Bush, Buffalo, N. Y.
 4th premium, P. Williams, Taunton, Mass.
 5th premium, Wm. Wright, Detroit, Mich.
 Cockerels—1st special premium, S. Merry, Ilion, N. Y.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, P. Williams, Taunton, Mass.
 4th premium, P. Williams, Taunton, Mass.
 5th premium, W. H. Todd, Vermilion, Ohio.
 Pullets—1st special premium, W. H. Todd, Vermilion, O.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, C. A. Sweet, Buffalo, N. Y.
 4th premium, W. H. Todd, Vermilion, Ohio.
 5th premium, S. Merry, Ilion, N. Y.
 JUDGES—I. K. Felch, Mass.; A. B. Estes, N. Y.; E. P. Howlett, N. Y.

DARK BRAHMAS.

Special extraordinary premium for best dark Brahma hen,
 Charles A. Sweet, Buffalo, N. Y.
 Cocks—1st special premium, P. Williams, Taunton, Mass.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, W. H. Todd, Vermilion, Ohio.
 4th premium, W. H. Todd, Vermilion, Ohio.
 5th premium, W. H. Todd, Vermilion, Ohio.
 Hens—1st special premium, C. A. Sweet, Buffalo, N. Y.
 2d premium, W. H. Churchman, Wilmington, Del.
 3d premium, P. Williams, Taunton, Mass.
 4th premium, W. H. Todd, Vermilion, Ohio.
 5th premium, W. H. Todd, Vermilion, Ohio.
 Cockerels—1st special premium, P. Williams, Taunton, Mass.
 2d premium, W. H. Todd, Vermilion, Ohio.
 3d premium, W. H. Todd, Vermilion, Ohio.
 4th premium, P. Williams, Taunton, Mass.
 5th premium, W. H. Todd, Vermilion, Ohio.
 Pullets—1st special premium, W. H. Churchman, Wilmington, Del.
 2d premium, W. H. Churchman, Wilmington, Del.
 3d premium, P. Williams, Taunton, Mass.
 4th premium, D. W. Herstine, Philadelphia, Pa.
 5th premium, W. H. Todd, Vermilion, Ohio.
 JUDGES—P. W. Hudson, Conn.; S. Merry, N. Y.; H. A. Mansfield, Mass.

BUFF COCHINS.

Cocks—1st special premium, S. Merry, Ilion, N. Y.
 2d premium, W. H. Todd, Vermilion, Ohio.
 3d premium, G. W. Dickinson, Warren, Ohio.
 4th premium, Jones & Green, Tecumseh, Mich.
 5th premium, Jones & Green, Tecumseh, Mich.
 Hens—1st special premium, W. H. Todd, Vermilion, Ohio.
 2d premium, Geo. L. Williams, Buffalo, N. Y.
 3d premium, S. Merry, Ilion, N. Y.
 4th premium, Geo. L. Williams, Buffalo, N. Y.
 5th premium, Daniel Allen, Galt, Ontario.
 Cockerels—1st special premium, Jones & Green, Tecumseh, Mich.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, H. M. Thomas, Brooklin, Ontario.
 4th premium, W. H. Todd, Vermilion, Ohio.
 5th premium, Jones & Green, Tecumseh, Mich.
 Pullets—1st special premium, W. H. Todd, Vermilion, Ohio.
 2d premium, Geo. Dickinson, Warren, Ohio.
 3d premium, W. H. Todd, Vermilion, Ohio.
 4th premium, Jones & Green, Tecumseh, Mich.
 5th premium, S. Merry, Ilion, N. Y.
 JUDGES—J. M. Wade, Penn.; H. H. Stoddard, Conn.; E. P. Howlett, N. Y.

PARTRIDGE COCHINS.

Cocks—1st special premium, W. H. Todd, Vermilion, Ohio.
 2d premium, Newton & Moon, Angola, N. Y.
 3d premium, W. H. Todd, Vermilion, Ohio.
 4th premium, A. P. Groves, Philadelphia, Pa.
 5th premium, R. K. Noye, Buffalo, N. Y.
 Hens—1st special premium, H. S. Huidekoper, Meadville, Pa.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, H. M. Thomas, Brooklin, Ontario.
 4th premium, George Resseque, N. Ridgeway, N. Y.

5th premium, P. Williams, Taunton, Mass.
 Cockerels—1st special premium, P. Williams, Taunton, Mass.
 2d premium, S. Merry, Ilion, N. Y.
 3d premium, C. A. Sweet, Buffalo, N. Y.
 4th premium, H. M. Thomas, Brooklin, Ontario.
 5th premium, Geo. H. Warner, New York Mills, N. Y.
 Pullets—1st special premium, P. Williams, Taunton, Mass.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, W. H. Todd, Vermilion, Ohio.
 4th premium, S. Merry, Ilion, N. Y.
 5th premium, C. A. Sweet, Buffalo, N. Y.
 JUDGES—W. H. Churchman, Del.; David Jones, Mich.; E. S. Ongley, N. Y.

WHITE COCHINS.

Cocks—1st special premium, P. Williams, Taunton, Mass.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, W. H. Todd, Vermilion, Ohio.
 4th premium, F. Sturdy, Guelph, Ontario.
 Hens—1st special premium, F. Sturdy, Guelph, Ontario.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, P. Williams, Taunton, Mass.
 4th premium, W. H. Todd, Vermilion, Ohio.
 Cockerels—1st special premium, W. H. Todd, Vermilion, Ohio.
 2d premium, P. Williams, Taunton, Mass.
 3d premium, George W. White, Buffalo, N. Y.
 4th premium, W. H. Todd, Vermilion, Ohio.
 Pullets—1st special premium, P. Williams, Taunton, Mass.
 2d premium, George W. White, Buffalo, N. Y.
 3d premium, W. H. Todd, Vermilion, O.
 4th premium, H. S. Huidekoper, Meadville, Pa.
 JUDGES—I. K. Felch, Mass.; H. M. Thomas, Ontario; B. H. Nichols, N. Y.

BLACK COCHINS.

Cocks—1st special premium—P. Williams, Taunton, Mass.
 2d premium—no award.
 3d premium—no award.
 4th premium—no award.
 Hens—1st special premium—P. Williams, Taunton, Mass.
 2d premium—George W. White, Buffalo, N. Y.
 3d premium, W. H. Todd, Vermilion, O.
 4th premium, George W. White, Buffalo, N. Y.
 Cockerels—1st special premium, P. Williams, Taunton, Mass.
 2d premium, Chidsey & White, Elmira, N. Y.
 3d premium, George W. White, Buffalo, N. Y.
 4th premium, P. Williams, Taunton, Mass.
 Pullets—1st special premium, P. Williams, Taunton, Mass.
 2d premium, W. H. Todd, Vermilion, O.
 3d premium, Chidsey & White, Elmira, N. Y.
 4th premium, George W. White, Buffalo, N. Y.
 JUDGES—I. K. Felch, Mass.; H. M. Thomas, Ontario; B. H. Hollis, N. Y.

CLASS 2.—GAMES.

BLACK-BREASTED RED.

Cocks—1st special premium, A. D. Warren, Worcester, Mass.
 2d premium, A. D. Warren, Worcester, Mass.
 3d premium, S. Curtis, Buffalo, N. Y.
 4th premium, J. Y. Bicknell, Westmoreland, N. Y.
 5th premium, H. M. Thomas, Brooklyn, Ont.
 Hens—1st special premium, A. D. Warren, Worcester, Mass.
 2d premium, S. Curtis, Buffalo, N. Y.
 3d premium, H. M. Thomas, Brooklyn, Ont.
 4th premium, A. D. Warren, Worcester, Mass.
 5th premium, A. D. Warren, Worcester, Mass.
 Cockerels—1st special premium, S. Curtis, Buffalo, N. Y.
 2d premium, A. D. Warren, Worcester, Mass.
 3d premium, A. D. Warren, Worcester, Mass.
 4th premium, M. H. Cryer & Co., Massillon, O.
 5th premium, A. D. Warren, Worcester, Mass.
 Pullets—1st special premium, A. D. Warren, Worcester, Mass.
 2d premium, A. D. Warren, Worcester, Mass.
 3d premium, S. Curtis, Buffalo, N. Y.
 4th premium, M. H. Cryer & Co., Massillon, O.

5th premium, S. Curtis, Buffalo, N. Y.

JUDGES—C. H. Crosby, Conn.; E. P. Lawrence, Mass.; G. L. White, N. Y.

DUCK WING

Cocks—1st special premium, P. W. Hudson, N. Manchester, Ct.

2d premium, Thomas Tugby, Niagara Falls, N. Y.

3d premium, Daniel Allen, Galt, Ont.

4th premium, S. Curtis, Buffalo, N. Y.

Hens—1st special premium, P. W. Hudson, N. Manchester, Ct.

2d premium, S. Curtis, Buffalo, N. Y.

3d premium, George W. White, Buffalo, N. Y.

4th premium, M. H. Cryer & Co., Massillon, O.

Cockerels—1st special premium, B. E. Lyall, Niagara Falls, N. Y.

2d premium, M. H. Cryer & Co., Massillon, O.

3d premium, S. Curtis, Buffalo, N. Y.

4th premium—no award.

Pullets—1st special premium, S. Curtis, Buffalo, N. Y.

2d premium—no award.

3d premium, S. Curtis, Buffalo, N. Y.

4th premium—no award.

JUDGES—G. L. White, New York; E. P. Lawrence, Mass.; W. H. Todd, Ohio.

PILE GAME.

Cocks—1st special premium, P. W. Hudson, N. Manchester, Ct.

2d premium, J. Y. Bicknell, Westmoreland, N. Y.

Items Interesting and Amusing.

WORKS ON FANCY PIGEONS.—The books that have been written on fancy pigeons have not been many. First, Moore's "Columbarium," published in 1735. This book, scarcely more than a pamphlet, is now very scarce and valuable; it is excellent, and the foundation of all our correct knowledge. Then followed the "Treatise on Domestic Pigeons," published in 1765. This is Moore's work enlarged, with illustrations of each bird. There is an edition of this work on larger paper and superior engravings, a copy of which I have seen. Next, in about 1800, came the "The Complete Pigeon Fancier," by Daniel Girton, in substance like the two former, but enlarged. This book has illustrations. It may sometimes be bought for 1s. at a bookstall, being much more common than the two former. In 1802 was published a "Treatise on the Almond Tumbler" only. This was the next book in value after Moore's. It has a picture of a standard Almond of that date. Dixon's "Dovecote and Aviary" saw the light in 1851. It is prettily written, but no authority on high fancy matters; it is now out of print; its substance, with illustrations by Harrison Weir, may be bought for 1s., under the name of "Pigeons and Rabbits," being one of Routledge's "Books for the Country." Eaton's "Treatise on the Almond Tumbler," came out in 1851. It is now incorporated in his "Treatise on Pigeons," and since the death of Mr. Eaton is to be bought of its able illustrator, Mr. Dean Wolstenholme, Elizabeth Cottage, Archway Road, Highgate, price 10s. The "Pigeon Book," by Brent, with many illustrations, published at the office of this journal, is a practical and able work. Tegemeier's "Pigeons," with colored illustrations, was sent out in 1868, price, I think, 10s. 6d. More recently the same author has published a shilling book on "The Homing or Carrier Pigeon."—*Wiltshire Rector.*

THE Zoological Garden at Fairmount Park in time will be an interesting place to visit. What are particularly needed there are native American animals. Lions, tigers, leopards, &c., are familiar to every child, but not more than one in a thousand of our population has ever seen a grizzly bear, panther, buffalo, silver fox, and many other native animals that could be obtained at a comparatively small expense. On Saturday last the first invoice was received in this city for the garden, and consisted of eighty-six specimens of wild animals and reptiles from the Rocky Mountains.

HORSES are a drug in Australia. In many of the old districts of New South Wales they run wild in thousands; they are not worth looking after, and are very difficult to collect in any way; they eat the food of other profitable stock, and are only a scourge upon the pastures. Hence they have to be exterminated like vermin. In many parts of the country they are shot by hired men, for so much per head, and are collected and destroyed systematically. They abound in wild mobs upon mountains of the most rugged and inaccessible character, as well as upon the wildest plains of the interior; always degenerating, becoming smaller, weaker, and wilder.

A HARTFORD gentleman recently communicated the following incident to a local paper: "A young dove, unable to fly but a short distance, dropped from its nest, which is in the eaves of a barn located just outside the city, and after several excursions of the parent bird from the nest to the ground, and *vice versa*, in which it showed by its actions that it desired the young one to follow, finally, seeing that the younger could not fly to the nest, walked along on the ground cooing to the younger to follow, until it reached the foot of a ladder which was standing against the barn, the upper end of which was but a short distance from the nest, and hopping from round to round actually succeeded in bringing the infant bird to its parent nest."

THE following incident is said to have occurred recently in Knoxville, Tenn. A lady had a false tooth which had become loose, and recently, while out in the yard feeding her chickens, she sneezed very hard, when the tooth fell out and was at once swallowed by one of the chickens. The lady kept her eye on that same chicken, and, as soon as possible, effected a capture, when she felt of the craw until she discovered a substance she took to be her tooth, and, taking a knife, the craw was opened at that place, the tooth taken out, and again closed with needle and thread, and the chicken released. The chicken is still living and well, though full of resolution never to again to swallow a tooth, while the lady sports a full set of teeth again.

THE Hartford Times tells a curious story of a flock of crows in that vicinity who recently lost their way in a fog. They lost their bearings at a point directly above the South Green, in Hartford. For a good while they hovered there, coming low down, circling and diving aimlessly about, like a blindfold person in "blind man's buff," and keeping up a hoarse cawing and general racket beyond description. It was plain enough that of the entire company each individual crow was not only puzzled and bothered, but highly indignant, and inclined to utter "cuss words" in his frantic attempts to be heard above the general din, and tell the others which way to go. Once or twice the whole flock swept down to a distance of not more than one hundred feet above the street. Finally, after going around for many times they sailed away in a southerly direction, evidently having got some clue to the way out of the fog, or desperately resolved to go *somewhere* till they could see daylight.

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

DAVENPORT POULTRY CLUB.

At the annual meeting of the Davenport Poultry Club, the other evening, the re-elected President, Rev. E. Miller, read the following paper on the History of Domestication of Fowls. It is undoubtedly one of the best, if not the best, paper on the subject extant, and is filled with knowledge, humor, and good sense. It will interest everybody.

This is the age of organization. The great thinkers and doers that anciently stood in isolated grandeur above the low plane of the uneducated masses, did great things by means of *authority*. But since the masses have become more intelligent, equal and free, *organization*, instead of *authority*, holds the sceptre that concentrates the efforts of the people.

Organization, at once the exponent of equality and power, has also become a modern *propensity*. Two men can scarcely go fishing or hunting, nowadays, without articles of incorporation, and pigs are fattened and colts trained according to constitution and by-laws. Coal-miners wield the pick, and boot-blacks "put on the shine," under the auspices of State and national conventions. Literature, art, and science do duty for melons, potatoes, and onions. History and philosophy solemnize the nuptials of labor and capital; and the lay of the poet and the lay of the hen blend in the strains of modern classics.

The *propensity* to organize is justly gratified in the organization of "The Davenport Poultry Club," inasmuch as it seeks to give utility and taste to the recreations of its members. It is fitting, too, that the literature of this body should contain a *history of poultry domestication*.

The earliest valid point of such history is cotemporary with Plato and Aristotle, 350 years before the Christian era. There are, nevertheless, many allusions in sacred history, that, assisted by probable argumentation, lead us to think that poultry became domesticated at a much earlier date. The passage in Ecclesiastics (12:4) probably refers to cock-crowing as "the voice of the bird." And in 1 Kings (4:23) the phrase "fatted fowl" must refer to *domestic* fowl of some

kind. Job, who was probably cotemporary with Jacob, refers (38:36) to instinctive intelligence; and according to the Latin translation, instances gallinaceous fowl as its embodiment. ("Quis posuit in Visceribus sapientiam, vel quis didit galls intelligentiam.")

Passing backward along the course of emigration into Persia, to the "first families" of post-diluvian civilization, we find a man, the oldest son of Japhet, and first grandson of Noah, bearing the name "Gomer." This name, according to Hebrew scholars, is borrowed from the poultry-yard, and is the name of the veritable "cock that crew in the morn" during the dark and lonely wanderings of the ark.

But we may support this probability with a theory never before, to our knowledge, advanced, viz.: *That the divisions of time are based upon periodic phenomena of nature*; and as the seasons first indicated the year, the moon suggested months, the sun gave night and day, nothing could have suggested the watches and hours except the crowing of the cock. The apparently indiscriminate application of the term "hour" to watches of 180 minutes, and hours of 60 minutes, sometimes occurring in the New Testament, further evinces that the crowing was the basis of these time divisions, since this crowing takes place at intervals of 180 minutes from 6 o'clock until midnight, and of 60 minutes thence till dawn. Now if we inquire of the ancients as to how they came by these smaller time divisions, we get no reply, except that Heroditus says the Greeks obtained them from the Babylonians. And if we look into sacred history, we find the *first* mention of "hours" in the Book of Daniel, speaking of events in the city of Babylon. Daniel and other Jewish captives were the first Jews to use the term hour, and they doubtless learned this time division during the captivity.

But the first settlements of the sons of Noah were in the country of Babylon, and at an early date the families of Japhet emigrated to the Greek Archipelago. These built houses and cities; were men of manufacturing and commercial habits, and not only found great use for the minor time indicator, but in the stability of their dwellings, leisure for the domestication and care of fowls; while the roving life of the tribes of Shem and Ham precluded the society of poultry, though it utilized the camel, sheep, kine, &c. The presumption exists, that nearly all of our domestic animals and birds were in the domestic state during the life of Noah, if not much earlier.

Passing downward to the Greeks, Romans, and Jews, very common and familiar mention is made of domestic poultry. The peacock, guinea-fowl, goose, and hen were common among the Greeks. Four hundred and fifty years before the Christian era, cock-fighting, which had been a common pastime in Greece and India, was adopted by the Romans. Christ referred in the most familiar way to the "hen gathering her brood under her wings." And while the theologians "kept the key of knowledge," he taught the people the tenderness of his compassion by this well-understood illustration. And when he warned Peter of his fall, he designated the time by the ever reliable instinct of the feathered chronometer.

As the game-cock was both a source of amusement, for fighting, and a reliable indicator of the night watches, it is easy to believe he accompanied the Roman armies to France and England. The first record of cock-fighting in England is that under Henry II; it was practiced by school-boys on Shrove Tuesday, but afterwards it became a favorite amuse-

ment of English sovereigns and nobles. The practice was prohibited under Edward III, but became general again under subsequent rulers until again put down under the Protectorship. But as this barbarous pastime has a history of its own—more interesting to roughs—we will not pursue it here.

Columeli was the first whom we know to have devoted a work to the subject of poultry. And though he was nearly cotemporary with Christ, the markings and qualities of many varieties were about as definitely classified then as at present. He speaks of the Dorking with his "fifth toe," the Polish with his "top-knot," the game with his "black breast, red hackle, and fiery courage," and the black Spanish with his "white face."

Gallinaceous fowls are now to be found in nearly all portions of the habitable globe. The aborigines of America and the Greenlander have not possessed them, but the islands of the Southern Oceans are said to be "alive with them;" while Asia, North Africa, Europe, and civilized America, use them and their eggs in such profusion as to occupy many millions of money annually with incident commercial transactions.

The objects for which persons have given attention to poultry have been food, profit, fancy, and science. The first of these, namely, was, together with the time-keeping qualities of the crower, the great reason, no doubt, for their domestication and care in ancient times. And as this care was bestowed principally by woman, it is natural that it should, with herself, have been despised by men and neglected by ancient writers. But not caring that her devotion was unappreciated by her lord, she sedulously sought every means to "give food to her household." I suspect that to this feminized devotion, we owe the preservation of the race of poultry. But, as the world grows older and wiser, not only woman, but this charge of the housewife, grows in importance, till the products of the poultry-yard command hundreds of millions.

New York City alone consumes \$8,750,000 worth of eggs annually, while the annual consumption of eggs and chickens in the United States, is estimated at \$100,000,000. Over \$1,000,000 worth of eggs are annually exported from Ireland to the two ports of Bristol and Liverpool; and of poultry feathers Ireland sells to England \$2,500,000 worth yearly. Yet the importation of eggs and poultry by England from France are even greater, while France keeps \$80,000,000 worth for home consumption. Full statistics of the trade in eggs and poultry are not now in my possession, but they cannot fall short of \$2,000,000,000.

In view of these immense figures the question of profit presents itself. Careful accounts and experiments have settled the profits of poultry-keeping to be, on an average, one hundred and fifty per cent. upon the capital invested. These figures have led many into a hasty investment in poultry rearing as a business, without sufficient regard to the three great conditions of success, namely: 1. Experienced skill in the management; 2. Market facilities; 3. The practicability of keeping fowls on a large scale, so as to invest a considerable capital.

This last consideration was experimented upon by Mr. Geyelin, at Bromley, England. The failure was decided, and the consequence was to discourage all similiar attempts for many years.

A reconsideration of the subject has, of late, led to the belief that his failure was chiefly owing to fault in the first

above-mentioned condition. He proceeded upon mere theory, and that theory strangely defective. Parties in the United States are conducting the experiment with encouraging success.

In Egypt immense numbers of fowls are hatched by artificial means, but are not reared together in large numbers, but sold or parcelled out among other parties to be raised on shares. These incubating establishments have been carried on, it is believed, for centuries, but by a clan who possess a secret that accounts for their success. They receive eggs from the surrounding communities to supply their ovens, and pay in advance twenty-five per cent in chickens.

Fancy, however, has been the chief motive in the careful culture of fowls in Great Britain and the United States, where the finest and purest varieties are to be found. In England, this fancy directed chief attention to the game fowl, at a very early date, and developed clearly the best fighting strains. These had about monopolized the fancy until between the years 1840-50, when importations of the gigantic hens of China, Malacca, and the East India islands, began to be made in large numbers. Most of us may remember those days of the "hen fever," that as mysteriously and universally as the "epizootic" swept over our country. Games, Bantams, Dominiques, paled into insignificance in the estimation of those effected by this epidemic. Nothing but the rooster that could peck corn from the top of a flour barrel and bawl with the ambition of an ox could be the object of their fancy; and for such specimens fabulous sums were paid.

(To be continued.)

PHILADELPHIA ZOOLOGICAL GARDENS.

(Continued from page 52, No. 4.)

It will hardly be asserted that there is any prospect of this number diminishing, nor will it be denied that it is most probable it will steadily increase, and during the year of the Centennial be more than quadrupled. It is reasonable to believe that few would resist the pleasure of driving, riding or walking through the zoological gardens so invitingly at hand. Saturdays should be cheap days, and the money that would be taken in on those days alone would dissolve any fears of their six per cent. in the minds of the stockholders. Apparent, however, as the result seems to those who have studied the question, or who have the subject at heart, the managers have had great difficulty in raising sufficient money, but they have struggled gallantly along, and have established the nucleus of a collection in the park which, with encouragement from the public, will assume magnificent proportions in a very few years. With some \$60,000 they have inclosed ten acres in the centre of the thirty-three shown in the plan, and have laid it out as there shown. The walks are vulcanized, the ground graded and ready for a lovely turf in the spring, the stream opened and widened into pools in places for fish and aquatic birds, rustic bridges have been thrown across, a handsome place for beavers has been built, an enclosure for prairie dogs, a monkey house, the finest to be seen anywhere, costing six thousand dollars, a buffalo enclosure, six deer parks and houses, three connecting pits for bears have been begun, a barn, or temporary winter house, and before spring an aviary, aquarium house, restaurant, eagles' cage, and other buildings will be completed. The list of members nearly reach four hundred, and means are being taken for increasing the num-

ber to a thousand before opening. It is most earnestly desired that \$150,000 at least will be subscribed, as with that to devote to improving the whole tract of ground and collecting animals, a collection and garden that would compare favorably with any in Europe can be obtained by the time of the Centennial.

The Society has had many animals donated, and has purchased a number very cheaply through means of its friends and agents in the West. Its superintendent is now in the Cape of Good Hope, from whence he will return by way of Australia and India, with a cargo of rare and curious beasts and birds. The Society has given him all the money it can possibly spare, and ten times the sum in this country would not purchase what it will there in the hands of a capable man.

It is proposed to open the garden about the first of May or June of this year, and the Society has no doubt that it will be in a condition to entertain and instruct visitors to its garden.

It may not be uninteresting to readers of this paper to know just what go to make up the Society's collection, as it indicates how much can be done with a very little money, and much interest is shown by citizens of this and other States in such a garden. In view of the Centennial, it must be again observed, a collection of American animals would be viewed with great pleasure by all foreigners, and it would be thoroughly new, and without a rival anywhere.

The animals marked thus * have been donated.

- | | |
|---|---|
| 1 pair ravens, very fine.* | 1 Blacktail deer doe, six months old. |
| 4 Alligators.* | 1 pair silver pheasants.* |
| 3 Turtles.* | 5 English pheasants.* |

| 1 Santo Domingo dog.* | 1 Pink cockatoo.* |
| 1 Porcupine.* | 3 Wolverines. |
| 1 Virginia deer.* | 1 Badger. |
| 2 Blacktail deer. | 1 Lynx. |
| | 1 Wild cat. |
| | 1 pair English magpies. |
| | 1 English hedgehog. |

Mr. Theodore Harrison, of this city, whose collection of live birds is unrivalled in this country, has presented them to the Society, and as soon as a suitable aviary is prepared they will be removed to the garden. The aquarial department will be made a special feature, and lovers of that branch of natural history will have an opportunity for investigation and study never before presented in this country. A source of income to the Society will also be the sale of surplus or duplicate animals and birds. This could be made a large

item if properly managed. Pigeons, chickens, dogs, sheep, birds of various kinds, &c., &c., could be raised in great variety and purity.

In fact such a garden opens a thousand avenues of benefit and pleasure, and it is to be earnestly hoped that such a project shall at once receive the necessary financial encouragement to make it a great American success.

Correspondence.

(For the Fanciers' Journal.)

ON SELECTING FOWLS.

So much has been written in regard to the different and best plans for the successful rearing of poultry, and so many different ideas have been advanced by those whose long experience gives them a precedent over the more recent school of fanciers, that an amateur hardly knows whose advice to take, or what breed of fowls to commence with. For instance, a young man whose natural tendencies from early boyhood have leaned toward the feathered tribe generally, goes to an exhibition of poultry, pigeons, &c. When he enters the room, and finds himself surrounded by fowls and pigeons of every known variety, and hears the crowing of the knights of the barnyard portrayed in the deep bass of the gigantic Brahma, down to the squeaking alto of the diminutive Bantam, accompanied by the musical cackle of their fair mates (for to my ear there is no sweeter music than the cackle of a hen, especially about sunrise in the early spring mornings), he is at an utter loss as to what breed he shall select from. The first variety most likely to attract his notice will be the huge Brahma; and as he views their immense forms, and hears the laudations of their numerous admirers (for he will find many of them around the Brahma cages), his mind is almost made up to give them a trial. Well, they really do have their merits; they are without doubt the poor man's fowl; notwithstanding their ravenous appetites, they will subsist on the refuse of the table, and be satisfied with a cheaper and coarser article of diet than their smaller and more delicate relations. They are not of a roving disposition; they can be reared successfully in a small yard, provided they are kept clean. They are not as subject to disease as some of the smaller varieties. Lice being their greatest enemy where they are kept in a city; and for the benefit of those that have been troubled by the pesky varmints, I will add a cheap and sure remedy. Go to your grocer, and procure a mackerel keg filled with brine, which he will be glad to get out of the way; stand it in one corner of your coop, and with a sponge saturate the perches, nest, boxes, &c., every other day with the brine. It will also destroy pigeon lice effectually. From the Brahma department we will go to their cousins, the Cochins, and as our young friend gazes with admiration on the different varieties of that magnificent breed, his mind undergoes a complete change. What color shall he select? Before him are the buff, partridge, black, white, cinnamon, all handsome birds, and well worthy of all the praise that can be bestowed upon them. Like the Brahmas, they are content with a small range, and are also good winter layers when properly cared for. My experience with Brahmas and Cochins has not been very extensive, but I would suggest that where fowls are kept in cities, or large towns, no matter what breed, that the coops be cleaned every day; it can be easily done by covering the floor of the coop with straw or hay; I prefer the latter, as it destroys any bad smell. Shake it up every

morning thoroughly, so that the droppings are excluded, and your fowls will be kept warm, healthy, and comfortable.

In a future article we will treat on the game fowl.

THOMAS S. ARMSTRONG.

TRENTON, N. J.

At a meeting of the Executive Committee of Wisconsin State Poultry Association, held at Milwaukee, January 7th, 1874, it was decided to hold an exhibition of poultry, pigeons, pet stock, &c., in the city of Milwaukee, Wisconsin, Feb. 17th, 18th, 19th, and 20th, 1874. Competition open to the world.

P. A. VAN VRANKEN.

WAUWATOSA, WIS., Jan. 8th, 1874.

(For Fanciers' Journal.)

MATCHING AND MATING.

As I understand these words, Mr. Editor, there is in many cases a wide difference, and yet in many cases they are in a measure synonymous. Rather let me say, sometimes in matching for exhibition and matching for breeding, the same pair or trio of fowls may be used and sometimes not.

Now, is this a fault in the fowls or the breed, or is it a fault in the standard, which requires such matching in a pen as will destroy the same pen, so far as breeding is concerned? It seems to me to be in the latter.

To make the matter plainer let us take a case. I have a trio of Plymouth Rocks; they are ready matched for exhibition, dark pullets and dark cockerel. But I dare not breed from a trio mated like this. True, it will bring me nice cockerels, but more than one-half probably of my pullets will be pure black. In fact this is about the only way to produce the exhibition cockerel. Now to breed exhibition pullets, I must mate differently. Here I must put with my same hens a light cock or cockerel, and I will get fine pullets, but all the cocks will come light. Thus to insure success for exhibition, I am compelled to undergo double expense, and be burdened with double care and trouble, in breeding from two pens, because *matching* and proper *mating* do not agree.

This is true, not only of this variety, but also of many others. Philander Williams, of Massachusetts, whose experience as a breeder and character as a man are unquestioned, wrote me a year ago as follows: "Most of our experienced breeders of Partridge Cochins are of the opinion that *brown* in the breast and fluff of a Partridge Cochin cock is no objection to him as a breeder, such cocks producing the best marked pullets." My own limited experience in this matter would fully confirm, so far as it goes, the assertion of Mr. Williams. But what body of judges would for a moment think of looking on a pen of Partridge Cochins in an exhibition favorably, if the cock were mottled with brown on the breast.

The same is true of light Brahmas. There are very few exhibition trios, or pairs, and particularly premium birds, which an experienced breeder would care to breed from as matched for the show-room, simply because he knows that as the birds are matched a large percentage of the progeny would be not only imperfect but badly marked birds.

I urge no objection to the present plan and the present standard, because we are getting around and behind the defects by offering premiums for single birds, thus permitting

the stock breeder to mate for himself. But were we to adhere to the old plan of trios, it does seem to me that it would be well to extend the premium list, particularly in those cases where *matching* and *mating* do not agree, and offer premiums, say for best mated pairs or trios for breeding pullets, and for best mated pairs or trios for breeding cockerels. This plan would enlist in our ranks not only the present fanciers, but also many other scientific stock-breeders who are not properly embraced within what is known as "the fancy." It would of course somewhat increase the expenses of premium lists, &c., but its effect would be to bring in a new and interested class of breeders who do not now grace the show-room with their presence.

LOCK HAVEN, PA.

(For Fanciers' Journal.)

"PEA-COMB PARTRIDGE COCHINS."

In a recent number of a poultry journal, I saw an account of a breed of Asiatics, of the "Partridge cochin" variety, in possession of C. H. Edmonds, of Melrose, Mass., that it strikes me is *new*, if he has established this breed permanently.

It is stated that he has no fowls or eggs for sale at present, but the account given is interesting to fanciers of the large Chinese fowls; since, with the *Brahmas*, the "pea-comb," upon the dark or light varieties, is now a *sine qua non* among breeders, and single combed birds of those varieties are disqualified for competition in our exhibition-rooms. Has Mr. Edmonds originated the pea-combed *Partridge Cochins*?

In brief, it is stated that he obtained three years ago a few choice Partridge Cochins, which were chickens, the *first* remove from stock imported from England; two or three of which, upon maturing, showed the *pea-comb* distinctly developed.

He bred this trio together, set all the eggs, got a good lot of chicks (a majority of which were cocks, however), the first year, selected from these, all pea-combed, a fresh lot, bred them the second year with continued success, and last year went on again, breeding back with the original stock, until he now has a fine lot of birds for the coming year, all perfectly marked with the pea-comb in both sexes; whose size, form, color, and other characteristics of these at present coveted large fowls are described as very superior.

The *Partridge Cochin* has hitherto been bred only with the single upright seriated comb, within my knowledge; and the "standard of excellence" provides this mark as a qualification, if I remember rightly. How about the *pea-comb* upon this variety? If it be *established*, is it an improvement in this fowl? And what becomes of Wright's theory upon this subject, in his "Monograph of the Brahma Fowl?" Is this variety really new? If so, and if like will produce its like (as in the case of the *Brahmas* in this particular), why hasn't Mr. Edmonds got a "good thing" in his "*Pea-comb Partridge Cochins*?"

B. G.

NEW YORK, January, 1874.

(For the Fanciers' Journal.)

INSIDE TUMBLERS.

THESE beautiful birds have been my study for at least fifteen years past, and I think, without exaggerating, they are the most interesting of the whole pigeon family. The very fact of having birds that cannot reach a fence four feet

high, until at least a dozen attempts have been made, would seem to some people a matter of impossibility; nevertheless it is a fact. In 1868, I reared a Red Mottle hen that could not reach a water-tub nine inches from the floor; and one year later had two cocks (nest mates) that would make four revolutions coming from one of the upper boxes, in a room six feet high, to the floor; and from my present stock I can select twenty or thirty birds, place them on a grass-plot, take a cart-whip, make all the noise imaginable, and very few of them will get higher than the fence; but there are times when they will tumble much better than others, for instance, during the moulting season they seem to care very little for such amusement.

My plan for breeding these little pets (and in order that they may attain the art of tumbling to perfection), is to change the eggs from my inside birds to outside of flying tumblers; the young birds from the inside stock will begin to show their good qualities in from four to six weeks, when they can be removed to permanent quarters; they must be closely watched, however, in order that no strolling cat pounces upon them. When they once begin to tumble they improve very rapidly, and are apt to fall in the neighboring yards, and become the prey of their feline enemy before they can get up in the air again. They are good breeders, naturally healthy, and very handsome in plumage; they can be kept with other pigeons, but will do much better alone, as in tumbling they sometimes get hurt coming in contact with larger birds.

THOMAS S. ARMSTRONG.

TRENTON, N. J.

ARE MICE IN PIGEON-HOUSES INJURIOUS?

JOSEPH M. WADE, EDITOR.

DEAR SIR: For some time past I have been greatly troubled with mice in my pigeon-house, and have found that their presence has tended to make the birds restless, especially those who are at present nesting. Will some of your correspondents kindly inform me whether they are troubled in the same manner, and if the presence of mice is injurious to the birds, and what are the best means to take for their removal. I have tried traps, poison, and a cat, but without any decided success.

Yours truly, B.

NEW YORK, January 8th, 1874.

PENNSYLVANIA STATE POULTRY SOCIETY.

At the annual election held on Monday, January 12th, 1874, of the Pennsylvania State Poultry Society, the following officers were elected to serve for the ensuing year:

President.—William Wister.

Vice-Presidents.—Wm. H. Churchman, Jesse N. Rooke, Charles L. Sharpless, John E. Diehl, Dr. Thomas B. Raynor.

Treasurer.—Henry Saunders.

Recording Secretary.—George C. Stroman, Oxford, Chester Co., Pa.

Corresponding Secretary.—Johnson Hughes, 49 N. Ninth Street, Philadelphia.

Executive Committee.—B. F. Lewis, R. M. Griffith, John C. Stone, Samuel J. Courtney, Samuel J. Sharpless, Jesse G. Darlington, A. P. Groves, Mark Schofield, Dr. Lussan, D. W. Herstine.

POULTRY SHOWS.

Pennsylvania, Philadelphia, January 26th to 31st.

Pennsylvania, Doylestown, first week in February. Thos.

Walton, Secretary.

Northern Ohio, Cleveland, January 23d to 29th.

Massachusetts, Boston Music Hall, February 4th to 11th.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR SIXTY WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

TWELVE FINE DARK BRAHMA HENS (Wade and Williams' Strain), will exchange for Light Brahmas of the same strains, or will sell at much below their value, for cash. Address

E. R. FRAZIER, Plattsburg, N. Y.

CHOICE POULTRY (of nearly all the leading varieties), will be exchanged for first-class FANCY PIGEONS—Tumblers, Pouters, and Carriers especially desired. Send description of stock to C. W. BOYCE, Albion, Mich. Or Brown Leghorn Cockerels will be exchanged for Pullets. Stock is first-class, white ear-lobes. Pullets must be the same.

WANTED, in exchange for Light Brahmas, White Leghorns, Japan Bantams, White Guinea Fowls, &c., one pair Lop-eared Rabbits, Guinea Pigs, Fancy Pigeons, &c. C. E. L. HAYWARD, Peterboro, N. H.

DARK BRAHMAS.—A pair of Dark Brahma chicks will be exchanged for either Silver Spangled Hamburgs, or Black-Red Game Bantams. Address A. GAINES, Castile, N. Y.

WANTED.—Golden Spangled Polands. THOMAS PARKER, Palsborough, Gloucester Co., N. J.

Williams' and Felch Hens), at \$6 per dozen. Dominique Eggs, \$3 per dozen. Black African Bantam Eggs, \$2 per dozen. Aylesbury Duck Eggs, \$6 per dozen. All of which are first-class first Prize Stock. Eggs packed with care in patent boxes. Two fine Aylesbury Drakes for sale, direct from imported stock.
C. B. ELBEN, Pittsburgh, Pa.

A. P. GROVES, 34 SOUTH DELAWARE AVENUE, Philadelphia, Pa., Breeder of Buff, and Partridge Cochins, Dark Brahmas, and Houdans. Satisfaction guaranteed.

GAME FOWLS, of all varieties, carefully bred in feather, station, and weight, all of which are bred from well-tested fowls. I have selected my stock from the most noted and reliable breeders in the country, who have not only bred for the show-pen, but with a cock-pit point of view, who seek for purity of blood, bone, and muscle, which is all that constitutes a genuine Game. And, as for color of plumage, or marks for the show room, I can produce fowl equal to any in this, or foreign countries, and having supplied the leading cock-pits for a number of years with my strains of Games, there has not been one reported as showing the white feather, or in other words, to run. And as I am not engaged in any other business than breeding of Game Fowls, I make my prices low so as to effect quick sales, while others who breed for pleasure ask enormous prices, caring little as to whether they effect a sale.

For Price List, address

JOHN ARCHER,
Box 43, Mahanoy City, Schuylkill County, Pa.

FOR SALE.—Two Houdan Cocks, one Houdan Hen, one trio Black Cochins. Also, the finest pair of White Crested Black Polands in the country; have taken first premium wherever exhibited. Also, one pair fine B. B. Red Game Bantams. Address

Send stamp for Illustrated Circular and Price List. Address
G. W. DICKINSONS, Warren, Ohio.

RARE CHANCE.—For a wide-awake man with a capital of one thousand dollars, and who is fond of Fowls, Pigeons, Birds, &c., to buy out the store, 39 N. Ninth Street, Philadelphia. The best stand in Philadelphia. This would not be for sale, but I find that my entire time will be required on the Fanciers' Journal which will be published at the above establishment. Address JOS. M. WADE, Philadelphia.

JOHN P. BUZZELL, Clinton, Mass., Breeder of Light and Dark Brahmas and Partridge Cochins. At the Great Show in Boston, 1873, my stock was awarded First Prize on Light Brahma Fowls; Fourth Prize on Light Brahma Chicks; Second Prize on Dark Brahma Chicks. A few Fowls of the above Stock for Sale. Also, Eggs from these prize-winning Cocks, mated with superior Hens.

BLACK BREASTED REDS.—I would state to the public that I shall dispose of my stock of Black-Breasted Red Games before January 1st. Those wishing to purchase at prices to suit can address at once,
S. E. CLARK, Cor. Sec'y, Hartford, Conn.

SUGAR MAPLE, White Ash, and Red Beach, 50c. per 100; \$2 per 1000. Tulip, Linden, and Sweet Chestnut, \$3 per 100; \$15 per 1000. By mail, 25c. per 100 extra. Send stamp for catalogue and description.
A. BATTLES, Girard, Pa.

PURE BRED!!—Two pairs Black Breasted Red Game Bantams, or Cocks single; ONE year old. One pair Gold-Laced Seabright Chicks. One pair White Bantam Chicks. Four Fine White Leghorn Cockerels, "J. B. Smith's Strain." One pair Aylesbury Ducks, "Clift's Strain." All splendid birds. Will exchange or sell low. Address
J. F. FERRIS, Stamford, Conn.

A. M. CAREY, SELINGSGROVE, PENNA.

Breeder of First-Class Fowls. Good specimens of the following varieties for sale now at very low prices: Light Brahmas, Partridge Cochins, Houdans, Silver-Laced, and Black Red Game Bantams.
CORRESPONDENCE SOLICITED.

MY PARTRIDGE COCHINS are well known to Breeders, Exhibitors, and judges of that variety of Asiatics, and have attained to a desirable reputation by their superior merits, and success as prize-winners. I prefer them to any other variety of Asiatics, and shall make them my specialty for 1874. A few Fowls and a fine lot of Chickens for sale at prices according to quality. Also, for sale, my entire stock of WHITE COCHINS, BLACK RUSSIANS, and JAPAN BANTAMS, to make room for PARTRIDGE COCHINS.

Address

W. H. BRACKETT,
Washington National Bank, Boston, Mass.

BULLDOG FOR SALE.—Extra fine, one and a half years old. White, with colored spot on the face. Free from scars, and a perfect specimen. Price \$30. Address
JOSEPH M. WADE,
No. 39 N. Ninth St., Phila., Pa.

BRONZE TURKEYS.—For want of room I will sell one trio Bronze Turkeys, one year old. Hens from Fords, Cocks from Todd's premium strains. The Hens were part of premium coop at Union Fair, of Four Counties, this Fall. Price, \$25, in P. O. Order, or N. Y. Dft.
Address BEN. FAGAN, Hubbardston, Mich.

THE MASSACHUSETTS POULTRY ASSOCIATION will hold its THIRD ANNUAL EXHIBITION at Music Hall, Feb'y 4th to 11th, inclusive, 1874. In addition to the regular premiums offered by the Association, OVER \$1000 ARE OFFERED IN SPECIALS.

No. 6.

AMERICAN POULTRY ASSOCIATION PROCEEDINGS, 1874.

(Continued from No. 5.)

Report on White and Black Cochins read, accepted and adopted. Committee discharged.

Report of Committee on Silkies read and accepted. Adopted, and this committee not yet discharged.

Committee on General Shape of Cochins directed to furnish a report.

Report of Committee on Plymouth Rocks read, accepted, adopted, and committee discharged.

Report of Committee on Dominiques read, accepted, and adopted, and committee discharged.

Report of Committee on White Leghorns read and accepted.

Mr. Warren moves to reconsider.

Carried and postponed till to-morrow.

Report of Committee on Hamburgs read.

General shape accepted and adopted.

Names changed from "Penciled Golden," &c., to "Golden Penciled," &c.

Vote of thanks passed, on motion of Mr. Warren, to Messrs. Skinner, Wright and Butterfield, for their services during their attendance.

Mr. Sweet authorized to furnish the press with items from the proceedings of the Convention.

Reports read by J. M. Wade, Secretary.

The following Committee of six were appointed to revise the reports on the Standard, and prepare for publication and publish: J. M. Wade, W. H. Churchman, C. A. Sweet, A. B. Estes, W. H. Lockwood, and H. H. Stoddard.

Committee appointed to fix the salary of the Secretary.

The following committee was appointed to revise the Constitution and By-Laws: Warren, Estes, Todd, Stoddard, Sweet, Felch, Hudson, Wade, and Griffith.

Adjourned to Saturday, 2 P.M.

JANUARY 17th, 2 P.M.

Convention met pursuant to adjournment.

President Churchman in the chair.

Mr. C. A. Sweet made remarks in support of a motion to adjourn (made by I. K. Felch), until evening. Mr. A. S. Warren also made remarks in support of the motion, and, being seconded, was voted and carried, thus giving the time of the members to the Western N. Y. P. Society for the purpose of completing the judging.

A motion was made by Mr. Warren to *rescind* the motion to keep out local reporters.

The Secretary proceeded to read the report of the Committee to revise the Standard of the Silver, Golden, Black and White Hamburgs, on motion, it was accepted, adopted, and the committee discharged.

The report of Committee on White Leghorns was also received and read, and, on motion, it was adopted.

The report of the Committee on Dominique Leghorns was received and read, and, on motion of Mr. Stoddard, it was adopted, and committee discharged.

The report of Committee on Black Leghorns was received and read, and, on motion of E. P. Howlett, it was adopted, and committee discharged.

The report of Committee on Brown Leghorns was received and read, and, on motion of E. P. Howlett, the report as read was adopted, and committee discharged.

The report of Committee on Andalusians was received and read, and, on motion of D. Allen, it was adopted, and committee discharged.

The report of Committee on Russians was received and read, and, on motion of J. C. Long, Jr., it was adopted as read, and committee discharged.

The report of Committee on General Shape of Cochins received, read, and, on motion of W. H. Lockwood, was adopted as read, and committee discharged.

The report of Committee on Dorkings was received, read and adopted (on motion of Rev. Wm. Atwood), and committee was discharged.

The report of the Committee on Plymouth Rocks was received, read, and, on motion, adopted, and committee discharged.

The report of the Committee on Polish was received, read, and, on motion, it was adopted as read, and committee discharged.

Mr. P. Williams, from Committee on Bantams, reported, that owing to press of work on other committees, the committee were not ready to report.

Mr. A. D. Warren made remarks as to adopting a coop as a show coop (naming the Lawrence coop); also as to allowing local societies to join as societies (not as individuals), they to pay a stated sum, and to be governed by the rules and laws of this Association.

Mr. P. W. Hudson, from Committee on Game and Game Bantams, presented and read their report, but, on motion of C. A. Sweet, it was laid over to Monday.

Adjourned to Monday, 19th, at 10 A.M.

JANUARY 19th, 1874, 10 A.M.

Convention met pursuant to adjournment, the President, W. H. Churchman, in the chair.

On motion of A. D. Warren, it was

Resolved, That in order to expedite business and to avoid the liability of any errors, that all resolutions to come before this Convention be reduced to writing.

The Committee on Revision of Standard on Turkeys presented report, which was adopted.

The Committee on Revision of Standard on Rumpless and Frizzled Fowls presented their report, and it was adopted as read.

P. W. Hudson, from Committee on Games and Game Bantams, read their report, and, after considerable discussion, it was adopted as read.

On motion of C. A. Sweet, a committee was appointed by the Chair, to make rules and regulations for the application of the Scale of Points in judging, &c., as far as this Association has jurisdiction. C. A. Sweet, J. K. Felch, P. Williams, H. H. Stoddard, and A. D. Warren, were appointed such committee.

On motion of I. K. Felch, it was

Resolved, That "symmetry" appear first on Scale of Points.

On motion, adjourned until 2 P.M.

2 P.M.

Convention met pursuant to adjournment.

On motion of C. A. Sweet, the Hon. Lewis F. Allen was nominated and elected an "honorary member" of this Association.

Mr. Allen was introduced and made some well-timed remarks, which were received with applause. He accepted the "honors," but desired to become a life member, and pay the usual fee. He was therefore elected a life member.

On motion, the Executive Committee were directed to procure a seal for the Society.

J. Y. Bicknell, from Committee on Revision of Standard of Ducks and Geese, read their report, which was adopted as read.

A. D. Warren, from Committee on Revision of Constitution and By-Laws and Nomination of Officers, presented their report, which was adopted.

CONSTITUTION.

ARTICLE I.

The designation of this organization shall be "The American Poultry Association."

ARTICLE II.

The objects of this Association shall always be for the perfection of the American Standard of Excellence, which shall be exclusively the property of this Association; and to consider and discuss all matters of a national character regarding the poultry interest at large; shall also advise with and assist all poultry organizations, when so requested, in the selection of judges in good standing and ability; it shall also aim to secure the entire co-operation of the various local poultry organizations in controlling the time of the various local exhibitions, and all the rules pertaining to the appointment of judges and methods of judging, which shall be accomplished through the admission to this Association of delegates from such local societies as shall conform to the requirements of Article III, Section 2, of this Constitution.

ARTICLE III.

Section 1. The members of this Association shall consist of such persons as are approved by the Executive Committee, on the payment of an initiation fee of \$3, and thereafter dues of \$2 per annum. Life membership, \$10.

Section 2. Local organizations will be entitled to membership upon the payment of an annual fee of \$10, and filing with the Secretary a copy of their Constitution and By-Laws, which shall, in all essential particulars, conform to the Constitution and By-Laws of this Association; and may be represented at all the meetings of the Association by a regularly appointed or elected delegate from such society, and shall be governed by and entitled to all the privileges given by the Constitution and By-Laws of this Association.

ARTICLE IV.

The Officers of this Association shall consist of a President, ten Vice-Presidents, a Secretary, a Treasurer, and an Executive Committee. The latter to consist of all the officers above designated, and twenty additional members, and an Auditing Committee of three, selected from the members of the Executive Committee.

ARTICLE V.

The annual meetings of this Association shall be held on the third Thursday of January, at such place as shall be decided upon by the Executive Committee. Thirty days notice of the same to be given to each member by the Secretary.

ARTICLE VI.

The annual dues shall be payable on the third Thursday in December, and any member who shall have neglected to pay his annual dues for a period of thirty days after that time, shall be deemed to have forfeited his membership. The Executive Committee shall have power to expel any member by a vote of three-fourths of the members present.

ARTICLE VII.

This Constitution, as well as the By-Laws of this Association, having been approved by a two-thirds vote of all the members present, at a regular meeting of the organization, they can only be repealed or amended by a like vote. Such repeal or amendment shall be offered in writing, and forwarded by the person proposing the same to both the President and Secretary; and the Secretary shall cause such repeal or amendment to be printed and mailed to every individual member of this Association, at least ninety days prior to the meeting at which said repeal or amendment is to be considered.

BY-LAWS.

ARTICLE I.

The President shall preside at all meetings of this Association. He will appoint all Special Committees, unless otherwise ordered by the Association. Shall call extra meetings at the request of five or more members of the Executive Committee. He shall also preside at the opening and closing of Fairs, and on all occasions where the Association is officially represented.

In case of the absence of the President, or of his inability to act, the Vice-President in attendance, who is next named on the ticket elected, shall act as presiding officer.

ARTICLE II.

The Secretary shall conduct the general correspondence of the Association, and have custody of the same. He shall read at the meetings of the Association all important letters received, and the answers thereto, as copied in a book provided for that purpose. The Secretary shall annually prepare a report of the proceedings of the Association.

ARTICLE III.

The Secretary shall prepare and distribute all notices of meetings of the Association and of the Executive Committee. He shall keep the minutes of such meetings, and have charge of all the books and papers appertaining to his office. He will also keep a correct list of all the members of the Association, the date of their election, and their places of residence. He shall be the custodian of the seal of the Association, to be procured by the Executive Committee, which he

will only use under the direction of the Executive Committee or by a direct vote of the Association. He will also notify all members of their election, as well as promptly notify members who are in arrears for dues. He shall collect all moneys for members' initiation fees or dues, or any other moneys of the Association, except that received at the Annual Fair; all of which he shall keep a correct account of, and pay over to the Treasurer, taking the receipt of the latter for the same. He shall have his books, papers and accounts always open for the inspection of the Executive Committee, or any one of its members.

(To be continued.)

Items Interesting and Amusing.

 Ancient Lays of Ireland. London eggs.

 Chickens are only ten cents a piece in Kansas.

 Lewis F. Allen, Black Rock, N. Y., is said to have imported the first Dorkings ever brought to this country.

 L. F. Allen was elected an honorary member of the American Poultry Association during its late session, at Buffalo, N. Y.

 A dog with two tails was seen in New York the other day. One belonging to an ox, and was carried in the mouth of the canine.

 Hens won't work in Nevada without sufficient inducements, and hence travelers have to pay a dollar and a half for two eggs out there.

 A hen stopped a train on a Pennsylvania railroad, her body striking the trigger that put on the air brakes; but she will never stop another.

 "Yer can't stuff that down this chicken," from a young lady in Indiana, meant that she did not credit her teacher's statement that the sun is larger than the earth.

 DURATION OF INCUBATION.—Hens' eggs hatch in from 19 to 21 days. Turkeys, from 26 to 29 days. Guinea-fowls, from 25 to 27 days. Pea-fowls, from 28 to 30 days. Ducks, 28 days. Geese, 30 days.

 A gentleman of Bangor, on hearing that a friend in Houlton was possessed of a hen seventeen years old, sent for the venerable biddy, in order to exhibit her at the Maine Poultry Association's show at Portland, next week. So the aged bird was sent by express on Monday, but, though the agents and messengers treated her with great respect and the tenderest courtesy, the excitement of traveling through a foreign land, and the endeavor to comprehend the customs regulations at Vanborough, were too much for her enfeebled brain, and she expired soon after crossing the State line.

 The glorious songster of our Southern forests, the mocking-bird, is in danger of extirpation. Thousands are every year taken from the nests, only to die in their cages, like the inhabitants of some plague-stricken city. Many fall beneath the fire of miscalled sportsmen, who shoot each feathered thing, from a humming-bird to a crow, and this slaughter must be stopped. In one sense this noble warbler is the national bird of the South, the pride and glory of that land in which he is alone found. It would disgrace the whole of this Southern country if so excellent a singer were to perish without one arm being put forth for his preservation.

 The American Poultry Association Convention, at Buffalo, was one of the most enthusiastic on record. It was well attended every session until the closing hour.

 At La Salle, Illinois, a hunter recently killed a wild turkey that weighed 23 pounds. It is called enormous, but one which recently came from California weighed 34 pounds.

 PARIS PIGEONS.—A new thing in pigeons is being exhibited on the Paris streets. A Frenchman trundles about a pigeon-house on wheels. The flock—ten or twelve in number—are at full liberty to remain in or out. The locomotive dove-cot is planted on a corner. The Frenchman blows a trumpet, and off fly the whole flock a quarter of a mile or so, settling eventually on housetops and window sills. Another peculiar blast, and back they come. As they approach, the Frenchman holds up a small red flag. That red flag is for one particular bird, which knows its color, and settles upon the staff as the showman holds it horizontally. In like manner are blue, white, and parti-colored flags held up, each one of which seems the exclusive property or signal of a particular bird, and on which that especial bird, which, meantime, has been waiting on some window-ledge or house-top, settles.

 GALWAY PIGS.—The pigs of Galway, Ireland, seem to have an uncommon liking for children, according to the following story of a correspondent:—"About a fortnight ago a child in the village of Miner was attacked by one of these brutes, and its hands torn from its body and eaten. The poor creature lingered for a couple of weeks, but, of course, died. It was surely better so. But on Sunday, a worse scene happened on the bowling green of Galway itself. A poor woman went out for a few minutes, leaving her infant in the cradle. You may imagine her horror on returning, to find the child outside the house with a pig busily tearing its body, he throat and breast already terribly mangled. It was no easy work driving the pig away, and in a few minutes the infant's sufferings ended in death. Yet it seems that in Galway, it is still the habit of many poor people to keep pigs in their houses.

 TRAINING TUMBLERS TO FLY.—It is somewhat difficult to train tumblers to fly, the difficulty being to get them up. This is increased if there are high buildings near, on which they can sit and defy you. We have found the following plan answer best:—1st. Do not let your birds out until you want them to perform. If they are let out early, say six o'clock in summer, by a servant, they take a fly round, and do not care to move again. 2d. Choose a fine, clear morning, put the birds which you intend to fly in one place, say one side of the division in your loft, not letting the setting birds mix with them. 3d. Do not feed them; and at, say nine o'clock, open the trap, and frighten them up with a carriage-whip, which, being long and making a noise when cracked in the air, we have found answer well. If possible, do not let one idler rest on a building. In a few mornings it is wonderful how they learn to mount. When they come in they will rush to their food and enjoy their breakfast. We are sure that overfeeding is bad. Keep the flyers pretty sharp and anxious to pick up every stray grain. Feeding before flying is a most foolish plan.

If you want your birds to fly,
Tumble well, and mount up high,
Don't give them a single grain
Till they are in the loft again.

There is a rhyming rule for you to remember.—*Journal of Horticulture.*

THE GREAT ST. BERNARD.

By the pass of the Great St. Bernard travelers cross the Pennine Alps (Penn, a Celtic word, meaning height) along the mountain road which leads from Martigny, in Switzerland, to Aosta, in Piedmont. On the crest of the pass, 8200 feet above the sea level, stands the Hospice, tenanted by about a dozen monks. This is supposed to be the highest spot in Europe inhabited by human beings. The climate is necessarily rigorous, the thermometer in winter being often twenty-nine degrees below zero, whilst sixty-eight degrees Fahr. is about the highest range ever attained in summer. From the extreme difficulty of respiration, few of the monks ever survive the period of their vow, which is fifteen years, commencing at the age of eighteen. This hospice is said to have been first founded in the year 962, by Bernard, a Piedmontese nobleman. It will be remembered that it was over this pass Napoleon, in May, 1800, led an army of 30,000 men into Italy, having with them heavy artillery and cavalry.

For poor travelers and traders the hospice is really a place of refuge. During winter, crossing this pass is a very dangerous affair. The snow falls in small particles, and remains as dry as dust. Whirlwinds, called "tourmentes," catch up this light snow, and carrying it with blinding violence against the traveler, burying every landmark, at once put an end to knowledge of position. Avalanches, too, are of frequent occurrence.

After violent storms, or the fall of avalanches, or any other unusual severity of winter weather, the monks set out in search of travelers who may have been overwhelmed by the snow in their ascent of the pass. They are generally accompanied in their search by dogs of a peculiar breed, commonly known as the St. Bernard's Dog, on account of the celebrated monastery where these magnificent animals are taught to exercise their wondrous powers, which have gained for them and their teachers a world-wide fame. On their neck is a bell, to attract the attention of any belated wayfarer, and their deep and powerful bay quickly gives notice to the benevolent monks to hurry to the relief of any unfortunate traveler they may find. Some of the dogs carry, attached to their collars, a flask of spirits or other restorative. Their wonderfully acute sense of smell enables them to detect the bodies of persons buried deeply beneath the surface of the snow, and thus direct the searchers where to dig for them. The animal's instinct seems to teach it, too, where hidden chasms or clefts, filled with loose snow, are, for it carefully avoids them, and thus is an all-important guide to the monks themselves.

We have stories without number as to what these dogs accomplish on their own account, how they dig out travelers, and bring them sometimes, unaided by man, to the hospice. A few years ago, one of these faithful animals might be seen wearing a medal, and regarded with much affection by all. This noble dog had well deserved the distinction, for one stormy day he had saved twenty-two individuals buried in their snowy envelope. Unfortunately he met, at a subsequent period, the very fate from which he had rescued so many persons. At the worst season an Italian courier was crossing the pass, attended by two monks, each escorted by a dog (one being the wearer of the medal), when suddenly a vast avalanche shot down upon them with lightning speed, and they were all lost.

Another of these dogs, named "Barry," had served the St. Bernard convent during twelve years, and had saved the

lives of fifteen persons during that time. Whenever the pass was obscured by fogs and wintry snow-storms, he would go forth in search of lost travelers. It was his practice to run barking till he lost his breath, and he would venture into the most dangerous places. If, as sometimes happened, he did not succeed in drawing out from the snow some traveler stiffened with cold or overcome with exhaustion, he would run back to the convent and fetch some of the monks.

One day this brave dog found a little child in a half-frozen state. He began directly to lick him, and having succeeded first in restoring animation, and next in the complete resuscitation of the boy, he induced the child, by his caresses, to tie himself on his back. When this was effected, he transported the poor child, as if in triumph, to the hospice. When overtaken by old age, the glorious dog was pensioned off by way of reward, and after his death his body was stuffed and placed in the museum at Berne.

It is said that dogs of this variety inherit the faculty of tracking footsteps in snow. A gentleman once obtained a pup which had been produced in London by a female of the St. Bernard breed. The young animal was brought to Scotland, where it was never observed to have any particular tokens of a power of tracking footsteps until winter. Then, when the ground was covered with snow, it showed the utmost inclination to follow footsteps; and such was its power of doing so, that though its master might attempt to confuse it by walking in the most irregular fashion, and by inducing other persons to cross his path in all directions, yet it always followed his course with great precision.—*Cottager and Artisan.*

THE DOG OF ST. BERNARD'S.

THEY tell that on St. Bernard's mount,
Where holy monks abide,
Still mindful of misfortune's claim,
Though dead to all beside;

The weary, wayworn traveler
Oft sinks beneath the snow;
For, where his faltering steps to bend,
No track is left to show.

'Twas here, bewildered and alone,
A stranger roamed at night;
His heart was heavy as his tread,
His scrip alone was light.

Onward he pressed, yet many an hour
He had not tasted food;
And many an hour he had not known
Which way his footsteps trod;

And if the convent's bell had rung
To hail the pilgrim near,
It still had rung in vain for him—
He was too far to hear;

And should the morning light disclose
Its towers amid the snow,
To him 'twould be a mournful sight—
He had not strength to go.

Valor could arm no mortal man
That night to meet the storm—
No glow of pity could have kept
A human bosom warm.

But obedience to a master's will
Had taught the Dog to roam,
And through the terrors of the waste,
To fetch the wanderer home.

And if it be too much to say
That pity gave him speed,
'Tis sure he not unwillingly
Performed the generous deed.

For now he listens—and anon
He scents the distant breeze,
And casts a keen and anxious look
On every speck he sees.

And now deceived, he darts along,
As if he trod the air—
Then disappointed, droops his head
With more than human care.

A RESCUE ON THE ST. BERNARD.

He never loiters by the way,
Nor lays him down to rest,
Nor seeks a refuge from the shower
That pelts his generous breast.

And surely 'tis not less than joy
That makes it throb so fast,
When he sees, extended on the snow,
The wanderer found at last.

'Tis surely he—he saw him move,
And at the joyful sight
He tossed his head with a prouder air,
His fierce eye grew more bright;

Eager emotion swelled his breast
To tell his generous tale—
And he raised his voice to its loudest tone
To bid the wanderer hail.

The pilgrim heard—he raised his head,
And beheld the shaggy form—
With sudden fear he seized the gun
That rested on his arm:

"Ha! art thou come to rend alive
What dead thou mightst devour?
And dost thy savage fury grudge
My one remaining hour?"

Fear gave him back his wasted strength,
He took his aim too well—
The bullet bore the message home—
The injured mastiff fell.

His eye was dimmed, his voice was still,
And he tossed his head no more—
But his heart, though it ceased to throb with joy,
Was generous as before!

For round his willing neck he bore
A store of needful food,
That might support the traveller's strength
On the yet remaining road.

Enough of parting life remained,
His errand to fulfil—
One painful, dying effort more
Might save the murderer still.

So he heeded not his aching wound,
But crawled to the traveller's side,
Marked with a look the way he came,
Then shuddered, groaned, and died!

MISS FRY.

TEACHING A CANARY TO PIPE.

It may interest some of you canary fanciers to hear that a canary is capable of learning to pipe like a bullfinch. I had a pair of canaries from Malta, given to me by a soldier's wife four or five years ago, and by frequently playing a little German air ("Trab Trab") this was caught up and sung so perfectly, that persons in the garden could not always distinguish the song of the bird from the organ. He lost his mate last summer, and though there was another pair in the same cage (a large one), he moped and was silent for several months. I gave him another mate and the whole cage to himself a month ago; he very shortly recovered his spirits and his song. I have more than a dozen birds, of various kinds, in a different compartment, which, when singing all together, one would suppose would be rather confusing, but I distinguish his sweet pipe in the midst of them. By reminding him occasionally of the air, and giving him a few hempseeds for proficiency, he remembers it perfectly, and generally greets me with it the first thing in the morning, or if I go to him and invite him. On second thoughts, my first bird died after learning the song and helping to educate his first-born.—*South Wales.*

[The above communication is most interesting, but it ought not to surprise; for if a canary can be taught one description of song, which in its endless variety defies any but a carefully educated ear to detect its constituent parts, why should it not learn another in the shape of a simple air? But, more marvellous still, I know of two instances, each authenticated beyond a doubt, in which canaries have been taught to speak.—W. A. BLAKSTON, in *Journal of Horticulture.*]

BUFFALO POULTRY SHOW.

LIST OF AWARDS.

(Continued from No. 5, page 71.)

SILVER SPANGLED.

Cocks—1st special premium, Ongley, Worden & Talmadge, Auburn, N. Y.

2d premium, W. H. Todd, Vermilion, Ohio.

3d premium, W. H. Todd, Vermilion, Ohio.

Hens—1st special premium, Ongley, Worden & Talmadge, Auburn, N. Y.

2d premium, Geo. E. Athole, New York.

3d premium, H. M. Thomas, Brooklin, Ontario.

Cockerels—1st special premium, H. M. Thomas, Brooklin, Ontario.

2d premium, Ongley, Worden & Talmadge, Auburn, N. Y.

3d premium, W. R. Hills, Albany, N. Y.

Pullets—1st special premium, L. D. Ely, Jr., Rochester, N. Y.

2d premium, W. R. Hills, Albany, N. Y.

3d premium, E. A. Bell, Buffalo, N. Y.

JUDGES—R. M. Griffith, Del.; M. H. Cryer, Ohio; P. W. Hudson, Conn.

Advertisements from unknown parties must be paid for in advance.

SHERMAN & Co., PRINTERS, PHILADELPHIA.

DAVENPORT POULTRY CLUB.

(Continued from page 73, No. 5.)

It is proper here to take a survey of the pure varieties of poultry, now recognized among us as worthy of fancy and propagation since the "hen fever" has subsided into a rational interest in these pets, and especially into rational prices for specimens. The specimens first brought from the Orient were called Shanghai, Chittagongs, Cochins, Chinas, Brahma Poortras, &c., according as they had been obtained at one or other seaport. But since, by inbreeding, they have been reduced to distinct types, they are known as Cochins, Brahmas, and Malays. Of the *Cochins* there are the buff, lemon, cinnamon, grouse, partridge, white and black. The last is sometimes erroneously called Black Java. Of the *Brahmas* there are the light and dark. The chief excellencies of these varieties are size (from 8 to 18 lbs.), docility that requires but little fencing to restrict them, hardiness, winter-laying, and early and constant sitting. Their defects are, capacity for much food, flesh not so delicate as in some others, and to fat and disease after passing the age of eighteen months. The *Malays* are so long and bony with so little flesh, and that of a poor quality, that they have been discarded by fanciers. The *Dorking* family, comprising the white-gray, silver-gray, and speckled, is an English product with whom as a table fowl they have held the first place for many years. Their excellencies are, abundance of the best of flesh with smallness of bone, docility, and superiority as sisters and mothers. Their defects are, great delicateness of constitution while chicks, and being the poorest of winter-layers, and the greatest of garden scratchers. The *Black Spanish* fowl is a native of Spain, and probably from Spain Columeli obtained his specimens 1800 years ago, from his relative, whom he says was a "sharp and ingenious man who engaged in breeding cattle and sheep in that country." When carefully bred the Black Spanish are very handsome, produces a great many eggs during summer, but spends a long time in moulting, lays but little during the winter, sits

occasionally and unreliably, and is very indifferent on the table. The *White Leghorn* fowl is nearly the exact counterpart of the Spanish, substituting white plumage for black, but is rather more noisy, quarrelsome and thieving in disposition, and equally indifferent as a table bird. The *Hamburghs*, spangled and pencilled golden, spangled and pencilled silver, and black are difficult to locate in their origin. My opinion is that the silver varieties are German, the pencilled golden, Paduan or perhaps Turkish, the spangled golden English, and the black a cross of spangled golden and Black Spanish. They are to my eye the most beautiful of gallinaceous fowls, are unsurpassed as summer layers, and the early pullets are good winter layers. The spangled golden is somewhat larger than the silver varieties, and their flesh is the best that grows on chicken bones, I think. The Hamburg, when startled, is a great flyer, but ordinarily is of a most quiet and gentle disposition. Close domestication destroys their disposition to sit, but reared with unlimited range they occasionally sit and make constant mothers. They are comparatively harmless in the garden and are almost proof against roost robbers by reason of their persistent squalling when handled. Their chief defects are, late maturity, smallness of size, and liability to "roup," though they rarely take the cholera, the scourge of the Asiatic varieties. The *Polish* fowl, black, white, silver and golden laced, is of Polish origin, perhaps Turkish, but most likely of East India. They are called "Polish" for their large crests; are very pretty, excellent summer layers, fair table fowls, but are delicate to rear, small of size, mature slowly, and scratch the garden exceedingly. *Bantams*, Black African, white-yellow, golden and silver-laced, are merely ornamental fowls. They are very handsome, proud of carriage, saucy, and quarrelsome. Their diminutiveness renders them useless as practical, but valuable as ornamental birds. The Bantam was first obtained in the kingdom of Bantam, in the East Indies. The gold and silver-laced Bantams, so called for the dark edging on each feather in their plumage, are claimed to have been produced as a composite variety by Lord Sebright, of England, professedly in pursuance of the theories of Dr. Darwin. But as Lord Sebright never divulged the "secret" of their production, and a repetition of the claimed phenomenon had never been effected, the whole claim seems very doubtful. *Game* Bantams are merely dwarf game fowls, produced by late and inbreeding, as dwarfs of any variety may be had. The *Dominiques* and *Plymouth Rocks* are varieties that seem to have been evolved from miscellaneous breeding of other varieties. The *game* fowl, whose origin has been already referred to, is of many varieties and subvarieties, but these are reducible to three original types, the red, gray, and black. Of these the red is best, being a better layer, sitter, and mother; and is less quarrelsome though equally courageous as compared with the others. The gray is larger, more quarrelsome, and of all games the poorest layer. Games are but moderately good winter layers as a class, but are unsurpassed as sensible, sedate, though courageous sitters and mothers. Among the many subvarieties of game, we may name the Earl Derby, Pile (a name corrupted from pied), blue, red and white pied. Also Seftons, Heathwoods, Stonefence, Clippers, Tartars, &c. I may be pardoned, perhaps, for mentioning here a subvariety or strain, I have, with encouraging success, endeavored to produce, with a view to combining the best qualities of the game fowl in the highest degree; i. e., excellence for the table, and as layers, sitters, and mothers, requiring size, stamina, and courage as essential

elements. Supposing I have reached a point where the type may be called a "strain," I acknowledge the bent of my recreations by naming it, "*The Parson's Blue Monday*." The *French* varieties, Houdan, Laflech, and Creveleur are products of France. They have excellent qualities, but except Houdans, are too delicate for this climate. The Houdan is like the Dorking in size, quality of flesh, and smallness of bone, but is much hardier, matures more rapidly than any other variety, and is said to be a good winter layer.

I must in this paper forego to notice geese, ducks, turkeys, peafowl, and guinea-fowl; not that they are undeserving, but that there is so much to be said in their behalf. Our tame turkey is a native of Mexico. The wild turkey of our own forests is a larger, finer, and more beautiful bird. The *Bronze Turkey* is a cross of the Buff Turkey of South America and our wild black variety. I have seen a bronze said to weigh forty-five pounds, though we read of some yet larger.

Time will not admit of a treatment of the *scientific* phase of poultry keeping here, although, to myself, this constitutes its chief interest. "Brute psychology in its relations to mental philosophy," "Selection of Species," with other curious scientific queries, find a field of investigation easy to observe, rapid in development, and full of pleasurable recreation in the phenomena presented among these feathered tribes.

LIGHT BRAHMA CLASS.

As judged at the Buffalo show, by I. K. Felch, Natick, Mass; E. P. Howlett, Syracuse, N. Y., and A. B. Estes, New York City.

PHILADELPHIA, January 30, 1874.

MR. JOS. M. WADE.

DEAR SIR: I was informed on my return from the convention at Buffalo, that I was proprietor of a poultry paper, of which you are editor and publisher.

I desire you to say to all whom it may concern, that such is not the truth, as I do not own a dollar in "*any poultry paper*," yet I wish success to all, and hope all fanciers will give them a hearty support by subscriptions and as advertisers.

Yours truly, W. H. CHURCHMAN.

(For Fanciers' Journal.)

DO AS WE CONTRACT.

WE notice an article in the *Journal*, under date of January 1st, by Mr. Armstrong, of Trenton, N. J., in which he writes of the "foolish idea of amateurs in not selecting the best stock, and *seeing* what they get before paying for it."

That breeders should select the best stock to start and propagate their yards with, no one who is familiar with fancy poultry will question for one moment; but too *see* what they get before *paying* for it, is in most cases, with the purchaser, an impossibility.

For the buyer who wishes truly excellent stock, in nine cases out of ten, has to order it through the mail, sent by express, perhaps for hundreds or thousands of miles, and not unfrequently have it imported. If we wished a trio of choice Hamburgs from Mr. Armstrong's pens, our better way would be to order them sent, rather than take two or three days to go and *see* them before purchasing, and also pay our traveling expenses, with board and lodging.

Then, again, if a fancier starts a yard, *as we have done*, among a select lot of old foggy farmers, who never believe in any improvement among their domestic animals or poultry, and more especially if a fine-bred fowl cost ten cents more than the little "yellow hen," this fancier must expect to sell his fine birds to those who appreciate his labors and calling, hence, he must advertise, and send his poultry out of his immediate neighborhood. Now the point we wish to get at is this,—a fancier should not only breed first-class stock, but should, in his shipments, *send the poultry just as he represents them*, every feather true in color, and every pound in the bird as promised. A breeder can soon establish a reputation, but he can much quicker go under.

Situated as we are among a class of men who appreciate nothing that costs an extra penny, we are obliged to ship most of our poultry to other vicinities, and hence we feel the great necessity of doing just as we promised.

We, too, like Mr. Armstrong, have been "set up" by unscrupulous breeders.

Last March we wrote to a certain firm, asking them if they could furnish us with a bronze turkey hen that would scale 20 pounds and over; they replied they would for \$—, and we should remit immediately. We sent our check by return mail, expecting in a few days an extra-fine large bird to add to our flock; after a delay of two weeks, we began to inquire for our large turkey,—no answer came; they were not gentlemen enough to write us; why the delay even, when we sent them a return stamp. As it was about 200 miles to go search for our long-looked-for bird and seek out our victims, we did not feel like using more good money after what we expected lost; so after two months or more, after writing to the postmaster of their town, and inquiring of every one we were likely to receive any information from, in regard to this large advertising firm, we wrote them, if they did not return our money, or fulfil the contract, we would expose them in every leading stock and agricultural journal in the land, if it cost us five hundred dollars. Now for the result; instead of our 20-pound or over turkey hen, they sent us a miserable, mean little squamy gobbler, that just pulled down all of 14 pounds.

This firm not only gulled us, but swindled hundreds of others, and it got so hot for them, that the head monk, "the high cockalorum" had to get up and get out of the country, so the *New York Tribune* said.

Hence we feel the necessity of being strictly honest with our fellow-men, and when a breeder and shipper gulls his customers with inferior birds, he should not only be exposed, but held responsible by the high tribunals of the law for swindling; then the rascality of unprincipled parties will give way for the dealings of men who love truth and honor above lies and littleness.

H. C.

N. J. C. STOCK FARM.

(For Fanciers' Journal.)

INCUBATION.

MR. EDITOR.

By your permission, I will pen a few thoughts which occurred during an investigation into some of the mysteries of producing animal life by heat alone, when properly applied to the fertile eggs of oviparous animals. It is wonderful to note from day to day the life-giving changes which take place in the egg, from the increased lines of blood which radiate over the yolk, to the end of incubation, when the young animals by expansion, and the aid of its horn-like mandible, bursts its way out of its life-giving prison, with all the lineaments of its parents. And how exactly it can be made to resemble its parents is now being understood by scientific breeders. But my object is not now to discant upon that phase of the subject, so I will propose a conjecture which was in my mind when I wrote the caption of this short article, viz.: suppose, as in gardening, we should construct a hotbed upon the very same principle as for sprouting vegetables, regulating its temperature by the knowledge of the degree of heat required for hatching eggs, which should be about 90° Fahrenheit, then place the eggs in the hotbed, slightly covering them with some feathery substance under the glass, with air enough for ventilation, not forgetting to turn the eggs once in every twenty-four hours.

I do not claim that this suggestion will prove successful, but I believe it will, and trust that some one better situated than myself will make the experiment, and report his or her success or failure as the case may be. Surely if it should succeed, and I cannot doubt that it will, it would be a means of obtaining March chickens in abundance, from our non-sitting breeds of poultry, which are now so fashionable.

V. M. F.

DUFFIELDS, WEST VA.

(For Fanciers' Journal.)

ZOOLOGICAL GARDENS.

MR. EDITOR.

In No. 4 of the *Fancier's Journal*, which you had the kindness to send me, I discovered that the dream of my life's fancy is in process of realization in your *City Zoological Gardens*! Yes, verily. In the United States, after the expiration of its first century, by private enterprise, is to have what has been the charm of all the older nations, a collection of God's animate creatures. An enterprise so grand and so glorious (humanly speaking), ought to be the work of the Government; or at least to be fostered by a great municipality. New York City, in creating its Park, has and is progressing nobly in the proper direction; but I think it does not contemplate more than a collection of animals for exhibition. If I can collect from your first exposition of the contemplated enterprise in your city, it will aim to utilize the "beasts of the field, and the fowls of the air," which the Divine Master has distributed over the earth for man, by acclimating and domesticating the various species of natural history, which come forth and depart,

seemingly purposeless. We are informed by that eminent naturalist, Cuvier, that there yet exists four untamed members or species of the horse genera. Only two of the six known species having been domesticated, viz.: the horse and the ass. One of the species, the zebra, has been partially domesticated. Of the bovine genera a much larger number of species still roam over the vast areas of Asia and Africa, the cow being all of the genera fully appreciated by man, unless we include the buffalo, which some of the dutch colonists of Africa have partially domesticated. Of sheep and goats, one or two species each have been brought under dominion, whilst of deer not one species, and there are over forty, if I mistake not, many of whom would be great accessions if domesticated. Of the untamed beauties of the feather and plume, but very few have been brought under domestication. Bravo for Philadelphia. V. M. F.

(For Fanciers' Journal.)

ROUP TREATMENT.

EDITOR FANCIERS' JOURNAL.

DEAR SIR: Will you allow me space in your valuable paper for explanation of and experience with this dreaded disease called Roup. This disease makes its appearance in different characteristics, generally in the West. You can discern the appearance of this disease by the relaxed condition of your fowls. A watery substance first makes an appearance in the eyes of the fowls, and afterwards a hard mucus appears in the roof of the fowls' mouths. To cure this disease I find it very simple and easily accomplished. When you first see symptoms of roup, at once catch your fowls, remove the hard unmerciful-smelling mucus from their mouths, then take a small dish, one that will hold half a pint of water; into this put half a pint of rain-water and two tablespoonfuls of genuine cider vinegar. With this wash with a linen rag, mouth, and eyes, and nostrils, three times per day, for two or three days. Keep your fowls inclosed in a dry warm place. On the third or fourth day you will find your patient quite well. I find this treatment has saved more poultry for me than twenty other remedies I have used the past two years. Give it a trial.

JAS. M. WILLS.

(For Fanciers' Journal.)

EXTRAORDINARY ATTACHMENT.

THERE are so many remarkable stories told of the attachment of cats, dogs, &c., that I feel inclined to tell one that is just as remarkable, and just as hard to be believed, although strictly true. It is of a small, white Bantam chicken, which had been given when a little chick to a little girl who was lame, and whose health compelled her to spend most of her time on a couch. Her family were poor, and the little chicken was her substitute for dolls and toys. It staid with her on the couch, followed her wherever she went, ate from her hands, made its nest and laid its eggs by her side on the couch. The little girl was taken suddenly ill and died. The chicken refused all food after she could not feed it, and in a few days was dead too; dying of grief, who can doubt. I had these facts from the child's mother, and know her to be truthful.

W. W. LEWIS.

LEXINGTON, VA., January 6th, 1874.

 Sportsmen who have returned from Virginia and North Carolina, state that game was never before in this generation so plentiful. Deer, ducks and wild turkeys abound.

(For Fanciers' Journal.)

REMINISCENCES OF THE "HEN FEVER."

BY G. P. BURNHAM.

I AM an old man now!

When I was five-and-twenty, and that was over five-and-thirty years ago, I "loved pigs and chickens." In the long period that has elapsed since then, I have never parted with one jot of my early regard for the beautiful and useful among the Creator's goodly gifts to man.

In my time I have, in one way or another, been in possession of some of the choicest breeds and broods of domestic poultry ever seen in this or any other country. I have had my fun, paid its cost (roundly), enjoyed the pleasures and comforts of raising chickens, submitted to the abuse that success in *any* enterprise of this character entails, contended with sharp competitors, made a respectable fortune in the business; first and last, had "a good time," and am content.

I propose to write, for the *Fanciers' Journal*, an occasional reminiscence of former days, upon the topic of poultry and fowl-raising in America. And though the theme is not a little hackneyed, I shall submit, in this first paper, some account relating to the true history of what is nowadays known, the world over, as the *Brahma* fowl.

The "*Brahma*" is so good a variety—it has always been so good—and breeders everywhere, at home and abroad, are so unanimous in giving it the preference, par excellence, when well managed, over all others, as a single variety, that what I may have to say about this fowl, even at this late day, may prove readable to thousands who are now beginning the laudable undertaking of breeding poultry, on a large or a limited scale.

When, during the years 1848-9 to 1856-7, I bred this variety most extensively, I called them "Gray Shanghais," which, as I have often said before, I conceived the most appropriate cognomen for this breed, since the *first* birds of this tribe which I ever owned were light gray in color, which I purchased in Pennsylvania for \$25 the pair, and these came from *Shanghai*, China.

This cock and hen were identical in form, size, feathered leg, and all other characteristics, with the *Brahma* of to-day. Yet the party of whom I bought them, Dr. Kerr, of Philadelphia, denominated them "Chittagongs." I bred these one year, then obtained a few similar birds in New York, from on board a ship direct from Shanghai, through the late William T. Porter, of the old *Spirit of the Times*. This *last* lot were *lighter* colored, however. And fanciers who used to come to see my stock in Roxbury, and afterwards (twenty-five years ago, in Melrose), pronounced them too *white* to suit their then uncultivated tastes.

Dr. John C. Bennett, of Plymouth, Mass., in those days a shrewd and enthusiastic breeder of all kinds of fancy fowls, who originated the famous "Plymouth Rock" variety, made me a fabulous offer for my pair of "Gray Chittagongs" (the Philadelphia birds), and took them away. He bred them with a very light drab or buff Shanghai hen he had (I think of the Forbes' importation), and produced a clutch of fine showy chickens, which he exhibited at the second or third Boston fowl show, to which he desired to give a specific name.

In those long ago days of the "hen fever," a good name for fowls was "a big thing" towards success, among fanciers, in disposing of the stock they produced. The Doctor consulted me on this point, and in my own library, at Rox-

bury, he took down an atlas. Turning to the Eastern countries, he pored over China, Cochinchina, Hindostan, &c., and his eye lighted upon the Burrampooter River, in India. "*Eureka!*" cried the amiable Doctor, "I have found it! Here it is, and it's a stunner!"

And he pointed me to that unpronounceable word—Burrampooter—upon the map.

"What is it?" I quietly asked.

"The name for my birds. Do you see? Grand, expressive, stylish, capital!" he continued.

Thus it began. He shortly varied it to "Brahmah-pootra," the first portion of this term being the name of the chief deity of the Hindoos. But this compound was too lengthy. Then it was cut short to *Brahmah*, and finally, by universal approval, became *BRAHMA*. A very good name for a very good fowl, though I continued for years to call my stock—precisely like his, and bred originally from the same pair of "Chittagongs" with the lighter birds I got on shipboard in New York, from China—what they really were, to wit, "Gray Shanghais."

Under this name, in 1852, I sent to her Majesty, Queen Victoria, the cage of mature birds, pronounced by the British press and fanciers there "the finest domestic fowls ever seen in England," and the first of their species sent from America. These were the *Light* Brahmas. A few months afterwards, I sent to John Bailey, of London, a trio of *Dark* Brahmas (or dark gray Shanghais), from this same stock, which he put into the Birmingham Poultry Show, alongside of my fowls sent previously to the Queen, and contributed by His Royal Highness, Prince Albert. Mr. Bailey's trio carried off the first prize, Her Majesty's the second, and a pair of my birds, sent to Bailey, were sold at that show to Mr. Taylor, of Shepard's Bush, for one hundred guineas (\$500)! Mr. Bailey paid me \$100 for this trio.

Mr. Tegetmeyer, in his splendidly illustrated work on Poultry, furnishes admirable portraits of both these consignments of Brahmas from my yards, and credits me with being the first to introduce these superb varieties into England, which is fact. Her Majesty sent me a beautifully-framed copy of her portrait, by Winterhalter, which now hangs in my parlor at Melrose, and, as may well be understood, I was not set back on the *Brahma* question much after this episode in my chicken experience.

This, in brief, is the *true* history of the original coining of the name "*Brahma*." The theory set up by one writer, that "the first pair of Brahmas were brought from Lucki-poor up the Brahmapoutra River, in a ship to New York, by a sailor," whose name has never been given, is sheer romance and nonsense. But this is simply "a part in the play" of the hen fever.

It is not my purpose now, however, to enter into any controversy upon this subject. I will occasionally write a reminiscence of the old days, but always good-naturedly and truthfully, hoping that these contributions, if you choose to use them in your columns, will serve as a pleasant variety in the contents of your very agreeable weekly, *Fanciers' Journal*.

(For Fanciers' Journal.)

BEE-KEEPING.

I PRESUME it is true, that "every one has his fancy," although the fancies of some are very odd. We have a man out here in "Hoosierdom," who has a fancy for *lawsuits*. His name is seldom off the dockets of his county courts.

He claims that he has as much right to employ his time and spend his money in the enjoyment of his peculiar fancy, as others have in theirs. Of course, this claim cannot be questioned, so long as he does not interfere with the rights of others.

I confess that I have my fancy, but it is not for lawsuits, nor for dogs nor rabbits, and not much for poultry, although I take considerable pleasure in feeding and admiring, and especially in *eating* my Light Brahmas. My fancy is for *bees*, and I suppose I am about as wild on this subject as others are on dogs, and rabbits, and pigeons, or even as my Hoosier friend is on lawsuits. I confess that I have "bee on the brain," and have had it for some years, and do not realize any strong symptoms of the abatement of the disease. As the *Fanciers' Journal* is projected as a medium for the interchange of the views of fanciers upon their favorite themes, I have consented to contribute an occasional article upon what I consider the most fascinating as well as the most profitable of all pastimes—*Bee-keeping*.

I may be a little too enthusiastic upon this subject; but after several years of study and practical experience in the apiary, I am convinced that the honey-bee, in its natural history, its habits and instincts, and, I may almost say, in its reasoning faculties, is the most wonderful and mysterious being below man.

When the bee was first domesticated is not known. We read of it away back in the early history of the Israelites, where their "promised land" was described as "flowing with milk and honey;" where its rich stores abounded in the rocks and caves of their mountains, and was even found within the carcasses of their wild beasts. It was known and prized by the ancient Greeks and Romans, and attracted the attention and furnished themes for the pens of their poets and philosophers.

But it was not until within the last quarter of a century, that apiculture was reduced to what might be called a science. The invention and introduction to the public of the *movable frame-hive*, forms the great epoch between ancient and modern bee-keeping. Before this the internal workings of the hive were wrapt in almost impenetrable mystery; but now the bee-keeper can and should be as familiar with the nature, and instincts, and habits of his bees, as with those of his most domesticated animals.

I presume that many of the readers of the *Journal* are proficient in apiculture; but, for the benefit of those who have not made it a study, I shall, in my proposed articles, endeavor to give such information as will enable the inexperienced to keep bees with pleasure and with profit.

HOOSIER B. LOVER.

EDITOR FANCIERS' JOURNAL.

DEAR SIR: A friend of mine has a hen of the "common breed" that two days in each week lays a very large egg. One that I now have on exhibition at my store, laid this week, measures 8½ inches in circumference the long way, and 6¼ inches the short way. On the alternate days she sometimes lays an egg somewhat smaller—the *smallest* measuring 7¼ by 5¼ inches. Who beats?

Yours truly,
J. F. FERRIS.

 John A. Lord, Kennebunk, Maine, won two silver cups, three specials, and eight Society premiums at the late Maine State Poultry Show.

BUFFALO SHOW.

Churchman's \$100 Gold Prize for best D. B. Hen.

As it was generally expected by the Dark Brahma fanciers, that the clause in the Premium List would be enforced, requiring all fowls entered for this prize to be between the age of twenty and twenty-four months, only four entries were made: one by Wm. H. Churchman, Claymont, Del.; one by Chas. A. Sweet, Buffalo, N. Y.; and two by D. W. Herstine, of Philadelphia.

Entry No.	Points.	Judge.
725, owned by W. H. Churchman.	93	J. K. Felch.
	89	P. W. Hudson.
	94	P. Williams.
598, owned by Charles A. Sweet.	95½	J. K. Felch.
	97	P. W. Hudson.
	94	P. Williams.
1053, owned by D. W. Herstine.	91½	J. K. Felch.
	81	P. W. Hudson.
	74	P. Williams.
1054, owned by D. W. Herstine,	91	J. K. Felch.
	83	P. W. Hudson.
	74	P. Williams.

The decision was arrived at by adding the points together, as given by the three judges, and dividing by three, showing that the prize was taken by Chas. A. Sweet, of Buffalo, N. Y. We believe this to be the largest prize on record. Besides the \$100 in gold, Mr. Sweet also takes the other three hens which were entered for this prize, the poorest of which must be worth, at least, \$50.

CRYSTAL PALACE EXHIBITIONS IN 1874.

1. Grand Show of Pigeons, by the members of the Peristeronic Society, Second Tuesday in January.
2. Cage Bird Show, February 14th to 19th.
3. Mule and Donkey Show, April 28th to 30th.
4. Spring Flower Show, May 16th.
5. Dog Show, June 9th to 12th.
6. Great Rose Show, June 20th.
7. Autumn Fruit and Flower Show, Sept. 8th to 10th.
8. Cat Show, Sept. 26th to 29th.
9. Poultry Show, November 16th to 19th.

NATIONAL COLUMBARIAN SOCIETY.

THE first annual meeting took place at the rooms of the Society on January 14th.

The reports of the officers show the Society to be in a very flourishing condition. The committee on nominations reported the following list of officers for 1874, which, on being balloted for, were unanimously elected:

PRESIDENT,

WM. SIMPSON, JR., of West Farms, New York.

VICE-PRESIDENTS.

Maine,	JOHN W. HARRIS, . .	Eastport.
New Hampshire, .	V. G. GILMAN, . . .	Nashua.
Massachusetts, . .	PHILANDER WILLIAMS, .	Taunton.
Rhode Island, . . .	J. F. PECKHAM, . . .	Providence.
Connecticut,	E. P. TIFFANY, . . .	Hartford.
New York,	ANDREW SCHELD, . . .	Brooklyn.
Canada,	R. HEAP,	Lauzon.
Pennsylvania, . . .	JOS. R. CARPENTER, . .	Philadelphia.
Delaware,	WM. H. CHURCHMAN, . .	Wilmington.
Maryland,	THOS. S. GADDESS, . . .	Baltimore.
District Columbia, .	E. S. MILLER,	Washington.
Ohio,	J. C. LONG, JR., . . .	Ravenna.
Florida,	J. H. FRY,	Pilatka.
California,	T. E. FINLEY,	San Francisco.

SECRETARY.

A. B. ESTES, 14 Murray Street, New York City.

TREASURER.

BENJAMIN ABORN, 56 Exchange Place, New York City.

EXECUTIVE COMMITTEE.

Massachusetts, . . .	WM. E. SHEDD, . . .	Waltham.
Rhode Island, . . .	E. B. WHITMARTH, . . .	Providence.
Connecticut, . . .	S. J. BESTOR, . . .	Hartford.
New York, . . .	J. Y. BICKNELL, . . .	Westmoreland.
New York, . . .	L. BURLINGAME, . . .	New York City.
Canada, . . .	F. F. POLE, . . .	Mitchell, Ont.
New York, . . .	P. C. BIEGEL, . . .	New York City.
Pennsylvania, . . .	A. N. RAUB, . . .	Lockhaven.
Delaware, . . .	R. M. GRIFFITH, . . .	Wilmington.
Maryland, . . .	J. E. KOONS, . . .	Baltimore.
Maryland, . . .	DR. W. P. MORGAN, . . .	Baltimore.
Mississippi, . . .	A. P. MILLER, . . .	Vicksburg.
Indiana, . . .	F. P. BECKER, . . .	Indianapolis.
Ohio, . . .	F. W. KUTZ, . . .	Cincinnati.
California, . . .	F. P. BECKER, . . .	San Francisco.

The committee on prize-list reported that they hoped to have the prize-list out next week. The first exhibition will take place at Republican Hall, 956 Broadway, corner Twenty-third Street, in the city of New York, opening on Monday, February 23d, and closing February 28th.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

WANTED.—To Exchange a pair of Silver-Pencilled Hamburgs, or Ginger Red Games of improved Stock, for a pair of pure bred Golden-Spangled Hamburg Pullets.

V. M. FIROR,
Duffields, West Virginia.

TWELVE FINE DARK BRAHMA HENS (Wade and Williams' Strain), will exchange for Light Brahmas of the same strains, or will sell at much below their value, for cash. Address

E. R. FRAZIER, Plattsburg, N. Y.

CHOICE POULTRY (of nearly all the leading varieties), will be exchanged for first-class FANCY PIGEONS—Tumblers, Pouters, and Carriers especially desired. Send description of stock to C. W. BOYCE, Albion, Mich. Or Brown Leghorn Cockerels will be exchanged for Pullets. Stock is first-class, white ear-lobes. Pullets must be the same.

DARK BRAHMAS.—A pair of Dark Brahma chicks will be exchanged for either Silver Spangled Hamburgs, or Black-Red Game Bantams. Address

A. GAINES, Castile, N. Y.

WANTED.—Golden Spangled Polands. Address

THOMAS PARKER,
Palsborough, Gloucester Co., N. J.

TWO FINE WHITE LEGHORN COCKERELS.—"J. B. Smith's well-known strain," will exchange for a trio of ENGLISH GRAY DORKINGS, or CAYUGA, or ROUEN DUCKS, or for good PLYMOUTH ROCK PULLETS. Address

J. F. FERRIS, Stamford, Conn.
Breeder of Light Brahmas, Buff, and Partridge Cochins, Black Russians, Plymouth Rocks, White, and Dominique Leghorns. EGGS FOR HATCHING, \$2 per 13. ORDER EARLY!

WANTED, in exchange for Black-Breasted Red Games, Houdans, Fancy Pigeons, or Black-Breasted Red Game Bantams, &c., ONE PAIR OF BROWN LEGHORN FOWLS. Address

A. K. MARTIN, P. O. Box 1584, Binghamton.

CHOICE
POULTRY AND FANCY PIGEONS.

I have an immense stock of the above, which I will exchange for GENERAL MERCHANDISE, at fair prices. Address, with stamp,

EDWIN W. SQUIRE, Johnstown, N. Y.

WANTED.—A LIGHT BRAHMA COCK (pea comb), in exchange for a W. F. B. SPANISH COCK, that took the first premium at Federal Fair of Four Counties. Please give weight.

Address JNO. RUMBOLD, Fowling Creek, Maryland.

SEND STAMPS for Price List and description of my GAME FOWLS. Address

L. B. RICHARDS,
New Castle, West Chester Co., N. Y.

TWELVE S. G. DORKING HENS, \$4 each.

Address JOHN L. RICE, Rensselaerville, N. Y.

FOR SALE.—ELEGANT LITHOGRAPHS OF POULTRY, from Wright's Illustrated Book of Poultry. Four lithographs in one frame, rosewood and gilt, price \$3.00 each, or \$37.50 per lot of thirteen frames, and fifty-two lithographs. EBEN. P. DAY, Hazleton, Pa.

BOOKS FOR THE FANCIER.

Practical Poultry Keeper (L. Wright).....	\$2 00

Any book on any advertised list will be sent prepaid by mail on receipt of price. Address	
JOS. M. WADE, 39 N. 9th St., Philadelphia, Pa	

H. K. PAYNE, Albany, New York, can furnish Light and Dark Brahmas; Buff, White, and Partridge Cochins; B. B. Red, Silver Duckwing, and Golden Sebright Bantams. Satisfaction guaranteed. All orders promptly filled, or money refunded.

GAMES, GAMES FOR SALE.—One Pill Game Cock, price \$7. Also, a few head-hooded Game Stags for Sale. Address F. ANSTEAD, Box 34, Oneida, N. Y.

HAMBURGS AND BANTAMS.

EGGS from Imported

GOLDEN AND SILVER-SPANGLED HAMBURGS,

GOLDEN AND SILVER SEBRIGHT BANTAMS,

\$4 PER DOZEN.

A few trios Hamburgs at \$12 to \$20. A few pairs of G. S. Bantams at \$8 to 12.

FANCY PIGEONS.

GEORGE F. SEAVEY,
Cambridgeport, Mass.

WHITE LEGHORNS

A SPECIALTY.

From J. B. Smith's Strains,

EGGS NOW READY AT

\$3 PER DOZEN.

W. F. BACON,
Cambridgeport, Mass.

GAME FOWLS.—I have a variety of GAME FOWLS and BANTAMS for sale or to exchange, on Golden Polands, Golden Hamburgs, Silver Hamburgs, Leghorns, and Fancy Pigeons.

J. L. BOW, Mahanoy City, Schuylkill County, Pa.

FOR SALE VERY LOW, to close out a surplus—30 fine young Light Brahmas, reliable stock. Also, Houdans, and Gold-Laced, Silver-Laced, and Black Red Game Bantams.

For particulars, address

A. M. CAREY, Selinsgrove, Pa.

WANTED.—One pair White Fantails, capped. One pair White Fantails, not capped. One pair Black Fantails. One pair Blue or Red Fantails. One pair Yellow Fantails. Address, with price per pair,

H. A. B., Box 180, N. Y. Post Office.

WHITE LEGHORN EGGS.—From one of the best strains in this country, at \$3.50 per setting of 13. "First come, first served."

Address JOS. H. HAMILL, Compton Hill, St. Louis, Mo.

CANADA.—DARK BRAHMAS, \$12 the trio. BLACK SPANISH (Biggar strain), \$5 each. Eggs for hatching early in the spring, \$4 per dozen. All birds from my yards are from best imported stock, and warranted pure.

A. F. BANKS,
Drawer 790, Toronto P. O.

ADVERTISEMENT.

Society's Prize Best Collection Dark Brahmas.

" " " " " Asiatics.

Eggs from above varieties at \$5 per setting. Good Birds for sale. Three Dark Brahma Cocks, solid black breasts, at \$20 each. Dark Brahma Cockerels, solid black breasts, well-feathered legs, at from \$6 to \$15 each.

Dark Brahma Cockerels, slightly mottled on breast, at from \$3 to \$5 each. Fine young Partridge Cochins, very low, to close out this breed.

A. A. MILLER, Oakdale Station, Allegheny Co., Pa.

HAVING SOLD my entire stock of Dark Brahmas to A. A. Miller, of Oakdale, Allegheny Co., Pa., I will give my attention to Light Brahmas, Dominiques, and Aylesbury Ducks. Eggs from the above for sale. All first-prize birds. C. B. ELBEN, Pittsburg, Pa.

FOR SALE.—Fancy Pigeons, First Premium Stock. Two pair of White Fantails, \$5 per pair; two pair of Black Antwerps, \$6 per pair; two pair of White African Owls, \$10. No Circulars. Address, with stamp, to insure reply, WALTER C. HART, Box 152, Clinton, N. Y.

GAME FOWLS.—I have spent many years and studied much to work up my strains of GAME FOWLS to their present standard; also, White Leghorns. I have not, however, "the ONLY WHITE EARLOBE STRAINS IN THE WORLD;" for there are, at present, other careful breeders. I am also selling Eggs and Fowls of nearly all varieties of land and water-fowls, all carefully bred. Price List FREE. J. Y. BICKNELL, Westmoreland, Oneida Co., N. Y.

HOLLINGWORTH'S

RAW CRUSHED BONE, for Poultry. A Specialty.

HOLLINGWORTH'S

PREPARED BONE MEAL, for young Chicks. A Splendid Article.

HOLLINGWORTH'S

PREPARED BONE MEAL, for Cattle, Horses, and Swine.

\$1 per package of 20 lbs. Sent to any part of the country by express. No C. O. D. Cash to accompany order. Address

G. T. HOLLINGWORTH,
Utica, New York.

ONE BUFF COCHIN COCK and three Pullets (Dodge & Kelly strain), price \$10, and eight Partridge Cochins Cockerels (very fine), at \$2.50 each. Also, FERETS for Sale. Address H. C. NICK, West Millcreek, Erie Co., Pa.

DOGS FOR SALE, CHEAP.—Two Setter Pups, nine months old, partially yard broke. Or would exchange one for Fancy Pigeons. For further particulars, address E. G. STETSON, Farmer Village, Seneca County, N. Y.

FINE LIGHT BRAHMAS.—Two Cockerels, from Williams & Tee's Stock, for Sale, or will exchange one of them. T. J. WOOLDRIDGE, "French Hay," Va.

POUTERS FOR SALE.

IMPORTED POUTERS FOR SALE.—1 pair Blue Pied, Cock 20 inches long, good legs and well booted, plain on the wings, and fine breast-mark; Hen, 18½ inches long, good legs, nicely booted, and in marking is well suited to breed with the cock. The pair bred three good young ones in England the past summer. Price, the pair, \$120. Also, two trios of good AYLESBURY DUCKS at \$12 and \$15 per trio. Address POUTER, 39 N. Ninth St., Philadelphia.

POUTERS FOR SALE.—1 pair of Black Pied Pouters, Cock 18½ inches long, well marked on the wings, good blower, well booted, and a very showy bird. Hen 17½ inches long, quite well marked, well booted, and a good breeder. The pair have raised six fine young the past season. Price, \$30. Address POUTER, 39 N. Ninth St., Philadelphia.

MITCHELL COLUMBARY.—Fancy Pigeons in great variety. Yellow, Black, and Blue Fantails, and Carriers, a specialty. I would call attention to my stock of IMPORTED TOYS ICE PIGEONS, FRILL BACKS, &c. There are few birds more beautiful or delicate in plumage than the two varieties named; an opportunity to procure them is rarely afforded. Send 6 cents for Circular. F. F. POLE, Mitchell, Ont., Canada.

FOWLS AND EGGS.—I can furnish now a few trios of Light Brahmas, Dark Brahmas, and Partridge Cochins. Eggs of above in season. And White and Buff Cochins, Houdans, Silver-Spangled Hamburgs, Silver-Spangled Polands, Gray and White Dorkings, B. B. Red Games, White Leghorns, Gold Sebright Bantams, Bronze Turkeys, Bremen Geese, Aylesbury, Cayuga, and Rouen Ducks, &c. Mode of transporting eggs is as good as the best. My Fowls and Chicks were awarded over \$500 in premiums the past FALL. Send me two 3 cent stamps for new Descriptive Catalogue of Poultry, worth dollars to a beginner. Will exchange NURSERY STOCK for standard pure bred Poultry. For information and Price List, address JAS. M. WILLS, Bloomington, Ills.

GRAVES' INCUBATOR can be seen in working order at 26 N. Market Street, Boston, Mass. Send for Circulars. JACOB GRAVES.

W. W. ELLIOTT, McEwensville, Pa., Breeder of Light and Dark Brahmas, from the best strains. Also, Houdans from Cooper, Ireland.

GAME FOWLS! GAME FOWLS!—Send for Price List to J. A. BENTLEY, Potter Hill, R. I.

"THE POULTRY RECORD."

AN ILLUSTRATED MONTHLY MAGAZINE, edited by C. W. HEATON, Farmington, Ill. One Dollar per year; single copies, Ten cents. THE POULTRY RECORD contains each month fine Illustrations of the popular breeds of fowls; also, plans of houses, yards, and necessary appliances, with contributions relating to all branches of the business of poultry-raising, from writers of experience and ability. The low price at which it is offered should induce you to subscribe for it at once. It has the unqualified indorsement of the leading Breeders and Fanciers of the country, and also of Farmers and Market Poultrymen who raise fowls for profit alone. Send for a copy before subscribing for any other paper.

Williams' and Felch Hens), at \$6 per dozen. Dominique Eggs, \$3 per dozen. Black African Bantam Eggs, \$2 per dozen. Aylesbury Duck Eggs, \$6 per dozen. All of which are first-class first Prize Stock. Eggs packed with care in patent boxes. Two fine Aylesbury Drakes for sale, direct from imported stock.

C. B. ELBEN, Pittsburgh, Pa.

A. P. GROVES, 34 SOUTH DELAWARE AVENUE, Philadelphia, Pa., Breeder of Buff, and Partridge Cochins, Dark Brahmas, and Houdans. Satisfaction guaranteed.

GAME FOWLS, of all varieties, carefully bred in feather, station, and weight, all of which are bred from well-tested fowls. I have selected my stock from the most noted and reliable breeders in the country, who have not only bred for the show-pen, but with a cock-pit point of view, who seek for purity of blood, bone, and muscle, which is all that constitutes a genuine Game. And, as for color of plumage, or marks for the show room, I can produce fowl equal to any in this, or foreign countries, and having supplied the leading cock-pits for a number of years with my strains of Games, there has not been one reported as showing the white feather, or in other words, to run. And as I am not engaged in any other business than breeding of Game Fowls, I make my prices low so as to effect quick sales, while others who breed for pleasure ask enormous prices, caring little as to whether they effect a sale.

For Price List, address

JOHN ARCHER,

Box 43, Mahanoy City, Schuylkill County, Pa.

FOR SALE.—Two Houdan Cocks, one Houdan Hen, one trio Black Cochins. Also, the finest pair of White Crested Black Polands in the country; have taken first premium wherever exhibited. Also, one pair fine B. B. Red Game Bantams. Address

POULTRY EXCHANGE.

VOL. I.

PHILADELPHIA, FEBRUARY 12, 1874.

No. 7.

AMERICAN POULTRY ASSOCIATION PROCEEDINGS, 1874.

(Continued from No. 6.)

ARTICLE IV.

The Treasurer shall be the custodian of all moneys belonging to the Association, from which he shall pay all bills of the Association, only when such bills have been audited by the Auditing Committee. The Treasurer will keep a book, in which shall be entered the amounts received and disbursed by him; such book to be at all times open for the inspection of the Executive Committee, or either of its members. The Treasurer shall make general reports of the financial condition of the Association, at the regular meetings of the Association; and he shall give bonds, to be approved by the Executive Committee, for the faithful performance of his duties, to the amount of \$20,000.

ARTICLE V.

Section 1. The officers of the Association will also be officers of the Executive Committee, which will hold its meetings at the call of five or more members, seven of whom are a quorum. It will have complete control and supervision of the affairs of the Association, and will be its official organ at all times and on all occasions.

Section 2. The Executive Committee of the Association shall designate the localities for holding its Annual Fairs, provide suitable accommodations for, give publicity to, and consummate the same.

Section 3. The Executive Committee will cause to be designed and executed suitable medals and diplomas, and procure such other awards as it may deem desirable and expedient. It will have entire control of the Annual Fairs, in all their various details.

Section 4. The Executive Committee will make report at each stated meeting of the Association.

ARTICLE VI.

Order of Business.

The order of business shall be as follows:

1. Reading Minutes of last meeting.
2. Report of Secretary.
3. Report of Treasurer.
4. Reports of Committees.
5. Election of Officers.
6. Unfinished Business.
7. New Business.
8. Discussions, &c.

On motion, a committee of three was appointed, consisting of A. D. Warren, P. Williams, and C. A. Sweet, to devise and procure badges, which shall be always the property of the Association.

The Convention proceeded to ballot for officers for ensuing year, with following result:

President—William H. Churchman, Wilmington, Del.

Vice-Presidents—Charles A. Sweet, Buffalo, N. Y.; A. D. Warren, Wilmington, Del.; Philander Williams, Taunton, Mass.; E. C. Skinner, Detroit, Mich.; Duncan McR. Kay, Galt, Ont.; Albert Noyes, Maine; T. C. Luce, Iowa; William Bassett, Cal.; J. C. Long, Jr., Ohio; T. G. Holt, Ga.

Treasurer—Edward B. Smith, Buffalo, N. Y.

Secretary—Edmund S. Ralph, Buffalo, N. Y.

Executive Committee—P. W. Hudson, Conn.; W. H. Todd, Ohio; J. K. Felch, Mass.; S. H. Seamans, Wis.; Rev. Wm. Atwood, N. Y.; E. S. Ongley, N. Y.; George B. Bagley, Cal.; William T. Atkinson, Penn.; W. H. Lockwood, Conn.; C. B. Elbin, Penn.; A. J. Tuck, N. H.; H. S. Bace, Mass.; William Simpson, Jr., N. Y.; M. H. Cryer, Ohio; William Wright, Mich.; C. H. Turner, Mo.; E. P. Howlett, N. Y.; Daniel Allen, Ont.; J. T. Peckham, R. I.; H. T. Sperry, Conn.

7½ P.M.

Met pursuant to adjournment.

The Committee on Bantams other than Game made report, which was adopted.

A. D. Warren, C. A. Sweet, P. W. Hudson, E. C. Skinner, W. H. Todd, P. Williams, and W. H. Churchman, were appointed a committee to report on the best method of judging at shows, to report to the Executive Committee.

On motion, a committee, consisting of W. H. Churchman, A. D. Warren, C. A. Sweet, I. K. Felch, and William Simpson, Jr., were appointed to take into consideration the plan for holding the "First National Show," and report the city giving the best inducements.

On motion of W. H. Churchman, the Executive Committee were instructed to hold a Show in Philadelphia in January, 1877.

I. K. Felch, from Committee on Manner of Judging, made report, which was accepted.

The Association then listened to the report of the Publishing Committee, which was as follows:

The Committee upon the Publication of the Standard report that they have placed the work in the hands of W. H. Lockwood, as printer. We deem this important, in order to get it before the public before the 15th of February. The committee have also decided that the retail price of the Standard will be one dollar, the usual discount being made to the trade.

It was voted that the report of the Publishing Committee be accepted.

The following is the list of members elected:

JANUARY 20, 1874, 11 A.M.

SPECIAL MEETING.

W. H. Churchman in the chair.

On motion of C. A. Sweet,

Resolved, That as an Association we owe much to Joseph M. Wade, our former Secretary, and regret that the enterprise that he has embarked on (the *Fanciers' Journal*), seems to render it necessary for him to withdraw from the office which he is so competent for, and has so ably and acceptably filled during the past year.

Therefore Resolved, that we tender to him our heartfelt thanks for the uniform courtesy that has characterized all of his official relations with this body and its members.

Resolved, That one hundred dollars be paid him as a partial compensation for extra help employed by him during the past year.

Your committee report that for the year 1874 we think five hundred dollars a sufficient compensation to the Secretary of this Association, for extra help required.

W. H. CHURCHMAN,
P. WILLIAMS,
E. B. SMITH.

On motion, adjourned until 2 P.M.

2½ P.M.

The President, W. H. Churchman, in the chair.

On motion of P. W. Hudson,

Resolved, That we will not recognize in our List of Premiums any variety of a Class of Fowls when such class is recognized in our Standard, unless such variety is also recognized in our Standard of Excellence.

On motion of C. A. Sweet, adjourned to meet at 7 P.M.

7 P.M.

Convention met pursuant to adjournment, W. H. Churchman in the chair.

On motion, it was resolved that the following additional disqualifications be added to all of the Asiatic class: Cocks

not weighing 9 pounds; hens not weighing $7\frac{1}{2}$ pounds; cockerels not weighing $7\frac{1}{2}$ pounds; pullets not weighing 6 pounds.

The Rev. William Atwood moved the following resolution, which was adopted:

Resolved, That the officers and members of this American Poultry Association express their heartfelt and sincere gratitude to the Western New York Poultry Society, for the excellent manner in which they have provided for our meeting, facilitated our labors, and encouraged our hearts, in the arduous work in which we have been engaged; that we appreciate the skill, wisdom, and energy with which the President and his staff of officers have conducted the affairs of the Exhibition, that has afforded each and all of us such unmeasured gratification; and that we now leave them at the earnest call of those higher duties which we owe our families, but shall ever cherish with warm affection the names of the noble and generous-minded gentlemen we have met in the officers of the Western New York Poultry Society and their cordial and numerous friends.

The report of the Committee on Instruction to Judges was received, read, and adopted, and P. Williams and I. K. Felch were directed to engross the same for publication.

On motion of C. A. Sweet, the Rev. Wm. Atwood, of Big Flatts, N. Y., offered an appropriate prayer in behalf of the Association, asking acknowledgment of the Divine supervision, in first giving us a being, sparing life, directing to high and noble ends, and crowning us Lords of Creation. Thanksgiving, enjoyments given, mercies bestowed, and the elevating of the creature to a high standard of moral excellence, transforming him by grace into the likeness of the world's Redeemer; supplication for future guidance, for more than human wisdom to lead into the way of all truth, sanctifying all relations, giving us to know in this world influence to act well our part, that humanity be exalted, the world be made better by our living in it, and the name of God glorified by us. Commending all our individual, domestic, social, and associated interest to the guidance of the all-wise, the ever-present and gracious God, who suffereth not even the sparrow to fall to the ground without the notice of our Heavenly Father.

On motion of C. A. Sweet, the Association adjourned to meet at Boston, Thursday, February 5, 1874, at $7\frac{1}{2}$ P.M.

THE DOG OF MONTARGIS.

In October, 1361, there occurred a memorable fight between a man, who was known as the Chevalier Macaire, and a dog which has passed into tradition as the dog of Montargis. The contest took place on the Isle of Notre Dame, in Paris, in the presence of King John. The tradition formed the plot of a play which was presented at the Bowery Theatre a few years ago. The story goes that M. Aubry de Montdidier, a gentleman of Montargis, in passing through the forest of Bondy, was murdered and buried at the foot of a tree. His dog was with him at the time, and remained at the grave till driven away by hunger, and then found his way to Paris to the house of an old friend of his master. In Paris, he did nothing but howl, and, had Caleb Cushing lived at that time, it is probable that he would have had the dog of Montargis killed as a nuisance. At intervals he would catch the pantaloons of his dead master's friend, in his effort to drag him out to where poor Aubry was buried. For some time, the dog was not understood, but at

length, connecting Aubry's absence with the inseparable companionship of the man and dog, and the violent pertinacity of the animal in attempting to draw them after him, they followed, and after a time he led them to the foot of the tree in the forest of Bondy, where they dug the earth away and found the murdered man. There was no doubt that Aubry was murdered, but there was no evidence to convict any living being with the crime. The eyes of God had seen, and the dog had seen too, but dogs are dumb. A certain Chevalier Macaire had been the enemy of M. Aubry. Perhaps in consequence of the knowledge, somebody, the friend for instance, had his suspicions of the Chevalier, and confronted the dog with him, thinking, very likely, if the dog had reason enough to lead them to Aubry's grave, he would have enough to detect his murderer if he saw him. In these conclusions they were right. The dog, directly he saw Macaire, attacked him with an almost invincible ferocity. Wherever he saw the Chevalier he attacked him; and as the friends of Aubry took care, as may be supposed, to throw the dog as much as possible into the company of the now suspected man, the life of the Chevalier came to be diurnally uncomfortable. To have an unpleasant dog eternally flying at your cravat and anywhere else lying open to his fangs, may be seriously regarded as the reverse of cheerful. The Chevalier Macaire probably thought so. The conduct of the dog towards this particular man—he being notoriously of a gentle disposition and kind to every one else—quickly became the talk of certain circles in Paris. It was known to the court; it reached the ears of John, and then the king ordered the dog to be brought before him, and the Chevalier Macaire to be placed among the courtiers as one of them at the same time. Being at court, the dog conducted himself with perfect propriety for a short time, until he saw Macaire mixed up among the courtiers, and then, dashing at him furiously as usual, with an awful growl out of his great red throat, he pinned him against the wall. In those days the judicial arbitrament of battle was in full force; the popular belief being that the "judgment of God" would be manifested in favor of the innocent and against the guilty. The known enmity of the Chevalier to Aubry, the fact of Aubry's murder, the dreadful antagonism of the murdered man's dog—these settled the question with King John, and it was directed that the man must fight the dog, as the only way to justify himself in the eyes of Paris and purge himself of the suspicion of murder. It was the custom in the middle ages occasionally to try the lower animals for offences with much of the parade and ceremonial bestowed in the cases of their superiors, and from this we may understand that a combat between a man and a dog was not so strange an occurrence after all, away back in the fourteenth century. There was no cathedral of Notre Dame in Paris, in 1361, and so the open space of the island served as a capital place in which to pitch a ring for the combatants. The Chevalier Macaire was armed with a strong heavy stick, and the dog of Montargis had his teeth and a tub. This last, which might more properly be called an empty cask, was an ark of refuge for the dog to retreat to and make his spring from. But the dog of Montargis had no use for the tub. He scorned it. He flew with astonishing activity and fury at his opposer, first on one side, then on the other, he dodged under the cudgel, and finely with a terrible bound, fastened his deadly grip on the murderer's throat, and there was an end of the Chevalier Macaire, who lived just long enough to confess his crime before King John and the court. Of course

every body in Paris cried, "Well done dog," and was more than ever satisfied of the truth and justice of "trial by battle." We can readily understand that the faithful dog, having nobly avenged the death of his master, took up his quarters with his master's friend, looked after the rats and was made comfortable the remainder of his days. This is for conjecture only, however, because he may have been put in the dog-pound for non-payment of the tax; but what is not conjecture is the fact that over a chimney in the great hall of the ancient chateau of Montargis, in France, there is a curiously carved representation of this memorable combat; and as long as the old chateau stands, and the wrought oak wainscoting is spared the inroads of the worm, that carving will stand as the monument of the fidelity of a dog.

Items Interesting and Amusing.

☛ Six black foxes have been caught in Cumberland County, Nova Scotia, this fall. These animals are very rare, and their skins sell at fabulous prices.

☛ "Take a wing," inquired a pompous upstart of a sensible young lady at the close of a prayer meeting. "Not of a gander," she quickly replied, and walked home with her mother.

☛ Old Phin. Teeple, of Preston, Wayne County, Pa., is seventy years old, though remarkably vigorous, and looks hardly fifty. Since eleven years of age he has killed 2985 deer, and 438 bears. His favorite hunting ground is in Potter County.

☛ Seth Green now proposes frog culture for food. He says: "We have many stagnant pools about the country that are useless in their present state, and believing that there is nothing made in vain, I do not know of any other use for them than to make them into frog ponds. I also believe it would make the man wealthy who could raise a million frogs and get them to market. All I would claim is giving him two years' experience in experimenting." The hind quarters of the frog are a great delicacy. We have eaten them many a time.

☛ Among the attractive exhibitions in San Francisco, has been that of a bear boy. This ursine youth walks on all fours when he walks, and squats on his hind feet when he squats. Near the termination of the spine he has a scar, caused, as the keeper affirms, by the amputation of his tail. Formerly there was a ridge of hair down his back. This has been removed, and nothing but marks of glue are now visible to the naked eye.

☛ A suit was recently brought before the sheriff of the Dundee (Scotland) Small Debt Court, to obtain damages for injuries sustained from the bite of a dog. A man was about to enter the house of a neighbor to complain of the noise made by his dog, but being somewhat violent in his manner, the dog jumped upon the intruder and bit him in the face and hand. At the trial, the plaintiff having failed to prove the dog's previous bad character, the sheriff decided the case in favor of the defendant, saying that it was somewhat singular that, according to Scotch law, a dog was entitled to the first bite out of a man without attaching a penalty to the master, while the master was liable for the first bite taken out of a sheep, however good the previous character of the dog might have been.

☛ The following from the *Field* seems to prove that the eagle of the Tyrol has the power of carrying off full-grown chamois. It is taken from the journal of an English chamois hunter:—"June 27, 1871.—When taking out a young eagle from the Falknervaud, near Johanneslaus, I found in the nest (which was quite inaccessible except by means of a fifty fathom rope) the half-devoured carcass of a full grown chamois; three pairs of seven inch chamois horns, and the corresponding bones of the animals; one pair of goat horns; the remains of a mountain hare, and the head of a roedeer fawn."

☛ A letter from Russell, Kansas, dated January 9th, to *Forest and Stream* says:—"Game is not very plenty in this county at this season. Antelope were plenty in the fall, but I have not seen any lately. When seen they are very wild. Elk are scarce. I saw two last week, but as I had only a shot gun with me I could only look at them run. What leaps they did make in the snow! Buffalo keep farther west, although they sometimes wander through here. Deer scarce, 'Jack rabbits' plenty, coyotes and gray wolves plenty, quail are rather scarce, prairie chickens scarce, and generally crossed with the sharp-tailed grouse. Now and then a dusky grouse."

☛ Scattered about the prairies in Kansas are little ponds and puddles caused by the collecting of the surface water after rains, the occasional overflow of streams, and sometimes by springs at the bottom. These ponds average perhaps thirty yards in length by eight in width and three feet deep in the middle. To them all kinds of animals and wild fowl resort to quench their thirst and eat the varieties of food which always collect or grow in damp and marshy places. It is quite customary for sportsmen and travelers with depleted larders to build screens near by and lie in wait for the approach of game, which is sure to come and afford fine sport, and a bag can soon be filled.

☛ THE RATTLES OF THE RATTLESNAKE.—The formation of rattles upon the tail of a rattlesnake is a curious phenomenon. The notion that one is developed each year is incorrect. Young ones have been known to have six or more; sometimes two or three appear in a single year. The number seldom exceeds fifteen. The skin of one that was six feet long, now in the Museum of the Long Island Historical Society of Brooklyn, has fourteen rattles. De Kay cited, in 1842, the *Clarion* newspaper, published at Bolton, New York, which stated that two men killed, in three days, in the town of Bolton, at lake George, 1104 rattlesnakes, some of which carried fifteen to twenty rattles. They were killed for their oil. The same author states, on the authority of the *Columbian Magazine* for Nov., 1786, that a rattlesnake was killed, having 44 rattles, which seems an incredible number. The use of the rattles is a subject of discussion. They are evidently well developed—not rudimental merely—and the conclusion is irresistible that they are of service to the creature. We cannot suppose that organs which are constant in a class of animals, could have originated, if entirely useless and unserviceable to it. Professor Aughey suggests that the whirring rattle is a call-note by the animal to its mate. That it was thus used on one occasion he was an eye-witness. Again, it may be used to terrify its enemies; or to paralyze its victims with fright, or to call assistance in danger. He says: "I once witnessed an attack by seven hogs on a rattlesnake. Immediately the snake rattled, and three others appeared; but the hogs were victorious."—*Popular Science Monthly*.

BUFFALO POULTRY SHOW.**LIST OF AWARDS.**

(Continued from page 87, No. 6.)

CLASS 9—MISCELLANEOUS.**PLYMOUTH ROCK.**

- Cocks—1st special premium, A. H. Drake, Stoughton, Mass.
2d premium—no award.
3d premium, John Hunter, Buffalo, N. Y.
- Hens—1st special premium, A. H. Drake, Stoughton, Mass.
2d premium—no award.
3d premium, E. R. Hayward, Easton, Mass.
- Cockerels—1st special premium, A. H. Drake, Stoughton, Mass.
2d premium, A. H. Drake, Stoughton, Mass.
3d premium, O. Howland, Owasco, N. Y.
- Pullets—1st special premium, A. H. Drake, Stoughton, Mass.
2d premium, A. H. Drake, Stoughton, Mass.
3d premium, E. R. Hayward, Easton, Mass.

DOMINIQUE.

- Cocks—1st special premium, M. I. Ellis, Norwood, Mass.
2d premium—no award.
3d premium—no award.
- Hens—1st special premium, M. I. Ellis, Norwood, Mass.
2d premium, W. A. Fuller, Glen, N. Y.
3d premium, A. Rice, Buffalo, N. Y.
- Cockerels—1st special premium, M. I. Ellis, Norwood, Mass.
2d premium, John A. Davis, Auburn, N. Y.
3d premium, J. G. Bicknell, Westmoreland, N. Y.
- Pullets—1st special premium, M. I. Ellis, Norwood, Mass.
2d premium, J. G. Bucknell, Westmoreland, N. Y.
3d premium, J. A. Davis, Auburn, N. Y.

FRIZZLES.

- Trio, 1st special premium, G. P. Whitney, Rochester, N. Y.
2d premium—no award.

SILKIES.

- Trio, 1st special premium, E. S. Ralph, Buffalo, N. Y.
2d premium, S. B. Covert, Buffalo, N. Y.

CAPONS.

- Trio, 1st special premium, R. B. Engle, Masonville, N. J.
JUDGES—P. Williams, Mass.; I. R. Felch, Mass.

CLASS 10—TURKEYS.**BRONZE.**

- Old—1st special premium, George Vanderveer, Port Jackson, N. Y.
2d premium, George Vanderveer, Port Jackson, N. Y.
3d premium, E. V. Barton, Waterloo, N. Y.

THE CONVENTION AS I FOUND IT.

FRIEND WADE:

I confess to some misgiving on leaving my parish home to attend the meeting of the American Poultry Association, convened at Buffalo. Even admitting that my fears were like the ripples on the surface of the sea, yet they had some relation to the deeper water. For myself, I had seen enough of the poultry business to know that intelligence coupled with refinement could be profitably employed in the enterprise, the inevitable tendency of which would be to elevate, and not debase, the mind.

By the power of steam, generated from pure water, I reached the Queen City of the Lakes, breakfasted at the Bonney House, and soon after entered the Exhibition Hall of the Western New York Poultry Society, of which I would like to say much, for it is truly deserving of the highest commendation. Apart from their ample hall was a kind of Senate-chamber, where I was soon to meet the *Fellows of the Royal Society*. In the meantime, mental curiosity was playing pranks; but I was not to decide prematurely upon character. Justice to my brother man demanded a more careful deliberation; for there were men there of journalistic fame, as editors, contributors, and advertisers, some of whom I had corresponded with; but how they would look and act I could not tell, although I could conceive a possibility of a person being genteel with the pen, but really swaggerish in manner. But when the character of the Convention opened out before me, like clustered photographs, I felt rebuked even for my mental cogitations.

Then came the formal introduction, the hearty handshaking, by gentlemen from the East, the West, the North, and the South, each seemingly striving to excel in cordiality to their newly-made acquaintances; and yet these men were competitors in business, rivaling each other in opinion, but with all so noble that, to all appearances, they would sooner lose a right arm than knowingly wound another's feelings.

Soon the especial business of the Convention, viz.: the Revision of the Standard, was entered upon; and, in view of the various and varied interests bearing upon that one transaction, it tested the merits and integrity of that body of men as but few assemblages are tried; and yet they rose superior to it all. The grand magnanimity of the presiding officer found a hearty response, or else infused itself into the minds and purposes of the members, until harmony, despite every contingency, was the crowning element of each session.

The moral type of the Convention—contrary to the opinion of some who know very little of the facts—the moral features of the body were of a high order, infused in no small degree with a Christian consciousness. I was present at all of the meetings of the Convention, and mingled freely with its members during each recess, and I heard not a vulgar word nor an unchaste expression; neither was there an utterance in my hearing verging upon profanity; and I venture the assertion that a nobler set of men were never convened in the interest of any secular enterprise. One landlord at a popular hotel in Buffalo, where was gathered the largest number of delegates, complimented his guests as men who drank no rum; and this one fact alone speaks volumes in honor of the men and the measures they labored to promote. Indeed, all selfishness seemed to be far removed from every mind. The public presentation of substantial tokens of regard and friendship to acquaintances so recently made, called forth personal congratulations to the recipients of such favors, and appeared to gladden the hearts of all.

Just here I would like to digress from my purpose, and speak of individuals as I met them; but I must not presume upon the columns of your most excellent journal. Suffice it for me to say that I found myself invariably associated with gentlemen of sterling worth—men tried and true—who were earnestly laboring to promote the public welfare; and in the good time coming the fact will be heartily acknowledged, and that ignorance and bigotry done away which would indiscriminately sweep the entire fraternity of poultry fanciers into the cock-pit, just as though they had no higher than a brutal, debasing purpose to subserve. I know that there are a large class of game fowls, but it must be admitted that they are creatures of beauty and most excellent in their way; and further be it said of those who are most familiar with the breeding of them, that, like true naturalists, they have studied their nature and propensity, and would repel with noble scorn the idea of testing their pugnacity, and calling it sport.

In fact, no man connected with the American Poultry Association need feel for a moment that he is required by any relation or rule to compromise a good moral standing. The day has passed when sneers and jeers are to doom an honorable business to disrepute, for, with the degree of enlightenment already possessed upon the subject of poultry raising, withering epithets, from any quarter, are only signs of ignorance, and exposes the weakness of those who condescend to use them.

If I mistake not, the populace, in their intelligence, do not claim that cattle-men who convene to promote the enterprise of stock-raising are necessarily masters of the arena for bull-fighting. And why not the public mind everywhere be disabused in reference to the purposes and intent of the American Poultry Association. For one, I can confidently assure them that the very character and

management of the Convention at Buffalo is itself a powerful argument that noble-minded men are making rapid progress in that direction.

In the Convention, as we were anticipating the closing evening session, a resolution was cordially and unanimously adopted that the final act should be the offering of prayer to Almighty God; and when that prayer was ended, the plain and responsive amen from many lips was full of feeling, and its power more than filled that hall, and immediately started out upon the avenues of human influence, to crown with lasting honor the Convention which, at the close of its secular labors, devoutly acknowledged the Divine Sovereign in whom we all live, and move, and have our being.

Then came the last good-bye at parting. Good wishes were lavished, not as common stock, as air and water, but were given as the tokens of the most cordial friendship. And even now, as I write, the frequent and hearty "God bless you," so often heard as I left, is working in me the determined purpose, if God in his wise providence permits, to meet those friends again.

WILLIAM ATWOOD.

BIG FLATS, January 29, 1874.

RATS.

JOS. M. WADE.

DEAR SIR: To the readers of the *Fanciers' Journal*, as well as to fanciers generally, the question of rats, their habits, instincts, and destructiveness, will ever be a matter of interest. To one who attempts to raise poultry or pigeons in the circumscribed limits of a city yard, or in the neighborhood of corn-cribs, or buildings with ground floors, they will prove an unceasing source of provocation, unless entirely excluded from the coop or cot. My own experience with them has not been of long standing, but most decided in its way. I propose to give a specimen or two.

While living in the country I had no cause of complaint, but having moved to the city, and bought some pigeons, I have, in the last two years, had many opportunities of becoming intimately acquainted with the vermine. My dove-cot is a large one, and at that time a part of the flooring was not laid. I had thought that the birds would like to pick the lime and gravel on this dirt floor. Burrowing through this the rats obtained ready ingress and egress. For some time they contented themselves with the peas and corn that remained there over night, and did not molest my stock; but one morning a dead pigeon, left on the floor, was found nearly consumed. Then some sick ones—I had several of them—were helped out of existence. Thus they ascended the scale of depredation, until at last a fine pouter, an unusually strong bird, which was quite well the evening previous, was found half eaten on the ground. This convinced me that something must be done. I looked about for their holes, and stopped them; but next morning a beautiful tumbler hen, put up to mate with another, had disappeared; and only her breast-bone left to tell her fate. A vigorous search was instituted, and five rats, round and fat, were found hidden away in the pigeon-house. These were soon got rid of, and every hole fastened up. I hoped this was the end—it was not, but the beginning. Every night they cut in, but seemed to content themselves with the fact of being in for that night. If their hole was not discovered, or left unclosed,

the next night some bird or birds would suffer. I tried to trap or poison them. A trap was placed over a newly-cut hole, so as to prevent the rats reaching the cot except through the trap. While I was securing it, one of the tribe peeped through the hole into the trap. *No other rat came to that hole again.* But they cut in elsewhere as before, and killed a fan. I took the bird the next night, covered it with "sure-pop," placed it at the hole, and put a board over it so that the rats could not get into the house. Next morning the pigeon was gone, and I congratulated myself that it had been eaten. The rats, however, did not abate their attacks, so I bought a steel-trap, and placed it, bated, where I had put the poisoned pigeon. When I next examined it I found it buried in dirt. I cleared this away, and set it again. The next morning the *poisoned pigeon was found entire in the trap.*

I strewed bread, smeared with the poison, in their runs. The bread disappeared, and quite a number of *young*, half-grown rats were found dead or dying of the poison, but no trace was ever discovered of any old one having suffered.

Again they had cut in—this time directly through the flooring. I set my steel-trap temptingly beside the hole, and covered trap and hole with a large tight box. This I thought would take them, and so it did; but only *young* rats again. Three half-grown were caught in succession, and then, to my surprise, the hole was stopped up. As the flooring was only about two inches from the ground, this could easily be done. I opened it, and again set the trap. Next morning another young rat was caught, and not the *hole only*, but *even the run leading to it were thoroughly stopped.* All this while I had killed several in various ways, but not a single old one, either by trap or poison.

By this time, as I had stopped their holes with tin as they were cut, a considerable portion of the flooring, and one side of the cot, were tinned over. I now secured every weak point, and so arranged the nests so as to have no hiding places whatever inside the house. I also encouraged a terrier to remain under the dove-cot, and this, I think, materially assisted me in getting rid of them.

Now I breathe freely, and surely I deserve to. J. G.

GREENVILLE, N. J., January 16, 1874.

MR. JOS. M. WADE.

DEAR SIR: I received the *Fanciers' Journal* just as I was preparing to go to Connecticut to judge on game fowls.

A weekly publication of this class is what I have always advocated. Our fraternity must have a quicker way of introducing their fowls to public notice than once a month. I am most anxious for its success, and I think that by your management it will be the leading paper of its kind.

I am also pleased that you give that noble and faithful animal, the dog, a place in your columns, and I hope that our poultry men will have a place set apart at the exhibition for competition in thoroughbred dogs. I have never lost a chicken by a thief, so well have my faithful guardians attended to their duty; and my cats save my young chicks from the rats. I have seen them set a whole day behind a coop of little ones watching a chance for Mr. Rat. Send me the *Journal* regularly, and when I return I will remit \$2.50.

Inclosed I send you my standard on game if you feel like publishing it; if not, please return it to me, as it is the only one I have.

Yours truly,

ISAAC VAN WINKE.

LOFT FOR PIGEONS.

MR. EDITOR.

R. J. H. wishes to know how many pigeons may be successfully kept in a loft 10 x 14, &c. Merely to keep pigeons requires but a small space, and he can keep twenty pairs, of different varieties, in such a place. But to satisfactorily breed the birds, and to enjoy their companionship, I think six pairs of one, or at most two varieties, will give him the greatest pleasure. Six pairs of old, properly attended to, will produce him about eighteen pairs of young during the breeding season, which, added to the first stock, will crowd his loft. Of course he will become attached to some of the young, and will undoubtedly have more on hand for the next (second) season than he will be able to attend to in that sized loft.

He had better confine himself to one variety. As men become experienced in the fancy, they naturally reduce their stock to nothing but fine birds, of few varieties. It is a sure sign of a good fancier to see that he has but few kinds, and fine birds of those kinds.

Nearly all the fancy birds bear confinement well; in fact, they have been bred so long in confinement that it has become their normal state. They are cage birds; but the loft must determine the size of the birds. It would be an unsatisfactory place for pouters or carriers, but will do well for the toys or small birds, such as turbits, owls, tumblers (not flying), &c.

White owls, I suspect, will be the most gratifying variety for him to handle. Let him study the points for which he has to breed, and produce first-class show birds by the third season, and he will have won his spurs. Advising him to stick to one kind, to buy the best birds of that kind to begin with (no matter what they cost), to keep his loft clean and the number of birds few, I predict and wish him the success and gratification he will obtain. W. P. M.

(For Fanciers' Journal.)

THE MOCKING-BIRD.

Of all the woodland minstrels none can successfully compare with the mocking-bird. Its harmonious and varied song rings sweetly in budding spring, in the groves of mid-summer, and in the tinted bowers of autumn.

When the saddened heart is heavily pressed by the hand of affliction, or weighed down by the cares of life, then turn to the haunts of the mocking-bird, and listen to its thrilling music, its rich and melodious notes, calling from distant hills and adjacent tree-tops the various feathered tribes, selecting the choicest notes from this medley choir, imitating so completely the wild song of the thrush, the warbling nightingale, the crowing cock, the cackling hen, that they listen in silence, spell-bound at his masterly triumphs. Then he perches himself within a few feet of the planter's mansion, and there peals abroad delicious sound to delight and charm the ear with its fitful hymn. Oftimes it is heard to chant with sweetness in the drowsy watches of the night, when all nature is hushed, and through the crisp air its hollow dirge meets the ear in rapturous sounds as he lifts his anthem seemingly to no one except Him who ruleth on high.

This bird, unlike most others, courts civilization, often building within a few feet of the homestead, oftimes selecting a solitary holly, cedar, or thorn bush; many times a pear, quince, or apple tree. Their nest is usually placed from five to eight feet from the ground. No great care is exercised in secluding the nest from view, nor to place it be-

yond the reach of man. Its construction is neat and simple; the bottom layer consists of small dry sticks and twigs, upon which is placed fine hay, weeds, wood, or hair, and over this is interwoven, in compact form, fibrous roots of plants or moss.

In this nest she deposits from four to five eggs, deep-blue in color, dotted here and there with numerous blotches of brown. The period of incubation numbers fourteen days, which is accomplished solely by the hen, who usually rears two broods during the season.

When hatching, the mocking-bird displays great courage in defending its young against the attack of enemies, and evinces great love for its offspring; yet, should the nest be disturbed by man, they have been known to forsake their young, and leave them to perish. The black-snake is their inveterate enemy, and against this intruder they usually prove victorious in the contest, exhibiting great spirit and parental affection.

This bird is peculiar to the American continent. Its geographical range extends from Connecticut to Brazil. It luxuriates in the genial clime of the Southern States, and is abundantly found south of the Potomac, while but few extend their pilgrimage as far north as New York, though they have been known to breed in this latitude.

They prefer the warm region bordering the Atlantic and Gulf of Mexico, being more numerous here than west of the Alleghanies.

The mocking-bird is omnivorous, feeding on berries, insects, and fruit. If desired for cage purposes, their young should be taken at an early age, as they are then reared easily; but if left until nearly fledged, and ready to leave the nest, they frequently sullenly submit to starvation.

Like all soft-billed birds they thrive on mashed Irish potatoes, mixed with one-third its bulk of hard-boiled egg. Occasionally insects, or a little lean beef, should be given them, with a limited supply of fruit.

The young birds, when taken from the nest, should be fed very often, and not much at a time, to keep them growing thriftily. Fresh water should be abundantly supplied for drinking and bathing purposes, also gravel to aid digestion.

The great consideration in rearing them successfully is regularity in feeding, and cleanliness. They should be fed by hand long after they are able to eat without assistance; it renders them more gentle and confiding, and keeps them strong.

The writer well recollects a favorite bird, reared by hand, who used to range at will in the room with doors open, but when hungry would approach, with its intelligent eye glistening, and with mandible widely extended, to grasp a dainty bit from his master's hand. It would also fly for protection when disturbed by household pets, and warn him by its peculiar note of distress and alarm. One frosty morning Harry was discovered under his perch cold and almost lifeless, but quickly, and with affectionate hands, he was wrapped in warmed bats of cotton, and placed before the fire, and fed with stimulating bits of bread soaked in milk and black pepper, when he revived, and gladdened our hearts with his presence and cheerful and winning ways. Although at this season of the year the voice of the mocking-bird was seldom heard, Harry, after fully recovering from his chill, made us thrice happy by his melodious notes. An opportunity offered to send him as a present to a Northern friend. Upon his arrival he seemed quite at home, and was allowed the same freedom as at his Southern home. He roamed at will

throughout the house, picking here and there a spider or a fly. He would hop to an open door and take a cautious gaze at passers by, and if disturbed would fly back, out of the reach of harm. He was the joy and pet of the household, but as the vigorous Northern winter set in, he was observed to droop, and at length perished a victim to acclimation.

The mocking-bird should never be exposed to inclement weather, but should have the benefit of fresh air as much as possible, protected, however, from the scorching rays of the sun by a covering thrown over the cage.

The mocking-bird is clothed in plain but neat attire, yet its lively and graceful motions, together with its elegant form, are quite sufficient to render it attractive as a household pet.

The plumage of the male and female closely resemble each other. The following marks are considered sufficient to distinguish them:

"The male has the white on the wings extending over the whole nine primaries, or quill feathers, down to and well over the coverts; these are also white, though sometimes tipped with brown, the white of the primaries extending equally on both vanes of the feathers.

"In the female the white is not so clear, and extends only over seven or eight of the primaries, and more on the broad than on the narrow vane of the feathers; the black of the wing is also less deep, being of a brownish shade.

"The mocking-bird measures nine and a half inches in length; at an expanse of wings thirteen inches. The upper part of the head, neck, and back, dark brownish-ash. Wings and tail nearly black; primaries as described above; first and second row of coverts tipped with white. Tail cuneiform; the two outer feathers wholly white; the others, except the middle ones, tipped with white. Neck, breast, and whole under parts clouded white. Iris of a yellowish-cream color. Bill black; base of the lower mandible whitish. Legs and feet black, and stoutly formed."

The mocking-bird is subject to diseases peculiar to its variety, which may be described as follows:

DIARRHŒA, or looseness of the bowels, is often produced by improper diet, by allowing their food to sour in the cage. Meal-worms, spiders, grasshoppers, and dried currants will often relieve.

BLINDNESS.—For this there is no remedy. Whenever it occurs it must necessarily prove fatal; for with it is associated disease of the brain, through the medium of which the optic nerve is affected.

BALDNESS, or the dropping of the head feathers, usually commences around the eyes, and is generally fatal.

Symptoms.—Continued restlessness, and rubbing of the parts on the perch or cage.

Treatment.—Flowers of sulphur, rubbed up with a little water to the consistence of paste, and applied twice per day to the affected parts, will allay the itching, and may completely check the disease if early applied.

PIP.—If they refuse to eat, examine their tongue carefully, and you will discover a horny scale upon the end of the tongue, which should be removed; if allowed to remain it will be at the sacrifice of the life of the bird.

JAMES S. BAILEY, M.D.

Albany, N. Y.

 A. D. Warren, Worcester, Mass., had, on exhibition at the Buffalo show, just closed, two coops of his recently imported Golden Chinese Pheasants. They were quite an attractive feature of the show.

EXHIBITION OF WESTERN PENNSYLVANIA POULTRY SOCIETY.

THE number of entries at this exhibition was not as large this year as last, but the fowls were better than at any previous show.

The largest contributors were A. A. Miller, who showed forty coops; C. B. Elben, twenty-three; S. H. Cook, twenty; and Joseph Bamford, fourteen. Mr. Miller took 34 society and special premiums; Mr. Elben, 19; Mr. Cook, 16; and Mr. Bamford, 14.

The show of Dark Brahmas, was much better than that of last year. The Dark Cock which took 2d this year, is the same one that took 1st and special last year.

D. J. Rogers, of Mansfield, Pa., exhibited eight beautiful pullets, which had been carefully selected from the H. H. G. Sharpless yards. Mr. Miller, of Oakdale, Pa., also exhibited three pullets and two hens from the same yards, which were very fine indeed. These two gentlemen also showed some very finely marked cockerels, but they were quite young, and not sufficiently developed to show to best advantage. A pair of hens shown by S. H. Cook, were well matched and finely penciled.

The display of

LIGHT BRAHMAS

was quite large and very good. C. B. Elben, exhibited a cock whose pedigree runs directly back to the yards of Mr. Felch. He is a very fine bird, combining large size with compact form, and with medium length of leg.

The 2d premium cock was lately purchased by Mr. Gregg, from P. Williams, and is a good sample of Mr. Williams' breeding stock. While both styles have their admirers, we confess to a decided preference for the former, as coming nearer to what the Brahma fowl ought to be.

While the show of chicks was very good, and some fine birds were exhibited, yet they were almost without exception, to our mind, too long in the legs, and lacking in compactness of form. In

BUFF COCHINS,

the number of entries was not large. The principal exhibitors in this class were Joseph Bamford and A. A. Miller. Two cocks exhibited by A. A. Miller, and recently purchased by him of Jos. M. Wade, Esq., were fine in form and carriage, even in color throughout, and of that shade of coloring most prized by Cochin fanciers.

A cock shown by Jos. Bamford, was also very fine, but was more loose in the feathering, and, to our fancy, inferior in color; and while appearing very much larger than either of the two above mentioned, was found to be of exactly the same weight as one of them. Both of these exhibitors showed some excellent hens and chicks of this variety.

PARTRIDGE COCHINS

were pretty well represented as to number, and were fair in quality. Many of the birds were rather young for first-class exhibition birds. There was but one trio each of Black and White Cochins; these however were very fine.

THE DORKING CLASS

was not very largely represented, though the specimens were quite good.

C. B. Elben, J. Dyer, and others, made a good display of American Dominiques. This class is evidently growing in favor, and promises in the future to attract a larger share of attention than it has hitherto done.

The Plymouth Rocks exhibited by Hayward, of Mass., and Isom, of Cleveland, were very much admired. In

GOLDEN PENCILLED HAMBURGS.

The principal exhibitors were Jos. Bamford and A. A. Miller. Mr. Bamford seems to be particularly successful in breeding this class of fowls. Mr Miller also exhibited several coops of the same stock which competed sharply for prizes with the parent stock.

The other varieties of Hamburgs were not largely represented.

There were but few entries of Spanish and Leghorn. Of

FRENCH FOWLS

the Houdans were in greatest numbers, and were probably better in quality than at any previous exhibition.

GAMES

were as usual numerous, and, in the main, good.

POLISH,

fair in quantity and quality.

BANTAMS

were numerous and good, evincing an increasing interest in this class of pet stock.

The number of entries of turkeys was not large, but there were no inferior specimens on exhibition. The

AYLESBURY AND ROUEN DUCKS

were unusually fine, and the show in this department would compare favorably with that of any exhibition in the country. The show of

PIGEONS

was greatly in advance of last year. Altogether the Society have great reason for encouragement. There is a growing interest in the breeding of fine poultry in West Pennsylvania, which promises a still greater improvement in the exhibitions in the future. Below we give a

LIST OF PREMIUMS

Plymouth Rock Chickens.

- 1st premium, E. S. Isom.
- 2d premium, E. R. Hayward.
- 3d premium, C. B. Elben.

(To be continued.)

MR. EDITOR:

In No. 3 of the *Fanciers' Journal* A. E. B. asks information upon the following question: "Which plan would probably ultimate in the most profit—the purchase of a trio of the best fowls, or to lay out the amount of cost in eggs for hatching the same breed?" Now supposing A. E. B. desires to invest \$30. If he invests this amount in eggs he will get say six settings certainly—not more than that—if he buys from a good reliable breeder of good stock; this will give him seventy-eight eggs. Now then for the other side of the question. We will suppose he pays \$30 for a trio of good Light Brahmas. Now then, in looking over a back number of the *Poultry World*, I find the following letters: M. E. W., Houston, Texas, writes: "I have a Light Brahma hen that laid eighty-one eggs, hatched and raised a brood of fifteen chicks, and recommenced laying in one hundred and forty-two days." Another, H. N. S., Sacramento, Cal., writes: "I have a Light Brahma hen hatched April 21st, 1872, which commenced to lay about the middle of December, and has laid up to June 3d, 1873, one hundred and eighteen eggs of large size without wanting to set; after that she laid one more egg and quit." Now then admitting the above to be more than the average number that each hen would lay, suppose we take off one-third, this would leave one hundred or more eggs as the product of two hens, nearly three settings more than he would get for his \$30, and I think their chance of hatching would be much better. I am personally acquainted with a gentleman who raised over one hundred Light Brahma chickens from the eggs laid by two hens; of course he used other hens to hatch and rear them.

Yours, &c.,

W. E. FLOWER.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

T. J. WOOLDRIDGE, "French Hay," Va.

POUTERS FOR SALE.
IMPORTED POUTERS FOR SALE.—1 pair Blue Pied, Cock 20 inches long, good legs and well booted, plain on the wings, and fine breast-mark; Hen, 18½ inches long, good legs, nicely booted, and in marking is well suited to breed with the cock. The pair bred three good young ones in England the past summer. Price, the pair, \$120. Also, two trios of good AYLESBURY DUCKS at \$12 and \$15 per trio.
Address POUTER, 39 N. Ninth St., Philadelphia.

POUTERS FOR SALE.—1 pair of Black Pied Pouters, Cock 18½ inches long, well marked on the wings, good blower, well booted, and a very showy bird. Hen 17½ inches long, quite well marked, well booted, and a good breeder. The pair have raised six fine young the past season. Price, \$30. Address
POUTER, 39 N. Ninth St., Philadelphia.

MITCHELL COLUMBARY.—Fancy Pigeons in great variety. Yellow, Black, and Blue Fantails, and Carriers, a specialty. I would call attention to my stock of IMPORTED TOYS ICE PIGEONS, FRILL BACKS, &c. There are few birds more beautiful or delicate in plumage than the two varieties named; an opportunity to procure them is rarely afforded. Send 6 cents for Circular. F. F. POLE,
Mitchell, Ont., Canada.

FOWLS AND EGGS.—I can furnish now a few trios of Light Brahmas, Dark Brahmas, and Partridge Cochins. Eggs of above in season. And White and Buff Cochins, Houdans, Silver-Spangled Hamburgs, Silver-Spangled Polands, Gray and White Dorkings, B. B. Red Games, White Leghorns, Gold Sebright Bantams, Bronze Turkeys, Bremen Geese, Aylesbury, Cayuga, and Rouen Ducks, &c. Mode of transporting eggs is as good as the best. My Fowls and Chicks were awarded over \$500 in premiums the past FALL. Send me two 3 cent stamps for new Descriptive Catalogue of Poultry, worth dollars to a beginner. Will exchange NURSERY STOCK for standard pure bred Poultry. For information and PRICE LIST, address
JAS. M. WILLS,
Bloomington, Ills.

GRAVES' INCUBATOR can be seen in working order at 26 N. Market Street, Boston, Mass. Send for Circulars. JACOB GRAVES.

W. W. ELLIOTT, McEwensville, Pa., Breeder of Light and Dark Brahmas, from the best strains. Also, Houdans from Cooper, Ireland.

GAME FOWLS! GAME FOWLS!!—Send for Price List to J. A. BENTLEY, Potter Hill, R. I.

"THE POULTRY RECORD."

AN ILLUSTRATED MONTHLY MAGAZINE, edited by C. W. HEATON, Farmington, Ill. One Dollar per year; single copies, Ten cents. THE POULTRY RECORD contains each month fine illustrations of the popular breeds of fowls; also, plans of houses, yards, and necessary appliances, with contributions relating to all branches of the business of poultry-raising, from writers of experience and ability. The low price at which it is offered should induce you to subscribe for it at once. It has the unqualified indorsement of the leading Breeders and Fanciers of the country, and also of Farmers and Market Poultrymen who raise fowls for profit alone. Send for a copy before subscribing for any other paper.

C. B. ELBEN, Pittsburgh, Pa.

A. P. GROVES, 34 SOUTH DELAWARE AVENUE, Philadelphia, Pa., Breeder of Buff, and Partridge Cochins, Dark Brahmas, and Houdans. Satisfaction guaranteed.

GAME FOWLS, of all varieties, carefully bred in feather, station, and weight, all of which are bred from well-tested fowls. I have selected my stock from the most noted and reliable breeders in the country, who have not only bred for the show-pen, but with a cock-pit point of view, who seek for purity of blood, bone, and muscle, which is all that constitutes a genuine Game. And, as for color of plumage, or marks for the show room, I can produce fowl equal to any in this, or foreign countries, and having supplied the leading cock-pits for a number of years with my strains of Games, there has not been one reported as showing the white feather, or in other words, to run. And as I am not engaged in any other business than breeding of Game Fowls, I make my prices low so as to effect quick sales, while others who breed for pleasure ask enormous prices, caring little as to whether they effect a sale.

For Price List, address **JOHN ARCHER**,
Box 43, Mahanoy City, Schuylkill County, Pa.

FOR SALE.—Two Houdan Cocks, one Houdan Hen, one trio Black Cochins. Also, the finest pair of White Crested Black Polands in the country; have taken first premium wherever exhibited. Also, one pair fine B. B. Red Game Bantams. Address

J. F. FERRIS, Stamford, Conn.

A. M. CAREY, SELINGSGROVE, PENNA.,

Breeder of First-Class Fowls. Good specimens of the following varieties for sale now at *very low prices*: Light Brahmas, Partridge Cochins, Houdans, Silver-Laced, and Black Red Game Bantams.

CORRESPONDENCE SOLICITED.

MY PARTRIDGE COCHINS are well known to Breeders, Exhibitors, and judges of that variety of Asiatics, and have attained to a desirable reputation by their superior merits, and success as prize-winners. I prefer them to any other variety of Asiatics, and shall make them my specialty for 1874. A few Fowls and a fine lot of Chicks for sale at prices according to quality. Also, for sale, my entire stock of WHITE COCHINS, BLACK RUSSIANS, and JAPAN BANTAMS, to make room for PARTRIDGE COCHINS.

Address

W. H. BRACKETT,
Washington National Bank, Boston, Mass.

BULLDOG FOR SALE.—Extra fine, one and a half years old. White, with colored spot on the face. Free from scars, and a perfect specimen. Price \$30. Address

JOSEPH M. WADE,
No. 39 N. Ninth St., Phila., Pa.

BRONZE TURKEYS.—For want of room I will sell one trio Bronze Turkeys, one year old. Hens from Fords, Cocks from Todd's premium strains. The Hens were part of premium coop at Union Fair, of Four Counties, this Fall. Price, \$25, in P.O. Order, or N. Y. Dft.

Address

BEN. FAGAN, Hubbardston, Mich.

FOR SALE, VERY CHEAP.—PARTRIDGE COCHIN COCK, with slight objectionable markings. Address

DANIEL T. CROSMAN, Rochester, N. Y.

J. C. LONG, Jr., RAVENNA, OHIO,
Offers at low rates,
LIGHT AND DARK BRAHMAS,
BUFF, WHITE, AND
PARTRIDGE COCHINS.

FANCY PIGEONS.

AND ANGORA RABBITS.

To gentlemen wishing to purchase

Good Stock at small figures,

This is a rare opportunity.

WESTERN NEW YORK POULTRY SHOW.

MR. EDITOR:

We attended the Buffalo Show, and, although much hard labor was to be performed, we never spent a few days more pleasantly. We there came face to face with many of our old friends, whom we had long desired to see, but had never met before. A short season with the "Buffalo boys" and those who sojourned with them was enough in itself to fully compensate for all the sacrifices of the journey.

But the Show! It was splendid. Everything was in order. We realize our inability to do it justice. Exhibitors, as well as officers of the Society, may well feel proud of the contents of St. James' Hall. As we entered the door, a long row of pens, two deep, containing magnificent specimens of Buff Cochins, met our view. Partridges, White and Black Cochins were also a credit to their respective classes, yet the latter was not so great in numbers. Light and Dark Brahmas crowded hard in numbers and quality on the Cochins; but we could see more faulty birds in the latter variety than in the former. Two coops of Malays put in their appearance, and we stopped in front of them and admired their ungainliness and awkwardness. Bantams may be the extreme of beauty, but Malays are certainly the other extreme. We have had some experience with them, and believe they are really a profitable fowl, on account of their excellent laying and table qualities.

Two or three coops of Golden Polands and one of Black would cover all in the Poland class that were worthy specimens. A few good White Dorkings and a very slim display of Grays is all that could be said of the Dorking class; but when we come to Hamburgs, we require much time to look through the different coops of Golden and Silver varieties. We never saw a better display, nor better birds. A few coops of Black were also shown. With our experience, we consider the latter the best of all Hamburgs, and hope to see them share as prominent a place in the show-room as the others. There were some coops of White Hamburgs, but we did not admire them much. The Dominiques and Plymouth Rocks were very fairly represented, yet many of the former bore strong marks of having been crossed with the latter. We are sorry we are obliged to pass the French class without comment; we must go to Utica for them.

Of the Game class, we might throw out a few birds and then say we had a show of them worthy of any exhibition; and the same of Game Bantams. There were Black Red, Brown Red, Duckwing Pile, Black, and even Irish Gray Bantams; and we gazed on them in wonder and admiration, in view of the amount of care, study, and perseverance required to bring these pets to their present state of perfection. A few coops of African and a few of Sebright's made up the class in Bantams.

Although water fowls were shown in fair numbers, nearly every coop contained good birds, and the Ducks were, with

the exception of Cayugas, far ahead of those shown a few years since. We read that we "cannot make one hair white or black," but we noticed one exhibitor failed to agree with that sentence as regards feathers, for one coop of Cayugas, which had white patches on their breasts, had moulted before the judges had passed on them, and every feather was black. The judges, however, understood their business, and reported accordingly. One coop of Pekin Ducks and only one of Muscovys were shown. We admire the former, and think it will be a popular and useful variety.

Two coops of Geese could have been improved for breeding if they had been "slightly mixed" or changed, as one contained two "female geese" and the other two "male ganders." In all our experience we have never known birds mated in that way to be very productive.

We must not forget the turkeys, for, although there were not a great many, the specimens were noble and creditable. Bronze cocks weighing nearly forty pounds, and hens over twenty pounds each, some beautiful Buffs, Narragansets, Blacks, and Blues were to be seen.

The fine display of Fish and Minks attracted usual attention, and the Dressed Poultry was the finest we have ever seen. The Pigeons we will not attempt to describe. There were coops upon coops of very superior specimens, and they attracted many admirers. When our Buffalo friends have another Show, "May I be there to see."

J. Y. BICKNELL.

Westmoreland, N. Y.

(For Fanciers' Journal.)

NOTES FROM THE EAST.

No. 4 of the *Fanciers' Journal* came promptly. We consider it just the thing—pleasant to the eye, and good for the mind. Short articles right to the point; results of experiments rather than guess-work; friendly advice, judicious counsel, and few advertisements, are some of its good qualities. Long may it live, and miles may it travel, until every bird fancier in the country has booked his name for a copy.

The "hen fever" that has raged in almost every city and village in the United States, attacked us early last spring. Prompt measures were resorted to, but were of no avail. It has continued to gain upon us, and at the present writing our quiet little village is all astir, and poultry-houses, sitting hens, pretty pullets, and heavy cocks, are the principal subjects of conversation. Hens are traded as are horses, and gentlemen of leisure ride from one town to another to examine, compare, and criticize poultry.

A Society has recently been formed, entitled the Merrimac Valley Poultry Association, with General Chas. A. Johnson as President, and measures are soon to be taken for a show. Medical men, ministers, and mechanics are alike interested.

There is nothing so well adapted to the wants of all classes, to drive dull care away, and rest a weary brain, as the care

of poultry. But little capital is needed in the beginning; faithful care is sure to bring good results, and much pleasure is gained, if no profit.

Poultry houses of all styles, from the two dollar pen to the five hundred dollar establishment, are going up. The man with small house and smaller means may produce a fowl that shall pay him a big bonus, and another season a larger house will grace his grounds. The present winter has, thus far, been very favorable for poultry business, and, as other business has been dull, it has kept the "blues" from many a brain. Man must have some employment—*some interest in something*—to be happy. Fanciers are now sitting hens, and, in a few weeks, little chicks will furnish new employment and create a new stock in trade. They will go hither and thither, like migrating birds. Hundreds will only live to "peep" disconsolately a few days, while the few are destined to become the pride of the fancier's heart.

ESSEX CO., MASS.

(For Fanciers' Journal.)

THE OTTER.

MR. EDITOR:

The Otter is so seldom seen in the domesticated state that I suppose but few of the readers of the *Fancier* have ever seen one, and consequently must have a very indefinite, if not imperfect idea, of this truly wonderful creature. To such as are familiar with the appearance of the weasel, I would say that the otter is not unlike an overgrown weasel, both being long and slender, but the otter is of much larger and stronger proportions. The head of the otter is broad and flat, with small bright eyes; its legs are short, heavy, and strong, and its feet are broad and webbed; its limbs are so limber and elastic as to be capable of being used as are the fins of fish, and his long tail is used in water as a rudder in turning quickly.

Although this animal is covered with a beautiful thick fur, it is amphibious, inhabiting alike land and water, but when in water must now and then come to the surface to catch breath to prevent drowning. It is a very ready swimmer, as may be imagined when it is known that its food consists principally of fish, which it contrives to catch for itself. He is very cunning and is a close observer, and has learned that hungry fish always run with their heads against the current, so as to catch and devour anything suited to their taste that may float downward. The eyes of the fish are so arranged that they cannot see downward, while the otter's eyes are so placed as to see equally well in every direction; so in seizing his prey he resorts to a little strategy by swimming against a stream, and when a fish is observed above him, he quickly darts upward and seizes it, carrying the fish to his rendezvous for a comfortable meal. Being an adept at fishing, he remains in his habitation but little, spending most of his time in water, catching fish. His taste, too, is quite fastidious, as he only devours the most dainty parts, such as the flaky portions about the shoulders and along the back, leaving the remainder for birds and fish-loving creatures. There are times when he is not so dainty and cannot find fish to eat; then he perambulates dry land and searches for a farmyard, seizing such prey as he can make off with. When he cannot find fish or meat to satisfy his appetite, he is content to devour vegetables or gnaw the bark of roots of trees.

The otter is found in Europe, Asia, and in North and South America. His home is usually in a hole in the bank

of some stream, the entrance of which is always under water, with its course deviating upward in order to insure a dry sleeping place above the water's level.

Instances are recorded where otters have been caught, when quite young, and domesticated; they are said to be quite frolicsome, playing and gamboling like a kitten. They have also been trained to catch fish for their master, but writers agree that it is difficult to teach them to deliver the fish to their master, for, true to instinct, they prefer to take the first nibble themselves.

The process of training is as follows: Feed it on bread and milk or vegetables until a taste for such food is acquired; then permit it to play with a leather imitation of a fish, as a kitten plays with a spool or anything that will remind it of a mouse, then this imaginary fish may be thrown in the water, and by means of a string attached may be drawn quickly and the pupil encouraged to plunge into the stream and bring it ashore. After having done so it should be rewarded by a dainty morsel, which his instructor should be careful to provide beforehand. Having become proficient in the first lesson, a dead fish may be substituted, and the otter encouraged to seize and yield it at the command of its master. After a while a living fish is substituted and fastened to a string, and the otter is taught to pursue and capture the fish and yield it as before to his master. After this the remainder of the task is easily performed, and when the animal is taken to the water-side it is quite willing to chase the finny tribe and bring them ashore, and receive the praise and caress of its master; and last, but not least, receive the reward of food which the apt pupil so justly deserves.

Another important lesson is to teach him not to spoil the fish in seizing it. If so, a reprimand must be given, and perhaps, in order to make the lesson more impressive, a few taps with a switch may serve the purpose.

A friend once owned a tame otter that used to follow him like a dog, and when in the house would crawl up and nestle in his lap and go to sleep. He was a great pet, but would not allow strangers to handle him; in fact, in some cases, when strangers came around, he manifested so much temper that no one excepting his master cared to be too familiar with him. There was no stream of water in his vicinity, consequently no effort was made to teach him to fish, but a tub of water was provided for bathing purposes, which seemed to delight him much. One day he ventured too far from home, and his life was sacrificed by the shot of a sportsman, not knowing that the creature was domesticated. His beautiful skin was presented to the writer and, after being suitably dressed, was employed many years as a covering to a pair of medical saddle-bags. Its thick fur seemed entirely impervious to the most drenching rains.

The color of the otter is of a rich brown, which is lighter on the back and outside of the legs than on other parts of the body.

When attacked, the otter is a desperate fighter, never yielding as long as able to snap at its antagonist. Its mode of seizing and shaking renders its bite doubly severe. But few dogs not trained are able to cope with and conquer it in a fair fight.

The best dog for otter hunting is the otter-hound, which seems to be a cross between the deer-hound and some other variety, though some claim it to be a pure bred dog.

The entire length of the otter is about three feet; of this

the tail measures fourteen inches. It usually weighs between twenty and twenty-five pounds, though an instance of the otter weighing forty pounds is mentioned by Mr. Bell.

JAMES S. BAILEY, M.D.

HOW SHEPHERD DOGS ARE TRAINED.

You may go over the plains and hills of southern California for miles and see thousands of sheep, but not a man to watch them. Around each flock or band of, say, a thousand sheep, are half a dozen dogs, of a peculiar breed; dogs whose progenitors were imported from the sheep pastures of the Old World. These dogs take the entire care of the sheep, drive them out to pasture in the morning, keep them from straying during the day, and bring them home at night. They have inherited a talent for keeping sheep; but the shepherds do not depend wholly on that. They cultivate it in this way, so at least the old shepherds say: When a lamb is born it is taken away from the mother sheep before she has seen it, and a puppy put in its place. The sheep suckles the puppy and learns to love it. When the puppy grows old enough to eat meat it is fed in the morning and sent out with the sheep. It stays with them because it is accustomed to be with its mother, but it cannot feed with them. As they get full, the dog gets hungry. At length, impatient to return, where it hopes to get another piece of meat, it begins to tease and worry its mother, and finally starts her toward home, the other sheep follow, and thus the whole flock is brought in. If the dog brings the sheep home too soon, or comes without them, he gets no supper, or is punished in some other way. Hence he soon learns when to come, and to see to it that none of his charge are left behind. These animals are trained by taking advantage of their instincts and appetites.

THE WONDERFUL ESCAPE OF A DOG FROM THE CHICAGO FIRE.

ONE day Dan and I visited the Security Bank, on Randolph street. We did not go to see the bank simply, but to take a look at the safety vaults connected with the bank, which are probably as thoroughly fire and burglar proof, as anything can be.

We entered quite a large office, where a solemn-looking police officer was guarding the entrance to the vault. The ponderous steel doors with their ingenious combination locks were swung back, and nothing but an iron grating was before the entrance, so that although we might not enter, he could see within. Doors, entrances to little safes, lined each side of the vault. These safes, which are made of heavy steel plates, can be hired for a reasonable sum. The lessee holds the only key, so that he has absolute control of his own safe; but he is never allowed to enter, except in the presence of an officer. The vaults, themselves, are of solid masonry, with a lining made of six half inch steel plates, firmly bolted together. Up stairs is a vault for diamonds, but no visitor is ever allowed there. We descended the basement, where the vaults are used for the reception of valuables or trunks. The officer followed us. We viewed the massive stone-work. It appeared firm enough to withstand the force of an avalanche.

"Where is the place where that dog was?" asked Dan.

"In there," replied the officer, pointing through an open door.

I looked in but saw nothing except the bare stone cell.

"What dog?" I inquired.

So Dan told me the story:

"Fidelity is a large Newfoundland dog, who helps guard the bank at night. You know that all this part of the city was burned in the great fire. The Sherman House was the next building to this. The bank did not have as many vaults then as now, but these down here were just the same. The fire swept on, destroying everything in its way. Of course, as none who valued his life would stay here, the building was deserted by all human beings. In that terrible hour, when the madness of the flame seemed beyond human control, it was not strange that Fidelity should have been forgotten.

"The building fell, and received the additional weight of the prostrate Sherman House. For two days the mass of burning ruins was untouched. The proprietors of the bank scarcely dared hope for the safety even of their property. When the ruins had cooled sufficiently to admit of an exam-

ination, they were gradually removed. And, strange as it may seem, not only were the valuables found in a perfect condition, but in the remotest corner of that vault, was discovered, alive and well, the dog Fidelity. When he began to feel the heat of the fire, he crept into an unoccupied vault whose door was fortunately open, and lived there without food or drink, under tons of red hot matter, for the whole time. He was not hurt in the least, with the exception of his feet being slightly scorched.

"You may believe that the officers of the bank rewarded him, as best they could. He is at home now, but if it were evening, you might see him at his usual post, wearing a silver collar, bearing the name 'Fidelity,' and the date of his remarkable escape."

This is no fancy sketch, but a veritable fact, and you may learn the proof of it any day, by stepping into the Security Bank, on Randolph street, Chicago.—*Everett Monthly*.

SOME NOTES ON PIGEONS.

PREVIOUS to my settlement in good Old England, I had the pleasure of visiting a portion of Asia Minor, European Turkey, Spain, Italy, Austria, Egypt, Belgium, France, and the United States. In every town one of my first inquiries was, "Are there any pigeon dealers here?" And whether there were or not, I made out what sort of interesting specimens there were, and now from my observations give my conclusions.

In every one of the named countries existed once, and in most yet exist, the common sorts of half-bred pigeons, of several colors. In the warmest countries, as in the case of the wild birds also, the pigeons are most improved; for example, there are in Africa specimens of all sorts, and of all the distinct varieties exhibited in England. I observed, in general, that wherever cultivation or importation introduced the moderate and short-beaked varieties, the long-beaked sorts have disappeared gradually, and I believe I am correct in saying that the same is the case in this country. So far as I am informed, once the principal breed was the worthy Carrier, in its several degrees, and the most beautiful Almond Tumbler, and nearly every fancier kept some form of the Carrier race. The introduction of the several short-beaked varieties has limited the Carrier fancy considerably, which I am very sorry to see, as I consider the English Carrier ought always to be preserved, as a contrast to the modern introduction. The principal reason of this apparent transformation I believe to be public opinion, and this is also the conclusion from my inquiries in other countries. I say

public opinion, because the general public, including modern fanciers, at sight appreciate a compact, short-beaked pigeon, rather than a long-beaked one, and any one can be convinced of this by a little attention to the remarks of the non-amateur visitors to the large pigeon shows.

The only long-beaked varieties some of the general public appreciate, are the Pouters, the Fantails, the double-capped Trumpeters, &c., possessing some remarkable and pleasing attraction; and is not the Carrier most remarkable? I say decidedly it is; but we cannot prevent the general public, and especially the ladies, from saying, "Oh! what unsightly, deformed beaks and sore eyes these birds have. Are they well, poor creatures?" Although there is something remarkable and pleasant in the Pouter, Fantail, Trumpeter, &c., they do not approach the short-beaked varieties in public estimation even in England, where the latter are of comparatively modern introduction; but in countries where there are plenty, and such specimens as England has not seen yet, the long-beaked varieties have disappeared, or if any, are in the loft of some old lady or gentleman, like my uncle, who kept Runts, and large Trumpeters, whose progeny he had cooked by passing through them a long iron rod. They had to be turned by this rod over a charcoal fire, saturating them constantly with butter, and powdering them with ground biscuit till ready for the table, and I assure you they were infinitely superior to any which had been made into a pie.

The Carriers, Pouters, Fantails, Trumpeters, Runts, &c., are, of course, well known, and of great perfection in this country, so they need no comment from me. I pass, therefore, to the moderate-sized and short-beaked varieties. There are in this country Archangels, Nuns, Magpies, Swallows, Jacobins, &c., perfection, also of the short-beaked kinds there are perfect specimens of Almonds, of course, Owls and Barbs, but unfortunately not of Turbits, I must say that I have not yet seen a well-formed and good-colored Turbit, such as I met with on the continent, where the black is as good as a good black Barb's, the red a deep warm red, and the yellow a fine deep orange yellow, all shining naturally, as if they were varnished, instead of the generally faded dead-looking colors I see on their feathers in England. To my surprise, instead of persevering to improve this most important property, breeders have given their attention to breeding clear-thighed birds, which should be quite a secondary consideration. The eye, also, of the Turbits in this country is quite insignificant; the good continental Turbits have the lash around the eye of a most remarkable buff color, contrasting most beautifully with the black eye, and increasing its apparent size.

In looking at the most interesting "new variety" class in our large shows, I always think of the answer I received from a great German new-variety breeder for the English market. I asked what is the origin of the Ice Pigeon, the Fairy, the Satin Swallow, and the like? The answer—"I mingle together in my loft a dozen of each of the following breeds: Hyacinths, Swallows, and Spots, of different colors, and Archangels; cocks of the two breeds, and hens of the other two, so that I may be sure of having crosses, and I obtain more new varieties than I can find names for!" And who can deny that nearly all the different new varieties have one and the same character? Certainly there are some with beautiful plumage, such as the Satin Swallow, but the variety from which it has taken half of its name, the Satinette is admitted to be the new variety which has revolutionized the fancy. The Satinettes have done what no other variety ever

did; in fact, they have tired the judges awarding them prizes, to such an extent that one judge said he must give the turn to others for encouragement. I never yet heard any fancier or observer say that he had seen anything prettier in the pigeon tribe, and I never expected meeting with anything approaching them anywhere till I saw this breed, which is a production of Africa, and my opinion most decidedly has been verified in England. The Satinettes possess as great perfection of plumage as any of the known new varieties, if not a superiority in that respect, with as exquisite and compact a form of head as the owl, including the frill. They are grouse-muffed, and the most remarkable of their properties are the tail feathers, which are of similar color to those of the blue Owls, only darker, and at the extremity of each feather there is a white spot as large as a shilling, which is the admiration and puzzle of every fancier, as they are the only known variety possessing this beautiful peculiarity.—*Journal of Horticulture*.

PEKIN (CHINA) DUCKS.

Mr. James E. Palmer, of Stonington, whilst on a visit to China, in 1873, procured a large number of China Ducks, all of which, except one drake and three ducks, died on the passage. Those he succeeded in getting to his farm alive, but dwarfed by the long voyage. Before he suspected them of laying, he found a lot of their eggs in a small branch running through the pasture, where they were confined. They laid constantly until the last of July, something over one hundred eggs each. Fifty birds in all were raised. The eggs hatch in twenty-five days, and the young birds are about one-third larger than the Rouens when they first come out of the shell, and grow more rapidly through the season.

Mr. Palmer exhibited some of these ducks at the late Exhibition of the Connecticut State Poultry Society, and the largest pair, only five months old, weighed fifteen pounds, without any fattening or special preparation. They are clear white, with a yellowish tinge to the under part of the feathers, which are very thick and downy. The wing primaries and all of the flight feathers are remarkably short, showing that they have long been domesticated, and are not disposed to fly much. They are very hardy, not minding snow or rain; are easily kept in small inclosures; and only are given a little clean water and regular feeding to raise them successfully. When they have a good run, they are excellent foragers, and will take care of themselves as readily as any other breed of ducks. They have large yellow bills and reddish eyes. Their long, graceful necks, their white plumage, and remarkable size, make them pleasing objects upon the water or about the farm-yard and lawn, and have excited a great deal of interest among all poultry fanciers who have seen them.

PET SPARROWS.

There is an indescribable charm in the law of kindness. Few living things resist its power. Force is grinding, stirring up rebellious thoughts. Gentle treatment overcomes, by magic as it were, and holds the subject a willing captive. Here is a little story from *Land and Water*, showing the effect of a fair-browed girl's love for the sparrow. A correspondent writes:

"In the Summer of 1870 my little sister got two young sparrows quite small from a nest, which she succeeded in

rearing; one of them turned out to be a cock, the other a hen—the latter, which I am now going to give you an account of. She kept them in a cage, amongst other lots of birds, in the school-room, where they were frequently allowed to fly about. In April, 1871, the cock disappeared during her absence from home. After that my sister did not care about keeping the hen, so she let it out purposely into the garden; but so accustomed had it got to the room and the society of the other birds, that it had no intention of finally taking its departure, as it continually used to come into the room whenever the window was opened. Last summer this sparrow paired to a wild cock, and built a nest in the ivy about twenty yards from the house, within reach of the ground, with material taken out of the room. During the time it was sitting, it would fly off its nest on being called, and take a caterpillar from her hand. At length it hatched its young, when it came backwards and forwards to the room for food, but my sister, wishing to give it some caterpillars, went to look for them amongst the flowers, and the sparrow used to follow her, and when she found one it would fly to her to take it out of her hand, and continued to do so wherever she was. After the young had got a little older, my sister used to take food to the nest, and when she held some close to it, the sparrow would take it out of her hand when sitting on the nest. The young sparrows soon left the nest and sat about the trees, my sister feeding the mother with her young sitting close to her; but the young soon went away and left the old sparrow, which still remains in our garden, and comes to be fed every day, and stays in the room all night very often, which it is doing to-night. The cock which disappeared was tamer than the hen, and it used to nestle about my sister's hair."

Items Interesting and Amusing.

 A PROFESSOR in Montreal recently introduced two tame skunks, to illustrate a lecture on the diffusion of odors.

 J. F. FERRIS, Stamford, Conn., has sold his entire stock of White Leghorns to C. H. Crosby, Danbury, Conn., for Rollo Nichols, Esq., of the same place.

 THERE was a room with eight corners. In each corner sat a cat; before each cat sat seven other cats; and on each cat's tail sat a cat. How many cats in all? *Answer*—Eight cats.

 FROG HUNTING for the Boston market is said to be a profitable employment in Newburyport. The frogs are kept in tubs and fattened with meal, and afterwards shipped to order.

 STATISTICS show that those who love pets rarely become criminals. Out of two thousand convicts, of whom inquiry was made, only twelve admitted that they left pets at home. This offers a valuable suggestion to parents. Children should be encouraged in a spirit of tenderness and a love of the beautiful.

 WOMAN'S LOGIC.—Ladies' logic is not always of the clearest. A married lady with a family, who lived in a villa, was asked why she was at the expense of keeping a cow, seeing that it would be surely cheaper to buy milk for the household. "Well," said she, in reply, "we keep the cow because we have a field quite at hand, which answers very nicely." "But," was the rejoinder, "why do you rent the field?" The answer was: "Because, you know, we have got the cow."

 RARE ANIMALS.—The Paris Jardin d'Acclimation has just received a large consignment of rare animals from the Coromandel coast, Polynesia, and South America. Among them are four young Patagonian Hares, which grow to the size of a fawn; some curious Ducks, from the Daillia Spinicandi (never before brought to Europe) to the Melopiona paposaca of Micronesia; a Swan, which looks like a floating log, thence called *Dendrocyenal arcuatu*; some Tufted Partridges; a *Cryptonyx Cristalus*, whose eyes are half covered with a red eyelid; Quails from Coromandel; the *Cathurnix Coromandelica*, &c.—*American Sportsman*.

 WE OVERHEARD a dialogue the other day between a couple of elderly ladies, both parties seeming to take a lively interest in the poultry business, discussing the merits of their favorite breeds. The first lady said she once had a stock of hens that used to lay two eggs per day the year round—she had forgot "the name on 'um." The second lady replied that when she was first married her mother gave her a hen that done that the first year, and she and her man used to brag on her, and it made the old hen mighty proud. So, one time the old hen thought she would see how well she could do; so on Monday she only laid one egg, and the next day two, and doubled every day until Saturday, when she laid a goose egg, and busted. The other lady heaved a sigh and said, "I must go."—*Exchange*.

 ULCERATED FEET OF BIRDS.—In your *Journal* of November 3d (page 362) I observe a question about a Bullfinch's feet being swollen, and Mr. Blakston says it arises from the cage, &c., not being kept clean. Now, this cannot be, as I knew several kept in a room, afflicted with bad feet. I have observed that Bullfinches seem more subject to this complaint than other birds, but I have known Canaries affected with it. It comes on with a sort of swelling, and goes on, if not stopped, till the foot suppurates, and off drop the claws, and sometimes the foot. I found out a cure for it in one-fourth of the solution of chloride of soda, and three parts of boiled rain-water with just the chill off, put into a little galley-pot, and the bird's feet put in twice or thrice a day. The same water will do for a day or so, but it must be kept corked up, as this solution is a solution of soda impregnated with chlorine gas, and not as many of the chemists will tell you, common salt. I have known this cure birds after one or two of the claws have dropped off, and it may be of use to many of your readers.—*A. Y., in Journal of Horticulture*.

 A BEE RAISER in New England is said to have patented an invention for the protection of bees from the attacks of the honey-moth, which enters the hives at night and rifles the stores. The idea arose out of his familiarity with the daily routine, not of bees only, but of hens. Hens, he observed, retire to rest early; bees seek repose earlier still; no sooner are they sunk in slumber than the moth steals into their abode and devours the produce of their toil. He has now built a stand of hives with a hen house above it. The bees first betake themselves to their dwelling and settle themselves for the night. The hens then come home to roost on their perch, and, as they take their place upon it, their weight sets some simple mechanism to work, which at once shuts down the doors of all the hives. When the day dawns, however, the hens leave their roost, and the removal of their weight from the perch raises the hive doors and gives egress to the bees in time for their morning's work.

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

SHERMAN & Co., PRINTERS, PHILADELPHIA.

WE have received from the publisher, Wm. P. Atkinson, Erie, Pa., an elegantly printed descriptive catalogue, handsomely illustrated with eighteen cuts, representing the best breeds. Great care and pains have evidently been taken in presenting to the public this really elegant and useful work on poultry. The descriptions are taken from the new American standard, as revised at the late Buffalo convention, and may be relied upon as being correct in every particular. The size of the page is a large octavo, and is printed on toned paper. The mechanical execution is excellent, the illustrations and letter-press being very clear, and an illuminated cover adds considerably to its appearance ; but the subject matter is really of the most importance, containing—besides the descriptions and illustrations alluded to—valuable hints relative to the care of poultry, together with a list of many of the diseases of fowl and their remedies. It is a work which we can cordially recommend to all breeders of poultry. Sent postpaid on receipt of fifteen cents. See advertisement.

FOWLS FOR FARMERS.

FARMERS have their fancies like the rest of us, but they have an eye at the same time to the profits which an enterprise will yield them. There are, probably, few ardent fanciers, who breed fowls for pleasure alone, that would care to show up the profit and loss account. Fanciers in general make pleasure and a love for the beautiful the first elements in the breeding of pets, but with farmers this is not the case. The first question is, *Will it pay?* and the second, *In what respect is your fancy stock any better than our common dunghill fowls?*

To answer intelligently the question, What stock of fowls

is best for the farmer? we have first to take note of the fact that the farmer's treatment of stock and the fancier's treatment are two vastly different things. Your fancier looks out for beauty, and takes but little account of expense of feed ; but the farmer has the same problem to solve here that he has in the feeding of sheep or cattle: How much marketable meat, or butter, or eggs, will every bushel of corn produce? If less than the value of the corn, then he argues it is useless and unwise to keep stock. But if, on the other hand, the beef, and butter, and eggs will yield more revenue than the corn, besides paying for the extra labor and attention to stock, then keeping and feeding stock for market purposes is the best.

That fowls do pay, we believe no man that ever tried the experiment doubts. On an average every hen on the farm, with ordinary attention, will yield an annual profit of one dollar at least. This is true of almost any good ordinary breed of fowls ; with better breeds, and better attention, the profit will be greater, of course.

Farmers's fowls in general receive but little care and attention except during the winter, and even then only in the matter of feed. It would be safe to say that not more than one farmer in ten ever seems to think of feeding his fowls in summer ; they are expected to find their own living. This, of course, is not true of those living near our large cities, where the matter of poultry breeding forms one of the industries of the farmer, but it is true of the rural districts. Not only is this true, but it is true, too, that the fowls have no permanent roosting-place—sometimes in the wagon-shed, sometimes over the pig-sty, but oftener on the trees and fences.

Our Asiatics are valuable, but with care like this where are the Asiatics that would thrive? I am a warm admirer of Brahmas and Cochins, but with the kind of care here indicated—and it is the care which most farmers give—I would not advise any farmer to try these. Light Brahmas—among the most valuable—might get through, but it would be a battle for life and existence. The average farmer wants a fowl that will in a great degree support itself. There are many, of course, that will do this, and among the best are the Hamburgs and Leghorns. Of the former I cannot speak from experience, but I know, from the experience of others, that they are excellent. I find the Leghorns extra good ; and among the best of them for the farmer is the Brown Leghorn, particularly where foxes are numerous. White Leghorns, in foxy districts, are too conspicuous. Only one objection can be urged on behalf of the farmer against the Leghorns, and that is want of size ; but, as egg producers, they are hard to beat. Think of taking to market from twelve to eighteen dozen of eggs every year from each hen on your farm—say an average of fifteen dozen, at thirty cents a dozen—and tell us poultry does not pay. Your wife knows better than that.

One more variety, which we cannot now refrain from naming as being an excellent farmer's fowl, is the Plymouth Rock. The chicks are easily reared. The fowls are good self-supporters and good in size, ranging from fourteen to eighteen pounds to the pair ; sometimes going beyond this. They are active, have a nice yellow skin, lay good-sized eggs and plenty of them, and, in fact, have more good points and fewer objections, from the farmer's point of view, than any other breed we know of. But, more on this subject at another time.

A. N. RAUB.

LOCK HAVEN, PA.

Correspondence.

(For Fanciers' Journal.)

EDITOR FANCIERS' JOURNAL.

DEAR SIR: I read with interest Mr. I. K. Felch's article on the Light Brahma Standard, in No. 2 of the *Journal*, but I beg leave to differ with him on one or two points at least. He says: "If the Standard is revised or altered at all, I suggest that in the department I refer to especially, size should read weight, and that five points be taken off and added to legs and feathering thereof, excepting the feathering of the middle toe, to which I most emphatically object."

Now, Mr. Editor, as a Light Brahma fancier, I most emphatically object to the substitution of the word weight for size, simply for this reason: the exhibitor whose fowls are gorged and fatted so as to attain the greatest weight, must, of necessity, receive the highest award. For example: A and B are two rival breeders, their fowls being nearly equal. A, being desirous of preserving the vigor and stamina of his stock, pursues a judicious course of feeding. B, on the other hand, does not care for his fowls, but is bound to have the premium, cost what it will, stuffs and gorges his birds, so as to make them weigh more than A's, to their utter ruin, and bears off the palm.

With regard to leg-feathering, I say, let the Light Brahmas be heavily feathered on the outside and middle toes; and I insist they can be so bred without vulture-locks, to which I object as strongly as Mr. Felch does. Profuse leg and toe-feathering, I think, is one of the chief beauties of the Light Brahma; and I see no reason why they should not have it, as well as the Dark Brahmas, Buff Cochins, or any of their Asiatic brethren. If five points extra are given to legs and feathering thereof, give it to the bird with feathers on its middle toes, be it hen or cock.

In his description of the body, Mr. Felch says: "Body round, carrying the breast well forward." Now, as far as carrying the breast is concerned, I agree with him; but about the body being round, I do not. For example: on page 69, chapter iii, of *The Brahma Fowl*, Wright says: "The breast-bone or keel should be deep and well down between the thighs." This would give the bird a broad and deep appearance. I think it should read, "Body wide and deep." This, I think, is the true shape of a Brahma, which every true fancier of Light Brahmas will insist on maintaining.

Hoping that Mr. Felch will not be offended at me for thus criticizing his article, I am

Your obedient servant,

W. E. FLOWER.

SHOEMAKERTOWN, December 30, 1873.

(For Fanciers' Journal.)

MR. JOS. M. WADE:

I have to thank you for the two first numbers of your excellent *Journal*, and take pleasure in contributing my mite towards its support.

Dr. Morgan's articles are of the right strain, and well calculated to encourage the amateur fancier; and the photographs of Mr. Chandler will doubtless prove as attractive to the columns of the *Journal* as have the illustrations of Nast to *Harper's Weekly*.

I am pleased to see such a variety of articles from different pens. This is as it should be. Fanciers must contribute brains, as well as money, in order to make the *Journal* a success; and an exchange of experiences and ideas are highly conducive to the healthy action of the former.

I have been thinking of Allen Carter's article upon Rumpless Fowls, and hope they will not be noticed in the American Standard. A few weeks since I had a pair of rumpless Light Brahmas, and consequently a chance to propagate a new variety, but sensibly concluded to do no such thing; so I killed the cock, and, upon examination, found the os coccygens entirely wanting, and in its place had grown a fibrous tumor the size of a chestnut, which, I presume, in this case, had something to do with the non-development of the terminal bones of the vertebral column. Now, either some such pathological occurrence has presented in the progenitors of all rumpless fowl, or it has resulted from the same cause as hare-lip, cleft-palate, or bifid spine in human beings, namely, an insufficiency of vital power in procreation, or a lack of vital power in the embryo or mother to develop it into a perfect being. Why, then, should we seek to fix this worthless characteristic upon any variety? for it will be but a sub-variety at best. Certainly not for its beauty, nor utility. My opinion is that we had better cultivate the valuable traits we have in so many of our present breeds, and of which we have variety enough, even for a person of vitiated taste.

Yours respectfully,

E. W. GOODWIN, M.D.

MORO, MADISON CO., ILL., February 5, 1874.

(For Fanciers' Journal.)

JOSEPH M. WADE, ESQ.

DEAR SIR: Can you, through the *Journal*, give a novice some information? My hens have lately shown signs of distress in a peculiar way—new at least to me. I first noticed a favorite Leghorn Hen on the perch in the morning, staggering along, occasionally kicking backward, precisely as if there was an invisible string holding the foot. After taking her off the perch, I found her ready to eat and drink, but could not walk three steps without sitting down; she, however, laid her usual egg during the day, and now seems all right again. Since, several of my pullets have been affected the same way. None of the cocks have suffered. What can it be? H.

(For Fanciers' Journal.)

EAR-LOBES OF WHITE LEGHORNS.

MR. EDITOR:

I have not heard whether any change was made at the Buffalo Convention to revise the "Standard of Excellence" in respect to White Leghorn fowls, and I do not know that any special change was necessary, except that it should be decided, one way or the other, whether a *white* ear-lobe is to be the standard, or a *cream* or *straw*-color. I breed both kinds, and find invariably that those with the cream-colored lobes are the hardest. I think it is noticeable in our exhibitions that those with *pure white* lobes are most liable to disease.

Mr. I. K. Felch, well known to the poultry fraternity, and who bred White Leghorns for fifteen years, in an article to the *Poultry World*, Vol. II, No. 10, says: "But when we go back and claim that the pure white ear-lobe is hereditary, I do know, and here affirm, that the ear-lobes of the

earlier birds were of a *creamy* white; so much so as to be almost, if not quite, straw color."

Again, in No. 11, same volume of *World*, J. B. Smith, a noted Leghorn breeder, says: "I believe the standard on the ear-lobe should be changed, and instead of reading 'pure *opaque* white,' it should read 'pure white or straw-color;' for some of the best specimens I have ever seen had straw-colored ear-lobes. They were common, years ago."

But I differ with Mr. Smith. I think the *standard* should be either the one thing or the other. Instead of "pure *opaque* white," I would substitute "pale straw-color."

The editor of the *World* says, in same number referred to: "White ear-lobes upon White Leghorns are not as beautiful or as novel as cream-colored ones, and they are at war with the yellow skin and legs. It was a mistake that cream or straw-color was not adopted as standard in the first place."

If the *standard*, as now revised, allows both white and straw-colored lobes, I hope it will be considered a disqualification where the ear-lobes do not match in the pen.

In the late Pennsylvania Show, the cock in the first premium coop of White Leghorns had straw-colored lobes, and the hen in the same had pure white lobes.

I would like to hear the opinion of other Leghorn breeders on this subject.

A. R. TATNALL.

WILMINGTON, DEL.

AMONG the very rarest novelties exhibited in the Boulevard Fair, is the "elephant rat," alleged to be alive. The science of medicine has of late established the possibility of transplanting flesh from one part of the body to replace it in another; even bone has taken root. An admirer of nature had the bright idea suggested commercially by the numerous phenomena at present exhibited in the city and reaping a golden harvest, to engraft a portion of a rat's tail on a rat's nose, the thick end uppermost. Darwin never dreamed of such an intermediary race. The exhibitor succeeded in twenty grafts, the process being effected in the course of a month. The fact is asserted as true, and though I specially visited the part of the Boulevard where the darlings were to be seen, they were invisible, but persons affirmed their existence was true. In addition, there are exhibited, not only gambling birds that will find a required card in a pack, but "table turners" of an unexpected kind, consisting of birds which will upset tables and chairs in a tiny drawing-room.

THE ROBIN.—A Robin came in the severity of the winter to the window of a pious countryman, as if he would like to come in. The countryman opened his window and kindly took the confiding little creature into his dwelling, and it picked up the crumbs and scraps which fell from his table. The children of the countryman were very much attached to the bird, but when spring reappeared in the country, and the leaves put forth, the countryman opened his window, and the little guest flew into the neighboring woods and built its nest and sung its cheerful song.

Behold, when winter returned, the robin came again into the countryman's house, bringing with him his mate. The countryman and his children were very glad when they saw how trustingly the bright eyes of both the little creatures looked about, and the children said: "The bird slook at us as if they would like to say something!"

Their father answered: "If they could speak they would say, 'friendly confidence awakens confidence, and love begets a return of love!'"

YOUNG FISH-HAWKS.

THE young Fish-Hawks are the funniest things you ever saw, awkward and mis-shaped and yet with such a wise, dignified expression! I watched for several hours a couple learning to fly. They sat balanced uneasily on the edge of the nest, solemn and grave as judges, and looked as if they had come out of the shell knowing everything. The old birds were coaxing, and going through various exercises, which, I suppose, were the first principles of flying, and the young ones tilted about and rolled over, and finally got fastened between the sharp branches of the tree. The mother and father fussed and scolded, "Bill-ee, Bill-ee, Stu-pid-i-ty." The young are very slow in learning to fly; and I have heard that they often linger in the nest long after they are well able to help themselves, to be fed and waited upon, till driven away by the parents, who beat them out with their wings and pick them with their sharp beaks. I don't like to think this, but it may be so, for one day we found a young bird drooping on the fence. He allowed us to come very close to him, and we discovered that his wing was broken. It was not shot, so he must have fallen in his effort to fly. No birds were near him; he had evidently been deserted. He looked forlorn and pitiful, so we took him home and put him in the wagon-house. The children were very attentive to him; they cut up fish for him—pounds of it—and tried to amuse him as if he were a lamed child. But it was of no use; he drooped still more and then died, and was buried with martial noise and pomp. He would not have been a successful pet, for these birds have a lonely, isolated nature. They seem to have bred in them the wild, untamable spirit of the wind and wave, and if deprived of their free, soaring flight, and their sportings in air and water, they will languish and die.—*St. Nicholas*.

ANECDOTE OF LANDSEER.

It is now some twenty years ago that a large party were assembled at one of the ducal ancestral homes of England, and among the guests expected was Sir Edwin. During the day the question turned upon which was the handsomest of two dogs—one, a King Charles spaniel, called Dash, belonging to the lady of the mansion, and a terrier, the property of a gallant officer in the navy, now an admiral. After describing the merits of the two dogs, an Englishman's argument—a wager—was resorted to: the Duchess, if the winner, to receive a certain number of Houbigant's best gloves from Paris; the Captain to receive a beautiful hunt-waistcoat of buff silk, ornamented with gold frogs, should his terrier (Tyke) carry off the prize. An understanding was then come to that Landseer should be the judge, but that not a hint or remark was to be given or made to him. For an hour before dinner, and during the entire evening, Dash was moving about the room or stretching himself upon the rug before a blazing fire. Next morning, a visit to the stable was made by all the guests, headed by the host and hostess. While admiring one of the Duke's hunters, "Tyke" made his appearance. "What a beauty!" said Sir Edwin. The Captain gave a look at the hostess, who immediately replied, "Fairly won;" and within a week he appeared at table in the hunt-waistcoat. During the visit a sketch was made of Tyke, who afterward appeared as "Impudence" in that splendid work of art, "Dignity and Impudence." Fifteen years elapsed, when one day the Captain

found himself in a railway carriage, bound for Chatham, to join his ship, when who should enter the compartment but Landseer. For some time he looked at the gallant sailor, and appeared anxious and perplexed; at last, as if in despair in not remembering the name of his companion, he blurted out, "Tyke." A recognition followed, and a talk about old times whiled away the time until they reached Chatham, where they parted. Poor Tyke met with a sad end: he was bitten by a mad dog and destroyed.—*Land and Water.*

CAT vs. RABBIT.

A LITTLE old man in blouse and felt hat, says a Paris letter writer, was pointed out to me by the policeman as one who, in addition to rag picking, deals in questionable rabbits. He is known as the Pere Jacques, and is regarded as a person of some importance in the rag fraternity. I approach Pere Jacques and engage him in conversation. He has become expansive over his wine, and makes indiscreet revelations touching the rabbit business. Twenty years ago he skinned and dressed his rabbits, and people bought them without asking any questions. That was the *bon temps*, and if it had continued he would be to-day a man of independent fortune. But the journals and inquisitive people got to talking so much about cats in connection with rabbits that a long season of dullness followed as a consequence. The newspapers went so far as to figure up how many rabbits were brought into Paris each year, and how many were consumed, and they made it out that twice as many were consumed as were brought in. He felt for a time as if the business was ruined, for thereafter the rabbit purchasers demanded the head of the rabbit as a guarantee of the genuineness of the animal. But he was equal to the emergency. He gave an extension to his commerce by making an arrangement with all the cooks on his rag beat to buy their rabbit skins on condition that the heads should be delivered with them. Thereafter he was enabled to furnish to skeptical buyers the rabbit head with the dressed cat, and everybody was satisfied. He sold the animals to the small out-of-the-way restaurants, as a rule, where they were made into *gibeolottes*. The cat entire yielded him one franc, and they to whom he sold the flesh usually got about two and a half francs out of the animal when turned into *gibeolottes*. The business was fair, but there was more competition—especially since the Commune, under which some people had learned to eat the cat with pleasure, knowing him to be cat.

THE BLACK MARTIN.—The writer in *Our Dumb Animals* says:—"We often wondered, when reading the history of birds, why so little is said about the black martin, the most beautiful, and most interesting of the swallow family. We would like to ask for information in relation to providing houses for them—how they should be built, and how many rooms in one house. If others were like us in their love of birds, there would be few birds killed, and much more attention would be given to the building of houses, and in many other ways providing comfortable places where they can build their nests and rear their young. Two years ago we erected a martin-house, with five rooms, on a cedar pole twenty-five feet high, in the yard, near the house, for the accommodation of any birds that might choose to occupy it. Bluebirds were the first to take possession, and were not disturbed in their new home that year. Last year the blue-

birds came again, but had been there but a few days when four pairs of black martins put in an appearance, and remained several days. They examined every martin-house in the village, but finally made war on our poor bluebirds, drove them off, and took possession, remaining till about the last of August, and taking with them quite a large family. Last spring one pair of common swallows occupied one room in the house, and in a few days six pairs of black martins arrived, and wished to take possession of their home of last year. But the swallows were not to be driven off, and they held possession of the tenement they had taken, leaving but four tenements for the martins; consequently but four pairs remained. In due time our house was filled with martins; and they attracted the attention of the whole community by their music, which could be heard for half a mile, from morning until night. Other parties in the village erected large, elegant martin-houses; but no birds came. Next season, probably, the whole flock will be back; and we want to provide the best accommodations for them, that they may all stay with us; so we write for the above information. We have many different kinds of birds about our premises, and do not allow any one to frighten them; and they are always very tame. They are so musical that we want to do all we can to encourage them to stay with us. Our home, without the company and music of birds in summer, would be a lonely, unpleasant home, indeed."

 AN eccentric cow in St. Paul, having a wish for something better than the cold, bare barn, cautiously stole up the front stoop and stairs of a dwelling-house and surprised its mistress by poking a pair of horns through the second floor front door. The lady with the characteristic presence of mind of her sex, attempted to drive the now belligerent foe out with the broomstick. Failing in this, she called in the "tyrant" man, who disposed of the cow, and a great part of the furniture, stair-carpet and matting, not to mention suffering a few broken fingers and a scraped nose. This excursion of "Bessy" to the boudoir of its mistress cost the family a little less than "Bessy" was worth. But the children think more of her now than ever.

THE ESSEX COUNTY (MASS.) POULTRY ASSOCIATION

Has been organized by the choice of the following officers:

President—George B. Loring, Salem.

Vice-Presidents—Hon. William Sutton, Peabody; Francis H. Appleton, West Peabody; George W. Boynton, Georgetown; Francis Dane, Hamilton; George R. Harris, Salem.

Corresponding Secretary—N. B. Perkins, Jr., Salem.

Recording Secretary—C. A. Beckford, Salem.

Treasurer—H. B. Griffin, Salem.

Executive Committee—Aaron Low, Essex; Mark Pitman, North Beverly; Ira J. Patch, Lynn; John Swinerton, Danvers; John C. Ropes, Salem; William B. Atkinson, Newburyport; Bennett Griffin, Gloucester; H. G. Herrick, Lawrence; Winsor M. Ward, Peabody; Solomon Cummings, Rowley; A. L. Dorr, Haverhill; T. O. Wardwell, North Andover.

The Association proposes to hold an Exhibition at an early day, at some convenient point in the county.

NEW YORK, February 15, 1874.

MR. WADE, Editor of "Fancier's Journal."

DEAR SIR: Please to say in your paper that the forthcoming Exhibition of the "*National Columbarian Society*" will open at Republican Hall, corner of Broadway and Twenty-Third Street, New York, on the 21st day of February, and close on the 29th of the same month.

A. B. ESTES,
Secretary.

Excelsior Poultry Yard in the Washington Park.

PREMIUM.—I offer to the person who first procures 120 new subscriptions to the "POULTRY WORLD," a **DARK BRAHMA HEN**, valued at \$40, and a **DARK BRAHMA PULLET**, valued at \$25. The names of subscribers to be forwarded to the publishers of the magazine as fast as procured; each name or list of names to be accompanied by the statement: "These names are for the Dark Brahma Premium."

The winner of the birds will receive them with the privilege of returning them to me and receiving \$65 in cash, instead, if, in his judgment, they are not worth that amount.

Competitors are informed that no one has had an opportunity to begin a list of names for this prize, until it appeared in a public advertisement, so that all may have a fair start.

W. H. CHURCHMAN, Wilmington, Del.

EGGS. **EGGS** may be obtained from the following varieties, for hatching: Dark Brahmas, from imported stock; Light Brahmas, from William's and Felch stock; Buff Cochins, from choice fowls, and pure bred White Leghorns. E. G. STETSON,

Farmer Village, Seneca County, N. Y.

FINE LIGHT BRAHMAS.—Two Cockerels, from Williams & Tee's Stock, for Sale, or will exchange one of them.

T. J. WOOLDRIDGE, "French Hay," Va.

POUTERS FOR SALE.

IMPORTED POUTERS FOR SALE.—1 pair Blue Pied, Cock 20 inches long, good legs and well booted, plain on the wings, and fine breast-mark; Hen, 18½ inches long, good legs, nicely booted, and in marking is well suited to breed with the cock. The pair bred three good young ones in England the past summer. Price, the pair, \$120. Also, two trios of good AYLESBURY DUCKS at \$12 and \$15 per trio.

Address

POUTER, 39 N. Ninth St., Philadelphia.

POUTERS FOR SALE.—1 pair of Black Pied Pouters, Cock 18½ inches long, well marked on the wings, good blower, well booted, and a very showy bird. Hen 17½ inches long, quite well marked, well booted, and a good breeder. The pair have raised six fine young the past season. Price, \$30. Address

POUTER, 39 N. Ninth St., Philadelphia.

MITCHELL COLUMBARY.—Fancy Pigeons in great variety. Yellow, Black, and Blue Fantails, and Carriers, a specialty. I would call attention to my stock of IMPORTED TOYS ICE PIGEONS, FRILL BACKS, &c. There are few birds more beautiful or delicate in plumage than the two varieties named; an opportunity to procure them is rarely afforded. Send 6 cents for Circular.

F. F. POLE,

Mitchell, Ont., Canada.

FOWLS AND EGGS.—I can furnish now a few trios of Light Brahmas, Dark Brahmas, and Partridge Cochins. Eggs of above in season. And White and Buff Cochins, Houdans, Silver-Spangled Hamburgs, Silver-Spangled Polands, Gray and White Dorkings, B. B. Red Games, White Leghorns, Gold Sebright Bantams, Bronze Turkeys, Bremen Geese, Aylesbury, Cayuga, and Rouen Ducks, &c. Mode of transporting eggs is as good as the best. My Fowls and Chicks were awarded over \$500 in premiums the past FALL. Send me two 3 cent stamps for new Descriptive Catalogue of Poultry, worth dollars to a beginner. Will exchange NURSERY STOCK for standard pure bred Poultry. For information and PRICE LIST, address

JAS. M. WILLS,

Bloomington, Ills.

GRAVES' INCUBATOR can be seen in working order at 26 N. Market Street, Boston, Mass. Send for Circulars.

C. B. ELBEN, Pittsburgh, Pa.

A. P. GROVES, 34 SOUTH DELAWARE AVENUE, Philadelphia, Pa., Breeder of Buff, and Partridge Cochins, Dark Brahmas, and Houdans. Satisfaction guaranteed.

GAME FOWLS, of all varieties, carefully bred in feather, station, and weight, all of which are bred from well-tested fowls. I have selected my stock from the most noted and reliable breeders in the country, who have not only bred for the show-pen, but with a cock-pit point of view, who seek for purity of blood, bone, and muscle, which is all that constitutes a genuine Game. And, as for color of plumage, or marks for the show room, I can produce fowl equal to any in this, or foreign countries, and having supplied the leading cock-pits for a number of years with my strains of Games, there has not been one reported as showing the white feather, or in other words, to run. And as I am not engaged in any other business than breeding of Game Fowls, I make my prices low so as to effect quick sales, while others who breed for pleasure ask enormous prices, caring little as to whether they effect a sale.

For Price List, address JOHN ARCHER,
Box 43, Mahanoy City, Schuylkill County, Pa.

FOR SALE.—Two Houdan Cocks, one Houdan Hen, one trio Black Cochins. Also, the finest pair of White Crested Black Polands in the country; have taken first premium wherever exhibited. Also, one pair fine B. B. Red Game Bantams. Address

SENT SAFELY BY EXPRESS.

I claim that the above fountain is the best, for many reasons, that has ever been brought to my notice—being made of stoneware and well glazed, it will last a lifetime. It is easily filled and can be set under the roost without the water being fouled. I have sold thousands of them, and sent them to nearly every State in the Union without a single party disliking them. I HAVE A LARGE NUMBER OF CERTIFICATES IN ITS FAVOR.

TRY THEM, IF THEY ARE NOT ALL I CLAIM FOR THEM
I WILL REFUND THE MONEY.

When furnished singly, they are delivered at Express Office unpacked, but safe arrival guaranteed. When ordered by the dozen, they are packed and delivered free of charge to freight depot in Philadelphia.

FOUNTAINS PACK WELL WITH BROKEN BONE.

BROKEN BONE FOR FOWLS.

This is fresh bone, broken about the size of grains of wheat, and is in the best shape known to feed to fowls for them to receive the full benefit, as there can be no adulterations as in Flour of Bone.

FEEDING.—Keep the bone in a box where the Fowls will have access to it at all times, or spread on the ground as you would corn, none will be wasted.

PRICE AS FOLLOWS:

Twenty-five pounds, and bag.....	\$1 25
Fifty "	2 25
One Hundred "	4 25

Per Barrel of about 200 lbs., 4 cts. per lb., including drayage.

Bone and Fountains pack well together and make a saving in freight.

VOL. I.

PHILADELPHIA, FEBRUARY 26, 1874.

No. 9.

AMERICAN POULTRY ASSOCIATION.

ADJOURNED MEETING.

Boston, February 5, 1874, 7½ P.M.

"THE Association met pursuant to adjournment, the President, W. H. Churchman, of Delaware, in the chair; E. S. Ralph, Buffalo, N. Y., Secretary.

The reading of minutes of previous meeting, at Buffalo, N. Y., was dispensed with, they having been printed and circulated to members.

The following persons were proposed and duly elected as members: C. E. Marsh, *Evansville, Ind.*; D. W. Herstine, Samuel P. Courtney, Paul M. Baker, John E. Diehl, *Philadelphia, Pa.*; General C. A. Johnson, *Newburyport, Mass.*; E. C. Comey, *Quincy, Mass.*; Harry G. Blanchard, *Detroit, Mich.*; W. L. Tobey, *Valley Falls, R. I.*; W. R. Hills, *Albany, N. Y.*; A. E. Hart, S. S. VanBuren, Henry Chapin, *Hartford, Conn.*

On motion of General C. A. Johnson, the following paragraph was added to the Instructions to Judges:

"Judges must in all cases make a *pro rata* reduction for any fractional part of a pound that a specimen falls short of the largest or standard bird."

On motion of General C. A. Johnson, the Merrimac Valley Poultry Association was duly received as an affiliating society, and entitled to membership and representation under Article III, Section 2, of Constitution.

On motion of H. T. Sperry, seconded by C. A. Sweet, it was resolved that no breed of fowls be represented by likeness on the cover or title-page of the new "Standard of Excellence."

The Committee on the "Willis Investigation" made partial report, and the committee directed to continue investigations.

On motion, after much debate, it was

Resolved, That A. M. Halstead be and is hereby expelled from this Association for introducing a member under a fictitious name at its January session, in the city of Buffalo, N. Y., and that this action be published in the *Poultry World*, *Poultry Bulletin*, and *Fanciers' Journal*.

Adopted unanimously.

On motion of W. H. Lockwood, the Executive Committee adjourned to meet at its regular annual session, in January, 1875.

E. S. RALPH,
Secretary.

EXECUTIVE COMMITTEE MEETING.

Boston, Mass., February 5, 1874.

To W. H. Churchman,

President of the American Poultry Association:

We, the undersigned, members of the Executive Committee of the American Poultry Association, desire that you call a meeting of the Executive Committee, at 11 o'clock A.M. on Friday, February 6, 1874, to take action on

an important matter which we desire to bring before the meeting. (Signed)

H. T. SPERRY,	E. P. HOWLETT,	P. WILLIAMS,
C. A. SWEET,	A. D. WARREN,	E. S. RALPH,
A. J. TUCK,	H. S. BALL,	P. W. HUDSON.

In answer to the above call, the President convened the Executive Committee of the American Poultry Association promptly at 11 o'clock A.M., February 6, 1874, at Boston, Mass.

PROCEEDINGS.

W. H. Churchman in the chair; E. S. Ralph, Secretary.

On motion, Lewis Wright, of London, England, was elected an honorary member of this Association.

The following persons, being approved by the Executive Committee, were duly elected members, viz.: Hon. Virgil C. Gilman, Colonel D. W. King, Albert Beard, N. C. Lucier, John Reed, *Nashua, N. H.*; Charles L. Spaulding, *Hudson, N. H.*; George F. Parker, Henry Bisco, *Leicester, Mass.*; H. Woodward, W. J. Wheeler, O. B. Hadwin, E. Childs, Winslow S. Lincoln, Horace B. Verry, George A. Dixon, W. H. Bliss, E. H. Knowlton, *Worcester, Mass.*; W. J. Underwood, Nathaniel Foster, Jr., *Belmont, Mass.*; W. Henry Brackett, J. Newton Cady, Edward H. Harsthor, Charles E. Tuttle, Edward B. Reynolds, *Boston, Mass.*; Henry F. Felch, *Natick, Mass.*; Edmund Rodman, *New Bedford, Mass.*; Charles L. Copland, *Milton, Mass.*; John P. Buzzell, *Clinton, Mass.*; William B. Atkinson, *Newburyport, Mass.*; C. Carroll Loring, *Dedham, Mass.*; Mark Pitman, *North Beverly, Mass.*; Colonel George A. Meacham, *North Cambridge, Mass.*; Fred. S. Potter, *North Dartmouth, Mass.*; Nathaniel J. Bacheller, *Lynn, Mass.*; George F. Seavey, *Cambridgeport, Mass.*; Samuel H. Warren, *Weston, Mass.*; L. L. Greenleaf, *Evanston, Ill.*; N. B. Sherwin, *Cleveland, Ohio*; Nathaniel S. Collyer, *Pawtucket, R. I.*; E. R. Spaulding, *Cedar Creek, N. J.*; C. S. Haines, *Toms River, N. J.*; J. S. Brown, *Galveston, Texas*; Dr. L. L. Holcombe, *Terre Borne, La.*; Charles E. Laughton, *Reno, Nevada*.

On motion of H. T. Sperry, seconded by A. D. Warren, the following preamble and resolution were unanimously adopted:

Whereas, The American Poultry Association has for one of its principal objects the protection of all *honorable poultry fanciers and dealers*, and to that end will promptly expel from membership members found guilty of dishonorable acts; and

Whereas, The publication of advertisements in the Poultry Journals of the United States, whose editors and publishers are members of this Association, is likely to be interpreted as a partial indorsement of dealers so advertising, and the editors, by a careful exclusion from their columns of all advertisements and mention of dealers and others known to be guilty of dishonorable acts, can largely protect all their honest and honorable patrons, thus ad-

vancing the best interest of the fraternity at large, as well as rendering the Association very valuable services in its efforts to elevate and dignify its character and standing; therefore

Resolved, That the editors of Poultry Journals—members of this Association—be and they hereby are requested and urged to decline advertisements from persons known to be guilty of acts detrimental to the interests of the fraternity and this Association.

On motion of H. T. Sperry, it was resolved that all State and other Poultry Societies be requested to publish the full list of entries, with the awards in each class, at their Shows.

On motion, the Chair appointed C. A. Sweet, A. D. Warren, and H. T. Sperry, a committee to mature and report to the Executive Committee a premium list for the coming Show of the Association in 1875.

On motion of C. A. Sweet, the motion and appointment last passed was rescinded, and the subject matter of Premium List referred to the committee appointed at Buffalo to take into consideration the plan of holding a Show, and that P. Williams and H. T. Sperry be added to that committee. Adopted unanimously.

On motion of C. A. Sweet, the following preamble and resolution was unanimously adopted:

Whereas, This Association has already decided that the retail price of the Standard should be one dollar each;

Resolved, That when we sell Standards to the trade with a discount off, it is with the distinct understanding that the said book shall not be sold by the parties buying them at the discount off at any less than the price named by this Association, viz.: "*one dollar*." Any person who shall be detected in evading the intent of this resolution shall be refused any future lots at any less than the retail price.

Adopted.

And if any member of this Association should be detected in evading this resolution, he shall be expelled from this Association.

And, on motion, the Secretary was directed to send the above notice with every lot sent to retailers.

On motion of A. D. Warren, it was resolved, that S. J. Bestor, of Hartford, be heard in regard to the Standard.

On motion, the committee took a recess for ten minutes.

At expiration of time, no quorum being present, the meeting stands adjourned to call of Executive Committee.

E. S. RALPH,
Secretary.

JOSEPH M. WADE, Esq.,
Philadelphia.

DEAR SIR: I am instructed by a regular meeting of our Association, held February 5th, to tender the grounds of this Association, at Pimlico, Baltimore County, for the use and occupation of the National Poultry Association during their Exhibition for the Fall of 1874, and to request that you will notify us of your decision with regard to the same.

I remain, very truly, yours,

T. B. DORSEY,
Secretary.

BALTIMORE, February 6, 1874.

MR. JOS. M. WADE,
Secretary National Poultry Association, Philadelphia.

DEAR SIR: By a letter written by P. W. Hudson, of North Manchester, Conn., I see that it is proposed to hold a

National Poultry Exhibition next fall, and that Baltimore has been spoken of as the place of holding it.

At a meeting of our State Agricultural Association, last evening, I called attention to the subject, and they unanimously tendered the use of their beautiful fair grounds and buildings for the Exhibition (of which you will be duly advised by the State Agricultural Association), and promising the co-operation of the Association.

There are also fine halls here in Baltimore—one particularly well lighted by a street on both sides of the hall—which can be had, if the offer of our State Agricultural Association is not accepted.

As one of the Executive Committee of the Poultry Association of Maryland (James E. Koons, Secretary), I can offer you the services and hearty co-operation of all its officers and members, with the full use of their rooms for any business to be transacted.

This being so central a point, we hope the National Association will see the advantages of holding the Exhibition here; and there is no doubt of the full patronage of all our citizens.

Hoping for your favorable consideration,

I am yours truly,

JNO. D. OAKFORD.

BALTIMORE, February 6.

(For Fanciers' Journal.)

HOW SHALL WE EXHIBIT POULTRY.

EDITOR FANCIERS' JOURNAL:

After looking through the exhibition recently held by the New England Poultry Society at Worcester, and the one now being held by the Massachusetts Association at Boston, so soon after coming from the rooms of the exhibition of the Western New York Poultry Association, recently held at Buffalo, I am more surprised than ever that any Association could admit one class of fowls in pairs, and oblige all others to be exhibited in trios. There does not seem to me to be one argument in favor of exhibiting in trios, but many, very many, against it.

I think the time is near at hand when all premiums by all Associations will be offered on single birds, because I am convinced that is the only way to have exhibitions of birds for American fanciers to be proud of.

Offer premiums for single birds, and make the premiums and entrance fees the same on all the varieties that are worthy of being encouraged. Make the entrance fees for competition large enough to exclude all but birds that are really *exhibition birds*; then have a selling class if you please, and enter your *scrubs* there. A person going into a hall now finds it a work of time to find the really good birds, they are so mixed up with what should be *market poultry*.

I ask a man why he brings *such* a trio of chickens, and he says they are some of my *poorest*, and I brought them here to sell. All right. There are all kinds of customers I am aware, but no good salesman or judicious dealer mixes his shoddy pants, worth \$3 a pair, with his finer cloth ones, worth \$10 a pair; and no Poultry Association should mix shoddy poultry with that of the best quality.

I believe in *fewer* and *better* birds, and more *floor room* for the accommodation of exhibitors and visitors, from whom we expect to receive our cash.

I do not object to a bird that has lost a *toe-nail* by accident, or a point or two from his comb, &c.; but I do object to a

fowl that has had the "*coop itch*," or any other disease that disfigures and weakens him; and I hope all such will be disqualified by *judges*, if not by Associations.

F. J. KINNEY.

WORCESTER, MASS., February 10, 1874.

(For Fanciers' Journal.)

RHODE ISLAND POULTRY ASSOCIATION.

EDITOR FANCIERS' JOURNAL:

There seems to be a mixed understanding abroad in relation to Poultry Associations in the State of Rhode Island, that needs a public explanation.

It appears that what some people have supposed was the Rhode Island State Association, located at Providence, other people have thought was located at Woonsocket, and *vice versa*.

The facts seem to be, there are two antagonistic Associations, one at Woonsocket, that has held three exhibitions in past seasons, and holds its fourth this month, and that the last-named Association has applied for a state charter, and advertises its exhibitions as those of the Rhode Island State Association, with headquarters at Woonsocket, R. I., and holds its exhibitions at Woonsocket this month.

There is another Association called the Rhode Island Poultry and Columbarian Society, with headquarters at Providence, R. I.; J. P. Peckham, President, and W. L. Toby, Secretary.

I have an acquaintance with many members and officers of both Associations, and am very sorry there is such a feeling between the two as appears to exist; still there may no *harm* arise from it when the facts are known.

Both Associations will try hard for a state charter, and one of them will be the *State Association*, the other a local affair. I have no *sympathies* with one more than the other, but as the *Providence Association* holds its exhibition fore part of March, and that *time suits me* better than the time of the Woonsocket exhibition, I shall have to assist at Providence this season.

My motto is, the *more* poultry exhibitions the better.

F. J. KINNEY.

WORCESTER, MASS., February 10, 1874.

(For Fanciers' Journal.)

WHAT I KNOW ABOUT ROUP.

ROUP is not, as many think, caused by filthy and badly-ventilated houses. It is not necessary to clean out their quarters daily, or weekly, nor even yearly, to prevent roup. If their quarters are not kept clean and well ventilated, you may expect your fowls to be troubled with cholera and diarrhœa, or other diseases, but not roup. I have had some experience with this troublesome disease, and I think I can speak from actual knowledge. It is caused the same as a cold often is in the human family, and in the first stages is nothing more than a cold. My fowls, two years ago last November, were taken with it, and I doctored them all winter in various ways, and by the first of April they all got well; and I then thought if ever I found it again in my yards I would kill all the affected ones at once, and get rid of it without so much trouble, as it would not pay to bother with them so long again. But, as bad luck would have it, in the following year, at about the same time, I discovered it again one evening as I was looking my fowls over with a light, as is my usual custom, so as to detect any ailment that

may prevail. I think I felt rather crest-fallen at the discovery; and I stood there debating in my mind whether I had better really kill the whole lot, and get rid of the disease, or try to cure them. (They were, I thought, a fine lot of dark Brahmas.)

I began to feel very cold about my feet and limbs, and was very much surprised to find so much cold could come in at the little entrance for the fowls. It occurred to me at once that I had found the cause of the roup, and immediately closed the little door, and kept it closed every cold and windy night, and in less than a week every chick was as well as ever; and as I followed up the practice of closing the little doors every chilly night, I have never had a case of the roup since.

My fowls roosted on perches ten inches above a shelf, which is two and a half feet from the ground, and three feet from the little doors, which are in my case unavoidably in front of the roosts, thus allowing the wind to drive in and directly up into the faces of the fowls, thus causing them to take cold. I have made careful inquiry into several cases since, and invariably found that where roup had existed it was caused by either cold wind coming in at broken windows, or holes of some kind, leaks in the roof, allowing the fowls to get damp and chilly, or exposure in open coops or houses to cold winds, thus causing them to have a cold, and die with the roup.

A cure is easily effected by keeping them in a dry warm house, and feeding on warm soft feed, and giving plenty of water, not very cold, and a little of Douglass' mixture added to it.

T. F. LAMB.

NEW HAVEN, CONN.

PENNSYLVANIA POULTRY SOCIETY.

THE Annual Exhibition of this Society, held at the Assembly Buildings, Tenth and Chestnut Streets, Philadelphia, was one of the most successful ever given by the Society, considering that it was decided to give an exhibition only a few weeks previous to the opening day. The display of fowls, turkeys, geese, ducks, and pet stock, was very good.

Of Light Brahma fowls there were six entries; the first prize pair being undoubtedly the best.

Of young birds, there was a grand display. Never before were so many really good birds brought together. The first prize was given to a Cockerel, good in size, but bad in color; his hock being very cloudy and indistinct. For a Breeding Cockerel, we should have taken the bird which was given the second or even the third prize pen, in preference to first. Entry No. 25, which received no premium, was but little inferior to first entry. No. 297, the first prize Cockerel at Buffalo, was not awarded anything here, which in our opinion was a just decision; for in length of head and cruelty of expression, he was not exceeded by a Malay.

Of Dark Brahmas, the display was good; the estate of H. H. G. Sharpless and D. W. Herstine receiving the lion's share of prizes.

Young Birds.—William H. Churchman took first with a Cockerel and Pullet that were exhibited by him at Buffalo, and received no award. The Cockerel which took first at Buffalo, was here placed third, and should have been disqualified for a bad comb.

Buff Cocks.—Some excellent birds were shown by Messrs. Rooke and Chandler. In young Buffs Mr. Rooke again came first. The third premium Cockerel here was the bird that won first at Buffalo.

Partridge Cochins were out in full force, Mr. Henry taking the lead with a splendid pair. Though hard pressed by Mr. Cooper, in young birds, Mr. Herstine took first with a splendid Cockerel and beautifully pencilled Pullet.

Black Cochins.—An excellent display by Messrs. Athole and Herstine. The interest in this really good variety seems to have had a fresh awakening.

White Cochins, not a very large collection, the Messrs. Lewis, Griffiths, and Stroeman dividing the honors between them. Mr. Stroeman's pair were very fine of Gray Dorkings. There were but three entries. This variety seems to be on the wane with Philadelphia fanciers. We should have liked to have seen more Blue Dorkings brought out to compete with the splendid pair shown by Mr. John E. Diehl. In Golden-Spangled Hamburgs, only four entries, the honors going to Messrs. J. Schofield and F. Taylor. Silver-Pencilled, six entries; some competition. Silver-Spangled; some excellent birds shown by Messrs. Henry and Schofield. Black Hamburgs; the first premium cock shown by Mr. Schofield, was a perfect beauty. We doubt if his equal can be found. Black Spanish; a small class, some of which were quite good. White Leghorns; a small class of about the average quality. Brown Leghorns; very few and not good. White-Crested Black Polish, Golden-Spangled Polish, and the Polish classes as a whole, were not good, the prize birds being most worthy of notice.

Mr. John E. Diehl showed a good pair of White Frizzles. In Dominiques, Mr. Wayne distanced all competitors. Games were all good classes. The principal exhibitors were Messrs. Ashford, Lightcap, Livzey, and Pye. The Game Bantam classes were not so good as last year. Houdons; a small class; not extra fine. Jersey Blues; only one or two coops. With the exception of three Black African Bantams, were a very poor class. Bronze Turkeys, not good. White Turkeys, one good pair. Aylesbury Ducks; a small class, but good; Messrs. Schofield and Taylor taking the honors. Rouen Ducks; Mr. S. J. Sharpless showed two splendid pens, taking first and second, with Mr. Thompson third. Muscovy Ducks; two pens. Geese were a small class; one pen of Bremen and one of Hongkong.

W. A. Henry showed a fine pair of Pea Fowls. J. N. Rooke exhibited a fine pair of Golden Pheasants; also a pair of Silver Pheasants.

The show of Rabbits was not so good as last year, Messrs. Thompson and Lewis being the principal exhibitors. Through some mistake the special premium for best collection of Rabbits was awarded to the wrong person, Mr. Thompson's being undoubtedly the best.

The display of Taxidermy was very fine, Mr. Crenshaw showing numerous specimens of his skill.

The collection of Pigeons was very creditable, but not being a pigeon fancier, we refrain from making any remarks upon the merits or demerits of the individual birds.

LIGHT BRAHMAS.

Fowls—1st premium, W. H. Kern; 2d, W. H. Kern; 3d, W. H. Churchman; 4th, W. H. Kern.
Chicks—1st premium, Charles Tees; 2d, W. H. Kern; 3d, Charles Tees; 4th, W. A. Henry.
Best Pen Light Brahmas—W. H. Kern.
Largest Cock—W. H. Kern.
Largest Hen—W. H. Kern.

DARK BRAHMAS.

1st premium, Estate H. H. G. Sharpless; 2d, no award; 3d, D. W. Herstine; 4th, no award.
Best Dark Brahma hen 2 years old—estate H. H. G. Sharpless.

Chicks—1st premium, W. H. Churchman; 2d, Estate H. H. G. Sharpless; 3d, W. H. Churchman; 4th, no award.

BUFF COCHINS.

1st premium, J. N. Rooke; 2d, J. C. Chandler; 3d, B. F. Lewis.
Chicks—1st premium, J. N. Roake; 2d, J. N. Roake; 3d, A. P. Groves; 4th, J. C. Chandler.

PARTRIDGE COCHINS.

Fowls—1st premium, W. A. Henry, special; 2d, T. S. Cooper; 3d, A. P. Groves; 4th, T. S. Cooper.
Chicks—1st premium, D. W. Herstine; 2d, T. S. Cooper; 3d, D. W. Herstine; 4th, F. Worilow.

BLACK COCHINS.

Fowls—1st premium, G. C. Athole, N. Y.
Chicks—1st premium and special, D. W. Herstine; 2d, G. C. Athole; 3, D. W. Herstine; 4th, D. W. Herstine.

WHITE COCHINS.

1st premium, R. M. Griffith; 2d and special, George C. Stroeman.

GRAY DORKINGS.

1st premium, A. R. Montgomery; 2d, B. F. Lewis; 3d, A. R. Montgomery.

BLUE DORKINGS.

1st and special premium, J. E. Diehl.

 Runts—1st premium, W. A. Henry; 2d, W. A. Henry.
 Yellow Trumpeters—1st premium, R. M. Griffith; 2d, special mention, B. F. Lewis.
 Suabians—1st premium, R. M. Griffith; 2d, P. M. Baker.

Items Interesting and Amusing.

 Silas W. Studley, Catskill Station, N. Y., took first prize on Silver Sebrights at the Buffalo Show, whereas our report credits him with only third.

 By the steamer "Herder," from Hamburg, Mr. P. T. Barnum received four Antelopes, four Llamas, nine Apes, two Peacocks, three White Bears, five Ponies, seven Dogs, one Goat, and two Reindeers.

 Canvass-back ducks are shot in large numbers in Polecat Bay, nearly opposite Mobile, and sell in the markets at \$1.50 per pair. Black Ducks can be bought for 75 cents per pair.

 The Merrimack Valley Poultry Association was the first to affiliate with the American Poultry Association, being proposed and the initiation fee of ten dollars paid by General Charles A. Johnson, President of the above Association.

 A HEN THAT RESPECTS THE SABBATH.—There is now in Delaware City a common hen that laid during the past fall thirty-two eggs, laying the first egg on Saturday, omitting Sunday, commencing again early on Monday morning, and laying the six days of each week, the last egg being laid on Saturday evening at six o'clock, but always omitting Sunday.

 ACTION OF THE FRENCH GOVERNMENT IN THE RAISING OF CARRIER PIGEONS.—The French Government, acting on the recommendation of the Committee on Fortifications, has determined to keep, for the next five years, five thousand pairs of Carrier Pigeons for breeding purposes, for service in war time. Each fortress will have a military pigeon-house, and each pigeon-house will contain one thousand birds. Two general stations will be established, at each of which sixty thousand pigeons will be kept. The German fortresses at Metz and Strasbourg have been for a year past connected with other German forts by a system of Carrier Pigeons.

 IMPORTATION.—While at the Boston Show, we were informed that General Charles A. Johnson, of Newburyport, had just imported two trios of Aylesbury Ducks and one young Rouen Duck. They are from the yards of Mr. Fowler, who writes that they are the equals of any Ducks now in England. The parents of the Rouen Duck were prize birds at Birmingham, and weighed twenty-two pounds, two ounces. They arrived too late to be entered for the Boston Show.

 HOW FRIEND RAUB WON THE FIRST PREMIUM.—One of the officers of the Doylestown Society perpetrated a good joke upon himself during the early part of the fair. The night before the committee were to examine the fowls he remained in the room until after midnight, applying soap, oil, and other cosmetics to a fine display of Brown Leghorns. At that time the lots were not named, and our friend supposed that all in a certain range were his own. He took especial pains with one coop, making the birds shine again, and felt confident that they would take the first prize. And sure enough they did. The card of first premium was duly tacked on the coop, and our exhibitor was happy. Pretty soon another officer, who remembered the numbers, came along and at once discovered that the prize fowls belonged to A. N. Raub, Lock Haven, Pa. It was a sad disappointment for our Doylestown friend, who said he had groomed up that lot the best of all.—*Doylestown Paper*.

OFFICIAL LIST OF PREMIUMS

Awarded at the Third Annual Exhibition of the Massachusetts Poultry Association, held at Boston Music Hall, February 5th to 11th, 1874.

GALLINACEOUS DIVISION.

CLASS I.—ASIATIC.

Best Collection Dark Brahmas Bred by Exhibitor.—Special premium, No. 9, C. E. Tuttle, Boston; special premium No. 10, best ten trios Dark Brahma Chicks, C. E. Tuttle, Boston; special premium No. 11, best collection Dark Brahmas, C. E. Tuttle, Boston; special premium No. 12, best trio Dark Brahma Chicks, T. O. Wardwell, North Andover; special premium No. 13, best Dark Brahma Cock raised in the United States, John P. Buzzell. Dark Brahmas.—Chicks—1st prize, T. O. Wardwell, North Andover; 2d prize, C. E. Tuttle, Boston; 3d prize, C. E. Tuttle, Boston; 4th prize, T. O. Wardwell, North Andover, Mass.; 5th prize, C. E. Tuttle, Boston. Dark Brahmas.—Fowls—1st prize, C. E. Tuttle, Boston; 2d prize, John P. Buzzell, Clinton; 3d prize, C. E. Tuttle, Boston; 4th prize, C. E. Tuttle, Boston; special premium No. 4, best Light Brahma Cockerel, J. P. Buzzell, Clinton; special premium No. 5, best Light Brahma Pullet, John P. Buzzell, Clinton; special premium No. 6, for Light Brahmas showing the fullest breast, not less than twelve birds in all of either or both sexes, being of the exhibitor's own stock, S. H. Warren, Weston; special premium No. 7, best collection Light Brahma Chickens, John P. Buzzell, Clinton; special premium No. 8, best twelve Light Brahma Cockerels, S. H. Warren, Weston; special premium No. 3, best ten trios Light Brahmas, raised and exhibited by one man, John P. Buzzell, Clinton; special premium No. 1, Association Champion Cup for Brahmas, for the best trio of Light or Dark Brahma Chickens, bred by exhibitor, the champion cup, value \$50, John P. Buzzell, Clinton, subject to the following conditions: The winner shall place the cup in the hands of the Executive Committee for competition at each succeeding exhibition. In every case the name of the winner to be engraved upon the cup, with date of award and variety for which awarded. Light Brahmas.—Chicks—1st prize, J. P. Buzzell, Clinton; 2d prize, Sturtevant Bros., South Framingham; 3d prize, J. P. Buzzell, Clinton; 4th prize, C. A.

Johnson, Newburyport; 5th prize, J. P. Buzzell, Clinton. Light Brahmas.—Fowls—1st prize, Sturtevant Bros., South Framingham; 2d prize, J. P. Buzzell, Clinton; 3d prize, Sturtevant Bros., South Framingham; 4th prize, John P. Buzzell, Clinton; special premium No. 14, best six trios Buff Cochins, raised by the exhibitor, Mark Pitman, North Beverly; special premium No. 15, best trio Buff Cochins, bred by exhibitor, Mark Pitman, North Beverly; special premium No. 16, best trio Buff Cochins, bred by exhibitor, Mark Pitman; special premium No. 21, best five trios White Cochins, bred by exhibitor, C. L. Copeland; special premium No. 22, best collection White Cochins, G. A. Meacham, North Cambridge; special premium No. 23, best trio White Cochins, Fowls, M. I. Ellis, Norwood, Mass. Buff Cochins.—Chicks—1st prize, M. Pitman; 2d prize, C. L. Copeland; 3d prize, M. Pitman; 4th prize, C. E. Mecum; 5th prize, C. E. Mecum. White Cochins.—Chicks—1st prize, C. L. Copeland; 2d prize, M. I. Ellis; 3d prize, George A. Meacham; 4th prize, J. S. Ives; 6th prize, C. L. Copeland. White Cochins.—Fowls—1st prize, M. I. Ellis; 2d prize, E. Hartshorn & Sons; 3d prize, G. A. Meacham; 4th prize, M. I. Ellis. Black Cochins.—Chicks—1st prize, R. & C. A. Richards, South Weymouth; 2d prize, A. E. Swasey, Jr., Taunton; 3d prize, R. & C. A. Richards, South Weymouth; 4th prize, A. E. Swasey, Jr., Taunton; 5th prize, Starks Whiton. Black Cochins.—Fowls—1st prize, A. E. Swasey, Taunton; 2d prize, R. & C. A. Richards, South Weymouth; 3d prize, A. E. Swasey, Taunton; 4th prize, M. I. Ellis, Norwood; special premium No. 24, best collection of Black Cochins; special premium No. 18, best trio Partridge Cochins, Chicks, bred by the exhibitor, W. H. Brackett, Boston; special premium No. 17, best collection Partridge Cochins, W. H. Brackett, Boston; special premium No. 19, second best trio Partridge Cochins, Chicks, bred by exhibitor, W. H. Brackett, Boston; special premium No. 20, best trio Partridge Cochins, Fowls, W. H. Brackett, Boston. Partridge Cochins.—Fowls—1st prize, W. H. Brackett, Boston; 2d prize, M. I. Ellis, Norwood; 3d prize, W. H. Brackett, Boston; 4th prize, Charles E. Perry, Wollaston Heights. Partridge Cochins.—Chicks—1st prize, W. H. Brackett, Boston; 2d prize, T. O. Wardwell, North Andover; 3d prize, M. I. Ellis, Norwood, Mass.; 4th prize, W. H. Brackett, Boston; 5th prize, M. I. Ellis, Norwood. Best collection of Asiatics—Special premium No. 2, M. I. Ellis, Norwood.

CLASS II—DORKING.

Special premium No. 27, best trio Colored Dorkings, F. J. Dutcher, Hopedale; special premium No. 25, best collection White Dorkings, Chicks, Jacob Graves & Co., Boston. White Dorkings.—Chicks—1st prize, Jacob Graves & Co., Boston; 2d prize, Jacob Graves & Co., Boston; 3d prize, E. R. Hayward, Easton, Mass.; 4th prize, Jacob Graves & Co., Boston. White Dorkings.—Fowls—1st prize, E. R. Hayward, Easton. Colored Dorkings.—Chicks—1st prize, F. J. Dutcher, Hopedale, Mass.; 2d prize, Henry Hale, Ridgewood, N. J.; 3d prize, F. J. Dutcher, Hopedale, Mass. Colored Dorkings.—Fowls—2d prize, F. J. Dutcher, Hopedale, Mass.; 3d prize, F. J. Dutcher, Hopedale, Mass. Silver Gray Dorkings.—Chicks—2d prize, James P. Brewer, New Haven, Conn.

CLASS III—HAMBURG.

White Hamburgs.—Fowls—1st prize, A. J. Tuck, Nashua, N. H. Silver-Pencilled Hamburgs.—Chicks—1st prize, L. H. Keith, Kingston, Mass.; 2d prize, R. W. Reid, Green Point, L. I. Silver-Pencilled Hamburgs.—Fowls—1st prize, R. W. Reid, Green Point, L. I. Black Hamburgs.—Chicks—1st prize, W. E. Shedd, Waltham; 2d prize, W. E. Shedd, Waltham; 3d prize, W. E. Shedd, Waltham. Black Hamburgs.—Fowls—2d prize, William E. Shedd, Waltham. Golden-Pencilled Hamburgs.—Fowls—1st prize, A. J. Tuck, Nashua, N. H. Golden Pencilled Hamburgs.—Chicks—1st prize, A. J. Tuck, Nashua, N. H. Golden-Spangled Hamburgs.—Chicks—1st prize, E. S. Ongley, Auburn, N. Y.; 2d prize, George F. Seavey, Cambridgeport. Golden-Spangled Hamburgs.—Fowls—1st prize, E. S. Ong-

ley, Auburn, N. Y.; 2d prize, George F. Seavey, Cambridgeport. Silver-Spangled Hamburgs.—Chicks—1st prize, H. O. Underwood, Belmont; 2d prize, William R. Hills, Albany, N. Y.; 3d prize, George F. Seavey, Cambridgeport; 4th prize, H. & F. A. Bisco, Leicester. Silver-Spangled Hamburgs.—Fowls—1st prize, H. K. Osborn, Cambridgeport; 2d prize, Ongley, Warden and Talmadge, Auburn, N. Y.; 3d prize, H. O. Underwood, Belmont; 4th prize, George F. Seavey, Cambridgeport; special premium No. 34, best trio Golden-Spangled Hamburgs, E. S. Ongley, Auburn, N. Y.; special premium No. 37, best two trios Black Hamburgs, raised by exhibitor, W. E. Shedd, Waltham; special premium No. 38, best collection Black Hamburgs, W. E. Shedd, Waltham; special premium No. 28, best Silver-Spangled Hamburg Cock, H. K. Osborn, Cambridgeport; special premium No. 29, best Silver-Spangled Hamburg Cockerel, H. O. Underwood, Belmont; special premium No. 30, best trio Silver-Spangled Hamburg Chicken, H. O. Underwood, Belmont; special premium No. 31, best trio Silver-Spangled Hamburg Fowls, H. K. Osborn, Cambridgeport; special premium No. 32, best Golden-Spangled Hamburg Cock, E. S. Ongley, Auburn, N. Y.; special premium No. 33, best Golden-Spangled Hamburg Cockerel, E. S. Ongley, Auburn, N. Y.; special premium No. 40, White Leghorn Cock showing least yellow or brassy plumage, William P. Miller, Milford, Mass.; special premium No. 41, Fifth best trio White Leghorns, W. T. Bacon, Cambridgeport; special premium No. 42, best trio White Leghorn Chickens, W. & E. Jennings, Newton Lower Falls; special premium No. 43, best collection Brown Leghorns, Graves & Kimball; special premium No. 44, best three trios Dominique Leghorns, Aaron Low, Essex; special premium No. 39, best collection Black Spanish, A. W. Jones, Milford.

CLASS IV.—SPANISH.

White Leghorns.—Fowls—2d prize, Leonard F. Cutter, Boston; 3d prize, S. H. Warren, Weston, Mass.; 4th prize, A. & E. Whitman, Fitchburg. White Leghorns.—Chicks—1st prize, W. & E. Jennings, Newton Lower Falls; 2d prize, Leonard F. Cutter, Boston; 3d prize, John Eldridge, New Bedford; 4th prize, R. R. Yates, Northborough, Mass. Black Spanish.—Fowls—1st prize, A. W. Jones, Milford; 2d prize, D. B. Wallace, Lynnfield; 3d prize, William P. Miller, Milford; 4th prize, H. S. Ball, Shrewsbury. Black Spanish.—Chicks—1st prize, C. W. Chamberlain, Arlington; 2d prize, C. & F. Spring, Newton Lower Falls; 3d prize, William P. Miller, Milford; 4th prize, C. & F. Spring, Newton Lower Falls. Dominique Leghorns.—Fowls—3d prize, A. Low, Essex, Mass. Dominique Leghorns.—Chicks—2d prize, A. Low, Essex, Mass.; 3d prize, Charles Dickerman, North Easton; 4th prize, A. Low, Essex, Mass. Brown Leghorns.—Fowls—1st prize, Graves & Kimball, Boston. Brown Leghorns.—Chicks—1st prize, Albert Beard, Nashua, N. H.; 2d prize, Graves & Kimball, Boston; 2d prize, C. C. Loring, Dedham; 3d prize, W. E. Boney, South Hanover; 4th prize, Graves & Kimball, Boston.

CLASS V.—FRENCH.

Creve Cœurs.—Fowls—1st prize, Philander Williams, Taunton. Creve Cœurs.—Chicks—1st prize, J. Henry Symonds, Boston. Houdans.—Chicks—1st prize, Charles L. Mitchell, New Haven, Conn.; 2d prize, E. C. Aldrich, Hyde Park; 3d prize, E. C. Aldrich, Hyde Park; 4th prize, E. C. Aldrich, Hyde Park. Houdans.—Fowls—1st prize, C. L. Mitchell, New Haven, Conn.; 2d prize, E. C. Aldrich, Hyde Park; 3d prize, E. C. Aldrich, Hyde Park; 4th prize, E. C. Aldrich, Hyde Park. La Fleche.—Fowls—1st prize, P. Williams, Taunton, Mass.; special premium No. 46, best trio Houdan Chicks, Charles L. Mitchell, New Haven, Conn.; special premium No. 47, best collection Houdans, E. C. Aldrich, Hyde Park; special premium No. 43, best trio Houdans, Fowls, Charles L. Mitchell, New Haven.

CLASS VI.—POLISH.

Black Polish.—Fowls—1st prize, J. W. Hunt, North Bridgewater. Black Polish.—Chicks—1st prize, J. R. Maxham, Fitchburg; 2d prize, Jacob Graves & Co., Boston; 3d prize, J. W. Hunt, North Bridgewater; 4th prize, J. R. Maxham, Fitchburg. Silver-Spangled Polish.—Fowls—1st

THE PIGEON POST OF THE PARIS PRESS.

To us in America, with our regular press dispatches occupying special wires of their own, and so voluminous in amount that the main difficulty is the one of condensation, and with our special telegraphic correspondents sending news nightly from the chief cities, and finally with a system of delivery which brings these dispatches speedily to the newspaper offices, the antique and clumsy device of a postal service by carrier pigeons seems rather amusing. Yet to this form of transmission of a part of their mails and correspondence, the Paris newspapers have been forced to come, supplying thereby the deficiencies of their telegraphic service. What is more, the Paris newspapers have so perfected this aerial mail service, that its results are surprising, and lead us to reflect whether we have so much reason for smiling at it after all.

The chief postal pigeon line is established between Versailles, where the assembly sits, and the faubourg Montmarte in Paris. The *Temps*, reviewing the history of the subject, remarks that the pigeon post office proper is a recent invention. It has only been regularly organized since the beginning of this century, but the siege of Paris fully demonstrated the important part that could be played by these precious little aerial carriers. Paris, however, was not the first city to make use of them even during an investment, for as early as 1849, during the siege of their city, the Venetians had employed pigeons to carry dispatches beyond the enemy's lines.

It is by cross-breeding and by education, continues the *Temps*, that bird fanciers have been enabled to produce pigeons whose flight is of wonderful rapidity. One celebrated pigeon, the Gladiator, travelled from Toulouse to Brussels in a single day. It is calculated that, on an average, a well-trained pigeon flies at the rate of 3280 feet a minute, that is to say, almost forty miles an hour, and even this rapid flight is often surpassed by the fastest birds. It is true that atmospheric circumstances must always be taken into ac-

count. The wind, the rain, and the snow are obstacles against which the force of these little aerial messengers often becomes exhausted. The most prized breeds are those of Liege, which are small, with bright eyes, and a short bill; the Irish, which are short and stumpy, and very strong, and the pigeons of Antwerp, standing high on their legs, with a big bill and a long neck. A cross-breeding of these three species is said to give the best results regarding memory, strength, and sight.

On the same subject the *Liberte* remarks that the pigeon post service carried on between Versailles and Paris is so extensive that from thirty to forty pigeons are often sent out in a single day, especially if the weather is clear, and political events are sufficiently exciting. The startings take place as fast as required, demands for these messengers being principally made from two and a half to three o'clock, and especially at the moment when the gun fires for the closing up of the governmental offices; for each paper must, of course take care to get its dispatches in season, lest some enterprising rival should profit by the delay. Accordingly, the operator, who launches the pigeons, places himself on the threshold of a little tavern opposite the Cour du Maroc, so that the reporters have only to cross the street and hand in their rapidly written news. The starter, who is a tall, broad-shouldered man, vigorously throws the birds into the air, one after the other, generally, to avoid delays, holding one bird ready in each hand. The pigeons, taking up the initial velocity they have thus received, fly rapidly in the direction of Paris. A considerable crowd, among which members of the Assembly do not disdain to appear, witnesses this spectacle, which is said to be by no means one of the least attractive that life in Versailles offers. As the bird guides himself by sight, the sky must be sufficiently clear, especially towards sunset, for the pigeons of the Paris press to see their way. The trying season is, therefore, the present one of short days and early dusk; and the little political couriers have to pierce through those fogs which are so heavy in late autumn and winter. It is added in this account that one thing is still wanting in this queer news service, namely, pigeons that fly by night. To our own morning newspaper press, this would be a pretty serious defect in the system.

SECOND GRAND NATIONAL DOG SHOW.

THE second of Col. Wood's excellent exhibitions, embracing a large and varied assortment of canines, will be held at his popular museum, commencing Monday, March 16th, to continue one week. The great success attending the first grand display of these useful and valuable animals (November, 1872), induced Col. Wood to repeat the dog fair, which will far excel in quantity and variety the first exhibition. Dogs of every nation have already been promised upon this occasion, and the enterprising proprietor of the museum would not inappropriately term his great display, "THE WORLD'S DOG SHOW." But we are informed that the animals arriving from other nations will be on exhibition only, whilst the dogs of our own country will be entered and classed for premiums, Col. Wood desiring to encourage the thorough breeding of good and useful animals. The premiums awarded to successful competitors will be elaborate, costly, and beautiful. Catalogues containing full descriptions of all varieties of the species *Canis familiaris*, and rules governing the exhibition, can be had by addressing Col. Wood's Museum, this city. (See Advertisement.)

Correspondence.

MR. JOS. M. WADE.

DEAR SIR: Shippers of fowls find it difficult to provide sufficient water for their trip. I have been acting upon the suggestion of my son, by putting into the vessel a float, made of thin board, enough smaller than the inside of the water-vessel, so that when swollen it will not bind; have in the centre a hole into which the fowls can put their bill, and the thing is complete.

The idea is taken from the carrying of water in pails on the cars, into which the train men lay a piece of board or plank. Let poultry men try it and they will like it. The wattles of the fowls are held up out of the water, and the coop may be tilted more than one would suppose without spilling from the dish, and it would be difficult to get it all out without actually upsetting the cage or box.

Truly yours, &c.,

WILLIAM ATWOOD.

BIG FLATS, CHEMUNG CO., N. Y.

MR. JOSEPH M. WADE.

DEAR SIR: The Journal bearing date of February 5th, came to hand this P.M., and has been carefully perused the second time. You need no assurance that it received a cordial welcome. It will be loaned and reloaned until all fanciers in this neighborhood have had the pleasure of reading and making its acquaintance.

Several have promised to subscribe, and I know they will not delay, as they cannot afford to be without its weekly visits.

A weekly poultry journal is no longer an experiment, and parties who predicted failure, have only to examine your columns of fresh interesting reading matter, to see that the supply is equal to the demand without the aid of old musty poultry records.

I did not intend writing a treatise on breeding, mating, or management of any new variety of imported ducks, or to tell you that my yards contain the finest specimens of Light Brahmas to be found in the country at \$75 per trio; but on general matters.

First, to congratulate you on the fine appearance of the Journal, and the success that has thus far attended your efforts, judging from the liberal advertising patronage you have received, which is the very best test of merit.

Article headed "Do as you Contract," page 89, reminds me of a small transaction I heard concerning a Western breeder, who prides himself on his standing and stock he exhibits, which by the way frequently takes prizes.

Last season he ordered some Brahmas from one of the leading breeders in this State, and after raising a number of fine chickens (some of which received premiums this winter), made complaint, and after threats intimating that the fowls were not pure breed, insisted on returning them for the purchase money.

The great uneasiness concerning the late meeting of the American Poultry Association is beginning to wear off, and the reports of its transactions received leave no room for complaint of rings, &c.

The important business was fully deliberated upon by men of experience and good judgment, and transacted in a most creditable manner to all concerned.

The new standard will be looked for with much interest

by would-be standard breeders and fanciers generally. Some of the first will be severe in their denunciation, while the more considerate will not look for perfection, and be content with the vast improvement over the old standard.

Now let every state and local poultry association in the land wheel into line, indorse the action of the American Poultry Association, send on their applications for membership, and by every word and thought add to its efficiency and prosperity.

ILLINOIS.

MR. JOS. M. WADE.

DEAR SIR: I beg leave to inform you I received per steamer Denmark, on Saturday, a pair of the finest Aylesbury ducks I ever saw. Yours truly, C. B. ELBEN.

HINGHAM CENTRE, MASS., Feb 11, 1874.

J. M. WADE, ESQ.

DEAR SIR: Seeing in your paper of Feb. 5th a description of a large egg, I thought I would give an account of an egg that one of my Light Brahma hens laid the 6th of February; it measures 14 inches in circumference the long way, and 7 inches the short way; weighs 4 $\frac{3}{4}$ ounces.

Yours respectfully,

P. N. SPRAGUE.

(For Fanciers' Journal.)

PREPARE FOR NEXT SHOW.

THERE are many among amateur poultry fanciers who could take premiums at some of our leading shows, did they but have the courage to send their stock. The trouble seems to arise from the fact that they misapprehend the meaning of the standard. They seem to take it for granted that no stock will have any chance which will not figure over eighty-five or ninety points.

I confess myself to a little guilt in this matter. Some time ago I had made all my preparations for sending a trio each of Brown Leghorns and Plymouth Rocks to one of our leading shows, but just on the eve of making the entry, my courage gave way and my stock remained at home, though one of the trios had been expressly matched for me by a leading breeder and exhibitor for this particular show.

Guess my mortification when on meeting a friend on the street to-day who had been at the show referred to; almost the first thing he said was: "Your stock should have been at the show; you would have taken first premium or both." I had no doubt as to the value of my own stock, but I, without any ground whatever, imagined that there would probably be better on exhibition, and kept mine at home. I see my mistake, but too late to correct it for this season.

At the late Buffalo show, a premium of \$100 was offered for the finest dark Brahma hen. What is the result of the investigation? Simply this: that the winning bird figured less than a hundred points,—just ninety-five and a half,—and this is probably the best, at least one of the *very best* hens in the United States, and yet she is not perfect.

Isn't there encouragement for the amateur in this result? Isn't there encouragement for all of us to know that this first premium bird under this hundred dollar inducement falls short of perfection by four and a half points? It ought to set every breeder and fancier at work, whether his flock consists of five or fifty, to produce some birds which shall be worthy of the next show. And when he has bred the birds

to a reasonable degree of beauty, let his courage not fail him just at the important moment, and induce him to keep his stock at home.

There is room in the show for all of us, and there are many fowls in the flocks of those who have never put stock on exhibition which are worthy of a premium, but they will never get it unless they enter the lists and compete for the prizes. Let us hope that this class of breeders may hereafter be more fully represented. It needs only careful breeding, good care, and courage.

A. N. R.

LOCK HAVEN, PA.

DOYLESTOWN POULTRY SHOW.

THE first Annual Exhibition of the Bucks County Poultry Association was held in Masonic Hall, Doylestown, commencing on Tuesday, February 3d, and closed on Saturday, and was a decided success. Taking into consideration the fact that this was the first effort of a newly organized society, and that it was held only the week following the Pennsylvania State Poultry Society's exhibition at Philadelphia, we think the officers and members are to be congratulated upon the success of their young association. The extent and variety of poultry, pigeons, and pet stock entered and shown far exceeded the expectation of everybody. The outlook at present is very encouraging for their next annual exhibition; indeed, if a suitable hall is secured for it, we think that the State Poultry Society will have to look to its laurels. For the benefit of those who were not at the show, we will endeavor to describe the different classes of poultry.

Of Light Brahmas, there were 7 entries; W. E. Flower, of Shoemakertown, distanced all competitors with a splendid trio.

Dark Brahmas, 13 entries; some really good birds, the lion's share of the prizes going to T. S. Cooper, of Coopersburg, Pa.

Buff Cochins, 8 entries; not a very good lot, only one premium being awarded.

Partridge Cochins mustered well; some excellent birds were shown by Mr. Cooper.

White Cochins, only 1 entry; not extra good.

Gray Dorkings, a small class and not very good.

Dominiques, a small class; some good birds shown by Mr. Henry and Theo. P. Harvey, of Doylestown.

The coops used for most of the poultry exhibited were made according to a pattern adopted by the Society, at the mill of Hogeland & Buckman. They are clean, light, and airy, and seem adapted to the purpose in every respect. When not in use they can be taken apart and stored away compactly.

Plymouth Rocks, quite a good display. None of this variety were shown at the State show.

Jersey Blues, only 1 entry.

Hamburgs were all good classes, though not large in numbers. In Black Hamburgs, Messrs. Rayers and Dickie carried off first honors with the cock and hens bred by Mr. Schofield. These birds also took first at Philadelphia.

Black Spanish were a small class and did not strike us as being very good.

Of White Leghorns there were 20 coops. A grand display; Mr. T. P. Harvey, of Doylestown taking first with a magnificent trio.

Brown Leghorns, 7 coops; all good fowls. A. N. Raub, Lock Haven, Pa., took first, though hard pressed by T. H. Walton, of Doylestown.

Of Black Leghorns, only 1 entry, by G. W. Swartz, of Doylestown. We hope Mr. Swartz will stick to this variety, and show more next year.

Dominique Leghorns, 5 coops. Some good birds shown by Messrs. Selser and Taylor.

While looking at the different varieties of Leghorns, we could not help remarking to a friend that we did not see any necessity of any person sending East for either White, Brown, or Dominique Leghorn fowls or eggs. While none of the breeders here in Doylestown or its vicinity, claim to have bred "*Leghorns longer than any man in America*," nor yet to have the largest, best, and only white earlobed stock in the world, we think they can show as fine birds as those who do. We venture the assertion that a better display of Leghorn fowls has not been seen in this State, and we very much doubt if there has in any State this side of Connecticut.

Polish were not large classes and were not particularly good.

Black-Red Games mustered well, there being 10 coops; a better show than at Philadelphia. Messrs. Eisenhart and Dudbridge were the principal exhibitors.

Brown-Red Game; a small class not extra fine.

Of Duck Wing, Irish Gray, and Earl Derby Game, the show was poor.

The French Classes were small, there being only 1 entry of Creve Coeurs and 3 of Houdans.

W. T. Rogers showed 2 coops of Silkies, which were much admired.

Sebright Bantams were exhibited by Messrs. Tregge, Lewis, and Webster.

Game Bantams were very numerous exhibited by Messrs. T. H. Walton, Lewis, Rogers, and Cooper.

We were disappointed in not seeing a larger display of Turkeys, there being but 4 entries of Bronze and 1 of White. We know that there are a number of breeders of turkeys in Bucks and the neighboring counties. We trust the Society will offer special inducements, so as to bring them out at the next annual exhibition.

The same may be said of Ducks, there being but few entries in each class.

Of Rabbits there was quite a good display. Messrs. Walton, Lewis, and Thompson showing some fine Laps. Mr. Thompson showed an excellent pair of Himalayans. Angoras were shown by Messrs. Walton and Lewis.

The display of dressed Turkeys, by W. Carson, was very fine.

A hive of Bees was shown by H. M. Twining, and attracted considerable attention.

The display of Fancy Pigeons was excellent. To attempt to describe the individual birds, or even the different classes, would occupy too much of your valuable space. The judging in the various classes was satisfactory to all. We did not hear of a single complaint.

We desire to return our sincere thanks to Messrs. T. P. Harvey and T. H. Walton, the obliging Corresponding and Recording Secretaries, for their courteous and gentlemanly treatment of us during our visit.

(Report of Premiums next week.)

GUINEA FOWLS.

IN the *Rural Home* of January 17th, I notice an inquiry about Guinea fowls and the manner of raising, and their merits for the table, and so on. There is but little more

trouble in raising Guineas than the common barnyard fowl. There is an inclination in the Guinea hen to roam about with her chicks, and by so doing exposes them to dew and rain. I would therefore prefer to let a barnyard hen hatch and nurse the chicks. The same care is needed for raising the young Guinea fowls that is needed for the young barnyard fowls, and no more—in fact, I have raised the two together with one hen. The Guinea hen is a continuous layer in her season, but does not commence until the grass and weeds get up a little in the spring, as she has a disposition to hide her nest. A little care in observing her habits will soon overcome this inconvenience, as the male bird is always found near the nest, and by his noisy demonstration calls the attention. The eggs of the Guinea fowl are preferred to any other, and the flesh of the bird is considered by many persons as superior in flavor to any other domestic fowls, though a little dark colored. A few hours in salt and water will render the flesh quite fair, and as good as *pheasant*, which it resembles in taste. I consider the Guinea fowl as a bird that might be raised with profit, besides being ornamental.

REMEDY FOR CHICKEN CHOLERA.

TRIED AND FOUND GOOD.

ALUM, copperas, cayenne pepper, sal sulphur, saltpetre, and resin, equal parts. Dose, two tablespoonfuls for twelve chickens. Mix with meal, and feed on first appearance of disease once or twice a week. It is best to feed early in the morning, as they are not so apt to refuse it. One of my neighbors gives it about once a month, and has never lost a fowl since he began the use of it.

SHIPPING ELEPHANTS.

A CALCUTTA newspaper says: "The hoisting into the air and lowering elephants into the hold of a ship is not only an unusual sight to most men, but also a strange experience to most elephants. They were lashed with strong ropes, slung as far as practicable in slings, hoisted up with cranes with three-foot tackle, and lowered into the steamer's hold like a bale of cotton. When in the hold, they were placed in pens built of strong teak timber baulks, bolted to the ship's side to prevent them from breaking loose. The fear the animals suffered was the only pain they underwent, and by watching the eyes of the poor beasts, their terror was very manifest. Tears trickled down their mild countenances, and they roared with dread, more especially when being lowered into the hold, the bottom of which was sanded for them to stand upon. We are told that one female elephant actually fainted, and was brought to with a fan and many gallons of water. At sea it appears that they got into a curious habit of occasionally—evidently with a preconcerted signal—setting to work rocking the ship from side to side, by giving themselves, simultaneously, a swing motion as they stood athwart ship, the vessel rolling heavily, as if in a seaway. This they would do for a spell of an hour or more, and then desist for several hours, until the strange freak took them again. When they reached port they were hoisted out of the hold and swam on shore, thirty-five being thus safely landed without any accident whatever. When they were released from the slings, it was a supreme moment for the mahout, who was always on the elephant's neck from the time of its touching the water to letting go. As the word was given to let go, each of the elephants, either from the lightness of his

heart at being freed from his floating prison, or from his own weight, we are not sure which—lightness of heart, like lightness of head, causes elephants and men to play pranks—plunged down deep into the water, the mahout on his neck. The anxiety on the face of the mahout just one second before the plunge was a study; so, too, was it when elephant and man rose to the surface again, the former blowing water from his trunk and the latter from his nose.

CONNECTICUT STATE POULTRY SOCIETY.

ANNUAL MEETING—ELECTION OF OFFICERS.

THE annual meeting of this Society was held at Good Templars' Hall to-day. The attendance was large, showing an increased interest in the subject of fancy poultry. The Treasurer's report showed that the Society was out of debt, with a very handsome cash surplus on hand. The following officers were elected for the ensuing year:

President—[Mr. Phil. W. Hudson was chosen, but declined, and the election was then postponed to the next quarterly meeting.]

Vice-Presidents—Chas. H. Crosby, Geo. W. Bradley.

Corresponding Secretary—J. L. Gilman.

Recording Secretaries—J. L. Gilman, Dr. Geo. L. Palmerlee.

Treasurer—B. S. Woodward.

Auditors—Charles R. Hart, E. Palmer Tiffany.

Attorney—Hon. H. C. Robinson.

Directors—Samuel C. Colt, Chas. A. Pitkin, T. H. Munson, Alfred Hill, Henry Chapin, Phil. W. Hudson, Emory Carpenter, Samuel S. Van Buren, Ezra B. Dibble, James P. Brewer, Samuel L. Barker, Le Roy S. Huntington.

A committee of three was elected by the Society to revise the present constitution and by-laws of the organization, and submit the same at the next quarterly meeting, to be held in Hartford, for approval or rejection.

It was decided by a strong vote to hold the next exhibition at Hartford, on the 15th, 16th, 17th, and 18th of December next.

The meeting then adjourned to meet again at 2 o'clock.

WESTERN PENN'A POULTRY SOCIETY.

At the annual meeting of the Western Pennsylvania Poultry Society, held Feb. 10th, 1874, the following officers were elected to serve during the coming year:

President—Edward Gregg, Pittsburg, Pa.

Vice-Presidents—C. B. Elben, Pittsburg, Pa.; R. Henderson, Alleghany City, Pa.; W. A. Reed, Alleghany City, Pa.; R. Blair, Pittsburg, Pa.; G. W. Evans, Alleghany City, Pa.; John Dyer, Alleghany City, Pa.; F. R. Wotring, Mansfield, Pa.; J. N. McDonald, McDonald Station, Pa.

Treasurer—C. A. Stevens, Alleghany City, Pa.

Corresponding Secretary—A. A. Miller, Oakdale Station, Pa.

Recording Secretary—R. F. Shannon, Pittsburg, Pa.

Executive Committee—John Morrow, Alleghany City, Pa.; D. Meldrum, Alleghany City, Pa.; J. M. Goehring, Alleghany City, Pa.; S. H. Cook, McDonald Station, Pa.; D. J. Rodgers, Mansfield, Pa.; G. W. Snaman, Alleghany City, Pa.; J. Morton Hall, Sewickley, Pa.; C. C. Rinehart, Pittsburg, Pa.

A. A. MILLER,
Corresponding Secretary.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

WANTED, in exchange for Black Breasted Red Games, one trio of Brown Leghorns, Buff Cochins, or choice Fancy Pigeons.
Address JOHN MONRO,
Ashland Exotic Nursery, St. Louis Co., Mo.

WHITE LEGHORN AND LIGHT BRAHMA STOCK from Dibble, Williams & Felch; will exchange for Buff Cochins, Silver-Spangled Hamburgs or Dark Brahmas; good specimens only.
S. J. SMITH, Stony Brook, N. Y.

PARTRIDGE COCHINS.—A pair of choice Partridge Cochins will be exchanged for Fancy Pigeons. Address
G. F. MCCONNELL, Hudson, Col. Co., N. Y.

ONE PAIR PEA FOWLS.—Will exchange for Pigeons, Cage-Birds, Minor Pets, or \$10 greenback.
Address, with stamp, L. T. & W. CHARLES, Hornellsville, N. Y.

INCUBATOR WANTED.—(Second-hand), one that has worked successfully. Parties having one for sale or EXCHANGE, address

NATIONAL BEE JOURNAL.—MRS. ELLEN S. TUPPER, Editor and Proprietor. Devoted exclusively to Bee culture. Two Dollars a Year. The *National Bee Journal* is issued on the 15th of each month, contains sixty-four pages, printed on fine paper, in neat, clean type, and for the year 1874 has been greatly improved. Mrs. Tupper, having purchased the *Journal*, has removed it to Des Moines, Iowa, where it will hereafter be published under her own supervision. She will write for no other publication but her own, and in that she will give the result of that long practical experience which has placed her among the best, if not the best, authorities in this country on the honey bee.

Arrangements have been made with prominent bee keepers in this and foreign countries, for timely articles each month, upon important topics.

A special department has been assigned to "Notes and Queries," in which the various questions which arise in the practical experience of bee keepers each month, will be given, with pertinent answers by the editor. These will be condensed into the smallest possible space, and will be one of the most interesting features of the *Journal*.

The *Journal* will keep entirely clear of all entangling alliances with patent rights of whatever nature, and will be independent in the expression of its opinions. It will aim to be reliable, give only such information as will be of practical utility to its patrons, discarding theories and misleading propositions.

A limited space is devoted to advertising, which will be given to unobjectionable notices, at fair rates; and the large and rapidly increasing circulation of the *Journal* makes it a valuable advertising medium.

For circulars, containing club rates, premiums, advertising rates, etc., address MRS. E. S. TUPPER, Des Moines, Iowa.

THE AMERICAN STANDARD OF EXCELLENCE.—As I was appointed by the American Poultry Association to get the latest revised Standard printed and bound, I have the best opportunity to get them at the earliest moment from the binder, and shall act as their agent. Price, \$1. Cash with order. Orders filled in rotation. Send now and secure your copy from the first edition.

Excelsior Poultry Yard in the Washington Park.

EGGS. **EGGS** may be obtained from the following varieties, for hatching: Dark Brahmas, from imported stock; Light Brahmas, from William's and Felch stock; Buff Cochins, from choice fowls, and pure bred White Leghorns. Price, \$2 per 13 eggs. Address P. S. WYKOFF, Turbotville, Northumberland Co., Pa.

LOOK FOR CASH!—You can get any leading Journal or Paper, weekly or monthly, at club rates, with choice family groceries at T. D. ADAMS, AGENT. Store between Tenth and Eleventh Streets. Lock Box 61, Franklin, Pa. Eggs from any named fowl, from \$1 to \$6 per dozen.

FANCY PIGEONS.—JOHN SPEALLER, 1415 N. Fourth St., Philadelphia, Breeder, Importer, and Dealer in all varieties of Fancy Pigeons. A large lot on hand always. Orders by mail promptly attended to.

WHITE POUTERS.—One pair good blowers, very stylish, well booted on good long legs. Price \$40. Address POUTER, 39 N. Ninth St., Philadelphia.

NORTHWESTERN POULTRY JOURNAL.

Every poultry breeder or fancier should send ten cents for a specimen copy of this new illustrated 16 page poultry monthly, before subscribing for any other. Address C. P. CARPENTER, Editor Poultry Journal. Minneapolis, Minn.

PIGEONS.—Choice imported and premium birds. W. A. BURPEE, 1332 Arch St., Philadelphia.

FOR SALE.—Ped. Houdans, 1 Cock, 4 Hens, \$25; can prove pedigree. Eggs of Light Brahmas, that took premiums, William's strain, and of Ped. Houdans, \$3 per doz., each kind; cash must accompany order. Satisfaction guaranteed. H. A. NEITZ, Millersburg, Pa.

PREMIUM.—I offer to the person who first procures 120 new subscriptions to the "POULTRY WORLD," a **DARK BRAHMA HEN**, valued at \$40, and a **DARK BRAHMA PULLET**, valued at \$25. The names of subscribers to be forwarded to the publishers of the magazine as fast as procured; each name or list of names to be accompanied by the statement: "These names are for the Dark Brahma Premium."

The winner of the birds will receive them with the privilege of returning them to me and receiving \$65 in cash, instead, if, in his judgment, they are not worth that amount.

Competitors are informed that no one has had an opportunity to begin a list of names for this prize, until it appeared in a public advertisement, so that all may have a fair start.

W. H. CHURCHMAN, Wilmington, Del.

WALNUT HILL POULTRY YARD.—All orders received for Eggs from my fine Buff Cochins and Dark Brahmas, at the following price, \$3 per dozen. "I use the Cushion Bottom Packing Box."

Address P. NEATHER, No. 9 West Fifth St., Cincinnati, O.

SILVER-SPANGLED HAMBURGS.—Pairs, trios, or Cockereels, of my well-known strain, for sale at moderate prices. All of my birds have white ear-lobes, good wing-bars and tails, and their markings are round "moons," or spangles, not crescents or pencillings. None will be shipped save of my own breeding.

WM. R. HILLS, Albany, N. Y.

TRUMPETERS of all colors, and markings, from \$3 to \$40 per pair. CHAS. D. PARKER, 680 Saratoga St., Baltimore, Md.

EATON'S MATCHLESS PIGEON PORTRAITS. Life-Size. One pair Carrier and Pouter. Price \$5. The above Engravings are now out of print and seldom to be had at any price.
Address **JOS. M. WADE**, 39 N. Ninth St., Philadelphia.

RARE CHANCE.—For a wide-awake man with a capital of one thousand dollars, and who is fond of Fowls, Pigeons, Birds, &c., to buy out the store, 39 N. Ninth Street, Philadelphia. The best stand in Philadelphia. This would not be for sale, but I find that my entire time will be required on the Fanciers' Journal which will be published at the above establishment. Address **JOS. M. WADE**, Philadelphia.

JOHN P. BUZZELL, Clinton, Mass., Breeder of Light and Dark Brahmas and Partridge Cochins. At the Great Show in Boston, 1873, my stock was awarded First Prize on Light Brahma Fowls; Fourth Prize on Light Brahma Chicks; Second Prize on Dark Brahma Chicks. A few Fowls of the above Stock for Sale. Also, Eggs from these prize-winning Cocks, mated with superior Hens.

BLACK BREASTED REDS.—I would state to the public that I shall dispose of my stock of Black-Breasted Red Games before January 1st. Those wishing to purchase at prices to suit can address at once,
S. E. CLARK, Cor. Sec'y, Hartford, Conn.

SUGAR MAPLE, White Ash, and Red Beach, 50c. per 100; \$2 per 1000. Tulip, Linden, and Sweet Chestnut, \$3 per 100; \$15 per 1000. By mail, 25c. per 100 extra. Send stamp for catalogue and description.
A. BATTLES, Girard, Pa.

FOR SALE, CHEAP.—One trio of B. B. Red Games; one pair of Houdans, very fine. Address **CHAS. V. FOWLES**, Ithaca, N. Y.

BARB PIGEONS.—I have for sale, to reduce stock, some promising young Barbs, out of imported and home-bred stock. Also, a few other varieties. Address, with stamp.
J. B. TOWN, 371 Gay St.,
Baltimore, Md.

\$2 FOR 13 EGGS! from premium strains of Light Brahmas, Buff Cochins, Partridge Cochins, Black Russians, Plymouth Rocks, White and Dominique Leghorns, Bantams, and Ducks. *Best stock in the country!* SEND YOUR ORDER EARLY, accompanied with cash, to
J. F. FERRIS, Stamford, Conn.
Send for Circular and price of Fowls.

EGGS FOR HATCHING. **BERKSHIRE PIGS.** **SOUTH-DOWN SHEEP.** ILLUSTRATED CIRCULAR. SEND STAMP.
A. H. HOWARD, Omro, Wis.

POUTERS, 30 PAIRS FOR SALE.—Three pairs, at \$4 per pair. Two pairs, at \$5 per pair. Four pairs, at \$6 per pair. Five pairs, at \$8 per pair. Thirteen pairs, at \$10 per pair. Three pairs, at \$12 per pair.

FANTAILS FOR SALE.—Thirteen pairs, at \$4 to \$10 per pair: very pretty birds.
CHAS. D. PARKER, 680 Saratoga St.,
Baltimore, Md.

100 TUMBLER PIGEONS FOR SALE.—Every bird warranted to tumble. Black and Mottled a specialty. Address
H. BOWERS, 123 Philip St., Albany, N. Y.

EGGS FOR SALE.—I am now booking orders for Eggs, delivered any time after February 15th, from my first-prize pedigree stock of Light Brahmas (Cock *Recherche*, mated with P. Williams' and Felch Hens), at \$6 per dozen. Dominique Eggs, \$3 per dozen. Black African Bantam Eggs, \$2 per dozen. Aylesbury Duck Eggs, \$6 per dozen. All of which are first-class first Prize Stock. Eggs packed with care in patent boxes. Two fine Aylesbury Drakes for sale, direct from imported stock.
C. B. ELBEN, Pittsburgh, Pa.

GAME FOWLS, of all varieties, carefully bred in feather, station, and weight, all of which are bred from well-tested fowls. I have selected my stock from the most noted and reliable breeders in the country, who have not only bred for the show-pen, but with a cock-pit point of view, who seek for purity of blood, bone, and muscle, which is all that constitutes a genuine Game. And, as for color of plumage, or marks for the show room, I can produce fowl equal to any in this, or foreign countries, and having supplied the leading cock-pits for a number of years with my strains of Games, there has not been one reported as showing the white feather, or in other words, to run. And as I am not engaged in any other business than breeding of Game Fowls, I make my prices low so as to effect quick sales, while others who breed for pleasure ask enormous prices, caring little as to whether they effect a sale.
For Price List, address **JOHN ARCHER**,
Box 43, Mahanoy City, Schuylkill County, Pa.

MADAME DE LINAS'

LIGHTNING

VERMIN ERADICATOR.

It is the best, safest, and quickest, and only sure destroyer of Fleas and Lice on Fowls, Dogs, Cattle, Horses, &c. Also, sure death to Moths in Fur. Sample boxes mailed, 50 cents. Agents wanted.

HENRY C. CARTIER & CO.,

Manufacturing Agents for U. S.,

720 Broadway, N. Y.

INSIDE TUMBLERS. **INSIDE TUMBLERS.** **INSIDE TUMBLERS.**—After an experience of fifteen years with these beautiful little birds, I can say without hesitation, that they are my choice of the dove cote. A few pairs to dispose of before breeding season sets in. Price per pair for birds that will tumble in a small room, \$15 to \$25, according to color. Also, Blue English Owls, Magpies, &c. My Silver-Spangled Hamburgs *can't be beat*. Light and Dark Brahmas. Duck-Wing Game Bantams. For further information send stamp. No goods sent C.O.D.
T. S. ARMSTRONG, Trenton, N. J.

GOLDEN SPANGLED HAMBURG.—A few pairs or trios of good Birds, at low figures. Address **JAMES FISK**,
Care of 39 N. Ninth St., Philada, Pa.

COL. WOOD'S MUSEUM.

SECOND GRAND NATIONAL
DOG SHOW

WILL BE HELD AT COL. WOOD'S MUSEUM, PHILAD'A,

Commencing

MONDAY, MARCH 16th, 1874.

TWENTY-FIVE HUNDRED DOLLARS IN COSTLY AND
BEAUTIFUL PREMIUMS.

Dog Fanciers and others interested in the improvement of

THE CANINE RACE

Are solicited to aid this grand enterprise by forwarding dogs from any
part of the country for exhibition and competition.

It is the intention of the management to present upon this occasion the

LARGEST VARIETY OF DOGS

*That were ever placed on public exhibition, including some of the most beautiful
and talented animals in the world.*

Catalogues and information can be had by addressing

COL. WOOD'S MUSEUM, Philadelphia.

WM. H. CHURCHMAN,

CLAYMONT, DELAWARE,

IS NOW BREEDING ONLY

LIGHT AND DARK BRAHMAS,

From the best Strains to be obtained in this or any other country.

A FEW CHOICE BIRDS TO SPARE, OF EACH COLORING.

As my yards are well protected, I shall be able to supply

EGGS FOR HATCHING,

WELL PACKED, VERY EARLY IN THE SEASON.

FANCY PIGEONS.—I have on hand an immense quantity of
Fancy Pigeons which I wish to dispose of for want of time to give them
proper attention. JOS. M. WADE, 39 N. Ninth St., Phila.

GOLDEN-SPANGLED POLANDS.—A few pairs or trios for
sale at \$5 per pair, and \$7 per trio, fine birds; cash to accompany the
order. Address D. B. BROWN,
Peace Dale, Washington Co., R. I.

DARK BRAHMA
EGGS

EARLY IN THE SEASON,
FIVE DOLLARS PER DOZEN.

JOS. M. WADE,
PHILADELPHIA, PENNA.

LIGHT BRAHMA
EGGS

EARLY IN THE SEASON,
FIVE DOLLARS PER DOZEN.

JOS. M. WADE,
PHILADELPHIA, PENNA.

THE RHODE ISLAND Poultry and Columbarian Society will
hold their First Annual Exhibition at HOWARD HALL, Providence,
R. I., March 4th, 5th, and 6th, 1874.

Premium lists and entry blanks will be ready for delivery on and after
Monday, Feb. 2d. Information will be furnished upon application to
W. L. TOBEY, Secretary, Valley Falls, R. I., or to
J. T. PECKHAM, President, Lock Box 30, Providence, R. I.

Any one wishing to offer any special premiums will please communi-
cate with either of the above, stating upon what they wish it placed.
Such offers will be very acceptable to the Society.

WHITE-FACED BLACK SPANISH.

WHILE the large or Asiatic varieties have many points of excellence which recommends them to lovers of fine poultry, I think some other or smaller varieties have superior claims to the breeder's attention, where *profit* is the *greatest* consideration in poultry raising.

All fowls to be *profitable* must be carefully bred.

There are large sections, especially in the southern parts of our country, from their remoteness to large cities, make poultry raising for market purposes out of the question, as freights eat up all the profits. But on the other hand, eggs nearly always pay a good per cent. on any investment that may be made for the non-sitting breeds of fowls.

As producers of eggs, large or Asiatic fowls unquestionably occupy the background, and the world famous White-Faced Black Spanish stands triumphantly in the foreground, unequalled and excelled by none.

After years of experience with almost every breed of fowls that are now enumerated in the whole catalogue of varieties, this has been my experience, and so continues, and if I live years to come, I doubt not it will be the same. No fowl in my knowledge has more to recommend them. For beauty of plumage and style of carriage, they are grand and noble. For laying qualities, they cannot possibly be excelled; for about eight months in the year they keep up an almost continual supply of the very best eggs. And as for drawbacks, no fowls have fewer, being hardy, easy to raise, and quite free from disease. This last I speak from long experience. As for not being good winter layers it is altogether a mistake; for in a warm climate, they are ready to commence business as soon as through their moult, and it takes very severe weather to stop them, so great is their desire to stick to their work.

Notwithstanding what our Davenport friend says of their inferiority as a table fowl, their *color* of flesh alone is all the objection that can possibly be made against them. And my candid advice to my Southern brethern, and all others who will take the advice of one who is old in poultry breeding at least, is to procure some of this invaluable breed of poultry, as it will be a source of *pleasure* as well as profit, as they could proudly call their friends to view their pets, and put money in their pockets beside. I am hard to tire when speaking of my pets, but perhaps I had better stop writing, and give some one else some space in the *Journal* to talk about theirs.

I hope we shall be able to get the "hen fever" to fever heat again before long.

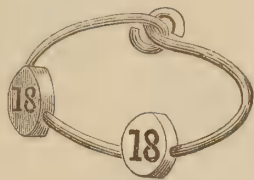

JOHN RUMBOLD.

FOWLING CREEK, MD., Feb. 1874.

POULTRY-MARKER.

Having frequently seen inquiries made by your correspondents as to the best mode of marking poultry, I enclose you a marker of my own invention, which I have used all

through the past season with entire satisfaction. It can be put on or taken off with the greatest ease by using two pairs of ordinary round pointed wire pliers. It is made by letting fall one or more drops of melted solder on to a piece of stoutish copper wire. The solder is then stamped with a number by means of a die, and a corresponding number entered on the poultry book. The size and number of the drops of solder, and likewise the thickness of the copper wire, can be varied at pleasure to suit the size of the chicken or fowl, and every ironmonger will furnish a set of number dies of the requisite size at a trifling cost.

This plan may possibly be already known, but I have never seen anything at all like it, and as it has been most useful to me I wish to make it known to my brother fanciers through the medium of your columns. I may add that I prefer two drops of solder in case of the accidental defacing or loss of one.

I do not find my marker incommodes the birds in the least, nor does it chafe or injure the feathering or color of the legs of Brahmas or Cochins.—*William Savile, in Journal of Horticulture.*

(For Fanciers' Journal.)

PIGEON KEEPING ON A LARGE SCALE.

MANY years ago, in the countries of Europe, dove-cots were attached to nearly all the residences of the landed gentry. These cots were of various styles of architecture, and were in most cases ornaments to the grounds. Occasionally unused outbuildings were turned over to the pigeons (and then they were more useful than ornamental), or the lofts of stables, or even of the house itself, became occupied by the birds, but it was considered *the thing* to have a special abode for pigeons; therefore all who could afford it had a tower in some conspicuous place devoted entirely to that purpose. In these cases the birds were not kept on account of any profit that might be made from breeding them; on the contrary, they were looked upon as unprofitable attachments of luxury. The squabs were occasionally eaten, and the old ones afforded the youngsters many opportunities for improving their skill as marksmen. The small farmers and tenants disliked the pigeons on account of their eating so much of their garden truck and seeds, and waged war upon them with traps and guns. By these means many birds that were with eggs or young perished, and no one has as yet been able to determine if there be any profit in keeping large numbers of common pigeons, and breeding exclusively for sale. It has more than once been thought there is money in it, yet it remains for Americans to try the experiment.

Five hundred pairs would require a thousand nests, with plenty of room, for commons are very aggressive; they

would have to be fed liberally, and upon the cost of feed would depend the profit and loss of the undertaking. Feed is too high on the Eastern seaboard to make it profitable, but in the West, where corn sells for fifteen cents a bushel, it might be made to pay; however, it must be taken into consideration, that it requires a pair of old birds at least seven weeks to produce a pair of young fit for the pot, during the whole of which time they must be supported.

Five hundred pairs, under the most favorable circumstances, might produce three thousand pairs of young, which, at twenty cents a pair, would amount to \$600. Now, how much of that amount would have to go for feed? We have kept fifty birds upon one bushel of corn per month by way of experiment—at that rate (which might pass for an average) one thousand old birds would require twenty bushels per month, or two hundred and forty a year; and the six thousand young, sold at six weeks old, would require one hundred and eighty bushels, a total of four hundred and twenty bushels of corn, which might be procured for \$250 here. Subtracting this from the six hundred, leaves a balance of \$350, which, added to the sum the manure will bring, might pay for the trouble of feeding, shipping, &c. The birds in a half wild state ought to pick up enough to do away with the necessity of feeding them more than above stated; and if the *neighbors* have good wheat crops, it is probable much of the corn would be saved during the summer months.

Any one who wishes to try the experiment of shipping commoners to market, can form a tolerable close average as to profit and loss by the foregoing account. There should be plenty of room, plenty of water, food, and warmth. The birds should be but little disturbed in their home, and odd birds and capricious ones (of which there are many) taken out of the loft; none being allowed as boarders but good breeders and sober nurses.

If a man should turn his whole attention to pigeon breeding, more money could be made out of extensive raising of the toys and fancy birds, the imperfect young of which could be sent to market, and the perfect held for high prices. One hundred pairs of swallows or turbits could thus be made to *pay* better than a thousand pairs of commons. In the south of Europe many persons add materially to their incomes by breeding fifty to a hundred runts during a season, some of which will weigh two to three pounds each, in addition to the chickens, which every cottager produces. This is a custom we should like to see naturalized here, for a young runt is a delicious morsel to waste a few moments over. We have not considered the capital invested in buildings, stock, &c., as that would take up too much of your space, and we wished merely to suggest the feasibility of breeding large numbers of pigeons.

DR. W. P. M.

(For Fanciers' Journal.)

REMINISCENCES OF THE "HEN FEVER."

BY G. P. BURNHAM.

The "*Pea Comb*" is an American institution.

The first indication I ever saw of this feature upon poultry occurred in the *Light Brahmas* I bred some twenty odd years ago, and my attention was called to this development by Dr. Bennett. He gave the name to this comb, so far as I am informed (and it was a good one) from its similarity in shape to a half-blown pea blossom.

The natural comb of the *Malay Fowl* is a species of pea comb, but it is more clumpy and indistinct in form than the

modern triple comb required by the standard now-a-days, upon the *Brahmas*.

The original *Brahmas*, both light and dark, were single combed; and they were thus bred for two or three years. When the pea comb showed itself, it was deemed a decided improvement, on account of the lesser danger of its freezing in winter, in our cold northern climate. And now the single upright comb, upon however otherwise good a fowl, disqualifies him in the English and American show-room, for competition with the later improvement.

English writers spoke of this novelty as a "stubbled" comb for a time, but they very readily accepted the Yankee title, and orders came from across the water for "*pea comb Brahmas*" universally, after the Doctor and myself gave currency to this name to the discovery. For a long period it was common, and even down to the present time the single comb is seen occasionally. But all such specimens are discarded among fanciers to-day, whatever may be their other good points.

And now we have the "*Pea Comb Partridge Fowls*," Mr. C. H. Edmonds having exhibited in February, 1874, at the third show of the Massachusetts Society, three or four cages of superb *Partridge fowls*, with the pea comb finely developed in both sexes. This is certainly a novelty in *this* variety; but I notice that this peculiar indication shows itself *only* on the Chinese birds. Edmonds' fowls were greatly admired, and he had numerous tempting offers for his stock, which he declined. It is his intention to test his experiments during the present season, and if he has got this thing *established* thoroughly, he certainly has a very valuable strain of stock in his possession, the pea comb being an admitted advantage. These are the first I ever saw of this variety.

And speaking of this poultry show, reminds me of an incident that occurred there, which brought back the days of "*auld-lang-syne*" very pointedly. An enterprising breeder from Norfolk County, where the original *Marsh* stock was bred for years, successfully contributed a few fine samples of this long ago popular variety, the parent stock of which was imported direct from China about thirty years since by the Rev. Mr. Marsh, of Dedham.

I was surprised to note the points and character of these birds, as compared with the originals, which I know so well, and scores of which I had on exhibition at the three or four first annual shows of the N. E. Poultry Society, in '50 and '53. I have raised and exported hundreds of this superior strain, and I know of *no* stock that ever gave such universal satisfaction, for their kind, as this did.

Now, in 1874, a quarter of a century from the time when this famous *Marsh* stock was first in rife demand, and when almost everybody had forgotten this strain, at the third exhibition of the new Massachusetts society, a young fancier comes in among the favorite *Brahmas* and *Cochins* with a few coops of the old genuine Chinese stock, very nicely bred, and as like their parents as "*peas in the same pod*."

But nobody notices them! They are probably the nearest relations to absolute China blooded poultry we have in America. You can't mistake them for any other fowl. They are real Celestials.

But I see no mention made of this fine stock in the reports of this Exhibition. We shall breed poultry a great many years yet in Massachusetts before we shall produce a strain of stock that will excel this, in all the characteristics of the best Chinese stock. It is "*out of the fashion*" now, however.

(For Fanciers' Journal.)

MARTINS.

IN the *Fancier* for February 19, the question is asked, "How to encourage martins to take possession of bird-boxes?" The answer is one of those simple things that makes us smile at our want of thought. In the early spring the blue birds first arrive, and take possession of all the boxes they have been in the habit of occupying from year to year, and also all of the new boxes that have been erected. The martins, arriving later in the season, return to their old nests, dislodging any intruders, or put up with such habitations as they can find unoccupied, or which they can drive other birds from. If, therefore, blue birds first occupy a new box, they will have eggs or young by the time the martins arrive, and it is difficult for the last to inspect and determine upon a box that may have been erected for them; but, if the box is kept closed until the blue birds are settled, and only thrown open when the martins arrive, there will be no difficulty, for after the martins once take possession of a haunt, no other birds can inhabit it in peace. It is distressing as well as amusing to watch the return of martins to their accustomed home, when that home has been pre-empted by blue birds. They attack the housekeeping blues with the utmost ferocity; some dragging out the intruders by main force, while others roll out eggs, young, and nests, making a clean sweep of all their housekeeping paraphernalia; therefore keep your boxes closed until the martins arrive, and there will be no trouble.

DR. W. P. MORGAN.

ON SELECTING FOWLS.

GAME fowls have always been especial favorites of mine, not on account of their pugnacious qualities, although I do admire genuine courage whether it be in animal or man; and no breed of fowls set off an exhibition-room so well (we might perhaps except the Hamburgs) as the different varieties of game fowls. Taking them singly or together, there is much to admire in the different strains; one fancier breeds for weight and size, another for feather and color of legs, and so on to the end of the chapter. The colors and markings of the game fowl vary more perhaps than any other known breed; for instance, we have the Derby or Black, Red, Brown Red, Sefton, Irish Gray, Pile (or Pied) Ginger, White, and in fact there is hardly a breeder but what has some variety or strain peculiar to himself. These sub-varieties are the result of a system of crossing, which to my mind tends very much to deteriorate from the beauty of the original stock. They may do very well for pit purposes or to take the place of the bull dog in a farm-yard, but I doubt very much if their fighting qualities are increased by the crossings above referred to. Where do you find anything more handsome than a trio of genuine Earl Derby Games, or what more beautiful than a clutch of little chicks from the same? Then imagine a cross from your beautiful Derby Cock, with a six or seven-pound hen, which your neighbor O'Callahan says was bred from a cock that won three battles in one day, or a cross between your delicate little hens and a big uncouth, topknot rooster, whose father Mr. Mull-doon tells you whipped the father of O'Callahan's chicken in four consecutive battles. If there is any advantage to be gained by such intermingling of blood, I have up to the present time failed to see it. I am sure it does not add to

their beauty, and as far as the fighting qualities are concerned, I have seen a better fight made by a fourteen-pound Brahma, than I ever saw made by what the cock-fighters term shakes. Game fowls more than any other breed (perhaps) possess all the qualities which would make them a valuable fowl for the farmer. They are good layers, fine table fowls, and as form others, can't be beat, and even in towns or the outskirts of large cities, a cock and half dozen hens might be kept to good advantage.

My advice to amateurs or fanciers of game fowls, is to procure the best and purest that can be had, and keep them so. Cross an Irish Gray with a Sefton, and you have dunghills good enough to lay eggs and eat corn; so would the progeny of a dark and light Brahma or a White and Gray Dorking.

THOMAS S. ARMSTRONG.

TRENTON, N. J.

CONTRARY CHICKENS.

MR. COBLEIGH, of Nelson Street, bought three hens Saturday night, and put them under a box until he could build a coop. Sunday morning he saw one of them in the street, and bestowing a brief curse on the somebody who had overturned the box and jeopardized his property, he started out after it to drive it back into the yard. It took fifteen minutes to convince him that that hen could not be driven into that yard, and then he attempted to catch it. Three times he rose up with his hands full of feathers and his chin full of sand, but still that hen eluded him. Once he got it cornered, and thought sure he had it, but it flew straight up over his head and flapped its wings in his face, and filled his eyes with dust. O, how mad Mr. Cobleigh was. It was Sunday morning. The bells were ringing, people were starting to church, and there he was in the street, with no coat or hat on, and with nothing but slippers on his feet, and every once in a while one of them would come off and fly through the air, and his naked foot would come in contact with the cruel gravel before he could stop himself. Then he would have to hop back on one foot after that slipper, while the hen stood on the walk and elocuted, and the little Sunday-school children stopped and laughed, and their parents reproved them and laughed too.

Finally the hen got away from him and started down the street at a wonderful speed for a hen, and he started after her, his face redder than ever, and every time he cleared a rod he would stop and hop back two after one of those slippers. When he reached the corner of Essex Street he jumped out of both slippers at once, but instead of stopping to go back he picked up a stick of wood and kept on. Then, as the hen dodged into a gateway, he hurled the stick and broke the leg of a strange dog, which added its piercing "ky-yi" to the entertainment. But Cobleigh didn't stop. He tore into the yard after his property, in his bare feet, and chased the hen into a wood pile, and caught it just as the owner of the premises came out and wanted to know what Cobleigh was going to do with *his* hen, and what he meant, in any way, by getting drunk and kicking up such a hullabaloo in a peaceful neighborhood. Cobleigh first thought he would knock the man down with an ax, and what he could not eat of him bury under a barn, but the new comer succeeded in proving to Cobleigh that the hen was his, and then the miserable man burst into tears, and limped back home, where he found the three hens under the box.—*Danbury News*.

SOME FACTS.

THE tendency towards perfection through improvement is one of the characteristics of the present age. No sooner has an inventor secured a patent on any manufactured article, and began to introduce it, than others have made improvements on that article. A forcible illustration of this fact is apparent in the sewing machine, which resulting from the ingenuity of one mind, has had added to it the improvements of others, and to such an extent that at the present time a purchaser is puzzled in making a selection from so many of different named machines, each claiming in itself a superiority over all the others..

This same tendency not only manifests itself with mechanical but with scientific occupations, and farming being now acknowledged a scientific pursuit, one of the strongest evidences we have in support of our statesmen is the desire among farmers to become educated in their calling, which fact is attested by the patronage bestowed on agricultural journals throughout the country, and furthermore, the benefit derived by farmers by the agency of the press is evident through larger quantity and better quality of crops, resulting from a knowledge of the experiments of others, and in becoming educated as to the manner of a proper selection of soil, the use of suitable fertilizers, and the mode of cultivation adapted to the nature of the product desired.

The field for improvement in live stock is so vast, and the desire so popular, that many are turning their attention to cattle breeding as a business, and journals throughout the country are awakening an interest in the matter, by setting forth the merits of the Jersey or short-horn breeds, showing the decided advantages in possessing one thoroughbred, rather than keeping two of an indifferent breed of cattle, and by less labor and expense reap more satisfactory results.

The interests of poultry breeding has only within the past few years received that consideration that the subject warrants, and it is only through the appeals of publications devoted to poultry raising, and by poultry exhibitions, that the public are brought to a knowledge of the amount of improvement made, and still capable of being made, by importation and judicious interbreeding of fowls. As an article of flesh food, perhaps, there is nothing else that possesses as many good qualities in being as palatable, as healthful, as easily prepared for market, and which commands throughout the entire year as high an aggregate price and ready sale, as chickens. They are to be found in our markets in all seasons of the year, a fact which proves a demand and a belief with providers for families of their fitness for consumption in midsummer as well as in midwinter.

It can be safely said, however, that fowls have more popularity with consumers (when upon the dinner-table) than with those capable of becoming producers, through opinions which perhaps originate from a prejudice to rearing, or more probably from a lack of interest in, or fancy for them, the contrary of which the editor of the FANCIERS' JOURNAL is striving to establish, by causing a new interest, in admitting a new light on the subject through his own practical knowledge and the experience of others.

To the well as to the sick, a fresh egg is a decided luxury, and we can purchase nothing else for the money (even at five cents apiece) that when properly prepared, will afford as much nourishment, be as acceptable, contains in its composition as many of the requisites in the formation of flesh and blood, and with all the more be as easily digested as an egg. Through the winter months it is no uncommon thing

for eggs to command fifty and sixty cents a dozen, and still at double that price would be in demand, from the fact that nothing has yet been discovered as a substitute; so as an ingredient of pies, cakes, puddings, and many of the more substantial dishes our appetites crave, eggs are indispensable. This being the case, eggs must continue in demand, and no fears need be apprehended that they will outgrow their popularity, or that the field for poultry raising (like some of the professions) become overcrowded.

In setting forth the merits of fowls, with a view of increasing their production and improvement, some of the facts to be looked at are:

1st. The small amount of capital needed to enable many of limited means to delight in becoming possessors.

2d. The small amount of room required (provided they receive proper attention) to keep them in.

3d. With proper management the large return realized as interest on the amount invested.

4th. The healthful recreation afforded to the owner in attending to their wants.

5th. The pleasure derived from the possession of fowls in a healthful and profitable condition.

6th. The trivial amount of actual expense incurred in feeding them, in comparison to the great advantages afforded, in fresh eggs, in the satisfaction of knowing, when we come to partake of their flesh, that being fed by our own hands, prepared for consumption under our own eyes, that they are in every way edible, and that we can enjoy them without thought or question as to how they have been cared for, how long they have been killed, and, finally, when we come to partake of them, find, to our disappointment, that through their great age they have lost their flavor and desirable qualities, and we our appetite for them.

It is not unusual with those whose experience is insufficient to detect bad qualities in fowls to be deceived in them, as a purchase is made through a dependence upon the judgment and recommendation of the seller, an article is often bought that is misrepresented, and the deception only discovered when it is too late to be remedied; but these evils can be obviated in our becoming rearers of fowls, and in that event we can enjoy (at a comparatively low price) a fresh, reliable, and desirable article.

In view of all that has been said and done relative to poultry raising, one conclusion can be safely arrived at, and that is, that success in the business depends on a proper management, resulting, 1st, from a fancy for fowls; 2d, the keeping of a desirable breed; 3d, a knowledge of how to treat poultry; and 4th, a determination on the part of the owner to improve his pets, and where these qualifications (if so they may be termed) exist, results must be satisfactory.

Innumerable instances might be given as regards the profits derived from poultry raising, but at this time I will merely cite two of such for the benefit of the incredulous. A gentleman of one of the principal towns in New Jersey commenced the season with 60 chickens, which produced during that season 667 dozen eggs, and from the sixty fowls realized a net gain of \$83 32, besides (as he says) their droppings, which I consider the most valuable of all domestic manures. Again, a breeder in an adjacent Western State realized in three consecutive years, on prizes alone awarded at different exhibitions, the snug sum of \$2500.

To be convinced as to the improvements made in fowls during the last decade, one need only attend a poultry exhibition of the present day, as did an acquaintance of the

writer, who previous to his attendance repeatedly said that there was no breed of fowls in existence like the old Bucks County fowls, but that same party came from the exhibition with a different opinion, occasioned merely through the external appearance of what he saw, while if he were to partake of the huge golden egg of the Cochin, and the delicate sweet flesh of the Houdan, he would undoubtedly be thoroughly convinced of the absurd expression as above quoted. Again, it has not been such a long time back that when cocks attained seven or eight pounds in weight they were considered unusually fine birds, while now the hens of some of the popular breeds weigh fully that much, and the cocks (within the experience of the writer and with not the best attention) have weighed upwards of twelve pounds apiece.

In France, where poultry raising is more of a specialty than any other country, many have realized handsome returns by devoting their entire time to poultry raising, carrying it on to such an extent that the valuation of poultry exceeds that of any other species of live stock, and the exportation of eggs to England alone has amounted to 6,000,000 dozen a year, while through carefully prepared statistics we have as a fact that the production of eggs in France amounts to over 600,000,000 dozen a year, and which, valued at but fifteen cents per dozen, amounts to over \$90,000,000.

While in our great progress in all matters we have not reached the extent in which the French people as producers and consumers excel, we are making rapid strides in the introduction and improvement of different breeds of fowls, and when poulterers shall know of the importance of a closer study of the mode of selecting, pairing, breeding, and rearing, we will have every reason to believe the interests of poultry breeding shall receive the attention it merits, and become more popular with our people.

Finally, it may be said that the more judicious way of causing poultry raising to reach that standard of importance that will arouse the lethargic and skeptical to a realization of the advantages and profits in poultry is through enterprises like the FANCIERS' JOURNAL, educating fanciers as to what are the best breeds of fowls, how to improve them, and the mode of treatment necessary to make them a success, for as certain as they exist there is profit in them, which fact will be better known and appreciated when rearers of live stock through journalistic instruction will understand how a pound of poultry flesh can be produced with far less expense, far less trouble, and far greater profits than those attendant on the production of beef or mutton.

DELANCO.

OFFICIAL LIST OF PREMIUMS

Awarded at the Third Annual Exhibition of the Massachusetts Poultry Association, held at Boston Music Hall, February 5th to 11th, 1874.

(Continued from page 135, No. 9.)

prize, H. & F. A. Bisco, Leicester, Mass.; 2d prize, J. W. Hunt, North Bridgewater. Silver-Spangled Polish.—Chicks—1st prize, W. H. Sylvester, North Bridgewater; 2d prize, Starkes Whiton, Hingham; 3d prize, J. W. Hunt, North Bridgewater; 4th prize, Starkes Whiton, Hingham. Golden Polish.—Chicks—1st prize, Jacob Graves & Co., Boston; 2d prize, Jacob Graves & Co., Boston; 3d prize, J. Henry Symonds, Boston. Golden Polish.—Fowls—1st prize, Jacob Graves & Co., Boston; 2d prize, J. W. Hunt, North Bridgewater; 3d prize, William D. Rudd, South Scituate. White-Crested White Polish.—Chicks—1st prize, H. T. Sperry, Hartford, Conn.; 2d prize, W. & E. Jennings, Newton

Lower Falls; 3d prize, W. & E. Jennings, Newton Lower Falls; 4th prize, H. F. Sperry, Hartford. White Crested White Polish.—Fowls—1st prize, H. T. Sperry, Hartford; 2d prize, H. T. Sperry, Hartford; 3d prize, H. T. Sperry, Hartford; 4th prize, W. & E. Jennings, Newton Lower Falls; special premium No. 51, best collection White-Crested White Polish, H. T. Sperry, Hartford, Conn.

CLASS VII.—GAME.

White Games.—Fowls—1st prize, M. I. Ellis, Norwood; 2d prize, M. I. Ellis, Norwood. White Games.—Chicks—1st prize, M. I. Ellis, Norwood. White Georgian Games.—Fowls—1st prize, H. S. Ball, Shrewsbury. White Georgian Games.—Chicks—1st prize, H. S. Ball, Shrewsbury; 2d prize, H. S. Ball, Shrewsbury; 3d prize, H. S. Ball, Shrewsbury. Spangled Pile Game.—Fowls—1st prize, D. B. Wallace, Lynnfield. Spangled Pile Game.—Chicks—1st prize, D. B. Wallace, Lynnfield. Dominique Games.—Fowls—1st prize, M. I. Ellis, Norwood. Ohio Brass Backs.—Chicks—1st prize, D. B. Wallace, Lynnfield. Malacca Spangled Game.—Fowls—1st prize, J. H. Brookhouse, North Cambridge. Malacca Spangled Game.—Chicks—1st prize, J. H. Brookhouse, North Cambridge. White Pile Games.—Fowls—1st prize, D. B. Wallace, Lynnfield. Silver Duck Game.—Fowls—1st prize, Damon & Marshall, Cohituate. Silver Duck Game.—Chicks—1st prize, D. B. Wallace, Lynnfield; 3d prize, A. H. Trowbridge, Boston. Tartar Games.—Chicks—1st prize, M. & E. Schwartz, Weston. Wild Indian Game.—Chicks—M. & E. Schwartz, Weston. Brown-Red Games.—Fowls—1st prize, H. S. Ball, Shrewsbury, Mass.; 2d prize, Damon & Marshall, Cohituate; 3d prize, D. B. Wallace, Lynnfield. Brown-Red Games.—Chicks—1st prize, P. W. Hudson, North Manchester, Conn.; 2d prize, D. B. Wallace, Lynnfield; 3d prize, M. & E. Schwartz, Weston, Mass.; 4th prize, J. Wyman, Abington, Mass. Yellow Duckwing Game.—Fowls—1st prize, P. W. Hudson, North Manchester, Conn.; 2d prize, D. B. Wallace, Lynnfield. Yellow Duckwing Game.—Chicks—1st prize, Damon & Marshall, Cohituate. Blue Pile Game.—Chicks—1st prize, —C. H. Pond, Attleborough, Mass. Java Games.—Chicks—1st prize, C. H. Pond, Attleborough, Mass.; 3d prize, J. H. Brookhouse, North Cambridge. Irish Muff Games.—Chicks—1st prize, D. B. Wallace, Lynnfield. Spangled Games.—Fowls—1st prize, J. Wyman, Arlington, Mass.; Earl of Derby Games.—Chicks—1st prize, D. B. Wallace, Lynnfield; 2d prize, Damon & Marshall, Cohituate; 3d prize, William E. Coffin, Boston. Blue-Red Games.—Chicks—1st prize, M. & E. Schwartz, Weston, Mass. Red Pile Games.—Chicks—1st prize, D. B. Wallace, Lynnfield; 2d prize, P. W. Hudson, North Manchester, Conn.; 3d prize, George A. Meacham, North Cambridge. Red Pile Games.—Fowls—2d prize, D. Frank Clark, Manchester, N. H.; 3d prize, George Meacham, North Cambridge. Ginger-Red Games.—Fowls—1st prize, P. W. Hudson, North Manchester, Conn.; 2d prize, D. B. Wallace, Lynnfield. Ginger-Red Games.—Chicks—1st prize, A. H. Trowbridge, Boston; 2d prize, Damon & Marshall, Cohituate. Black-Breasted Red Games.—Fowls—1st prize, Damon & Marshall, Cohituate. Black-Breasted Red Games.—Chicks—1st prize, D. B. Wallace, Lynnfield, Mass.; 2d prize, John Drown, Boston; 4th prize, J. Wyman, Abington. Black-Breasted Red Games.—Fowls—3d prize, George D. Hall, Jr., Medford. Sumatra Games.—Fowls—1st prize, D. B. Wallace, Lynnfield, Mass. Tasselled Games.—Chicks—1st prize, D. Frank Clark, Manchester, N. H. Red Dun Games.—Fowls—1st prize, D. B. Wallace, Lynnfield. Red Dun Games.—Chicks—1st prize, D. B. Wallace, Lynnfield. Clipper Games.—Fowls—1st prize, William B. Robinson, Groton, Mass. English White Games.—Fowls—1st prize, D. B. Wallace, Lynnfield; 2d prize, D. B. Wallace, Lynnfield. Black Games.—Chicks—1st prize, A. H. Trowbridge, Boston; 2d prize, A. H. Trowbridge, Boston. Ginger Muff Games.—Chicks—1st prize, D. B. Wallace, Lynnfield. Irish Gray Games.—Chicks—1st prize, D. B. Wallace, Lynnfield. Clairborn Games.—Fowls—1st prize, Damon & Marshall, Cohituate; 2d prize, W. B. Robinson, Groton, Mass.; 3d prize, D. B. Wallace, Lynnfield. Clairborn Games.—Chicks—1st prize, D. B. Wallace, Lynnfield; 2d prize, M. & E. Schwartz, Weston, Mass.; 3d prize, William B. Robinson, Groton, Mass.; special premium No. 52, best

Black-Red Game Cock, Damon & Marshall, Cochrute; special premium No. 54, best Game Cock, P. W. Hudson, North Manchester, Conn.; special premium No. 65, best pair White Pile Games, D. B. Wallace, Lynnfield; special premium No. 56, best collection Game Class, D. B. Wallace, Lynnfield, Mass.; special premium No. 57, best collection White Georgian Games, H. S. Ball, Shrewsbury, Mass. Red Pile Game Bantams.—Chicks—1st prize, H. S. Ball, Shrewsbury; 2d prize, A. H. Parker, Worcester; 3d prize, W. & E. Jennings, Newton Lower Falls. Red Pile Game Bantams.—Fowls—1st prize, W. B. Atkinson. Black-Red Game Bantams.—Fowls—1st prize, W. & E. Jennings, Newton Lower Falls; 2d prize, W. & E. Jennings, Newton Lower Falls; 3d prize, Daniel Kelly, Savin Hill, Boston. Black-Red Game Bantams.—Chicks—1st prize, T. O. Wardwell, North Andover; 2d prize, W. B. Atkinson; 3d prize, E. C. Spofford, Peabody; 4th prize, W. & E. Jennings, Newton Lower Falls. Irish Gray Game Bantams.—Chicks—1st prize, W. B. Atkinson; 2d prize, W. & E. Jennings, Newton Lower Falls. Derby Game Bantams.—Chicks—1st prize, W. & E. Jennings, Newton Lower Falls. Brown-Red Game Bantams.—Chicks—1st prize, William B. Atkinson, Newburyport. Spangled Game Bantams.—Fowls—1st prize, H. S. Ball, Shrewsbury. Silver Duckwing Game Bantams.—Fowls—1st prize, W. B. Atkinson, Newburyport; 2d prize, A. H. Rogers, Worcester; 3d prize, W. B. Atkinson, Newburyport. Silver Duckwing Game Bantams.—Chicks—1st prize, W. & E. Jennings, Newton Lower Falls; 2d prize, W. & E. Jennings, Newton Lower Falls; 3d prize, W. B. Atkinson, Newburyport. Golden Duckwing Game Bantams.—Fowls—1st prize, W. & E. Jennings, Newton Lower Falls; 2d prize, W. B. Atkinson, Newburyport. Golden Duckwing Game Bantams.—Chicks—1st prize, W. B. Atkinson, Newburyport; 2d prize, A. H. Rogers, Newburyport; 3d prize, C. A. Johnson, Newburyport; 4th prize, C. A. Johnson, Newburyport.

CLASS VIII.—GAME BANTAM.

Golden Sebright Bantams —Fowls—1st prize, George F. Seavy; 2d prize, P. N. Sprague, Hingham Centre; 3d prize, George F. Cowell, Wrentham, Mass. Golden Sebright Bantams.—Chicks—1st prize, W. H. Brackett, Boston; 2d prize, W. H. Brackett, Boston; 3d prize, W. H. Brackett, Boston; 4th prize, George F. Seavey, Cambridgeport. White Rose Comb Bantams.—Fowls—1st prize, W. B. Atkinson, Newburyport. Japan Bantams.—Fowls—1st prize, W. B. Atkinson, Newburyport; 2d prize, W. B. Atkinson, Newburyport; 4th prize, W. B. Atkinson, Newburyport. Silver Sebright Bantams.—Fowls—1st prize, T. O. Wardwell, North Andover; 2d prize, W. B. Atkinson, Newburyport; 3d prize, W. B. Atkinson, Newburyport; 4th prize, George F. Seavey, Cambridgeport. Silver Sebright Bantams.—Chicks—1st prize, T. O. Wardwell, North Andover; 2d prize, George F. Seavey, Cambridgeport; 3d prize, T. O. Wardwell, North Andover; 4th prize, W. B. Atkinson, Newburyport. Black African Bantams.—Fowls—1st prize, E. H. Hero, Milford, Mass.; 2d prize, W. B. Atkinson, Newburyport; 3d prize, W. B. Atkinson, Newburyport. Black African Bantams.—Chicks—1st prize, John Baker, Holliston; 2d prize, Arthur A. Parker, Worcester; 3d prize, W. B. Atkinson, Newburyport; 4th prize, W. B. Atkinson, Newburyport.

CLASS IX.—BANTAM.

[Other than Game.]

Special premium No. 69, best collection Bantams, other than game, W. B. Atkinson, Newburyport; special premium No. 70, best three trios Gold Sebright Bantam Chickens, W. H. Brackett, Boston; special premium No. 71, best collection Silver Sebright Bantams, T. O. Wardwell, North Andover; special premium No. 72, best Golden Sebright Bantam Cockerel, W. H. Brackett, Boston; special premium No. 73, best Golden Sebright Bantam Pullet, W. H. Brackett, Boston; special premium No. 74, best trio Cochin Bantams, W. B. Atkinson, Newburyport; special premium No. 75, best trio Black Rose Comb Bantams, John Baker, Holliston; special premium No. 76, best Japan Ban-

tam Cock, W. B. Atkinson, Newburyport; special premium, No. 62, best collection Black-Red Game Bantams, W. & E. Jennings, Newton Lower Falls; special premium No. 63, best Yellow Duckwing Game Bantam Cock, W. & E. Jennings, Newton Lower Falls; special premium No. 64, best Yellow Duckwing Game Bantam Hen, W. & E. Jennings, Newton Lower Falls; special premium No. 65, best Silver Duckwing Game Bantam Cock, W. B. Atkinson, Newburyport; special premium No. 66, best Silver Duckwing Game Bantam Hen, W. B. Atkinson, Newburyport; special premium No. 67, best trio Pile Game Bantams, H. S. Ball, Shrewsbury; special premium No. 68, best trio Spangled Game Bantams, H. S. Ball, Shrewsbury; special premium No. 60, best and most varied general collection of Bantams, W. B. Atkinson, Newburyport; special premium No. 61, for the largest and best collection of Game Bantams, W. B. Atkinson, Newburyport; special premium No. 62, best collection Black-Red Game Bantams, W. & E. Jennings, Newton Lower Falls.

CLASS X.—MISCELLANEOUS.

Dominiques.—Fowls—1st prize, M. I. Ellis, Norwood; 2d prize, M. I. Ellis, Norwood; 3d prize, M. I. Ellis, Norwood; 4th prize, M. I. Ellis, Norwood. Dominiques.—Chicks—1st prize, M. I. Ellis, Norwood; 2d prize, M. I. Ellis, Norwood; 3d prize, M. I. Ellis, Norwood; 4th prize, M. I. Ellis, Norwood. Negro Silkies.—Chicks—1st prize, E. B. Reynolds, Boston; 2d prize, John S. Ives, Salem; 3d prize, E. B. Reynolds, Boston; 4th prize, E. B. Reynolds, Boston. India Silkies—2d prize, E. B. Reynolds, Boston. Brown Silkies—1st prize E. B. Reynolds, Boston. Special premium No. 45, best trio Dominiques, M. I. Ellis, Norwood. Special premium No. 77, best collection Plymouth Rocks, A. H. Drake, Stoughton, Mass.; special premium No. 78, best Sultan Cock, J. W. Hunt, North Bridgewater; special premium No. 79, best collection Silkies, E. B. Reynolds, Boston. Sultans.—Fowls—1st prize, J. W. Hunt, North Bridgewater. Sultans.—Chicks—1st prize, Benjamin White, Pawtucket, R. I.; 2d prize, Benjamin White, Pawtucket, R. I. Frizzles.—Chicks—1st prize, A. H. Rogers, Worcester. Sicilians—1st prize, F. J. Skinner, Wakefield. Plymouth Rocks—Fowls—1st prize, A. H. Drake, Stoughton; 2d prize, E. R. Hayward, Easton; 3d prize, A. H. Drake, Stoughton; 4th prize, E. R. Hayward, Easton. Plymouth Rocks.—Chicks—1st prize, L. E. Gray, Foxborough; 2d prize, E. R. Hayward, Easton; 3d prize, A. H. Drake, Stoughton; 4th prize, A. H. Drake, Stoughton.

CLASS XI.—TURKEY.

Special premium No. 84, best pair Bronze Turkeys, George Van Deever, Port Jackson, N. Y. Bronze Turkeys—1st prize, George Van Deever, Port Jackson, N. Y.; 2d prize, E. R. Hayward, Easton; 3d prize, C. W. Bailey, Lynn. Buff Turkeys—1st prize, William B. and William A. Atwell, Lynn. California Turkeys—1st prize, M. A. Elliot, Grosvenordale, Conn.

CLASS XII.—ORNAMENTAL.

Silver Pheasants—1st prize, John Preston, Boston. Pea Fowls—1st prize, George R. Herrick, Bedford, Mass. Golden Pheasants—1st prize, A. D. Warren, Worcester.

AQUATIC DIVISION.

CLASS XIII.—GOOSE.

Embsen Geese—1st prize, C. A. Johnson, Newburyport; 2d prize, C. L. Parker, Winchester, Mass.; 3d prize, C. A. Johnson, Newburyport. Wild Geese—1st prize, C. L. Parker, Winchester, Mass. Gray China Geese—1st prize, C. L. Parker, Winchester, Mass.; 2d prize, Walter F. Cook, Milton, Mass. Poland Geese—1st prize, Marcus A. Elliot, Grosvenordale, Ct. White China Geese—1st prize, C. L. Parker, Winchester, Mass. Egyptian Geese—1st prize, E. S. Ralph, Buffalo, N. Y.; 2d prize, E. S. Ralph, Buffalo, N. Y.; special premium No. 88, best pair Embsen Geese, C. A. Johnson, Newburyport; special premium No. 89, best pair Embsen Geese, C. A. Johnson, Newburyport.

CLASS XIV.—DUCK.

White Muscovy Ducks—1st prize, William P. Miller, Milford, Ct.; 2d prize, George Perkins, East Woburn; 3d prize, Francis Homes, Easton, Mass.; 4th prize, George Per-

kins, East Woburn. Colored Muscovy Ducks—1st prize William P. Miller, Milford. Cayuga Ducks—1st prize, P. W. Hudson, North Manchester, Ct.; 2d prize, M. I. Ellis, Norwood, Mass.; 3d prize, M. I. Ellis, Norwood, Mass.; 4th prize, B. B. Covell, New Bedford. White-Crested Ducks—1st prize, J. W. Hunt, North Bridgewater; 2d prize, W. P. Miller, Milford, Mass. Rouen Ducks—1st prize, C. A. Johnson, Newburyport, Mass.; 2d prize, P. W. Hudson, North Manchester, Ct.; 3d prize, C. L. Parker, Winchester, Mass.; 4th prize, M. I. Ellis, Norwood. Aylesbury Ducks—1st prize, P. W. Hudson, North Manchester, Ct.; 2d prize, C. A. Johnson, Newburyport, Mass.; 3d prize, M. I. Ellis, Norwood; 4th prize, Calvin L. Parker, Winchester; special premium No. 91, best pair Rouen Ducks, C. A. Johnson, Newburyport; special premium No. 92, best pair Cayuga Ducks, P. W. Hudson, North Manchester, Ct.

(To be Continued.)

THE OLDEST HORSE DEAD.

"KATE" is dead. We suspect she was the oldest piece of horse flesh in this country. She was owned during the past twenty-seven years by Edwin W. Tiffany, Esq., President of the First National Bank, of this city, and she died on Sunday, the 8th inst., aged *thirty-eight years and nine months*. She was of the Morgan family of horses, was foaled in May, 1835, and Mr. S. D. Goodwin was her owner. The late Daniel Camp purchased her when she was in her youth, and Mr. Camp claimed that she could take a buggy and driver from Hartford to New Haven and back in less time than any other horse could travel the same distance. Kate had great endurance; and she was as gentle as a lamb, and as intelligent almost as a human. Mr. Tiffany became attached to her, as he knew his family were safe when Kate was in the harness. He treated her with great kindness, which prolonged her life, probably. Kate has done good service till within two years, and has eaten hay even till within a month past. But finally she yielded to the scythe of Time: the oldest horse known to "horse men." Indeed, at our State fairs, for ten years past, Kate was looked upon as a very old and sprightly marvel of a horse. She will be kindly interred in her old pasture, where the white clover grows, and in the summer time the beautiful white daisies will bow their heads in respect to the oldest and the best of the "noble" race.—*Hartford Times*.

THE BISON.

INDISCRIMINATE SLAUGHTER OF BUFFALOES ON THE PLAINS—THE ANIMALS NEARLY ALL GONE—VALUE OF HIDES DETERIORATING—HUNTERS ON THE PLAINS—COLD WEATHER.

THE buffaloes of the plains have met their fate. Encroaching civilization has sealed their doom; and the inordinate greed of man has swept them from the face of the earth. Where years ago the mammoth herds of Bison roamed the plains, and were hunted by the Indians as necessity demanded, now lie the bleaching bones of millions of these noble animals, sacrificed simply for their hides. For the past two years the work of destruction and annihilation has gone forward, and to day there are not enough buffaloes to form what was at one time considered a moderate-sized herd. Millions of these animals ranged the plains, their natural home, feeding upon the rich grasses. To day there are not enough to graze on a quarter section of land and eat the feed bare. Hunting parties are to be met with all over the plains in the vicinity of the Republican, and also in the southern portion of the Territory, who slaughter indiscriminately every herd upon which they come. The

traveler over the Kansas Pacific Road may see cords of white bones piled up at various stations in the buffalo country, awaiting transportation East, where they enter into a thousand and one articles of commerce and trade. Besides the bones there are thousands of hides, rough-dried, ready to be sent to the commercial marts of the East, where they are tanned and placed upon the markets. These bones and hides are the fruits of the huntsman's labors, in killing the noble game of the plains. The meat from the carcasses of the slain buffaloes is seldom used, although in a few instances it is cut and shipped to Eastern packers, where it is disposed of as mess beef at largely enhanced prices.

We yesterday met Mr. John A. Lessig, brother to Gen. Lessig, the Surveyor-General, who has been out on the plains several months, running correction lines and townshipping the eastern portion of the Territory. He informs us that the destruction of buffalo is almost incredible. During the perambulations of this party they had an opportunity of forming opinions as to the slaughter of the bison on the plains. On the south fork of the Republican they came upon one spot where were counted 6,500 carcasses of buffalo from which the hides only had been stripped. The meat was not touched, and was left to rot on the plains. Only a short distance on hundreds more of carcasses were discovered, and, in fact, the plains were literally dotted with putrifying buffalo carcasses. On the Rickarce River, which lies between the two forks of the Republican, the camps of buffalo hunters were of frequent occurrence. Mr. Lessig estimates that there are at least 2,000 hunters in camp along there, waiting for the buffalo. He came across one party of sixteen who stated that they had killed 28,000 buffaloes during the past summer, only the hides of which were utilized. If sixteen hunters can kill this many animals, how great must be the slaughter upon the broad expanse of the bison range? Evidently millions of the animals must have been killed during the past summer alone. Mr. Lessig says there are no buffaloes to be seen on the plains, except dead ones, and that, hunt as much as they may, the sportsmen can not at present find any game.

The value of the hides has deteriorated considerably, owing to the great increase of the articles in the market. Heretofore they were worth \$3 delivered at the railway stations, while now a distinction is made as to size and paid for accordingly. The hides of bulls bring but \$1, those of cows 60 cents, and calves 40 cents. At these rates even the hunters say it pays very well. But even at these low rates the hunters will have to scratch to make their grub, for Mr. Lessig says the buffalo are nowhere to be found. They say they are waiting for the buffaloes, but they will have to wait a long time. There are but few to breed from, and even if the animals are not completely annihilated, it will be many years before they regain even a tithe of their numbers of the past two years, before the indiscriminate slaughter began.

Mr. Lessig had fourteen men in his surveying party. About the 27th of November the cold weather began, and the snow fell to a great depth. The ravines were all drifted full, and on the level snow was quite deep. Being in a timberless country, the party depended upon buffalo chips for fuel, but the snow coming on, recourse to this article was cut off, and they had to think of returning. One night the weather was so cold that a barrel full of water froze solid. The party left the Republican about the 10th of December, and reached Eel Trail on Friday night, from which point they came to Denver by rail.—*Denver News*.

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

FANCIERS' JOURNAL AND POULTRY EXCHANGE,

JOSEPH M. WADE, Editor and Proprietor.

SHERMAN & CO., PRINTERS, PHILADELPHIA.

NATIONAL COLUMBIAN SOCIETY.

THE first exhibition of this Society opened at Republican Hall, Twenty-third and Broadway, N. Y., on the 24th of February, 1874. The display was exceedingly fine—probably the finest ever held on this side of the Atlantic—and the management all that could be asked; but the attendance during our stay was very poor, and we fear that, financially, the exhibition was a failure. The cages were uniform throughout, of good size, and made wholly of wire, and arranged two deep. They are made to be easily folded, and occupy little room, until a future exhibition, when we hope the fanciers of New York and vicinity will turn out in larger force than they did at this exhibition.

The show consisted of near 325 entries, about half of which were only entered for exhibition, which will account for the prize list not showing all the varieties exhibited. Mr. J. E. Spence, of Broughty Ferry, Scotland, sent over five pairs of White Fantails, some of which were very fine; also one pair of White Ruffs or Jacobins, and one pair of Blue Pied Pouters, which were quite good, but there were others on exhibition that excelled them, even had they arrived in time, although it must be taken into consideration that a first-class Pouter stands the voyage worse than any other pigeon. Mr. J. W. Ludlow, of Birmingham, England, also sent over one Yellow Pied Pouter Hen, *very fine*, but looking much worse for the voyage; also one pair of Red Pigmy Pouters, four pairs of Antwerps, and one pair of German Bronze Wings; these were the first pair we ever saw of this variety, and although a novelty, were not very attractive birds. These two noted fanciers deserve much credit for sending their birds such a distance; but we would suggest that if they send birds another year, and especially Pouters, they should be sent weeks before the show opens, for it takes them some time to recover from the voyage across the Atlantic; and the finer the bird the more difficult the passage.

Mr. Wm. Simpson, Jr., had much to do with the management of this show, and he deserves the thanks of every fancier in the land for the energy and perseverance displayed by him during the show, and since the organization of the Society.

This young Society has been at much expense for cages, printing, &c., and we would suggest (especially if our fears are realized, that the exhibition has financially been a failure) that every pigeon fancier in the land at once send on \$3.00, with \$2.00 annual dues, and become a member at once, and strengthen the Society, so that its managers can be preparing for the second annual show, which we hope will be equal to the first in show of birds, and much more successful financially.

Award of Prizes, February 25th, 1874.

Pouters.—Best Yellow Pied Hen—H. Colell's \$50 special, to John Yewdall, Philadelphia, Pa. Best pair Yellow Pied—W. H. Churchman's, \$10; special to A. Scheld, No. 60 Montrose Avenue, Brooklyn, E. D. Best Red Pied Cock—Lady Friend's, \$25; special, to A. Scheld. Best pair of each color—H. Colell's silver medal special, as follows: For Yellow Pied, A. Scheld; Red Pied, H. Colell; Blue Pied, J. Yewdall; Black Pied, H. Colell; Black Pied, 2d, A. Scheld; White, J. Yewdall. **Society Prizes.**—Yellow Pied Cock—1st, A. Scheld; 2d, H. Colell. Yellow Pied Hen—1st, J. Yewdall; 2d, A. Scheld; h. c., J. Yewdall. Red Pied Cock—1st, H. Colell; 2d, J. Yewdall; h. c., P. Schuchman, N. Y. City. Red Pied Hen—1st, A. Scheld. Blue Pied Cock—1st, J. Yewdall; 2d, A. Scheld; v. h. c., H. Colell. Blue Pied Hen—1st, A. Scheld; 2d, J. Yewdall; h. c., J. Yewdall; com., H. Colell. Black Pied Cock—1st, H. Colell; 2d, A. Scheld. Black Pied Hen—1st, H. Colell; 2d, A. Scheld. White Cock—1st, J. Yewdall; 2d, A. Scheld. White Hen—1st, J. Yewdall; 2d, A. Scheld. Mealy Cock—1st, H. Colell. **Carriers.**—Best Black Cock of 1872—J. Rogers, \$10; special to P. C. Biegel. Best Black Cock of 1873—D. E. Newell's \$10 special, to J. Yewdall. Best Dun Cock of 1873—F. Smith's \$10 special, to P. C. Biegel. **Society's Prizes.**—Black Cocks—1st, P. C. Biegel; 2d, J. Yewdall; v. h. c., H. Colell; h. c., J. Yewdall; c., P. C. Biegel. Black Hens—1st and 2d, J. Yewdall; h. c., P. C. Biegel. Blue Cocks—1st and 2d, P. Schuchman. Blue Hens—1st, P. Schuchman. Colell. **Fantails.**—Black—1st, H. Colell. White—T. M. Rodman, New York City. **Priests.**—Yellow—1st, T. S. Gaddess. Red—1st, T. S. Gaddess. Ruffed Moorhead—Special prize, H. Colell. **Turbits.**—Yellow Winged—R. Liebig, Hoboken, N. Y. Red Winged—T. S. Gaddess. Yellow, with white tails—1st, Lewis Schaffer. **African Owls.**—White—1st, J. Yewdall. **Jacobins.**—Yellow—1st, L. Schaeffer; 2d, A. Scheld. **Bald Heads.**—Yellow, Red, Blue, Silver, Black—H. A. Brown, New York City, takes 1st on each. **Beards.**—Blue—1st, A. Scheld. **Swallows.**—Yellow—1st, T. S. Gaddess; 2d, H. Colell.

Red—1st, T. S. Gaddess. Blue (barless)—1st, T. S. Gaddess. Black—1st, T. S. Gaddess. *Nuns*.—Yellow—1st, H. Colell. *Spots*.—Yellow—1st, H. Colell. *Magpies*.—Yellow—1st, T. S. Gaddess; 2d, H. Colell. Black—T. S. Gaddess. *Antwerps (short faced)*.—Silver Dun—1st, P. C. Biegel. *Antwerps*.—Silver Dun—1st, P. C. Biegel. *Archangels*.—1st, L. Schaeffer.

(For Fanciers' Journal.)

FALSE REPRESENTATION OF STOCK.

ONE of the dangers in purchasing fancy stock is that one has to rely upon the representations made by the dealer. Should he be a man of character or have a reputation to preserve there is little risk to run. But now and then those who represent their stock most highly are irresponsible, and impose not only upon the public, but also upon the publishers of the journals in whose columns they advertise.

As a general rule is it too much to say that the man who advertises as having the only pure blood stock in the country when others are breeding just as good, but of a different strain, is a humbug? I must say here that I am afraid to buy from such a dealer, because he assumes too much. There is too much *I* in it. I make no allusion here to the man who breeds the only white ear-lobe strain of Brown Leghorns, nor any one else in particular. The application of the principle is meant to be general.

But it is fair to say, too, that there are two sides to this question, and that while many do not get the stock they expect or hope for, they get from reliable dealers all they should expect for the money. The beginner wants perfect fowls at moderate or even low prices. Now, that is just what the best fancier or breeder in the country wants, but never gets at any price. Perfection for the present is beyond all price. The article, in fact, is not in the market. The beginner always wants fowls up to the standard, not knowing that fowls of that kind are not for sale. In fact, they are not yet hatched. We are all doing our best to produce them, but thus far none of us has succeeded.

I have sometimes thought that it would be well to have a list prepared, and placed in the hands of some person within the reach of all, in which is recorded the name of every one who has been found perpetrating frauds upon his customers. Now that we have a National Association, perhaps the Corresponding Secretary of that body would be the proper depository. Let him be entitled to a small fee, say ten cents, or any amount sufficient to pay him for his services in answering a correspondent as to the reliability of a dealer. All the reply he need give is that the dealer's name is or is not among the list of unreliaables.

Of course no name should be entered upon this list except upon the clearest evidence of fraud. A man who, as your correspondent H. C. says, sends a scrawny gobbler for a twenty-pound hen, cannot mean anything else than fraud, and should be marked. Evidence will not be slow in forthcoming to prove the guilt of the guilty. There are plenty of victims, and I want to say, with your other correspondents on this topic, I am one of them.

LOCK HAVEN, PA.

(For Fanciers' Journal.)

FEEDING TURKEYS.

LAST October we purchased a pair of the celebrated Bronze Turkeys of W. Clift, Mystic Bridge, Conn. At that time the cock weighed ten pounds, the hen a little over six. They

made friends with what chickens were not shut up, seemed happy and contented, and gained well during the first two months; since then, the weather having been cold, they have been kept in the barn, most of the time alone. Having but little appetite they have not gained well, the cock weighing, February 10th, twenty-one pounds, the hen ten. They have been fed according to the best of our knowledge. They do not like dough of any kind; as it is recommended by all pretending to know how to take care of turkeys to feed them a hot dough, made of mashed potatoes and meal mixed with milk we have tried to learn them to eat it these cold mornings, but they prefer dry corn. Does any one recommend meat scraps of any kind for turkeys? We have on recollection of seeing anything about it in our poultry reading. Will some one well posted tell us what will give them an appetite, and whether they should have meat scraps; if so, what? Perhaps we have kept them shut up too much; do they need out-door exercise and air in all kinds of weather, however cold, snowy, or rough? Are they lonesome? Will some one please give us some information through the columns of this paper, and oblige,

PREMIUM.

EDITOR FANCIERS' JOURNAL.

I will give to the first person furnishing six subscribers for the Journal, with payment in advance, on or before the first of April, a sitting of thirteen eggs from my two prize hens, Nora and Daisy, mated with the cock Wright, 2d. This trio took first premium at the Bucks County Exhibition.

Yours, &c., W. E. FLOWERS.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: Not being used to a weekly journal devoted to the interests of the fanciers, I am doubly pleased with the welcome visits of the "*Fanciers' Journal*." I must admit that my opinions coincide with that of the "*Rural Home*" when stating that a weekly sheet would not pay, yet I am now of the opinion that it will pay, and my decision is forced upon me by the contents of each number. My wonder is that you can succeed in placing so much valuable reading matter before your subscribers four times per month. When, however, I consider the growing interest in the subject, and the numbers and standing of those who are engaged in the work, it is plain that the amount of intellect is equal to the demand. I am glad to notice that the articles are selected for the general benefit of those interested, instead of being filled up with communications from those who wish to "grind axes on your grindstone," as the farmers very appropriately term it.

One word regarding Mr. Tatnall's article on ear-lobes. The standard allows "white or creamy white" ear-lobes. My experience with White Leghorns teaches me that this is correct. I am confident that the creamy ear-lobe is more in keeping with their yellow skins and legs than the white, but I would not disqualify a coop where the cock had creamy and the hens white, because the ear-lobes of the hens are seldom if ever creamy, but white. I think the point too small for disqualifications.

J. Y. BICKNELL.

CLAIRBORNE GAME FOWL.

THIS is a black-breasted red. In courage, bravery, and style they have no superiors. From head to tail and foot they show every faculty that is requisite for thoroughbred game. They may be killed, but not whipped. They never run away. The cock has a small, round head, brilliant, fiery eyes; neck full, well hackled; breast black, broad, and full; tail full, wide, and sickled; wings broad, full, long, hanging low on the shanks; legs, beak, and claws clear yellow, and will breed true to color. Dr. Cooper says that they will carry a three or a three and a half inch gaffle with as much ease and sprightliness as an ordinary game cock a pound or a pound and a half their superiors in weight.

The hens are deep buff or dark red. I am now, and for five years have been breeding them expressly for the pit. Have never known one of them to fail in battle for want of courage. Have often tested them at eight months old. They have invariably met their death without flinching. Weight of cock, from four and a half to six pounds; although I have raised one that weighed seven pounds. He won three shake-bag matches. For beauty, the Clairbornes are superior to all other game fowls.

S. L. CUMMINGS.

Items Interesting and Amusing.

FOXES are plenty among the hills of Long Island.

WILD CATS are plenty in the Catskill mountains this winter.

THIRTY foxes were shot in Camden county, N. J., last month.

THIRTY-FIVE foxes have been killed at East Falmouth, Mass., this winter.

OTTERS are plentiful in Buena Vista County, and their skins are worth \$10 each.

SIX MEN shot seventy-four rabbits one day last week in a single corn-field out west.

IN Dauphin county, Pa., six miles from the Schuylkill boundary, fifty-four deer have been shot this season.

AN OLD-FASHIONED DEER HUNT took place at Lower Blue Lick Springs, Ky., on the 7th day of February.

MORE than one hundred deer were killed in St. Clair township, Westmoreland county, Pa., during the month of December.

A. A. MILLER, Oakdale, Alleghany Co., Pa., has just shipped to Maysville, California, one pair of Bronze Turkeys—Fine Birds.

A SIOUX CITY hotel has a black and tan dog that killed a thousand rats in a month. This is a good puff for the dog, but is hard on the hotel.

A BILL is before the Ohio Legislature, which, if passed, will prohibit hunters from shooting any kind of wild game upon any other man's land.

STEPS are being taken by some Little Falls, N. Y., citizens to provide for stocking the Mohawk with fish, and to prevent the use of seines in the river.

A DROMEDARY, perfectly white in color, has just been received at the Jardin des Plants. This description of animal is even rarer than the white elephant.

A CARRIER PIGEON arrived in Bridgeport, Conn., recently, which was sent up from the deck of a steamer bound for Florida. It was seven hours making the flight from Cape Hatteras.—*Exchange*. (We don't believe it.)

LOS ANGELOS County, Cal., owes for gopher and squirrel scalps the sum of \$10,364, and yet the varmints are as thick as ever; 206,287 have been captured and scalped.

THE Duke of Southerland owns a three year old ox which weighs 2,500 pounds, and measurers in girt nine feet one inch. It was recently on exhibition in Inverness, Scotland, and attracted great crowds.

THE STRINGENCY of the egg market is painful. There is a large falling off in deposits of late; many of the hens have entirely suspended, while others are holding to their reserves. It is thought, however, that nearly all will be able to resume in the spring.

IT is a difficult matter to write about the hen without doing so with great her-nest. A Herkimer County farmer who has quite an extensive hennery, took especial care to ascertain what worth there really was in a certain number of hens. January 1, 1873, he selected thirty-six hens, consisting of different breeds, and kept an account of the harvest they would yield. January 1, 1874, he found that the thirty-six hens had furnished him with 4,004 eggs, and in addition to this he raised forty-seven hens, which are now at work.

A CITIZEN of Groveland, Mass., a few days since, made a trip to Haverhill in a sleigh. Arriving at the city, he proceeded to hitch his horse to a post. As he was about leaving to attend to business, one of his hens came out from under the sleigh seat, where she had stolen a nest, and started somewhat briskly round town on a tour of observation. The farmer gave chase, but biddy was too spry, and the proprietor concluded that that piece of property had "taken wings and flown away." Returning to the sleigh after an hour's absence, he was surprised to find the hen quietly sitting on her nest of eggs under the seat, she having returned and found the sleigh.

DOYLESTOWN POULTRY SHOW.

List of Premiums.

(Continued from page 138, No. 9.)

The following is a report of the awards of premiums made by the committees:

No. 1, Light Brahmas, 7 entries; 1st premium, W. E. Flowers, Shomakertown; 2d, W. A. Henry, Philadelphia; 3d, Eli Fell, Buckingham. No. 2, Dark Brahmas, 13 entries; 1st prem., W. A. Henry; 2d and 3d, T. S. Cooper, Coopersburg. No. 3, Buff Cochins, 8 entries; 1st to W. A. Henry; other specimens not worthy of premiums. No. 4, Partridge Cochins, 11 entries; 1st and 2d to T. S. Cooper; 3d, W. A. Henry. No. 6, White Cochins, 1 entry; 2d pr. to B. F. Lewis, Gwynedd; No. 7, Gray Dorkings, 1 entry; 2d pr. to B. F. Lewis. No. 11, Dominiques, 4 entries; 1st, W. A. Henry; 2d, Theo. P. Harvey, Doylestown. No. 12, Plymouth Rocks, 1st, A. N. Raub, Lock Haven; 2d, Edwin Johnson, Dolington; 3d, Dr. A. M. Dickie, Doylestown. No. 12, Mexican Fowls, honorable mention to Reuben Keller, Buckingham. No. 12, Jersey Blues, special to W. A. Henry. No. 13, Gold-Spangled Hamburgs, 3 entries; 1st to Charles Selser, Doylestown; 2d, W. T. Eisenhart, do.; 3d, Benjamin Connard, New Britain. No. 16, Silver-Pencilled Hamburgs, 5 entries; 1st, 2d, and 3d to W. T. Rogers, Doylestown. No. 14, Silver-Spangled Hamburgs, 4 entries; 1st to W. A. Henry; 2d, Charles Selser. No. 17, Black Hamburgs, 2 entries; 1st to Rogers & Dickie; 2d, Charles

Selser. No. 19, Black Spanish, 3 entries; 1st to B. Conard; 2d, B. F. Lewis; 3d, W. T. Eisenhart. No. 21, White Leghorns, 20 entries; 1st, T. P. Harvey; 2d, Amos Stone, Doylestown; 3d, Howard Hogeland, Doylestown. No. 22, Brown Leghorns, 7 entries; 1st, A. N. Raub; 2d and 3d, Thomas H. Walton, Doylestown. No. 23, Black Leghorns, 1 entry; G. W. Swartz, Doylestown. No. 24, Dominique Leghorns, 5 entries; 1st and 2d, Charles Selser; 3d, E. F. Taylor, Doylestown. No. 26, White Polish, 2 entries; 1st, E. F. Taylor; 2d, W. T. Eisenhart. No. 27, Gold-Spangled Polish, 1 entry, not worthy; No. 28, Silver Spangled Polish, 1 entry; special to W. A. Henry. No. 30, Frizzled, 1 entry, special to B. F. Lewis. No. 31, Black Breasted Red Games, 10 entries; 1st to W. T. Eisenhart; 2d and 3d, Isaac Dudbridge, Bridge Valley. No. 32, Brown Red Games, 2 entries; 1st, B. F. Lewis; 2d, George Wolf, Doylestown. No. 34, Duck Wing Games, 1 entry, no premium. No. 38, Irish Gray Games, 4 entries; 1st, David F. White; B. F. Lewis, special premium. No. 40—Earl Derby Game, 1 entry; no premium. No. 41—Creve Cœurs, 1 entry; 1st, Francis Bartleman, Gardenville. No. 42—Houdans, 3 entries; 1st, B. F. Lewis. No. 44—Japan Silkies, 2 entries; 1st and 2d, W. T. Rogers. No. 47—Golden Sebright Bantams, 4 entries; 1st, M. E. Trego, Doylestown; 2d, B. F. Lewis; 3d, Thomas Webster. No. 49—Black Red Game Bantams, 2 entries; 1st, T. H. Walton; B. F. Lewis, special. No. 50—Duck Wing Game Bantams, 3 entries; 1st, W. T. Rogers; 2d, T. S. Cooper, Coopersburg; 3d, W. T. Rogers. No. 51—Black African Bantams, 1 entry; B. F. Lewis. No. 52—White Bantams, 2 entries; 1st, B. F. Lewis; 2d, T. H. Walton. No. 54—Japan Bantams, 1 entry; 1st, Thomas Webster. No. 59—Grades and Crosses—12 entries; 1st, Benjamin Conard; 2d, D. W. McNair, Buckingham; 3d, Charles Selser. No. 60—Capons, 3 entries; 1st and 2d, Henry Somers, Quakertown. No. 61—Dark Bronze Turkeys, 4 entries; 1st, B. F. Lewis; 2d, Edward Rorer, Doylestown. No. 63, White Holland Turkeys, 1 entry, B. F. Lewis. No. 65, Largest Turkey, 4 entries; B. F. Lewis—41 lbs. No. 67, Aylesbury Ducks, 1 entry, B. F. Lewis. No. 68, Rouen Ducks, 4 entries; 1st, B. F. Lewis; 2d, F. Musselman, Quakertown. No. 70, Muscovy Ducks, 2 entries; 1st, Isaac Dudbridge; 2d, Theodore Hopkins, Bridge Valley. No. 72, Common Ducks, 2 entries; 1st, T. Hopkins; 2d, Levi Berger, Doylestown. No. 76, Bremen Geese, 1 entry, B. F. Lewis. No. 77, Hong Kong Geese, 1 entry, B. F. Lewis. No. 78, Common Geese, 1 entry, D. W. McNair, Buckingham. No. 81, Pea-Fowls, special to W. A. Henry. No. 83, Guinea Fowls, 2 entries, B. F. Lewis. No. 88, Partridges, special to W. T. Rogers. Himalayan Rabbits, 1 entry, John Thompson, Shoemakertown. No. 89, Madagascar Rabbits, 3 entries; 1st, B. F. Lewis; 2d, T. H. Walton; John Thompson, special, Madagascar Buck. No. 90—Angora Rabbits, 1st, T. H. Walton; 2d, B. F. Lewis. No. 91—English Rabbits, 4 entries; 1st, B. F. Lewis; 2d, O. McKinstry, Danboro. No. 92, Guinea Pigs, 6 entries; 1st, George Wolf; 2d, B. F. Lewis. No. 111—Canary Birds, 6 entries; 1st and 2d, W. Shade, Doylestown. No. 112—Squirrels, 1 entry; special, W. T. Rogers. No. 113—Bees, 1 entry; 1st, H. M. Twining. No. 114½—Maltese Cats, 2 entries; 1st, B. F. Lewis; 2d, E. F. Taylor. No. 122—Best Dressed Turkey, 6 entries; 1st and 2d, William Corson. No. 93—Carrier Pigeons, 6 entries; 1st, red, W. T. Rogers; 1st, black, W. T. Rogers; 1st, blue, W. A. Henry; 2d, black, B. F. Lewis; 3d, black, W. T. Rogers; 3d, white, Isaac Dudbridge. No. 94—Pouters, 5 entries; blue pied, 1st and 2d, W. T. Rogers; blue pied, 3d, William Frankenfield; yellow, 3d, B. F. Lewis. No. 95—Tumblers, 10 entries; 1st, yellow, A. N. Raub; 1st, blue bald head, W. A. Henry; 2d, inside, T. H. Walton; 2d, yellow, B. F. Lewis, 3d, inside, W. T. Rogers; 3d, black, William Frankenfield; 1st, black bald heads, Willie Widdifield. No. 96—Barbs, 1st, black, Barton Darlington; 1st, yellow, W. A. Henry; 1st, white, W. A. Henry; 2d, red, W. T. Rogers; 2d, black, W. T. Rogers; 3d, white, W. T. Rogers. No. 97—Jacobins, 5 entries; 1st, white, W. T. Rogers; 1st, yellow, B. F. Lewis; 2d, white, A. N. Raub; 3d, B. F. Lewis. Lewis. No. 110—Duchies, 2 entries; 1st, white, B. F. Lewis; 3d, mottled, Isaac Dudbridge.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

GAME FOWLS.—A few pairs of Black B. Reds and Dusty Miller Games will be exchanged for Earl of Derby Games, or Brown Leghorns. Address G. W. WARNE & CO., 1305 Chestnut St., St. Louis, Mo.

CURRENT ROOTS OR CUTTINGS WANTED in exchange for Fancy Pigeons, or Light and Dark Brahma Cocks. Address JOS. M. WADE, 39 N. Ninth St., Philadelphia, Pa.

SHADE TREES WANTED in exchange for Light or Dark Brahmas, or Fancy Pigeons. Address JOS. M. WADE, 39 N. Ninth St., Philadelphia, Pa.

TWO DARK BRAHMA HENS to exchange for common Angora Rabbits, or Five Dollar Greenback. Address M. W. MINER, Peoria, Ill.

I WISH TO EXCHANGE Buff Cochins Hens or Pullets for a Cock of same breed. Hens are fine. Cock must be same. Address JOHN L. RICE, Rensselaerville, N. Y.

WANTED TO EXCHANGE S. G. Dorking, and Buff Cochins Hens, and pairs or trios of Bolton Grays, for White, Yellow, or Black Fantail, Jacobin, or Pouter Pigeons. Address JOHN L. RICE, Rensselaerville, N. Y.

WANTED.—White, Black, or Buff Cochins, 2 Black African Bantam Hens, 1 pair Silver Sebright Bantams, Bremen Geese, &c., in exchange for Light Brahmas, White Leghorns, &c. Address C. E. L. HAYWARD, Peterboro, N. H.

TO EXCHANGE, a few hundred Mammoth Cluster, Davidson's Thornless, and Golden Thornless Raspberry Plants for a trio of No. 1 White Leghorns. Address, giving price and name of strain, W. L. PAYNE, Zoar, Mass.

TO EXCHANGE, a pair of Silver-Spangled Polands, well marked, with good crests, and well up to the standard, for a first-class Buff Cochins Cock or Cockerel. Address, with description of bird, W. S. KEMP, Dayton, Ohio.

TO EXCHANGE, Bolton Grays or Partridge Cochins for good Lop-Eared Rabbits. Address J. L. RICE, Rensselaerville, N. Y.

JOS. M. BROOKS, COLUMBUS, INDIANA, will exchange a Key Check Outfit, Dies, Ornamenting Stamps, Stock, &c., for Light Brahma Hens. A good chance for some man or boy to make money that has the time to attend to this business. No hens wanted weighing less than 10 lbs. each. Write for full particulars. JOS. M. BROOKS, Columbus, Ind.

PARTRIDGE COCHINS.—A pair of choice Partridge Cochins will be exchanged for Fancy Pigeons. Address G. F. MCCONNELL, Hudson, Col. Co., N. Y.

INCUBATOR WANTED.—(Second-hand), one that has worked successfully. Parties having one for sale or EXCHANGE, address W. G. BAKER, Norwalk, Huron Co., Ohio.

BULL DOG, extra fine, and a good watchdog—will exchange for any other property except dogs. JOS. M. WADE, Philadelphia, Pa.

TWELVE FINE DARK BRAHMA HENS (Wade and Williams' Strain), will exchange for Light Brahmas of the same strains, or will sell at much below their value, for cash. Address E. R. FRAZIER, Plattsburg, N. Y.

FOR EXCHANGE, or will **SELL,** a thoroughbred English Greyhound Slat, mouse color, about 15 months old, measures 63 inches from point of nose to tip of tail, 27 inches high at shoulder; price, \$50, or will exchange for other dogs. EBEN P. DAY, Hazleton, Pa.

Two of the edible dogs of China are now on exhibition at the Zoological Gardens in Paris. If it be found easy to acclimatize them, it is proposed to introduce this new article of food. The dogs in question are small and hairless and enormously fat. They are fed solely on vegetable food, a regimen which imparts a rare delicacy to their flesh.

THE NEW

STANDARD OF EXCELLENCE,

As adopted at Buffalo, N. Y., January, 1874, by the
AMERICAN POULTRY ASSOCIATION. Price, \$1 per copy.

For single copy, or wholesale, address

E. S. RALPH, Sec'y A.P.A.,
Buffalo, N. Y.

FRANK FITCH, CLYDE, N. Y., Breeder of Pure Bred Poultry
and Berkshire Pigs, from imported stock. Eggs for hatching in season.
Catalogue and package Mammoth Corn free, for stamp.

Choice Seed Potatoes also for sale.

WHO CAN BEAT THIS?—I received at the Buffalo Show, 24
premiums and only exhibited 19 pairs of Pigeons; so that any one want-
ing first-class Pigeons will do well to write me at once, with their order.
I can supply POUTERS, most all colors. CARRIERS, Black, Dun, Blue,
and Yellow. JACOBINES, Yellow, and White Mottled. TURBITS,
Blue-Winged, Yellow-Winged, and Solid Yellow. ISABELLA POUTERS,
Yellow and Red. TRUMPETERS, the best on this continent; Black,
Solid Yellow, and Yellow Hungarian Trumpeters. Also, Latin or Ground
Tumblers. I am now booking orders for the coming season, and to se-
cure first-class birds orders must be sent at once with 25 per cent. of the
purchase money, then I will book orders accordingly, and deliver the
birds during the Summer or coming Fall. My FANTAILS are not ex-
celled in this country. I can supply Red, Black, Blue, and White Cal-
cuttas; also, Solid Yellow. Circulars and Engravings of Pigeons sent on
receipt of six cents in postage stamps.

A. GOEBEL, Mitchell, Ontario, Canada.

W. Leghorns, Houdans, and Buff Cochins, \$3 per doz.

J. & C. V. FOWLES, Ithaca, N. Y.

NATIONAL BEE JOURNAL.—MRS. ELLEN S. TUPPER, Editor and Proprietor. Devoted exclusively to Bee culture. Two Dollars a Year. The *National Bee Journal* is issued on the 15th of each month, contains sixty-four pages, printed on fine paper, in neat, clean type, and for the year 1874 has been greatly improved. Mrs. Tupper, having purchased the *Journal*, has removed it to Des Moines, Iowa, where it will hereafter be published under her own supervision. She will write for no other publication but her own, and in that she will give the result of that long practical experience which has placed her among the best, if not the best, authorities in this country on the honey bee.

Arrangements have been made with prominent bee keepers in this and foreign countries, for timely articles each month, upon important topics.

A special department has been assigned to "Notes and Queries," in which the various questions which arise in the practical experience of bee keepers each month, will be given, with pertinent answers by the editor. These will be condensed into the smallest possible space, and will be one of the most interesting features of the *Journal*.

The *Journal* will keep entirely clear of all entangling alliances with patent rights of whatever nature, and will be independent in the expression of its opinions. It will aim to be reliable, give only such information as will be of practical utility to its patrons, discarding theories and misleading propositions.

A limited space is devoted to advertising, which will be given to unobjectionable notices, at fair rates; and the large and rapidly increasing circulation of the *Journal* makes it a valuable advertising medium.

For circulars, containing club rates, premiums, advertising rates, etc., address MRS. E. S. TUPPER, Des Moines, Iowa.

J. Y. BICKNELL, Westmoreland, Oneida County, N. Y.

Circular containing a few practical hints, and Price List of Fowls and Eggs, FREE.

SEX OF EGGS.

IN our time we have heard of many people who have thought that they had discovered how to produce "*sexes at will.*" We confess to be an unbeliever in this doctrine, and do not think it was ever intended that mankind should ever discover this secret. But during the past year we have had brought to our notice no less than three experiments, which seem to have been entirely successful in selecting eggs that would produce male or female as desired; and as the season of hatching is upon us, and the experiment can be

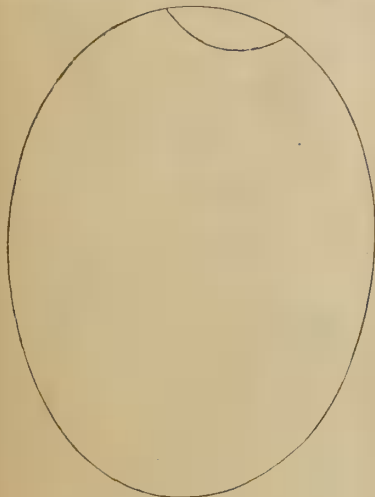

No. 1.

It will be seen that in No. 1 the air-chamber is directly at the apex or blunt end of the egg; this will hatch a lively cockerel, of quick growth, and light plumage.

tried without labor or expense, we have decided to give the information to our readers, and have had the following diagrams made to illustrate the subject more plainly.

K. B. Edwards says in his pamphlet, which we reprinted some time ago, "Select only eggs pointed at the ends, avoiding any that have a tendency to roundness of form; also examine the position of the air cavities in the eggs, and only retain those that have them placed directly at the apex of

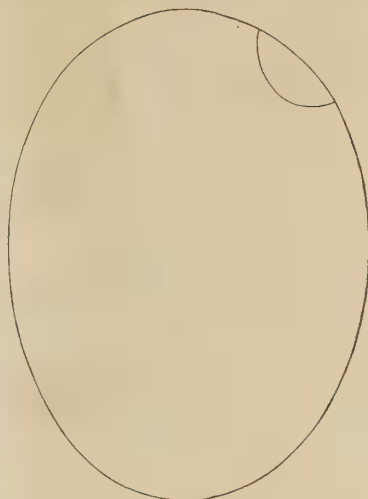

No. 2.

This is the kind rejected by all the experimenters so far, as it "will be good for nothing but the pot."

the blunt or large end, avoiding all that have them placed at all to the side. In this way eight eggs out of ten will

Mr. Pyle says this will hatch a pullet of quick, healthy growth, and good laying qualities.

No. 3.

produce cockerels." The following is from a correspondent of the *London Journal of Horticulture*:

"One of your correspondents revives the old question about the sex of eggs; I send you my experience. Last winter an old country poultry-keeper told me he could dis-

This will also hatch a pullet, but of slow growth, a poor layer, inclined to be masculine, and will sometimes crow.

No. 4.

tinguish the sex in eggs; I laughed at him, and was none the less sceptical when he told me the following secret: 'Eggs with the air-bladder on the centre of the crown of the egg will produce cockerels, those with the bladder on one side will produce pullets.' The old man was so certain of the truth of this dogma, and his poultry-yard so far confirmed it, that I determined to make experiments upon it this year. I have done so, carefully registering every egg 'bladder vertical' or 'bladder on one side,' rejecting every one in which it was not decidedly one or the other, as in some it is only very slightly out of the centre. The follow-

ing is the result: Fifty-eight chickens were hatched, three are dead, eleven are yet too young to decide upon their sex; of the remaining forty-four every one has turned out exactly true to the old man's theory. This, of course, may be an accidental coincidence, but I shall certainly try the experiment again. I am now trying the same theory upon ducks' eggs."

But to make the matter more sure we will give the experiments of Wm. J. Pyle, of West Chester, Pa., who writes:

"I herewith send you my 'egg mystery,' and if you will follow my instructions closely you will succeed every time. Last summer I hatched one hundred and twenty-two chicks from eggs selected on this principle, one hundred and nineteen of which were pullets. I always select eggs of medium size, believing them to be best for this purpose. I then get a large lamp (kerosene), and take an egg in my right hand, between the thumb and two forefingers, big end uppermost, and hold it as near to the light as possible, then lay the little finger of the left hand across the middle of the egg. This will throw the light in the egg; then turn it around slowly, and you will perceive a dark spot the size of a three-cent piece directly in the centre of large end, or on one side, as in diagrams Nos. 1, 2, 3, and 4.

"As I raise poultry for eggs and for market, I of course set only eggs like No. 3, with a few of No. 1 to replace the cocks of last year.

"It would be well for an amateur to break a few eggs, empty out the contents, and examine the large end where the air-chamber in the different positions as in diagram will be distinctly seen."

We hope that the fanciers who read the above will try the experiment carefully, and report through the *Fanciers' Journal* as soon as satisfied whether the theory is correct or not.

(For Fanciers' Journal.)

AMERICAN POULTRY ASSOCIATION.

J. M. WADE, Esq.

DEAR SIR: Yours of the 27th inst. received, containing a slip from the *Ohio Farmer*, in which one F. W. Babcock, of Fair Haven, Conn., makes a slanderous attack upon the members composing the American Poultry Association.

Really I do not believe that the article emanated from his brain, but that it was instigated by another. From the fact that he was obliged to send the questionable article to an agricultural journal in a distant State, where he was not known, in order to get it published, will be, beyond a doubt, positive evidence to the readers of poultry journals that the article would not have been published by them.

I look upon it as the most uncalled-for, untruthful, and venomous attack upon the strongest, most prosperous, and dignified body of men ever assembled together for any honorable purpose; also upon the organization, composed, as it is, of the masses of fanciers—prominent, solid, and active men of the United States and Canada.

The writer of the article shows himself to be a weak-minded individual, influenced by another, whose mind is not only weak, but whose principles would debar him from the society of such as are connected with the American Poultry Association.

The whole article is a distortion of the truth, interspersed with—well, to give them no milder terms—lies, and it would affect the high moral character and dignity of the Association

to take any notice of it whatever, other than to treat it with silent contempt. Yours truly,

W. H. CHURCHMAN.

CLAYMONT, DELAWARE, February 23th, 1874.

For the benefit of those who do not take the agricultural papers, we republish the letter of Mr. Babcock in full, which called out the above answer from Mr. Churchman, President of the American Poultry Association:

THE NEW POULTRY STANDARD.

It must be apparent to all readers of the *Ohio Farmer*, who are interested in the breeding of fancy poultry, for either pleasure or profit, that a great outrage has been perpetrated upon them in the revision of the "Standard" by the so-called American Poultry Association, which met in Buffalo, January 14th, and Boston, February 5th. I do not make this charge on my own responsibility alone, but am sustained in so doing by many of the leading poultry-breeders of America, whose comments upon this outrage I shall take the liberty to quote further on. This Association has nothing whatever in its organization, method of meeting or results, that is worthy of the title American.

The first American Standard, issued in May, 1871, and which has done such noble service in the poultry interest everywhere, was adopted in *open* meeting with *free* membership to every man, woman, and child owning or interested in poultry, the opinions of all receiving due weight and attention; and thus if every one was not heard it was their own fault.

On the other hand, the standard of 1874 has been adopted by a select few, with closed doors, an admission fee of three dollars being charged, and if unpaid the fancier was excluded. This standard aims to represent the particular points bred to by "that crowd," and all persons not liking it can solace themselves as best they may with the old one, which is now declared worthless. Will the rank and file of American fanciers swallow this pill so nicely prepared for them remains to be seen, but it is safe to assume that they will not. In this connection I received a letter, a few days since, from an American authority on poultry matters who declined to submit to any such tax, or to act in such "air-tight star-chamber get-up," and was of course put out.

That many good men and careful breeders attended this meeting, there is no doubt, but many of them will ere long realize that there is a "wheel within a wheel," and unless this whole patched-up standard is revoked *at once*, the poultry interest will be run in a "ring" which would do credit to Tweed & Co. Let the mass of our fanciers hold a *mass* meeting at once, and adopt a standard which shall merit the broad and meaning title of American. In closing I will annex a short extract from the *American Rural Home* for January 31st, and which but faintly expresses the indignation that is brewing, and will ere long break around the ears of the *aristocrats* of the "American" Poultry Association:

"We believe in freedom of speech, freedom of thought, freedom of action, and a free interchange of views on this subject of fixing an American standard. No close corporation or *secret* deliberation on a matter that affects all classes of breeders will be allowable by American fanciers. Because one man breeds a certain class of fowls to his own notion, it is no reason why other breeders should be obliged or compelled to follow out his ideas just because he got them adopted by a *minority* of breeders while in *secret* session. There is nothing right about such proceedings, it is anti-republican and anti-democratic in principle, and *will not* be acknowledged by the majority of breeders in this country. If there is any tinkering of our present standard needed (which we admit there is), let it be done with *open* doors, and in *public*. In this manner the present standard was adopted, *all* breeders being invited to participate in the proceedings, and discuss the several points of fowls as they were presented."

Items Interesting and Amusing.

 **WILD DUCKS** are plentiful in the Delaware, between Lackawaxen and Hancock.

 **THERE** is an orange tree in one of the gardens at Paris, that has reached the respectable age of 400 years.

 **GILES VAN DEUSEN**, of Hudson, shot a Paraguayan duck in Claverack creek, last week. This species is rare in these parts.

 **A ROSENDALE** (Ulster county) butcher, captured a wild duck, which flew against him as he was carrying a lantern, a few evenings since.

 **PETER COCHRAN**, last week shot two wild cats, on the Round Top, the heavier one weighing 27 pounds. D. M. Stewart, also shot a big one.

 **THEODORUS VAN WYCK**, of East Fishkill, caught eight foxes last year, and three this year, by the use of strychnine.

 **P. S. EVORY**, and E. D. Slater, of Cairo, went out gunning on Monday, 26th inst., and after an absence of only two hours, returned with three lusty raccoons, the united weight of which was 33 pounds.

 **THE** trade in ostrich feathers between the Cape of Good Hope and England, amounts in value, to \$200,000 a year. The birds are reared like pheasants, and their feathers are worth fifty guineas per pound.

 **THE** Acclimation Society of Cincinnati have procured three thousand dollars' worth of birds from Germany, among them many varieties entirely new to this country, which they intend to let loose in the spring.

 **A GEORGIA** paper tells of an attempt by a powerful eagle to carry off a girl fourteen years old. It says the bird lifted her from the ground several times and carried her some distance. She was severely wounded by its beak and talons, her sides and arms being terribly lacerated.

 **AN EXHIBITION** of canaries and other song and cage birds, at the Sydenham Crystal Palace recently, was the most extensive that has ever been held in the country. There were no less than 1300 entries, of which 600 were canaries, and the remainder thrushes, bullfinches, goldfinches, mules, nightingales, starlings, lories, parrots and paroquets. The cages were ranged in a double row, in a handsome pavilion, which had been erected in the south nave for the accommodation of the feathered songsters, talkers, and screamers, and every cage was so placed as to be easily accessible to the spectator.

 **THIS** wonderful dog story is told by the Boston Traveller: G. F. Richardson, of Lowell, owns a magnificent Newfoundland dog. Mrs. Richardson took the children and dog to the photograph saloon, to have the group taken; but the dog was in a wilful mood, and would not pose, and was turned out. The next day the dog put in an appearance at the saloon and scratched at the door till he was admitted; he then proceeded directly to the spot assigned him the day before, and placed himself in the exact position desired by the artist. The photograph was taken, and when completed put into a box and given to the dog, who carried it directly to his master.

 **SHAKING DOWN CROWS.**—A Delaware correspondent of the *Baltimore American*, writes these queer stories about crows: "A novel amusement, which is at present indulged in to a great extent in the upper part of this State, is crow shooting, as a substitute for pigeon matches. The rules and customs are the same in either case. The substitute was made out of a sort of humanitarian notion among the people, as well as to pecuniarily benefit residents about Reedy Island, in the Delaware, from whence the crows are taken. I have been told that this spot is the favorite roosting ground of these birds, and that towards nightfall they congregate there by thousands. When darkness overspreads the island, the catchers enter among the low trees with bags, and capture any desired number, simply plucking them from the limbs like so much fruit. The birds cannot fly in the darkness, and even if shaken from their roosts, they cling to the first object that comes within reach. It is said that a man standing beneath the tree from which the birds are shaken, with outstretched arms, will soon be covered with them."

 **SALMON IN THE POTOMAC.**—It is satisfactory to believe that in a few years the Potomac will be stocked with salmon, one of the finest and most desirable of food fishes. As stated recently, over 30,000 young fish of this species have been placed in one of the tributaries of the Potomac. The experiment of stocking rivers with different kinds of fish has been very successful in many instances, and there is no reason why the salmon should not thrive in the Potomac as well as in other waters in the same latitude on the Pacific side. The 30,000 young salmon referred to were placed in a small branch of the Shenandoah, near Winchester, Va.; this point being selected because there are no black bass there to gobble up the new-comers, and for the reason that the water is cool and clear and better adapted to their growth. By the time they get ready to go down the river they will have attained a sufficient size to be able to protect themselves from their enemies, the black bass. The young salmon remain in the water where they are first placed until they weigh about a pound each, when they leave for the sea. In a few years they return weighing from five to fifteen pounds each.—*Washington Star*.

THE NEW HAMPSHIRE POULTRY SOCIETY.

THE seventh annual exhibition was held in the City Hall, Manchester, Tuesday, Wednesday, and Thursday, February 24th, 25th, and 26th, 1874. It was the largest exhibition ever held in the State of New Hampshire, and was a success. The following are the awards:

Light Brahmas.—Fowls—1st, Charles C. Russell, Nashua; 2d, Andrew J. Tuck, Nashua; 3d, G. A. Brown, Keene. Chicks—1st, Geo. F. Andrews, Nashua; 2d, G. A. Brown, Keene; 3d, Charles C. Russell, Nashua. Special for best trio Light Brahmas, Charles C. Russell, Nashua. *Dark Brahmas.*—Fowls—1st, John F. Reed, Nashua; 2d, W. E. Hood, Concord; 3d, C. M. Boynton, Concord. Chicks—1st, John F. Reed, Nashua; 2d, W. T. Evans, Manchester; 3d, C. M. Boynton, Concord. Special for best collection Dark Brahmas, John F. Reed, Nashua. Special for best trio, John F. Reed, Nashua. *Buff Cochins.*—Fowls—1st, A. T. Learnard, Derry; 2d, Charles C. Russell, Nashua; 3d, C. M. Boynton, Concord. Chicks—1st, C. M. Boynton, Concord; 2d and 3d, Charles C. Russell, Nashua. Special, best collection, Charles C. Russell, Nashua. *Partridge Cochins.*—Fowls, C. M. Boynton, Concord; 2d and 3d, Wm. H. Knowles, Nashua. Chicks—1st, C. M. Boynton, Concord; 2d, C. F. Tilton, Concord; 3d, William H. Knowles, Nashua. Special, best collection Partridge Cochins, Wil-

liam H. Knowles, Nashua. Best trio Partridge Cochins. C. M. Boynton, Concord. Best collection Buff and Partridge Cochins. A. T. Learnard, Derry. *White Cochins*.—Fowls—1st, C. L. Spaulding, Hudson; 2d, D. S. Gilmore, Manchester. Chicks—1st, C. L. Spaulding, Hudson; 2d, D. L. Gilmore, Manchester; 3d, C. L. Spaulding, Hudson. Two specials for best collection, and one for best trio Chicks, C. L. Spaulding, Hudson. *Black Cochins*.—Fowls—1st, C. F. Holden, Hollis. Chicks—1st, C. H. Colburn, Manchester; 2d, William H. Knowles, Nashua; 3d, Sewell & Fisher, Concord. Special, best trio, C. H. Colburn, Manchester. *Silver Gray Dorkings*.—Fowls—W. T. Garmon, Manchester. Chicks—1st, J. A. Caverly, Manchester; 2d, S. A. Ordway, Manchester. Special, best trio, W. G. Garmon, Manchester. *White Dorkings*.—Fowls—1st, J. C. Warren, Manchester. *Plymouth Rocks*.—Fowls—1st, O. A. Hamblett, Milford; 2d, Virgil C. Gilman, Nashua; 3d, William H. Knowles, Nashua. Chicks—1st, O. A. Hamblett, Milford; 2d, Hon. Virgil C. Gilman, Nashua. Specials, two for best collection and one for best trio, O. A. Hamblett, Milford. *Dominiques*.—Chicks—1st, George F. Andrews, Nashua; 2d, G. Goodwin, Derry; 3d, George F. Andrews, Nashua. Special, best trio, George F. Andrews, Nashua. *Grade or Natives*.—1st and 2d, E. C. Smiley, Goffstown; 3d, J. B. Ellenwood, Manchester. Special, best collection, E. C. Smiley, Goffstown. *Silver Spangled Hamburgs*.—Fowls—1st, I. B. Shallies, Concord; 2d, Andrew J. Tuck, Nashua; 3d, I. B. Shallies, Concord. Chicks—1st, J. C. Warren, Manchester; 2d, I. B. Shallies, Concord; 3d, C. J. Edgerley, Manchester. *Silver Pencilled Hamburgs*.—Chicks—1st and 2d, J. C. Warren, Manchester. *Golden Pencilled Hamburgs*.—Fowls—1st, Andrew J. Tuck, Nashua. Chicks—1st, Andrew J. Tuck. Special, best Fowls and Chicks, Andrew J. Tuck, Nashua. *Golden Spangled Hamburgs*.—Chicks—1st and special for best trio, Andrew J. Tuck, Nashua. *Black Hamburgs*.—Chicks—1st, Andrew J. Tuck, Nashua. *White Hamburgs*.—Chicks—1st and special, best trio, Andrew J. Tuck, Nashua. Special, best collection Hamburgs, Andrew J. Tuck, Nashua. *Black Spanish*.—Fowls—1st, W. T. Evans, Manchester. Chicks—1st, 2d, 3d, and special, W. T. Evans, Manchester. *White Leghorns*.—Fowls—1st, G. Blanchard, Wilton; 2d, A. C. Flanders, Manchester. Chicks—1st, G. H. Flanders, Concord; 2d, John F. Reed, Nashua; 3d, G. Blanchard, Wilton. Special, best collection, Gardner Blanchard, Wilton; best Cock, A. C. Flanders, Manchester. *Dominique Leghorns*.—1st, Gardner Blanchard, Wilton. *Brown Leghorns*.—Fowls—1st, Albert Beard, Nashua. Chicks—1st, 2d, and 3d, Albert Beard, Nashua. Specials, best trio and best collection, Albert Beard, Nashua. Best Cock, Albert Beard, Nashua. *Crevecoeurs*.—Chicks—1st and 2d, J. H. Symonds, Boston, Mass. *Houdans*.—Fowls—1st, Gardner Blanchard, Wilton; 2d, H. M. Parker. Chicks—1st, Gardner Blanchard, Wilton; 2d, Willie A. Sewell, Concord. Special, best collection, Gardner Blanchard, Wilton. *White Polish*.—Fowls—1st, C. H. Colburn. Chicks—1st and 2d, C. H. Colburn. Special, best collection, C. H. Colburn. *White-crested Black Polish*.—Fowls—2d and 3d, C. W. Drake, Concord. *Silver Spangled Polish*.—Fowls—1st and 2d, J. C. Warren, Manchester. Chicks—1st, L. A. Gould, Manchester; 2d, J. C. Warren, Manchester. Special, best collection, J. C. Warren, Manchester. *Golden Spangled Polish*.—Fowls—1st, Gardner Blanchard, Wilton. Chicks—1st, J. H. Symonds, Boston, Mass. *Blue Pile Game*.—Fowls—1st, G. L. Tewksbury, Manchester. Chicks—1st, B. F. Clark, Manchester; 2d, Hugh Tallant, East Concord. *White Pile Game*.—Chicks—1st, E. P. Littlefield, Manchester; 2d, B. F. Clark, Manchester. *White Georgian Game*.—Fowls—1st, N. C. Lucier, Nashua; 2d, E. P. Littlefield, Manchester. Chicks—1st, Sewell & Fisher, Concord. *Heathwood Game*.—Fowls—1st, E. P. Littlefield, Manchester. *Strychnine Game*.—Fowls—1st, E. P. Littlefield, Manchester. *Black-breasted Red Game*.—1st, N. C. Lucier, Nashua; 2d, O. A. Hamblett, Milford; 3d, Hugh Tallant, East Concord. Chicks—1st, E. P. Littlefield, Manchester; 2d, C. F. Blaisdell, York, Maine; 3d, E. S. Smart, Lake Village. *Black Tasseled Game*.—Fowls—Dr. J. P. Walker, Manchester. *Blue Gray Games*.—Fowls—1st, Dr. J. P. Walker, Manchester. *Red Pile Game*.—Fowls—1st, Dr. J. P. Walker, Manchester. Chicks—1st, N. C. Lucier,

Nashua; 2d, H. H. Shaw, Milford; J. M. Durrell, Lake Village. *Spangled Game*.—Chicks—1st, Dr. J. P. Walker, Manchester. *Cleiborn Game*.—Fowls—1st, E. P. Littlefield. Chicks—1st, N. C. Lucier, Nashua. *Black-breasted Red Game*.—Chicks—1st, B. F. Clark, Manchester; 2d, E. P. Littlefield, Manchester. *Earl Derby Game*.—Chicks—1st, E. P. Littlefield, Manchester. *Ginger Red Game*.—Chicks—1st, E. P. Littlefield, Manchester. *Yellow Duckwing Game*.—Fowls—1st, E. P. Littlefield, Manchester; 2d, Hugh Tallant, East Concord. *Dominique Game*.—Fowls—1st, E. P. Littlefield, Manchester. *Brown-breasted Red Game*.—Fowls—1st, E. P. Littlefield, Manchester; 2d, N. C. Lucier, Nashua. Chicks—1st and 2d, B. F. Clark, Manchester. *Black-breasted Muff Game*.—Fowls—1st, E. P. Littlefield, Manchester. *Clepper Game*.—Chicks—1st, E. P. Littlefield, Manchester. *Blue Red Game*.—Fowls—E. P. Littlefield, Manchester; 2d, B. F. Clark, Manchester. Chicks—1st, N. C. Lucier, Nashua. *Irish Red Game*.—Fowls—1st, H. C. Shaw, Milford. *Blue Tasseled Game*.—Chicks—1st, N. C. Lucier, Nashua. *Brown Tasseled Game*.—Chicks—1st, B. F. Clark, Manchester. *Silver Gray Game*.—Fowls—1st, B. F. Clark, Manchester. Specials—One to J. P. Walker, Manchester; best White Georgian trio, N. C. Lucier, Nashua; best Black-breasted Red Game trio, N. C. Lucier; silver medal to E. P. Littlefield for having the best collection of Fowls and Chicks, not less than six varieties. *Duckwing Game Bantams*.—Chicks—1st, Brad. J. Cilley, Manchester. *Indian Game Bantams*.—Fowls and Chicks—1st, Woodbury & Young, Manchester. *Black-breasted Red Game Bantams*.—Fowls—1st, Woodbury & Young, Manchester; 2d, Isaac Dean, Taunton, Mass. Chicks—1st, Woodbury & Young, Manchester; 2d, Isaac Dean, Taunton, Mass. Special for best pair Black-breasted Red and Indian Game Bantams—Woodbury & Young, Manchester. *Golden Sebright Bantams*.—Fowls—1st, Isaac Dean, Taunton, Mass.; 2d, N. W. Robinson, Milford. Chicks—1st and 2d, Isaac Dean, Taunton, Mass.; 3d, Mrs. C. C. Chase, Manchester. *Silver Sebright Bantams*.—Fowls—1st, Isaac Dean, Taunton, Mass. Chicks—1st, E. R. Perkins, Salem, Mass. *White Bantams*.—Fowls—1st, W. G. Garmon, Manchester. Chicks (booted)—1st, W. G. Garmon, Manchester. Specials—Best collection Gold Sebright Bantams, Isaac Dean, Taunton, Mass.; best collection White Bantams, W. G. Garmon, Manchester. *Creepers*.—Fowls and Chicks—1st and special, E. P. Couch, Concord. *California Quails*.—1st, C. W. Davis, Manchester; 2d, A. W. Sanborn, Manchester. *Bronze Turkeys*.—1st, John B. Sanborn, East Concord; 2d, C. L. Spaulding, Hudson; 3d, S. C. Richardson, Litchfield. Special for best collection, J. B. Sanborn, East Concord. *Wild Black Eagle*.—1st, John B. Sanborn, East Concord.

DUCKS.

Muscovy.—1st, Hugh Tallant, East Concord. *Indian Ocean*.—1st and 2d, A. E. Martyn, Manchester. *Cuyuga*.—1st, C. F. Blaisdell, York, Maine. *Rouen*.—1st, Albert Beard, Nashua.

PIGEONS.

White Pied Pouters.—1st, C. C. Chase, Manchester. *Black Pied Pouters*.—1st, C. C. Chase, Manchester. *White Carriers*.—1st, C. C. Chase, Manchester. *Red Carriers*.—1st, C. C. Chase, Manchester. *White Smooth-head Calcutta Fans*.—1st, C. C. Chase, Manchester. *White Cap Calcutta Fans*.—1st, C. C. Chase, Manchester. *Black Calcutta Fans*.—1st, C. C. Chase, Manchester; 2d, O. D. Sawyer. *Yellow Barbs*.—1st, C. C. Chase, Manchester. *Yellow Jacobins*.—1st, C. C. Chase, Manchester. *Horseman*.—1st, C. C. Chase, Manchester. *Turbits*.—1st, C. C. Chase, Manchester. *Brunswicks*.—1st, C. C. Chase, Manchester. *Archangels*.—1st, C. C. Chase, Manchester. *Ring Doves*.—1st, C. C. Chase, Manchester. *White-winged Magpies*.—1st, C. C. Chase, Manchester. *Black Tumblers*.—1st, O. A. Hamblett, Milford; 2d, C. C. Chase, Manchester. *Bald-head Tumblers*.—1st, John P. Ankarloo. *German Song Bird*.—John P. Ankarloo. Special for best collection Pigeons, C. C. Chase, Manchester.

RABBITS.

Lop-eared Madagascar.—Four 1st and two 2d, and special for best collection, D. S. Gilmore. *White English*.—1st

and 2d, Brad. J. Cilley; special, H. A. Herrick. *Mexican*.—1st, Brad. J. Cilley.

Gray Squirrels.—1st, C. F. Hall. *White Mice*.—1st, Brad. J. Cilley.

SWEEPSTAKES.

Best collection Fowls (not less than six varieties), E. P. Littlefield, Manchester, New England Agricultural Society silver medal, value \$25; 2d, for similar collection, N. C. Lucier, Nashua, coin silver napkin-rings, value \$10. Best collection Fowls of any pure breed variety, William H. Knowles, Nashua, New Hampshire Agricultural Society silver medal, value \$25. Largest Cock of any variety, Chas. C. Russell, Nashua. Stuffed Birds and Animals, J. T. Robinson, Manchester. Flowers and Growing Plants, H. H. Huntress, Manchester. Exhibition Coop, O. A. Hamblett, Milford.

OFFICIAL LIST OF PREMIUMS

Awarded at the Third Annual Exhibition of the Massachusetts Poultry Association, held at Boston Music Hall, February 5th to 11th, 1874.

(Continued from page 151, No. 10.)

CLASS XV.—ORNAMENTAL.

White Call Ducks—1st prize, M. I. Ellis, Norwood. Swans—1st prize, William P. Miller, Milford, Mass.

COLUMBARIUM DIVISION.

CLASS XVI.—PIGEONS.

Black Badger English High Flyers—1st prize, Charles E. Mecum, Malden. Dark Mottled English High Flyers—1st prize, C. E. Mecum, Malden. Red Runts—1st prize, Bowman & Leavitt, Boston. Yellow Fantails—1st prize, Philander Williams, Taunton. Mottled Trumpeters—1st prize, H. S. Ball, Shrewsbury, Mass.; 2d prize, Bowman & Leavitt, Boston; 3d prize, R. H. Justice, Lawrence, Mass. Spots—1st prize, H. S. Ball, Shrewsbury, Mass. Silvered Dutch—1st prize, H. S. Ball, Shrewsbury, Mass. Black Priests—1st prize, H. S. Ball, Shrewsbury, Mass. Mottled Fantails—3d prize, E. H. Hero, Milford. White Fantails—1st prize, L. H. Hero, Milford; 2d prize, Bowman & Leavitt, Boston; 3d prize, H. S. Ball, Shrewsbury, Mass. Red Jacobins—1st prize, J. W. Hunt, North Bridgewater; 2d prize, J. S. Carpenter, Attleborough. Best Colored Pigeons—H. S. Ball, Shrewsbury. Best Colored Fantails—E. H. Hero, Milford. Best Colored Short-Face Tumbler—George F. Seavey, Cambridgeport. Round-Head Fantails—1st prize, George F. Seavey, Cambridgeport; 2d prize, E. H. Hero, Milford. Silver-Pied Pouters—1st prize, J. W. Hunt, North Bridgewater. Black-Pied Pouters—1st prize, Benjamin White, Pawtucket, R. I.; 2d prize, F. O. Conant, Portland, Me. Red-Pied Pouters—1st prize, Benjamin White, Pawtucket, R. I.; 2d prize, F. O. Conant, Portland, Me. Mealy-Pied Pouters—1st prize, Benjamin White, Pawtucket, R. I. White Pouters—1st prize, F. O. Conant, Portland; 2d prize, J. W. Hunt, North Bridgewater; 3d prize, H. S. Ball, Shrewsbury. Yellow Pouters—1st prize, F. O. Conant, Portland. Blue-Pied Pouters—1st prize, F. O. Conant, Portland; 2d prize, H. S. Ball, Shrewsbury; 3d prize, F. O. Conant, Portland. Pouters—3d prize, Eddie Cutler, Boston. Blue Dragons—1st prize, Clifton Church, Boston; 2d prize, Clifton Church, Boston. White Dragons—1st prize, Clifton Church, Boston. Fantails.—Blue: 2d prize, J. W. Hunt, North Bridgewater. Fantails.—Yellow Mottled: 1st prize, E. H. Hero, Milford. Fantails.—Smooth Head, Black: 1st prize, George F. Seavey, Cambridgeport; 2d prize, J. W. Hunt, Milford, Mass.; 3d prize, E. H. Hero, Milford, Mass. White Jacobins—1st prize, H. S. Ball, Shrewsbury; 2d prize, E. H. Hero, Milford. Yellow Jacobins—1st prize, Bowman & Leavitt, Boston; 2d prize, H. S. Ball, Shrewsbury; 3d prize, E. H. Hero, Milford. Black Jacobins—1st prize, R. H. Justice, Lawrence, Mass.; 2d prize, H. S. Ball, Shrewsbury; 3d prize, Clifton Church, Boston. Black Nuns—1st prize, E. H. Hero, Milford; 2d prize, E. H. Hero, Milford. White African Owls—1st prize, Benjamin White, Pawtucket,

R. I.; 2d prize, H. S. Ball, Shrewsbury. Silver Swallows—3d prize, Bowman & Leavitt, Boston. Red Tumblers—1st prize, Charles E. Mecum; 2d prize, R. H. Justice, Lawrence. German Tumblers—1st prize, R. H. Justice, Lawrence. Black Mottled Inside Tumblers—1st prize, R. H. Justice, Lawrence. Starlings—1st prize, H. S. Ball, Shrewsbury. Red Barbs—1st prize, H. S. Ball, Shrewsbury. Yellow Barbs—1st prize, H. S. Ball, Shrewsbury. Black Barbs—1st prize, H. S. Ball, Shrewsbury; 2d prize, Benjamin White, Pawtucket, R. I. Black Trumpets—1st prize, Bowman & Leavitt, Boston. White Trumpets—1st prize, Bowman & Leavitt, Boston. Red-Capped Magpies—1st prize, T. William Harris, Rutland, Mass. English White Eyes—1st prize, R. H. Justice, Lawrence. White Duns—1st prize, R. H. Justice, Lawrence. Blue Bald Pates—1st prize, R. H. Justice, Lawrence. Red Spots—1st prize, R. H. Justice, Lawrence. Black Magpies—1st prize, E. H. Hero, Milford, Mass.; 2d prize, H. S. Ball, Shrewsbury. Blue Magpies—1st prize, H. S. Ball, Shrewsbury; 2d prize, H. S. Ball, Shrewsbury. Yellow Capped Magpies—1st prize, R. H. Justice, Lawrence. Black Darts—1st prize, E. H. Hero, Milford. Almond Tumblers—1st prize, Philander Williams, Taunton; 2d prize, George F. Seavey, Cambridgeport; 3d prize, Benjamin White, Pawtucket, R. I. Black Kite Tumblers—1st prize, George F. Seavey, Cambridgeport; 2d prize, Bowman & Leavitt, Boston; 3d prize, R. H. Justice, Lawrence, Mass. Mottled Tumblers—2d prize, George F. Seavey, Cambridgeport. Black Button-Head Tumblers—1st prize, H. S. Ball, Shrewsbury. Big-Eyed Black Tumblers—1st prize, H. S. Ball, Shrewsbury. Black Bald-Head Tumbler—1st prize, E. H. Hero, Milford, Mass.; 2d prize, H. S. Ball, Shrewsbury, Mass. Yellow Tumblers—1st prize, R. H. Justice, Lawrence, Mass. Black-Tailed Turbits—1st prize, H. S. Ball, Shrewsbury; 2d prize, Clifton Church, Boston. Blue-Tailed Turbits—1st prize, H. S. Ball, Shrewsbury. Red-Wing Turbits—1st prize, H. S. Ball, Shrewsbury; 2d prize, Clifton Church, Boston. Black Turbits—1st prize, H. S. Ball, Shrewsbury. White Turbits—1st prize, H. S. Ball, Shrewsbury; 2d prize, Clifton Church, Boston. Black-Wing Turbits—2d prize, R. H. Justice, Lawrence. Blue Wing Turbits—1st prize, R. H. Justice, Lawrence; 2d prize, E. W. Hall, Medford. Yellow-wing Turbits—1st prize, Bowman & Leavitt, Boston. Blue Owls—1st prize, H. S. Ball, Shrewsbury; 2d prize, H. S. Ball, Shrewsbury. Red Checkered Antwerps—2d prize, Clifton Church, Boston. Archangels—1st prize, Bowman & Leavitt, Boston; 2d prize, T. Will Harris, Rutland, Mass.; 3d prize, H. S. Ball, Shrewsbury. White Carriers—1st prize, H. S. Ball, Shrewsbury; 2d prize, J. W. Hunt, North Bridgewater; 3d prize, Bowman & Leavitt, Boston. Black Carriers—1st prize, H. S. Ball, Shrewsbury; 2d prize, George F. Seavey, Cambridgeport; 3d prize, J. W. Hunt, North Bridgewater. Yellow Carriers—1st prize, H. S. Ball, Shrewsbury. Dun Carriers—1st prize, H. S. Ball, Shrewsbury. Red Carriers—1st prize, H. S. Ball, Shrewsbury. Blue Antwerps—1st prize, H. S. Ball, Shrewsbury; 2d prize, Clifton Church, Boston. Black Spots—1st prize, R. H. Justice, Lawrence. Agate Tumblers—1st prize, George F. Seavey, Cambridgeport.

CLASS XVII.—BIRDS.

German Song Canary—1st prize, Mrs. Frances A. Wise, Roslindale; 2d prize, Levi White, Quincy. Belgian Canary—1st prize, male, John D. Galloway, Somerville; 2d prize, male, John D. Galloway, Somerville; 1st prize, female, John D. Galloway, Somerville; 2d prize, female, John D. Galloway, Somerville; special premium No. 104, best collection Canaries, John D. Galloway, Somerville; special premium No. 105, best collection of Birds in Class 17, Mrs. Frances A. Wise, Roslindale, Mass. Aviary Collection—1st prize, W. O. Shattuck, Boston; 2d prize, Mrs. Frances A. Wise, Roslindale; 3d prize, H. O. Neil. Bulfinch—1st prize, Mrs. Frances A. Wise, Roslindale. Cardinal Bird—1st prize, Mrs. Frances A. Wise, Roslindale. Parrots—1st Prize, Charles F. Sander, Jamaica Plain. Song Thrush—1st prize, H. O. Neil, Boston Highlands. California Valley Quail—1st prize, A. D. Warren, Worcester. Goldfinch—1st prize, Mrs. Frances A. Wise, Roslindale.

FUR-BEARING PETS.

CLASS XVIII.—RABBITS.

Madagascar Rabbits—Buck of any color: 1st prize, Reitenbach Bros., Boston. Best self-colored buck: 1st prize, Reitenbach Bros., Boston. Best Doe of any color: 1st prize, F. A. Shurtleff, Somerset. Best broken-colored Doe: 1st prize, F. A. Shurtleff, Somerset. Best broken-colored Buck: 1st prize, F. A. Shurtleff, Somerset.—Domestic Rabbits—Best Doe: 1st prize, A. S. Eldridge, Boston. Best Buck: 1st prize, A. S. Eldridge, Boston. Special premium No. 106, best collection of fur-bearing pets, F. A. Shurtleff, Somerset.

CLASS XIX.—MINOR PETS.

Squirrels—Fox: 1st prize, Moses A. Wood, Cambridge. Red: 1st prize, Moses A. Wood, Cambridge. Gray: 1st prize, Moses A. Wood, Cambridge.—Best Collection of Minor Pets—Special premium, No. 107, Moses A. Wood, Cambridge.

CLASS XX.—SUNDRIES.

Best Incubator: Jacob Graves & Co., Boston. Best Artificial Mother: Jacob Graves & Co., Boston. Best Exhibition Coop: E. P. Lawrence, Worcester. Best Coop for Hen and Chickens: J. R. Achenbach, Saddle River, N. J. Heaviest Turkey: George Van Deever, Port Jackson, N. Y. Heaviest Goose: C. A. Johnson, Newburyport. Heaviest Duck—C. A. Johnson, Newburyport. Heaviest Cock, not less than 14 pounds: Sturtevant Brothers, South Framingham. Heaviest Cockerel, not less than 12 pounds: Sturtevant Brothers, South Framingham. Heaviest Hen, not less than 11 pounds: Sturtevant Bros. Heaviest Pullet, not less than 10 pounds: Sturtevant Bros. Best Bird Cage, made by exhibitor: W. O. Shattuck, Boston. Stuffed Birds and Animals: 1st prize, N. Vickary, Lynn; 2d prize, N. Vickary, Lynn. Oil Painting, "Poultry:" 1st prize, C. E. Tuttle, Boston. Special premium No. 109, Best Oil Painting of Dark Brahmas: C. E. Tuttle.

President Williams did not enter his *Asiatics* for competition (this year), but for exhibition only.

Two trios of Aylesbury ducks, imported by General C. A. Johnson, of Newburyport, Mass., arrived from England too late to compete for premiums, but were placed on exhibition.

A special committee appointed to inspect the ducks, reported that they were the best specimens they had ever had the pleasure of seeing.

CENTRAL NEW YORK POULTRY ASSOCIATION.

AWARD OF PREMIUMS.

THE Show has been a gratifying success as regards excellence, and it is to be hoped the Association will not lose financially by their initial venture. They have at least created capital for great custom at their succeeding fairs by the excellent manner in which they have conducted this one. The officers have labored indefatigably throughout the fair to make it the success it is, and they are deserving of great praise. A notable feature is the comparative dearth of complaint regarding the awards. The officers have all been obliging and efficient, and shown unmistakably that they know how to run a poultry show.

Special attractions at the fair were a fine display of live fish, exhibited by Seth Green, Superintendent of State Fisheries; a minkery, exhibited by A. Ressegue, of Verona; and an incubator for hatching eggs by artificial heat, exhibited by J. Graves, of Boston.

The attendance at the fair has been large, but would doubtless have been greater had the weather been more favorable. The great day was Friday, when the attendance was very large indeed. The unwinding of time will

bring with it another fair in due season, and we hope a highly profitable one financially as well as otherwise. The Association is determined to keep up the poultry show business, and have appointed Messrs. Warner, of New York Mills; Merry, of Iliion; and Howlett, of Syracuse, a committee of three to visit the Western New York Poultry Fair, at Buffalo, and make observations for future benefit at Utica fairs.

The awards by the judges are given below:

CLASS I—ASIATICS.

Best trio Light Brahma Fowls, C. A. Johnson, Newburyport, Mass., \$3; 2d, Seward Merry, Iliion, \$2; 3d, do., commended. Best trio Light Brahma Chicks, Seward Merry, Iliion, \$3; 2d, do., \$2; 3d, C. A. Johnson, Newburyport, Mass., commended. Best trio Dark Brahma Fowls, C. H. Townsend, Utica, \$3; 2d, F. H. Loucks, Salisbury Centre, \$2; 3d, Edward Warr, Utica, commended. Best trio Dark Brahma Chicks, G. H. Warner, New York Mills, \$3; 2d, E. T. Batsford, Utica, \$2; 3d, Edward Warr, Utica, commended. Best trio Buff Cochins Fowls, Seward Merry, Iliion, \$3; 2d, do., \$2; 3d, G. H. Warner, New York Mills, commended. Best trio Buff Cochins Chicks, Jeremiah Grant, Utica, \$3; 2d, Seward Merry, Iliion, \$2; 3d, Jeremiah, Grant, commended. Best trio Partridge Cochins Fowls, Seward Merry, Iliion, \$3; 2d, G. H. Warner, New York Mills, \$2; 3d, G. W. Hicks, Oriskany, commended. Best trio Partridge Cochins Chicks, G. H. Warren, New York Mills, \$3; 2d, do., \$2; 3d, Seward Merry, Iliion, commended. Best trio Black Cochins Fowls, G. H. Warner, New York Mills, \$3. Best trio Black Cochins Chicks, G. H. Warner, New York Mills, \$3; 2d, L. B. Root, New Hartford, commended. Best trio White Cochins Fowls, F. H. Loucks, Salisbury Centre, \$3; 2d, G. H. Warner, New York Mills, \$2; 3d, W. N. Dimmick, Hubbardsville, commended. Best trio White Cochins Chicks, J. Y. Bicknell, Westmoreland, \$3; 2d, J. M. Seymour, Westmoreland, \$2; 3d, F. H. Loucks, Salisbury Centre, commended.

CLASS II—FRENCH.

Best trio Houdan Fowls, Edward Warr, Utica, \$3; 2d, A. Leach, Utica, \$2; 3d, Edward Warr, Utica, commended. Best trio Crevecœur Fowls, W. A. Fuller, Glen, \$3. Best trio Crevecœur Chicks, E. T. Batsford, Utica, \$3; 2d, J. Y. Bicknell, Westmoreland, \$2; 3d, J. M. Seymour, Westmoreland, commended. Best trio La Fleche Fowls, G. H. Warner, New York Mills, \$3; 2d, J. M. Seymour, Westmoreland, \$2. Best trio La Fleche Chicks, G. H. Warner, New York Mills, \$3.

CLASS III—SPANISH.

Best trio White Leghorn Fowls, J. Y. Bicknell, Westmoreland, \$3. Best trio White Leghorn Chicks, Almon Leach, Utica, \$3; 2d, do., \$2; 3d, G. U. Brown, Unadilla Forks, commended. Best trio Brown Leghorn Chicks, A. Leach, Utica, \$3; 2d, Alfred Gray, Trenton Falls, \$2; 3d, do., commended. Best trio Black Spanish Fowls, S. P. Hallock, Oriskany, \$3; 2d, George H. Warner, New York Mills, \$2. Best trio Black Spanish Chicks, O. R. Babcock, New Hartford, \$3; 2d, William Bailey, Utica, \$2; 3d, George H. Warner, New York Mills, commended.

CLASS IV—DORKINGS.

Best trio White Dorking Fowls, G. H. Warner, New York Mills, \$3. Best trio White Dorking Chicks, G. H. Warner, New York Mills, \$3; 2d, Alfred Gray, Trenton Falls, \$2. Best trio Silver Gray Dorking Chicks, G. H. Warner, New York Mills, \$3. Best Colored Fowls, R. P. Wolcott, Holland Patent, \$3. Best Colored Chicks, R. P. Wolcott, Holland Patent, \$3; 2d, G. H. Warner, New York Mills, \$2; 3d, R. P. Wolcott, Holland Patent, commended. Best Dominique Fowl, O. Howland, Auburn, \$3. Best Dominique Chicks, J. Y. Bicknell, Westmoreland, \$3; 2d, O. Howland, Auburn, \$2. Best Plymouth Rock Fowl, A. Leach, Utica, \$3; 2d, O. Howland, Auburn, \$2. Best Plymouth Rock Chicks, A. Leach, Utica, \$3.

CLASS V—HAMBURGS.

Best trio Golden Spangled Hamburg Fowls, J. Y. Bicknell, Westmoreland, \$3; 2d, Chester Wolcott, Trenton, \$2; 3d, Johnson & Hague, Utica, commended. Best trio Golden Spangled Hamburg Chicks, J. Y. Bicknell, Westmoreland, \$3; 2d, George H. Warner, New York Mills, \$2; 3d, Johnson & Hague, Utica, commended. Second best trio Silver Spangled Hamburg Fowls, J. W. Jacobs, Holland Patent, \$2. Best trio Silver Spangled Hamburg Chicks, Wm. R. Hills, Albany, \$3; 2d, G. H. Warner, New York Mills, \$2; 3d, F. H. Loucks, Salisbury Centre, commended. Best trio Golden Pencilled Hamburg Chick, C. H. Warren, Verona, \$3; 2d, J. Y. Bicknell, Westmoreland, \$2. Best trio Black Hamburg Chicks, Alfred Gray, Trenton Falls, \$3.

CLASS VI—POLISH.

Best trio White Poland Chicks, F. H. Loucks, Salisbury Centre, \$3; 2d, do., \$2. Best trio Golden Poland Fowls, C. H. Warren, Verona, \$3. Best trio Golden Poland Chicks, C. H. Warren, Verona, \$3; 2d, G. H. Warner, New York Mills, \$2. Best trio Silver Poland Fowls, O. Howland, Auburn, \$3. Best trio Silver Poland Chicks, Daniel A. Carter, Utica, \$3; 2d, E. A. Putnam, Syracuse, \$3.

CLASS VII—GAME.

Best pair Black-breasted Red Game Fowls, J. Y. Bicknell, Westmoreland, \$3; 2d, do., \$2; 3d, Charles Clarke, West Winfield, commended. Best pair Black-breasted Red Game Chicks, J. Y. Bicknell, Westmoreland, \$3; 2d, W. A. Fuller, Glen, \$2; 3d, J. Y. Bicknell, Westmoreland, commended. Best pair Dorking Game Fowls, C. H. Warren, Verona, \$3; 2d, J. Y. Bicknell, Westmoreland, \$2; 3d, do., commended. Best pair Duckwing Game Chicks, J. Y. Bicknell, \$3. Best pair Pile Game Fowls, Alfred Gray, Trenton Falls, \$3; 2d, J. Y. Bicknell, Westmoreland, \$2; 3d, Warren Baker, West Schuyler, commended. Best pair Pile Game Chicks, Alfred Gray, Trenton Falls, \$3; 2d, R. Burch, West Schuyler, \$2. Best pair Blue Game Fowls, John Fulton, Gloversville, \$3. Best pair Blue Game Chicks, Charles Clarke, West Winfield, \$3; 2d, Alfred Gray, Trenton Falls, \$2; 3d, G. H. Warner, New York Mills, commended. Best pair Derby Game Fowls, John Fulton, Gloversville, \$3; 2d, W. R. Dudley, Augusta, \$2; 3d, J. Y. Bicknell, Westmoreland, commended. Best pair Derby Game Chicks, C. H. Warren, Verona, \$3; 2d, J. Y. Bicknell, Westmoreland, \$2; 3d, Alfred Gray, Trenton Falls, commended. Best pair Irish Gray Game Fowls, Charles Clarke, West Winfield, \$3; 2d, W. R. Dudley, Augusta, \$2. Best pair Irish Gray Game Chicks, John Fulton, Gloversville, \$3. Best pair White Georgian Game Fowls, W. R. Dudley, Augusta, \$3; 2d, John Fulton, Gloversville, \$2. Best pair White Georgian Game Chicks, J. Y. Bicknell, Westmoreland, \$3.

CLASS VIII—BANTAMS.

Best pair Black-breasted Red Game Bantam Fowls, E. P. Howlett, Syracuse, \$3; 2d, C. H. Townsend, Utica, \$2; 3d, H. S. Quinn, Utica, commended. Best pair Black-breasted Red Game Bantam Chicks, E. P. Howlett, Syracuse, \$3; 2d, C. H. Townsend, Utica, \$2; 3d, do., commended. Best pair Brown-breasted Red Game Bantam Fowls, C. N. Brown, Unadilla Forks, \$3; 2d, E. P. Howlett, Syracuse, \$2. Best pair Brown-breasted Red Game Bantam Chicks, E. P. Howlett, Syracuse, \$3. Best Duckwing Silver Game Bantam Fowls, G. H. Warner, New York Mills, \$3; 2d, Alfred Gray, Trenton Falls, \$2; 3d, E. P. Howlett, Syracuse, commended. Best Duckwing Silver Game Bantam Chicks, E. P. Howlett, Syracuse, \$3. Best pair Yellow Duckwing Game Bantam Fowls, E. P. Howlett, Syracuse, \$3; 2d, C. A. Johnson, Newburyport, Mass., \$2. Best pair Yellow Duckwing Game Bantam Chicks, E. P. Howlett, Syracuse, \$3. Best pair Pile Game Bantam Fowls, E. P. Howlett, Syracuse, \$3. Best pair Pile Game Bantam Chicks, E. P. Howlett, Syracuse, \$3. Second best pair White Game Bantam Fowls, E. P. Howlett, Syracuse, \$2. Best pair Black Game Bantam Fowls, E. P. Howlett, Syracuse, \$3. Best pair Black Game Chicks, E. P. Howlett, Syracuse, \$3.

CLASS IX—BANTAMS.

Best trio Golden Sebright Bantam Fowls, Alfred Gray, Trenton Falls, \$3; 2d, G. H. Warner, New York Mills, \$2; 3d, Johnson & Hague, Utica, commended. Best trio Golden Sebright Bantam Chicks, G. H. Warner, New York Mills, \$3; 2d, O. Howland, Auburn, \$2. Best trio African Bantam Chicks, J. Y. Bicknell, Westmoreland, \$3.

CLASS X—MISCELLANEOUS.

No awards.

CLASS XI—TURKEYS.

Best pair Bronze Turkeys, George Vandervear, Port Jackson, \$3; 2d, do., \$2; 3d, Chester Wolcott, Trenton, commended. Best pair Wild Turkeys, Seward Merry, Iliou, \$3; 2d, Alfred Gray, Trenton Falls, commended. Best pair Black Turkeys, R. P. Wolcott, Holland Patent, \$3. Best pair Buff Turkeys, R. A. Jones, Whitesboro', \$3; 2d, O. Howland, Auburn, \$2.

CLASS XII—DUCKS.

Best pair Rouen Ducks, E. N. Kelsey, Durhamville, \$3; 2d, J. M. Seymour, Westmoreland, \$2; 3d, G. Vandervear, Port Jackson, commended. Best pair Aylesbury Ducks, G. H. Warner, New York Mills, \$3; 2d, J. Y. Bicknell, Westmoreland, \$2; 3d, N. A. Fuller, Glen, commended. Best pair Cayuga Ducks, Chester Wolcott, Trenton, \$3; 2d, O. Howland, Auburn, \$2; 3d, R. P. Wolcott, Holland Patent, commended. Best pair Muscovy Ducks, S. F. Sherman, New Hartford, \$3; 2d, Johnson & Hague, Utica, \$2; 3d, C. H. Warren, Verona, commended.

CLASS XIII—GEESE.

Best pair Bremen Geese, J. Y. Bicknell, Westmoreland, \$3; 2d, do., \$2; 3d, O. Howland, Auburn, commended. Best pair Wild Geese, Chester Wolcott, Trenton, \$3. Best pair Toulouse Geese, Theodore A. Greiner, Bridgewater, \$3; 2d, R. A. Jones, Whitesboro, \$2.

CLASS XIV—ORNAMENTAL.

Best pair Pearl Guinea Fowl, G. H. Warner, New York Mills, \$3.

CLASS XV—ORNAMENTAL WATER FOWLS.

Best pair Wood Duck, Alfred Gray, Trenton Falls, \$3.

CLASS XVI—CAGE BIRDS.

Best pair Belgian Long-Breed Singers, George Weber, Utica, \$1. Best pair German Canaries, William Dunn, Utica, \$1.

CLASS XVII—PIGEONS.

Best pair Pouters, W. C. Harte, Clinton, \$2; 2d, do., commended. Best pair Fantails, George H. Warner, New York Mills, \$2; 2d, W. C. Harte, Clinton, commended. Best pair Tumblers, W. C. Harte, Clinton, \$2; 2d, George H. Warner, New York Mills, commended. Best pair Jacobins, George H. Warner, New York Mills, \$2; 2d, W. C. Harte, Clinton, commended. 1st and 2d best pair Antwerps, W. C. Harte, Clinton, \$2 and commended.

CLASS XVIII—RABBITS.

First and second best pair Lop-eared Rabbits, W. M. Dimmick, Hubbardville, \$3 and \$2; 3d, C. H. Warren, Verona, commended. Best pair Common Natives, G. H. Warner, New York Mills, \$3. 1st, 2d, and 3d best pair White Madagascars, Stephen Treen, Utica, \$3, \$2, and commended.

CLASS XIX—FISH.

Best Salmon and Trout, New York State Fisheries, \$5 each.

CLASS XX—PETS.

Best display of Minks, Henry A. Ressegue, Verona, \$10. Best pair Gray Squirrels, H. S. Adams, Utica, \$2.

JUDGING BY A STANDARD.

MR. EDITOR:

I am very glad if my note to you (which you are aware was not intended for the public eye) has been the means of bringing out a fuller expression of Mr. Wright's views on the subject of a "standard for judging birds," because he has said what ought to have been said, and what ought to be read and very thoughtfully considered by all our poultry fanciers in America, and because he has said it so much better than any one else could have done, and given his words the weight of his own large experience and thorough investigation of the subject.

I do not think I have misunderstood his meaning, as he is led to suppose, for I have very carefully read all he has written on the subject. In my note to you I only expressed my views in relation to the numeral values as now used in our American standard, and not in relation to the values as applied by him in his plan. I think there is a very great difference between sitting in convention making a standard giving "fixed" or definite values to the scales for the purpose of bringing all the judging at our shows to such a standard, and making a standard giving such values for the purpose of bringing the standard to the most accurate and consistent judging. This is what I understand Mr. Wright to have done, and we have his own testimony, as well as the testimony of others, that its workings are in the main satisfactory. I most heartily agree with him in what he says about judging by theoretical standards, because I have seen the workings of such standards, and because his idea tallies exactly with my own. The truth is—and it cannot be too often or too plainly spoken—that while it is easy to make a standard in a convention, it is not easy to find the judges, as you and I very well know, who will be bound by such a standard in their arbitrations. Another thing should be borne in mind: the English judges are gentlemen of

large experience as poultry breeders, thoroughly trained to the work of judging, and their decisions at the different shows would naturally be consistent, and would constitute a sort of standard by which fowls could safely be bred; but in America we have as yet no trained judges, and must depend upon the best experts we can obtain, which is no easy matter, for most of our experts are large breeders and large exhibitors at most of our principal shows. Nor is it at all probable that the judges who officiate at one show can be obtained for another; consequently we cannot have the same consistency in our awards which they have in England. I am no hero-worshiper, nor do I intentionally flatter any man, but it is my conviction that there is no person living who has given so much time and thought to this subject, or who has given us his views so clearly and attractively, as Mr. Wright, and therefore what he says should carry with it proportionate weight. Having been a careful student of all Mr. Wright has written upon poultry matters for several years, I think he is entitled to a careful reading by all who are interested in the subject and to our gratitude for what he has done as well as for what he has suggested.

CHICKENS IN A CARRIAGE-SHOP.

As early chickens are, as yet, raised but little in this vicinity, we conceived a great desire for some. Our poultry-house not being warm enough, we could think of no way to attain our desire. A few are raised near us in shoemakers' shops, and we wondered whether a carriage-shop would not do as well. After thinking upon it a week or two, we at length concluded to try it. Fanciers told us it was of no use, as there was so much noise not an egg would hatch; but, as we had a quiet Partridge Cochins pullet that seemed determined to act upon her maternal instincts, and our eggs did not cost us four or five dollars a dozen, as they did last year, we made her a nest and tried her. Finding she would sit amidst the noise as unconcerned as though she was in the farthest corner of the hay-mow, we placed under her thirteen eggs—three Dark Brahma, three Light Brahma, three Partridge Cochins, and four Brown Leghorns. She continued to sit, coming off nearly every day to eat, drink, and stretch herself, but remaining only a few moments. Last Monday (February 16th) she came off with eight chicks, all bright and strong. She is in the body-making room. Sawing, filing, planing, grinding tools, and hammering are the noises she hears, but they do not disturb her equanimity in the least. She trudges around the floor, calling her chicks, dusts herself in the sawdust under the shavings, lies down upon the floor in the sun, cuddles the chicks around her, and seems perfectly at home, unless strangers come in to see her, when she makes a sharp "cluck," and hovers her brood immediately. It is a curious sight, to go from the cold, piercing wind that is blowing tremendously out of doors, into the warm shop, and find those tender, peeping bits of chickens so bright and happy. We can see no reason why they should not live; nevertheless, they may not. Our success with them has emboldened us, and we have allowed three more pullets to try their luck at early chickens.

THE BALD-HEAD TUMBLER.

ONE of the most striking and pleasing birds to the eye, of the Tumbler class, and a bird which is springing largely into favor among fanciers, is the Bald-head Tumbler, a bird, by the way, that, until very lately, has not been taken much into the notice of our breeders in America; but several fanciers, after meeting together and consulting on the breeding powers and beauty of this class of Pigeons, concluded to give these birds a thorough trial. After careful and systematic breeding, they have succeeded in producing birds of the most approved style and feather. As some of your readers may not be acquainted with this variety of Tumblers, we will endeavor to describe the birds as they appeared to us while on exhibition. Bald-head Tumblers are about the size of our common Turbits, which they resemble very much in shape. Their bodies are of one solid color, either yellow, red, blue, black, or silver. Of these five colors, the black are the most common. Good birds of the other four colors are worth and do bring large prices. Above the line of the eye the feathers of the head are entirely white, from which characteristic marking comes their name. Their thighs, flight feathers, and tail are also white, and with the dark colors of the body form a most pleasing contrast. The wings of the best specimens droop and touch the ground. Their eyes are and should be of a pearl color, and the choicest birds possess a white and very short bill.

At the late exhibition of the National Columbian Society, just closed, we were introduced to a gentleman who has made these birds a specialty, who informed us that he had paid as much as forty dollars per pair for these birds in England, and in his opinion there were no better layers or more successful breeders to be found, search the world over. This gentleman's birds were awarded all the first premiums by the judges at the above show. Why is it that these birds are not more seen in the coops and lofts of our fanciers? Is it because they are scarce? or is it because the birds are owned by only a few fanciers, who have a "corner" in this particular class of birds. We are rather inclined to think the latter is the case, and if so, we say "Down with all rings and corners." However, in our judgment, if our fanciers would take the breeding of these birds into consideration, the "rings" would soon be abolished, and every fancier would be able soon to exhibit at our shows these really beautiful birds.

In conclusion, allow us to congratulate the managers of the National Columbian Society for their efforts in bringing them to the notice of our fanciers, and the neat manner in which they were exhibited.

Yours truly,

K. & S.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: I can hardly take up a journal that has any poultry news in, or paper devoted entirely to the poultry interest, without seeing very many inquiries as to finding an antidote for the worst of poultry diseases, roup.

Let me tell you a little of my experience for the last ten years, five in England and five in this country, in treating this disease. It is by sulphurous acid medication, or by letting the bird be exposed to the fumes of sulphur burned in the atmosphere, which produces sulphurous acid gas. I have found it the cheapest and most reliable remedy that can be used for either fowls, horses, or human beings, that are affected with roup, epizooty, or catarrh. It acts like magic, and relieves the patient at once. Two or three applications a day, for a day or two, being all that is necessary.

The mode of application is as follows: Take a small shovelful of red-hot cinders from the stove, and place it on a stool or chair (on something, so that it will not burn the article), in the middle of the room, or outhouse, barn, or any place that has a door and windows; sprinkle on the cinders a teaspoonful of flour of sulphur (powdered brimstone), and let it smudge; it will only glow, and give off sulphurous acid fumes, which will cause the fowl that you are operating upon to cough and sneeze, at the same time bringing up through the nostrils and throat phlegm and mucus. You need not hold the bird over the fumes, but sit a yard or two from it, and breathe it yourself as well. If you are troubled with catarrh or cold in the head, I will stake my professional reputation that in five or six fumigations, that it will entirely disappear, and until fresh cold is taken you will be cured.

When the epizooty was raging so bad with us a year ago, in my district I had over seventy horses that I fumigated twice a day, and I treated nearly one hundred and fifty by advice during the epidemic. I turned horse doctor for a time, and I can truly say, that not one horse that was thoroughly fumigated, and ordinary attention given to it, died or had any relapse.

I wrote an article on the subject, which the editors of the *Rochester Union and Advertiser* were kind enough to publish, and I had dozens of letters, from some of our most prominent horsemen and farmers, thanking me for giving them a cure so easy and certain as the sulphurous medication.

I have had many valuable birds sick, and whenever cold or roup symptoms put in an appearance, I just retire to a small room with my patient, and a pan of red-hot coals, a little sulphur, and ten minutes' fumigation. After four or five applications, I find my bird better every way, and not once has it failed.

The fumes, which to some are not at all disagreeable, can be soon expelled from the room by opening the window or door, and it will not damage either furniture or the most delicate articles.

My little boy has twice had a severe cold this winter. As soon as it appears my wife takes him on her lap, and has some sulphur burning for a few minutes in the kitchen or sitting-room, and in a couple of days he is over it, and perfectly well.

It saves a *doctor's bill*, and many a restless night. For children with croup or whooping cough, catarrh, or any affections of the bronchial tubes, inflammation of the lungs, &c.,

give me fumigation with sulphur before all the physic swallowed into the stomach.

In 1871 I had over one hundred cases of typhoid fever; every one was fumigated twice a day, and I had not one death-record to sign. Of course they had plenty of natural stimulants, in the shape of eggs, beef-tea, and milk, but no *spirituous liquor*.

Try this new remedy, and report.

W. C. MUNROE, M.D.

NEWARK, NEW YORK.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: in your report of Doylestown premiums there is a mistake in the Black Hamburg class. Messrs. Rogers & Dicke took first premium. Please give credit accordingly, and oblige,

Respectfully yours,

WM. T. ROGERS.

DOYLESTOWN, PA., March 2, 1874.

IMPORTATION.—S. H. Seamans, Wowwatosa, Wis., has just received from England one trio of Colored Dorkings; the cock is the winner of six prizes at the principal shows; they are magnificent birds. Also, one trio of Golden Seabright Bantams; winners at several shows. The above were selected by J. W. Ludlow. Also, from Henry Tomlinson, Birmingham, England, one trio of Buff Cochins and one trio of White Cochins; all grand birds. We have known Mr. Seamans for many years and sold him many fine birds, and with the above addition to his yards he will be able to supply eggs and fowls second to none in the Northwest.

(For Fanciers' Journal.)

SECRETARY AMERICAN POULTRY ASSOCIATION.

DEAR SIR: My attention has been called by a friend to the extraordinary action of the Association, in regard to myself, at the special meeting held in Boston the present month.

I hereby enter my protest against their action: first, that it is without cause; second, that it is unwarrantable; third, that it is unjust.

I deny that I introduced *any* person at the January meeting of the Association. I attended the Convention as a delegate from the New York State Poultry Society, in accordance with invitations issued to all Poultry Societies to send delegates to the Buffalo Convention. The delegation from the New York State Poultry Society consisted of Mr. Robert Reid, of Green Point, L. I., Mr. Geo. B. Willis, of New York City, and myself. Mr. A. B. Estes and myself made the journey together, and on our arrival at the Mansion House, Buffalo, I found Mr. Willis already there. We proceeded to the Hall and presented our credentials, duly signed by Mr. Thomas B. Kingsland as President of the New York State Poultry Society, which were accepted, and our names enrolled. After this I was *required* to become a member of the Association, as, unless I do so (although a delegate duly accredited), I could not retain my seat, nor have a voice in the Convention.

As you probably are aware, I was obliged to leave for home on the second day of the Convention, on account of sickness in my family, of which I was notified by telegraph; and whatever transpired after my departure, and may have seemingly led to this action, I know of only by hearsay.

If, as is asserted, there has been any introduction of any party to the Convention under a fictitious name, it surely should not be charged to me, but to the Society or officers thereof, of which I was simply a delegate. Holding no office in the Society since January, 1873, I had nothing whatever to do with the selection or appointment of delegates.

Had I been given, as was my right, an opportunity of explaining my position, I am confident the members of the Association would never have passed this most *unjust* resolution; and I doubt not that when their attention is called to this explanation, as I hereby request, *and insist as my right* it shall be, they will hasten to rescind their action in the matter.

Respectfully yours,

A. M. HALSTED.

RYE, N. Y., February 20th, 1874.

(For Fanciers' Journal.)

JOSEPH M. WADE, Esq.:

I desire to call out an exchange of ideas through your *Journal*, on the best and most profitable poultry for us farmers to cultivate. I am an amateur breeder, with no special variety or breed to commend. I want by an exchange of opinion to elicit some practical standard for general profit of the farmer. Utility and profit are the first things sought after, by a large majority of the farmers and poultry-raisers of the country. Now, as the scientific cultivation of poultry is beginning to receive general attention, and assuring that position which so important a production as our country entitles it to, it would be desirable to ventilate the question of the most productive, taking into the estimate cost of raising, value of meat and eggs, or which gives best returns on investment. While improved cattle, horses, swine and sheep have largely occupied the attention of our farmers and gentlemen of wealth and leisure, until fabulous prices have been paid for a single heifer of a particular pedigree, and a princely fortune is offered for a single piece of horse flesh that can beat Dexter's time on the track, it certainly cannot be beneath the attention of our farmers and stock-raisers to turn a practical inquiry into the best breed of fowls for eggs and the table.

I am aware that such particular breed has its admirers among the fancy, and breeders are enthusiastic in commending standard points and attractiveness of their several specialties; but as a farmer, and in behalf of my brother farmers, I regard this a question touching our pecuniary interest, not fancy. Those gentlemen who have passed beyond regarding the profits, may cultivate their refined and æsthetic taste in breeding for plumage, and place a high estimate on the shading of a feather, the gloss of a hackle, or point in a comb. This is all very well for those who can indulge their taste. Often a person of fortune and cultivated taste in art, would pay more for a landscape painted by an old master, than they would for the acres it represented; but as for us practical men, we must forego the pencilling of the artist, and rest content to cultivate the real soil, even though not as enchanting in its native roughness as it may appear on the canvas of the artist. The productiveness of our soil is the first practical inquiry. So with our poultry: While we admire the spirit of the Game, the supercilious strut of the dandy Bantam, the dignified sedateness of the Aldermanic Cochin, the imperious air of the Brahma, the vivacity of the Polish with the imperial crest, the important strut and exasperating cackle of the family of Hamburgs, who put on the

graceful airs and dainty step of the Flora McFlimsey's of the Fifth Avenue and Broadway, still, as a question of profit, which is it most to the interest of the farmer to cultivate? As we do not dine on feathers, nor sell plumage by the pound, it is eggs and solid meat which carries the argument for us at the counter of the grocer; and when we come to the question of meat for the table, we are apprised that all flesh is not the same flesh; "there is one of beasts, another of birds, and another of fish," with many subdivisions in each. If we are to dine on beef, we have a choice between the plump, tender, and juicy surloin of the Durham, and the coarse and tough-grained texture of a roast from a Buffalo steer; between the buttery richness of the tender, sugar-corned Cincinnati ham, or a cut from the hind leg of a Rocky Mountain bear; and we confess to a fastidious taste for fish. We can upon a pinch make a meal from a codfish; at the same time we have a weakness, if we pay the same price per pound for brook trout, and if it is just as convenient to our landlady, when we send our plate to the carver for a choice cut from a Canvas-back, preferring it always to the tender side of an overgrown Muscovy duck. The practical question then is, for general purposes of profit, what breed is the best, considering all points, for us to produce? I answer: that variety that earliest matures and produces the best meat for the table, at the lowest cost of feed.

If we can produce twenty pound of chickens, on three months' feed, from the egg, even though they average but three or four pounds a piece, are they not better than the same weight produced in the carcass of two overgrown, coarse, and stringy muscle of a Cochon or Brahma weighing ten or twelve pounds each, taking feed for eight to twelve months to mature them fit for market?

As for eggs, I know of no variety that will upon an average, lay more than one egg per day. Taking all things into the account, and from my own experience, though somewhat limited, I do not know of any variety that can excel in all desirable qualities, both for fine flavored meat, tender, and full breasted, the Plymouth Rock and American Dominique. I believe any farmer can produce, on the same feed, one hundred pounds of chickens, at less expense for feed and care, than the same weight of pork or beef, saying nothing of the return in eggs, to cover the cost of production. The time will come when poultry will more largely enter into our meat consumption, to the exclusion of pork, and prices will be governed by the quality of fowls yielding the best meat for the table, and eggs sold by the pound, and not by the dozen. It would be as sensible to sell sugar by measure as eggs by the dozen, or meat by the slice, regardless of the thickness of the cut.

If there are other breeds that excel the Plymouth Rock and Dominique in these desirable points of early maturity, richness of egg, and sweet and gamey flavor of their meat for the table, I should be glad to hear of them through your *Journal*, as we farmers desire the best variety to breed for market and profit, paying but little attention to the points of beauty or enormous weight, if to produce them costs more than they will bring us by the pound.

Yours in the country, AMOS G. DAY.

ITHACA, MARCH 2, 1874.

EGGS FOR HATCHING.

Light Brahma—with Felch & Buzzell cross, \$3.00 per doz.
Partridge Cochon—very finely marked birds, 3.00 "

First-class fowls for sale at reasonable prices. Eggs for hatching packed by the most successful method. Send stamp for new illustrated catalogue and price list. Address as above.

NATIONAL BEE JOURNAL.—MRS. ELLEN S. TUPPER, Editor and Proprietor. Devoted exclusively to Bee culture. Two Dollars a Year. The *National Bee Journal* is issued on the 15th of each month, contains sixty-four pages, printed on fine paper, in neat, clean type, and for the year 1874 has been greatly improved. Mrs. Tupper, having purchased the *Journal*, has removed it to Des Moines, Iowa, where it will hereafter be published under her own supervision. She will write for no other publication but her own, and in that she will give the result of that long practical experience which has placed her among the best, if not the best, authorities in this country on the honey bee.

Arrangements have been made with prominent bee keepers in this and foreign countries, for timely articles each month, upon important topics.

A special department has been assigned to "Notes and Queries," in which the various questions which arise in the practical experience of bee keepers each month, will be given, with pertinent answers by the editor. These will be condensed into the smallest possible space, and will be one of the most interesting features of the *Journal*.

The *Journal* will keep entirely clear of all entangling alliances with patent rights of whatever nature, and will be independent in the expression of its opinions. It will aim to be reliable, give only such information as will be of practical utility to its patrons, discarding theories and misleading propositions.

A limited space is devoted to advertising, which will be given to unobjectionable notices, at fair rates; and the large and rapidly increasing circulation of the *Journal* makes it a valuable advertising medium.

For circulars, containing club rates, premiums, advertising rates, etc., address MRS. E. S. TUPPER, Des Moines, Iowa.

J. Y. BICKNELL, Westmoreland, Oneida County, N. Y.

Circular containing a few practical hints, and Price List of Fowls and Eggs, FREE.

JOHN RUMBOLD, FOWLING CREEK, MD.—Light Brahmas and W. F. B. Spanish Eggs, \$2 per 13. W. Leghorn and Buff Cochins, \$3 per 13. The location of these yards especially recommend them to Southern buyers. Send your orders early.

LIVE AND LET LIVE!—I will forward EGGS for hatching from choice No. 1 Fowls, of the following varieties, at \$2 for 13: Light and Dark Brahmas, Partridge Cochins, Houdans, Brown Leghorns, B. R. Games, Gold and Silver-Laced and B. R. Game Bantams. Send stamp for Illustrated Descriptive Circular, &c. A. M. CAREY, Selinsgrove, Pa.

G. M. TUXBURY, West Amesbury, Mass., Importer and Breeder of Pure Brown Leghorns. Eggs, \$3.00 per dozen. Send for descriptive circular.

BLACK HAMBURGS.—A few trios of my "First Prize" and "Silver Cup" stock for sale at \$15.00 and \$20.00 per trio. W. E. Shedd, Waltham, Mass.

WHITE AND PARTRIDGE COCHIN EGGS, from John J. Berry's stock, \$4.00 per 13. White Crested White Polish, from F. T. Sperry's Stock Eggs, \$4.00 per sitting of 13. Black Leghorns, from Reed Watson's stock, \$4.00 per 13. Dark Brahmas and White-Faced Black Spanish, very fine; eggs, \$3.00 per 13. A very limited number of orders will be booked and filled in rotation. All eggs securely packed and fresh at time of shipment. J. C. FULLER, Vineland, N. J.

SCIENTIFIC BREEDING OF LIGHT BRAHMAS FOR EXHIBITION.

ARTICLE IV.

TIME OF HATCHING, CARE, AND FEEDING.

It may not be amiss just here to say a few words in regard to the proper time of hatching this variety. Experience has convinced me that little, if anything, is gained in size by having the chicks hatched before the middle or latter part of April. This, I am aware, is contrary to the prevailing opinion of many breeders; but the largest cockerel I ever bred was hatched April 14th this season (1873), and weighed ten pounds and six ounces, at twenty-four weeks old. If hatched during the cold, chilly days of February or March, they are often attacked with cramp or rheumatism and leg-weakness; the unfavorableness of the weather preventing them from taking sufficient exercise,

and causing a large portion of their food, which should go to make bone and muscle, to be expended in keeping up animal heat. Another difficulty with early hatched broods is, the hen often leaves them before warm weather sets in or they are fully fledged, when they apparently become stunted, and seldom, if ever, make large fowls. On the other hand, those hatched about the middle of April or first of May have the advantage of warm weather, and with good care and feeding will catch up with and pass, and eventually make larger birds than those hatched two months earlier. Well, then having removed your hen with her brood to a perfectly dry coop, or what is better, remove the nest from the pen in which they were hatched (which, I think, every one will agree is just the thing for a hen and chickens), the next question which presents itself is, how to get them to grow to the greatest possible size. I have obtained very good results by the following method: To one pint of corn meal add one teaspoonful of salt and one table

spoonful of ground bone, also a slight sprinkling of pepper; mix thoroughly before wetting. If it can be afforded, milk is excellent to wet it with. After the ingredients are well mixed, stir in milk or water enough to make into a stiff dough. Some writers advise mixing it so that it will crumble and fall apart when thrown on the ground. I prefer it with more milk or water, and think the chicks do too. I like to see the little fellows make a dive for it and get a chunk as big as they can swallow. Now then, suppose you give them their first feed at six in the morning. When first hatched their appetite will return about every two hours. They should be fed as often as this until two weeks old, and then change to every three hours till four weeks old; then feed them every four hours until six months old. Up to this time it will be next to impossible to over-feed them. My manner of feeding is to take a dish containing the food, and a teaspoon; then visit every brood in rotation, giving each a little at a time, being sure that each and every one is satisfied, and being equally sure that no food is left to be uneaten. Change the feed as often as possible. That is, if you give corn meal first in the morning, let the next feed consist of soaked bread, wheat middlings, corn and oats ground together, &c. I think the last feed at night should consist of cracked corn, which should be moistened with milk or water. They should be fed meat of some kind once a day. I usually feed mine scrap-cake or chandler's greaves. It should be chopped fine with a hatchet, put in a pot or pan filled with water, and allowed to soak over night, which softens it and enables the chicks to eat it much better than if fed dry. Sheep's or bullock's liver boiled and chopped fine is excellent. Now then, to all those who are situated as I am, and are compelled to rear their fowls on bare yards, entirely destitute of grass, comes the most important part of feeding, which is to supply your chicks with an unlimited quantity of green food, which should be grass. It is useless to attempt to rear fine birds without it. I give it to mine in addition to their other food twice daily. It does not matter how long the grass is, provided it be fresh and sweet. Lay it on a block or board, and with a hatchet chop it into fine chaff, say about one-fourth of an inch in length. To get extraordinary fine large birds this constant care and regular feeding is absolutely necessary, though ordinary-sized ones may be had without. The ground bone should be mixed with their food once a day. It is very beneficial in preventing leg-weakness in the cockerels. It causes full and profuse feathering; also prevents early laying in the pullets by keeping them raw and unformed until their frame has developed. I feel satisfied that it adds greatly to the size of birds reared in small, bare yards. For the knowledge of its value I am indebted to "*Wright's Brahma Fowl*," a little book which ought to be in the hands of every Brahma fancier. With regard to putting salt in the food: In former years, before I commenced to use it, I often had chicks that would stop growing at about six or eight weeks old. Sometimes two or three in a brood would be affected in this way. They would eat voraciously and did not fledge at all, being bare nearly all summer. I killed several, and on dissecting them found the gizzard filled with small white worms, from one-half to an inch and a half in length. They had eaten holes throughout the gizzard in all directions. I immediately commenced to put salt in the soft food, and have not had a single case since.

POOR POULTRY v. POOR JUDGES.

AMONG other things that result in considerable harm to the poultry dealers and their business is the indiscriminate awarding of premiums where there is no merit to justify, and the subsequent injury which follow such awards. At perhaps a majority of the State and county fairs throughout the country there is offered premiums for poultry, and in most cases the judges of poultry at these fairs are anything but posted. When one sees some of the stock which has "won the first premium," he will be forcibly reminded of an inquisitive gentleman who wrote to one of the papers out West inquiring why the award for fruit in water colors was given to an *oil* painting?

I recently saw a trio of Buff Cochins, which were awarded the highest premium at a large county fair, and one of the hens would have been totally disqualified at a regular poultry exhibition. Another case: I observed when the judges (?) passed their opinion that a trio of S. P. Polish were "all-right, give 'em first prize," when *both* of the hens had *five toes*, and the cock would not have counted thirty-five points. I will give still another case, where a cock was entered as a Dominique, when there was no such blood in him. I could mention many similar cases. If this was the end of the blunders, simply errors in judging, it would not be quite so bad, but it is not; there is yet greater damage done. In many cases parties receiving such premiums advertise "*prize blood stock*," and purchasers are thereby deceived, and lose faith in *all* poultry breeders, which deters many who would otherwise purchase were not some one's unfortunate venture held up to them as a warning. There is a difference between a *foul* dealer and a dealer in fowls.

Low price is a doubtful merit in most any article, and especially suspicious when offered as one of the best recommendations of good poultry. Every one will find in the end that it is *cheaper* to pay a good price for good stock to some reliable dealer than a poor price for poor stock to an unreliable dealer. If we desire to save the poultry business from reproach, we must strive to induce the agricultural fairs to select *competent* judges of poultry; and when we find any man who does not deal fair and square with all of his customers, let us be not afraid to speak out and "show him up," that others may be guarded against him and his transactions. If a man can show his intentions were good, and is willing to *make right* any little oversight or misrepresentation, well enough; it may be sufficient evidence that he is honest. To illustrate this point: some time ago I paid a *gentleman* (?), in New York State, his price for a trio each of Light Brahmas and P. Cochins; after receiving them, in a heavy ungainly box, and paying \$5.90 expressage, I discovered the Brahmas were anything but what they had been represented. The cock badly *pigeon-toed*, minus one gill, &c., and the hens with numerous bad points. I wrote my complaints. The answer came that "The fowls were selected by an employee, but that any future orders I favored him with, would see that I got good stock, &c. Was very sorry they were not all right, &c." His grief was not sufficient, however, for him to be honest enough to offer to do as he should. The Brahmas were of no use; I would not put them in my breeding-yards. The Cochins were good. Now note the difference in dealers: I received some fowls from a gentleman in Connecticut, and one of the pullets had a crooked or wry tail, and I immediately informed him of the

fact. His reply was, "That he picked them out *himself*, but in the evening, and if such was sent was not aware of it, and offered to remit the *money* back to be, or would satisfy me with eggs in the spring; I could take my choice." This I am satisfied is an *honest* dealer, and, with the one exception stated, the fowls sent me far exceeded my expectations. Twice the amount I paid for them would not induce me to part with them.

I deem it a duty, in justice to our reputation, and in order to maintain the dignity of our business, to expose every case of dishonest dealing that comes to our notice as soon as the facts can be investigated. I am confident the *Journal* will gladly publish such, and aid us all to build up the business, by weeding out dishonesty.

G. O. BROWN.

MONTVUE POULTRY YARDS, BROOKLANDVILLE, MD.

WORMS IN FOWLS.

MR. EDITOR:

Although trifling as this subject may seem to many, I have learned to regard it as a complaint of great importance, for the simple reason that it is generally overlooked, or rather credited to some other disease. It first attracted my attention as cholera (*i. e.*, the symptoms in a distressing case were similar), such as, refusal of food, great thirst; droppings of a greenish character at first, and afterward becoming thin and whitish; great weakness, cramps, ruffled plumage, &c.; the only difference being, that the fowls did not die off suddenly, or in great numbers, but sometimes lived over a week in this distressing condition.

I began treatment on a pullet for cholera, but without any apparent relief. Expecting her to die at all events, I gave her a full half ounce of laudanum, to see what a fowl could endure. In about five hours after I looked at her, and being still alive, I examined the droppings, and found a worm. It was about two inches in length, and the thickness of a medium corn-broom splint, both ends coming to a sharp point like a pin, with one end slightly curved. I then procured common worm-seed, and made a strong tea, and gave her three tablespoonfuls. Next morning I found her still alive, though totally blind in one eye, and nearly so in the other; *the effects of laudanum, perhaps*. During the night she had passed about twenty worms, all as above described. I then concluded to put an end to her existence, and upon opening her found the liver about twice its natural size, and otherwise diseased, having the appearance of decay in spots. The intestines were greatly inflamed from the gizzard throughout, and in two places I found small white warty-looking substances grown fast on the inner side, also several worms, making in all about thirty in this fowl.

I afterward gave my fowls worm-seed, mixed in soft food, and numbers of worms passed from them, after which there was a decided improvement; and, although the weather was unfavorable, they soon began laying, and looked cheerful.

The first indications I noticed of worms was a dull, stupid appearance, loss of appetite, and rather stiff, crampish movements.

The pullet referred to, with a number of others, was raised by my father, some four miles distant. His runs are rather damp, being what might be called good meadow lands.

A few years ago I received a lot of turkeys, which were raised on similar grounds, and noticing the stupor and loss of appetite in one, I fed it soft food for a few days, mixing in cattle powder, in hopes of improving the appetite, and in

a few days hundreds of small, conical-looking worms passed from her (they were about one-fourth of an inch in length), after which it became as bright and lively as any of them.

I am convinced that this complaint in fowls exists to a great extent, and is not suspected. A. C. HUNSBERGER.

PORTLAND, PA., March 2, 1874.

N.B. The laudanum was made by rather an unqualified druggist, and consequently may not have been full strength.

(For Fanciers' Journal.)

CORN FODDER FOR FOWLS.

IN a recent number of the *Fanciers' Journal* a correspondent recommends hay for fowls in winter. Corn fodder is also excellent where fowls are confined in a small yard without grass; they will eat the blades of the corn quite eagerly. Where a small quantity of sweet corn is raised in the garden, it is an excellent plan to cut off and cure the stalks when the ears are taken off for table use. The blades will then be much sweeter and better than if left to ripen and dry before cutting.

F. R. W.

CURE FOR ROUP.

THIS disease—so common, so fatal, and so easily cured—is the dread of many fanciers. As a gentleman, from Philadelphia, who was treating this disease experimentally, wrote me: "It is a nasty disease, and so contagious that it can be spread through a flock by allowing any of them access to a room or house where a patient has been kept weeks before."

My experience has been a sad one, for, until the last year or two, I thought it incurable; consequently, many of our fowls perished from neglect.

My treatment is simply this: In the first stage of the disease, which is denoted by a watery substance exuding from the eye, I give a dose of castor oil, which will generally be sufficient to effect a cure; but, if a fowl has not been noticed in this stage and left until the roof of the mouth and tonsils become ulcerated, several doses of oil may be necessary, about twelve hours apart. I use a small mop, dipped in vinegar, to cleanse the roof of the mouth, throat, head and nostrils; after which, instead of the lunar caustic for burning the ulcers, I dip a mop or feather in soft soap (which all good housekeepers generally have) and touch every ulcer. This answers every purpose, is convenient, and in its use there is not the danger of destroying the membrane of the larynx as with the caustic.

By using the vinegar wash and soap, several times as needed, and giving the necessary doses of oil or "castor beans," you need never lose a case from roup.

PEA FOWLS.

THINKING some years of experience in early life with these beautiful birds may not be amiss in answer to "D," last volume, page 822, I will say that I met at the beginning with the same difficulty that has overtaken him. In those days we lacked the advantages of poultry books and a "*Country Gentleman*" to apply to; hence I had to get my knowledge by experience. The pea fowl is a native of India, where the writer has seen it, wild and tame. The difference in the two conditions is not apparent to casual observation. Besides our common bird, there are some other varieties

among fanciers, known as pied and white, and these varieties have been introduced into California from Japan. But none of these are superior or equal in beauty to our ordinary birds. They were originally introduced into Western Europe by Vasco da Gama, the great Portuguese navigator, who succeeded in bringing a few live ones to his kingly master, Fernando the Fat. The birds are wild, yet easily domesticated. Thousands of them are to be seen ornamenting the grounds around the Hindoo temples. The feathers are used by the priests for ornamentation, and the eggs and flesh for food. The bird will not bear any confinement—requires a large range—and to be fully enjoyed as an ornamental appendage to the grounds, must be in large flocks. They are not prolific, yet thrifty and vigorous, and will live to an advanced age. The patriarch of our flock lived to be twenty-two years old, and was gathered to his Hindoo fathers in the natural way. I have seen it stated that at one time in the East they were recognized as a sacred bird—and I have seen the huge roofs of the temples of Allahabad, a sacred city of India, perfectly alive with them. Our original flock, now forty years old, is still in existence on the banks of the Delaware. They are a difficult bird to transplant when matured. I remember once to have presented a trio to a youthful sweetheart who lived some fifteen miles away, and the whole party returned in a few days. We began with a sitting of fifteen eggs, sent to us by Mr. Camac, who kept a splendid flock at his country seat near Philadelphia, and my grandfather brought them to us, carrying them on his lap in his carriage all the way. Ten were put under a turkey hen, and five under an old-fashioned five-toed Dominique hen—by the way, about the best fowl after all. Of the ten, seven hatched out; of the five, three came out—in all ten. Of these, seven (four hens and three cocks) came to perfect maturity, and formed the nucleus of our flock.

In the next two years' experience, when left to their own devices, the hens in the latter days of March would steal their nests, hiding in the top of the stalk-stack, straw-rick, or among the swingle tow stored in the peak of the roof over the colt stable—in the farm talk of that day called the "cupola," it being the highest building on the farm, surmounted by a rough turret, or "look-out," much needed in early days, and decorated with a red wooden weather-cock imported from Holland. This high-up, out-of-the-way place was the favorite resort of both the pea fowl and the turkey hen in spring; yet, later in summer, both made their nests on the ground.

The hen will lay six or seven eggs, go to sitting, and the moment one peeps under her wing, away she goes with it. In her anxiety to avoid the too scrutinizing observation of her master, her baby starves, or is destroyed by vermin. At all events, it disappears in a few days. Later in the season the hen steals her nest in a thick hedge row—if possible, under a pile of stones, or in a rocky cliff, with the approach well protected with briars, &c. Again she lays six or seven eggs, and turns up at the end of the season with a couple of fine birds. Thus left to their own devices, the egg product would amount to twelve to fourteen, and the bird product two or three.

Two years of this sort of thing was enough. The bird being a native of a hot climate, and luxuriating in tropical heat, accounts for the failure in some degree. The peacock is magnificent, and although he will sometimes mount the chimney top and yell discord, much to the disquiet of human sensibilities, yet when he appears upon the lawn at "noon-

tide," in full array, people who have a weakness for fine feathers forgive him. Yet with all his beauty he is an egoist of the meanest sort, ugly-tempered, cantankerous, and jealous among his family, especially in the spring, and is a coward withal. A plucky chicken cock will make him beat an ignominious retreat; and with all his domineering, he is a "hen-pecked" fellow after all. For when it comes to a pitched battle between him and his wife, he uniformly comes off second best and retires; not from gallantry, but his vanity, centered in the protection of his tail, upsets his equilibrium in the whirl of the fray. Among the feathered tribe, the bird of paradise is his only equal in vanity and meanness. He is charged with destroying the young, but in my experience this charge is not proved. But he will spy out the nest, and if he can evade the hen, who keeps a wary eye upon him, he will tramp the eggs to pieces, and wing his way to the chimney top, and screech with delight at his dastardly conduct. He is wise to keep out of her way then, for if she catches him his hair will get pulled "certain sure." But since she is as amiable as he is cross-grained, and she admires him very much, he is soon forgiven. He will plunder the nests and devour the eggs of other poultry; but he is a cute thief, and seldom risks being caught. In the barnyard he is no more insolent than turkeys or guineas.

The young pea hen is somewhat disposed to flirt, and will coquet with the young gobblers, causing the old one to knock things about some. The old hen is amiable and motherly. Armed with this experience, at the third year we marked the nests and stole the eggs, always taking them away after roosting time. The old hens would now lay nine to eleven and stop. Sometimes we would get four or five from a second laying in-doors. Then she would steal her nest and turn up in July with five or six birds. Insect life is then rampant, and when they go for them they get them. At this business they can beat the turkey out of the field, being more active and intelligent.

The stolen eggs, we put ten in a nest, under a good staid old turkey hen, and five under a Dominique hen. Ten chicks would be sure to hatch, and sometimes twelve. Put all with the turkey, as she is the best foster mother, and would pull through with eight or ten. The chicks are very pretty—much more hardy than turkeys, and more easily raised; must have plenty of room, animal food, water at will; are very docile, like to be petted, handled, and fed; will eat out of your hand or mouth, and flutter all over you; are very quick of wing, hence avoid many accidents, and will mount to the top of a three-foot paling before a turkey chick will mount a clap-board. At two months old I have seen them perched along the peak of the barn roof, making their way thence by the sheds and house roofs, and in another month on the very peak of the cupola.

By and by, when we came to know more and had old hens, we let them hatch and raise the chicks. When the writer went away to college there was a flock of eighty, and, when on parade, as fine a sight as one could wish to see. Judge Buel, the founder of the *Cultivator*, visited my father about this time, much admired my birds, and complimented me very highly.

As an edible bird, the pea fowl is quite equal to the turkey; and if cooked as they do it in India, is superior. It is a very sweet dish; the cooked bird is served incased by his own skin, set up in full feather, as the English serve a pheasant, standing up to his belly among olives, pomegranates, figs, dates, &c. The eggs are only fit to be eaten boiled very hard, or as an omelet with strong cheese, old ham, rusty bacon, well curried, as served to the British India officers.—*B. W. H., in Country Gentleman.*

(For Fanciers' Journal.)

BREEDING TO THE STANDARD.

MR. EDITOR.

As poultry breeding has to meet the Convention's Standard to receive the judges' favorable awards, it becomes questionable whether every one now attempting to breed to fancy points is prepared to do it; and in view of that hypothesis, I would intimate a system which might obtain to the advantage of all concerned. If, for example, the many who are now attempting to breed to points from cheap birds, or from eggs purchased from an injudicious breeder (premising all the while that in both instances the purchases were made from pure-bred stock), should, instead of breeding from fowls of their own mating, buy *each season* eggs from reliable and judicious fanciers, who, from means and position, could devote their entire time to the scientific breeding of high classed stock, such a system would enable the breeders to devote more time and money to the subject, because their customers would be more numerous, and consequently their profits greater, and to the buyers of eggs the results would still be greater: in this, that their stock would be unquestionably nearer to standard requisites, and consequently would bring better prices. Furthermore, the annual purchaser of eggs would not have the trouble and expense of keeping breeding stock. In that case a few common hens for sitting would be all that would be necessary to keep over winter; consequently a much less expensive preparation would be needed to raise the fancy breeds in the coming spring. This plan would enable any fancier to stock his summer lawns with the various breeds of poultry which have so beautifully adorned the show-pens at all the great exhibitions of the land, which of late years have attracted so large a share of popular interest.

This plan would also enable one to go through with the whole catalogue of improved poultry in a few years, thereby familiarizing himself and family with all the feathered tribes of domestic attainment.

V. M. F.

JACK RABBIT CHASE IN TEXAS.

THE PRAIRIE SPORT THAT PRECEDED A BALL IN GONZALES.

AMONG the finest sports of Texas, a correspondent says, are the rabbit chases. Don't imagine an ordinary rabbit hunt. The rabbit of Texas is in reality a hare, similar in size and proportion to the English hare. It is known in Texas as the mule-eared or jackass rabbit. It is so named from the length of its ears, which measure from five to six inches. The length of the animal from the tip of the nose to the end of the tail is three feet when fully grown; color, grayish brown; fore legs short and slender, hind legs and quarters long, fully developed, and symmetrically proportioned, indicating great strength and fleetness. Its ears are long and pendant, but capable of being erected; hence the name of mule-eared rabbit. It is not a mischievous animal like the swamp rabbit, which commits depredations on gardens and fruit trees. It feeds on the prairie grass and drinks no water except the dews of rain drops. It does not burrow, but makes a nest in the grass for its young. Its flesh is so tough and sinewy that it is not fit for food, but is hunted only for sport.

A stranger is almost certain to be invited to a rabbit chase soon after his arrival, especially if his dress and air indicate to the Texan that he is from the Eastern States.

On my arrival in southwestern Texas, I put up in the only hotel of the little village of Gonzales, on the Guadalupe river. After a good square meal of Texan fare, consisting of beef-steak, hominy, corn bread, and coffee, and just as I was finishing my cigar, I heard a familiar voice, and turned to greet an old acquaintance who moved to Texas some years ago. Before the evening was over it was arranged for me to join in a rabbit chase the next day. "But," said my friend, "can you ride a mustang?"

"I guess so, unless he is much harder to ride than a thoroughbred."

"Not much. Be ready, booted and spurred, to mount tomorrow at eight. Your mustang will be ready for you. I will call and we'll gallop over to the Squire's, the place of rendezvous. You shall have the prettiest girl and the boldest lady rider for your companion in the hunt. Good-night and pleasant dreams."

Anticipating the appointed time by a few minutes, Bob was on the ground the next morning with the mustang. We galloped over to the Squire's, about two miles from the village in the prairie. His pretty daughter Helen cheerfully accepted Bob's friend for an escort. She was well mounted, and sat with ease and grace. While we conversed, other members of the party came in by twos and fours from all points up the prairie, making for the central point, the Squire's. In a short time a company of about twenty ladies and gentlemen, or about a dozen couples had arrived, etiquette requiring each gentleman to bring a lady. Most of the party were mounted on mustangs. A few rode splendid hunters, bred from imported stock. The ladies wore dark habits or skirts, and stylish caps, ornamented with a jaunty white feather. They were evidently at home in the saddle, and more graceful riders I never saw. The gentlemen were in every kind of costume, from a hunting jacket to a blouse, and one wearing a Mexican ranchero's buckskin suit and sombrero, bore himself more proudly than all the rest.

The sounding of a horn in the distance threw the party into the wildest excitement. "There comes Roving Bill, our hunter," said Bob, and soon a wild Western ranger dashed in among us, followed by a dozen or more splendid English greyhounds and two black-and-tan beagles, or, as they are termed in the South, deer hounds. His long black hair floated from under a slouched hat, and he was fully equipped with the formidable six-shooter and bowie knife, the indispensable companions of the border Texan. He was welcomed with a shout, which he returned with, "are you all ready for the hunt?" "All ready," was the reply. Then "forward" was the command, and we dashed gaily over the prairie for several miles, riding in couples, that seemed to enjoy the chance for a flirtation as much as the exercise.

We galloped on two or three miles. Then our Master of the Chase ordered a halt, and conversation and flirtation ceased. Disposing his company in groups (in which position we were to remain until the game was up), he galloped here and there over the plain in our front, while the intelligent dogs dispersed themselves, waiting for the bugles to start the game.

Up sprang a rabbit directly in our front, and bounded off a few paces. Halting, it raised itself straight upon its haunches, surveyed the scene a moment with its bright black eyes, erected its long quivering ears, and then, with lightning speed, it darted with long bounds over the prairie,

followed closely by the hounds, while each gay cavalier and lady with shout and halloo, dashed after the pack. The deep-mouthed beagles, with their music, led off after the rabbit, but were soon left behind by the fleet greyhounds. With long and graceful leaps they stretched over the plain, at first loosing ground on the rabbit. But the greyhound's bottom is the hunter's sure reliance. As they ran they gained upon the frightened, flying game, which ran without the hope of reaching a covert, out on the open prairie, its only home. Faster and faster the greyhounds followed, with outstretched necks, gaining at every bound, until they seemed fairly to fly.

The riders followed with shouts, led off by Roving Bill, who, with hat off and flowing hair, was all animation. With keen, shrill whoops he urged on the pack, and was answered in the rear by the beagles, that followed more slowly but surely in the track, while the riders of the chase were scattered in confusion over the plain. The hounds were gaining; nearer and nearer they approached the rabbit. Its ears were thrown back; with desperate leaps it plunged, in the vain hope of escape from its inevitable doom.

A leader of the pack dashed forward and with a bound leaped upon the game. A sharp struggle, a wailing cry, and all was over. The chase was ended. The riders came galloping up at intervals until all were in at the death. No further notice was taken of the poor rabbit. The deer hounds coming up with savage growls claimed what they evidently considered their prey, while the greyhounds yielded in lordly disdain.

Roving Bill: "Well gents, we've had a right smart chase of it, run nigh on to five miles; 'twas almost equal to a regular fox chase. What next? Shall we have another chase, or go home and get ready for the fandango?" All: "The fandango, the fandango, by all means;" and engaging our partners for the dance that evening, we rode at leisure back to the village, well pleased with our morning's sport. Sometimes five or six rabbits are killed before the sport is over. A fandango invariably concludes the day's fun.

CENTRAL NEW YORK POULTRY ASSOCIATION.

AWARD OF PREMIUMS.

(Continued from page 167, No. 11.)

CLASS XXI—MISCELLANEOUS.

Best Improved Incubator, Jacob Graves, Boston, \$10. Exhibition Coop, Branson & Hurley, Utica, \$2. Coop for Hen and Chickens, W. M. Dimmick, Hubbardsville, \$2.

SPECIAL PREMIUMS.

1. Largest and best display of Fowls and Chicks (not less than twenty varieties), G. H. Warner, New York Mills, \$50. 3. Best collection of Asiatics, \$15; 2d, \$10; G. H. Warner, New York Mills, and Seward Merry, Ilion, tied, and each received \$12.50. 5. Best collection French Class, G. H. Warner, New York Mills, \$15. 7. Best collection Dorking Class, G. H. Warner, New York Mills, \$15. 9. Best collection Spanish Class, A. Leach, Utica, \$15. 11. Best collection Games, J. Y. Bicknell, Westmoreland, \$15. 12. Second best collection Games, Alfred Gray, Trenton Falls, \$10. 13. Best collection Game Bantams, E. P. Howlett, Syracuse, \$10. 17. Best collection Pigeons, W. C. Harte, Clinton, \$5. 19. Best collection Cage Birds, George Weber, Utica, silver cup. 20. Best display Mink, Henry Ressegue, Verona, \$10. 21. Best display Live Fish, Seth Green, Superintendent of Fisheries, \$10. 22. Best display Dressed Poultry, Jones Brothers, Utica, \$5. 23.

Best trio La Fleche Fowls, G. H. Warner, New York Mills, \$5. 24. Best trio Light Brahma Chicks, Seward Merry, Ilion, \$5. 25. Best trio Dark Brahma Fowls, C. H. Townsend, Utica, \$5. 26. Y. Bicknell, Westmoreland, \$5. 97. Best approved Incubator, J.

Graves, Boston, \$10. 99. Best trio Fowls or Chicks (any breed), G. H. Warner, New York Mills, \$5. 100. Best Black Cochon Hen, G. H. Warner, New York Mills, \$5.

The competition in some classes of fowl was very close indeed, and the judges devoted the greatest attention to such cases. In some instances feathers were plucked and compared, and a steelyard was even employed to bring in correct weight as one criterion.

Items Interesting and Amusing.

 A FARMER at Augusta, Ga., has discovered his dog milking his cow.

 A PERFECTLY white deer was shot in Pike County, Pa., last month.

 DEER are very plenty in Pike County, Pa., this season.

 Two Mountainville trappers have caught one hundred minks since the trapping season commenced.

 A POUGHKEEPSIE sportsman shot thirty-seven woodcock in one afternoon, near New Paltz.

 "You don't do that again," said the pig to the boy who cut his tail off.

 WOLVES are so plenty around Crown Point, Indiana, that sparking has fallen off at least one-half.

 WHAT is it that is a cat and not a cat, and yet is a cat? A kitten.

 THERE were pigeons on exhibition at the National Columbarian Society's show that were worth and would bring \$200 each, and upwards.

 THE Duchess of Geneva, the famous \$40,000 cow, died at the farm of Samuel Campbell, at New York Mills, recently.

 A BLACK BASS was caught in the Delaware recently that had in its mouth thirteen hooks, with pieces of lines from a half to ten yards in length.

 MR. H. LOWERY, of Pine Bush, took up a skip of bees recently, the honey from which weighed one hundred and twenty-six pounds.

 DURING a recent snow storm in Sullivan County, a legion of black and dark brown worms were discovered in the snow that fell. They varied in size from three-fourths to two inches in length.

 It is said that chestnuts can be preserved any length of time by simply putting them in a box or bag, and sprinkling common salt among them. The salt not only keeps the worms from them, but prevents them from becoming hard.

 A SHEEP was found in Maine the other day under a snowdrift in a hole seven or eight feet deep, where it had been for at least twelve days without food. It was alive, and being pulled out, ran briskly to the barn, apparently all right.

 A CARGO of two millions of dollars worth of silk worms recently arrived at San Francisco, on their transcontinental journey to France. They were purchased in Yokohama, China, by the French government, and arrived at San Francisco on the 15th of December. Only three days were lost in transferring them to the freight cars.

 FOUL PROMOTION.—"Why did the General take you on his staff?" was asked of a young Hussar, not long ago, by an enthusiast. "Oh! I'll tell you; because I cut ——" "Through the ranks of the enemy, you hero!" interrupted the enthusiast (she was a lady). "Oh! dear no, nothing of the sort; it was because I cut up a turkey so well."

 CATTLE AND WHEAT.—We have before us the statistics of two great products, the cattle crop of Texas and the wheat crop of California, both for the year 1873. For the cattle sent from Texas the sum realized by dealers of that State was \$8,000,000, and for California wheat crop exported from San Francisco the receipts are estimated at \$10,000,000. It will thus be seen that, vast as the California wheat crop is, the Texas cattle crop is not far below it.

 DISEASES OF PIGS.—Many of the diseases of pigs are contagious, and the instant a pig is observed to be sick it should be removed to a separate pen; and it would be well to regard this single case of sickness as an indication that something is wrong in the general management of the pigs. Clean out the pens, scald the troughs, scrape out all decaying matter from under and around them, sprinkle chloride of lime about the pen, or what is probably better, carbolic acid. Dry earth is a cheap and excellent disinfectant. Use it liberally at all times. Whitewash the walls of the pens; wash all the inside and outside wood work, troughs, plank floors, &c., with crude petroleum; it is the cheapest and best antiseptic yet discovered.

 DR. BUSHELL, physician to the British Legation at Peking, not long since made a journey through inner Mongolia to Kalgan, and thence northwesterly to Shang-tu, the old northern capital of the Yuan dynasty, described by the great Venetian traveler, Marco Polo. This place was built by the famous Kublai Khan. Dr. Bushell found the site a complete desert, overgrown with rank weeds and grass, the abode of foxes and owls, which prey on the numerous prairie rats and partridges. The walls of the city, built of earth faced with unhewn stone and brick, are still standing, but are more or less dilapidated, and the inclosed space is strewn with blocks of marble and other remains of large temples and palaces, while broken lions, dragons, and the remains of other carved monuments lie about in every direction, half hidden by the thick and tangled overgrowth.

 ARAB HORSES.—The experience of French and Prussian authorities appears to go against the Arab, as the best horse for the service. A German correspondent of the London *Veterinarian*, writes: "All the Prussian cavalry regiments have had to report to the Emperor William their experience of the French horses captured and utilized during the war. Though differing on many points, the reports agree in general, that the German military horses are preferable in every respect to the French, and especially to those of Arab race. This," the correspondent adds, "confirms what was stated to me in September, 1870, at the camp at Beverloo, in Belgium, when I went to see the French prisoners there, who had a number of their horses with them. The Belgian officers and the French cavalry sergeants (there were no French officers in the camp) all declared to me that the Arabs, of which there were fine specimens in the camp, would be considered, in a military point of view, only as pretty toys."

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

CULLS.

To the beginner in the poultry fancy, or in any other fancy for that matter, we would say, *don't buy culls*. When you buy, buy the best, and leave the culls for those who have no taste. We talk "by the book" in this matter. Years ago, when first taken by the fever, we invested in some cheap Light Brahmas. It was our first purchase. We found them advertised in the *American Agriculturist*, and sent for them. They came in good condition, but there seemed to be something about them which did not quite come up to our idea of what the fowls ought to be. One hen had a comb which made a struggle to be a pea-comb, but it ended simply in a wrinkle. The second was without any color but pure white, and would, with her single comb erect and nicely serrated, have passed for a fair specimen of White Cochins. The third had a single comb, but a dark neck-hackle, and the cock had every mark of a good White Cochins, except that he had long legs. Not a particle of black was to be found on him anywhere. The neighbors thought them grand birds. They were everything that could be desired in size, and we felt proud of them when we saw passers-by stop and look over the fence and admire them; but still we had an uncomfortable feeling that there was something wrong somewhere, and inwardly, though we didn't acknowledge it, made up our minds that there was a double sell in this transaction. Nor was this the last time we were misled by the idea of buying something cheap. We have, however, learned by all our misfortunes in this direction that good broadcloth cannot often be bought at shoddy prices.

But not alone is the advice as to buying culls good advice; we would add the equally important suggestion, *never sell culls*. If you have fowls in your yard that have a single disqualification (one at least which will affect their value as breeders or as show birds), consign them at once to the stock which you keep for eating. Even the best birds will now

and then, on the principle of reversion, throw some faulty young. These are just as good as the handsomest for eating purposes, and should be used for this only; for although their direct progeny may not show the same faults, they will be produced at some time when least expected.

There is a second and important reason why we should not sell culls or inferior fowls: there are parties in poultry breeding who will take advantage of such sale to show what your stock consists of. A year ago I turned two Partridge Cochins pullets among my common hens for hatchers. Shortly after a neighbor, who had fowls of the same breed, came and bought them at very low rates. During the breeding season he never failed to exhibit one of them to all his customers as a sample of my stock; and yet I am told, by one who knows, that he bred from these fowls himself, but kept them as a standing advertisement against mine, knowing, too, that I had rejected them. It was unfair, but I could not help myself, except when parties came and reported his work.

THE PREMIUM EXTRAORDINARY.

IN No. 3 of *Fanciers' Journal*, George W. White, writing of the premium extraordinary offered at the Buffalo Show, says: "Then should he"—that is, the winner of this premium—"invest the one hundred dollars in gold in the best cock that can be procured, he would have a breeding pen of Dark Brahmas that would be the envy of every lover of this beautiful and valuable variety."

One might collect in this way a pen of very choice birds, but it would by no means follow that they would be all that could be desired for breeding stock. A half dozen of hens might be selected, from as many different yards; all of them, measured by the standard, might be nearly perfect, and yet they may differ greatly in the shade of coloring and style of penciling. Suppose the hens were of different shades of gray, as silver-steel and blue-gray, and a cock should be chosen for his excellence, as measured by the standard, bred from stock the hens of which were dark brown, the result would not probably be satisfactory to the breeder; in fact, no experienced breeder would expect good results from a breeding pen made up in this way.

A prominent breeder recently said to me, "I know but one man with whom I would be willing to exchange Dark Brahma fowls, and he has bred from the same stock as my own, and kept it free from outside admixtures."

Many breeders, who have not had large experience with Dark Brahmas, purchase fine birds at high prices, and from different parties, without regard to the markings of the stock from which they come, and the result is disappointment, both to themselves and to those who purchase their fowls.

As a rule, those beautiful steel-gray hens, so much admired at shows, if mated with cocks which will produce pullets of the same color as the hens, will throw a very small proportion of solid black-breasted cockerels; hence, in order to supply enough of these to meet the demands of the trade, some breeders have a yard or two of much darker hens; so dark, indeed, in some cases, as to show but little penciling. These hens, mated with a solid black-breasted cock, will usually produce a large proportion of dark cockerels. The buyer who purchases these, mated with beautiful steel-gray pullets, is well pleased with his birds, but sadly disappointed in the offspring.

This is one thing which has rendered the breeding of Dark Brahmas so unsatisfactory to most young breeders, and yet I doubt whether any one can afford to raise solid black-breasted cockerels from the same mating which produces the steel-gray pullets, and sell them at the prices which purchasers are at present willing to pay.

Greater attention must be paid to building up distinct strains of this variety; and these strains must be well established by years of careful breeding before the results will be satisfactory.

(For Fanciers' Journal.)

DO NOT HOUSE THE TURKEYS.

IN reply to some inquiries of S. B. S., under the heading of "Feeding Turkeys," we would say, the sooner she turns her "celebrated Bronze" out of the barn the better. Turkeys will not do well confined; they need sunshine, air, and exercise. An adult turkey, it is well known, is extremely hardy, and bears the rigors of our coldest winters with impunity, even in the open air; for during the severest weather, flocks, if permitted, will roost upon the roof of a building or the branches of tall trees, preferring those accommodations to an indoor retreat. A certain writer says: "There is no poor animal so beset with ignorant and destructive empiricism as the turkey."

We have bred Bronze Turkeys for several years with marked success, seldom or never losing any after they become full feathered. Confining turkeys causes them to become unhealthy and weakly, and hence unfit for breeding. "Your turkie cock," says Markham, "should be a bird large, stout, proud, and majestic; for when he walketh *dejected* he is never good."

Our turkeys have had their full liberty the whole winter. During the severest weather they pick around under hovels, and scratch in the dirt and coal-ashes thrown purposely for them under the wagon-house. They feel happy and fine, often flapping their wings, and hopping and jumping around like so many playful lambs. We regularly feed them under a building, which gets them in the habit of going under; they become very tame; then, if a severe northeaster showers down its snow and sleet, they go to their feeding-place under shelter. We always allow them to roost out on the fences and on the buildings, excepting extremely cold and stormy nights, when they are shut in the feeding-house, but are set free the first thing in the morning.

We never feed our turkeys meat scraps, using what we have in the fowl-yards. As turkeys are not required to produce eggs in winter, we do not think it essentially necessary, yet we are confident they will not injure them in the least. We occasionally feed meat to the young brood, chopping it very fine and mixing it with other food.

Experience alone should teach "S. B. S." that her turkeys should not be confined, for she says "they gained well during the first two months," when at liberty with the chickens, but now when in confinement they refuse their food, and asks, "What will give them an appetite?" All the tinctures, ipecacs, and blue pills in the world will not give her turkeys an appetite so long as she keeps them *barned*. Turkeys are fond of wandering, even in winter. On pleasant mornings ours will take a stroll out in the orchard, where they pick up insects, snails, and other titbits which they greedily relish. The impatience of restraint and restlessness of the turkey render them unfit company for fowls in their dormitory.

If our friend will give her Bronzes their full liberty, and then set her *potato-meal dough* before them, in a clean trough, we will guarantee them to "go for it," unless they are unlike the Bronze we raise in Jersey.

Correspondence.

(For Fanciers' Journal.)

JOS. M. WADE, Esq.

DEAR SIR: I have noticed, ever since poultry papers have had an existence, that it is quite common for articles to appear in them very detrimental to the poultry interest, sent, I have no doubt, by some one who either has a spite against some competitor or exhibitor, or some one who has acted as judge, or else sore-headed because they did not get what they wanted in the premium line. Now, what I want to say is, in my opinion, no poultry paper, that has truly an interest in poultry breeding, should publish such articles; because, nine times out of ten, they are misrepresentations. I know just how the exhibitor feels when he does not get what he calls justice, for he really thinks his fowls the best, and his competitor thinks his certainly are; and when the judges work, perhaps all day, so, if possible, to consider all the points in the best fowls in that class, they judge on and make the awards as they think just, it is due them and the parties to whom the awards are given, after the directors have concurred, and the premium list has gone to the press, that their decision should be sustained by every one. There is a time when an exhibitor can speak to the directors, or enter a protest against what he may think unfair awards; and, as in the marriage ceremony, he should "speak then or forever after hold his peace." I have exhibited some, and when I did not exhibit have been called to judge some; but never have I accepted a call to judge except on such varieties as I have bred and am familiar with—Leghorns, Spanish, and Plymouth Rocks—yet I have heard very ungentlemanly remarks in regard to judging, and that, too, when I was losing my time and paying my own expenses, as I never received a penny for either. I write this not to complain, but to try to stop this everlasting wrangle over so-called unfairness in judging. It is impossible to give six or more exhibitors in a certain class all first or all some premium, when there are only three to be given. All may have very meritorious birds, but none of them are apt to see imperfections in their own, as it is so natural for a man to look through eyes that make his fowls look the best, the judging to the contrary notwithstanding. I suppose every man has a right to his own opinion, but he has not a right to publish articles to mislead the public in regard to awards made and published by any Poultry Association, and any person thus causing to be published such articles should be expelled from all Poultry Associations.

Very respectfully yours,

C. A. PITKIN.

HARTFORD, CONN.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: Will you allow me to inquire of your many readers for information in reference to the manufacture of "*bird lime*?" It seems to me that this information would be valuable to many as well as to

Yours truly,

W. S. ROCKHILL.

(For Fanciers' Journal.)

MR. WADE.

DEAR SIR: I wish to *thoroughly purify the ground* in my hen-yards, and also the *floors* of my hen-house. How would crude carbolic acid answer for that purpose? and if "just the thing," how strong a solution should be used, and in what way? Is there any danger to be apprehended (to the fowls) in its use? How would carbolic disinfecting powder, or some one of the carbolic soaps, answer? Please give me a reply to the above in the *first* issue of the *Journal* after the receipt of this.

Respectfully yours,

READER.

OSWEGO FALLS, N. Y., March 4, 1874.

Will some of our readers, who have had experience, please answer the above.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: I have just received from the port of Leghorn, Italy, per bark Hancock, seven white and two brown Leghorns, and one pair of black Sicilians; all the birds have extra white ear-lobes, which establishes the fact that white ear-lobes on Leghorns (as many breeders advocate) did not originate in this section of the world. When the bark left port she had twenty-six birds to my consignment, but the weather being severe, fifteen died on the passage. I shall shortly send for another lot.

Yours, very truly,

W. E. BONNEY.

SOUTH HANOVER, MASS., March 5, 1874.

(For Fanciers' Journal.)

MR. J. M. WADE.

DEAR SIR: I have just returned from our poultry show held in Guelph, Ont., Canada. It was a grand success. Some of the finest birds were shown that I ever saw at a show in Canada; a good many changed hands at good prices.

An association was formed called the Canadian Poultry Society—*President*, Rev. W. F. Clark, Guelph; *Secretary and Treasurer*, George Mustan, Esq., Guelph, with a strong working committee. A good many members joined before the show closed. I think we shall have a strong society.

There is a good demand for first-class birds in Canada; but my best imported English birds go to the States at better prices than I can get for them in Canada. I have just sold one of my best Buff Cochins to a breeder in New York for \$80. He was a first prize and cup winner in England last August.

H. M. THOMAS.

BROOKLIN, ONT., CANADA, March 9, 1874.

(For Fanciers' Journal.)

JOS. M. WADE, ESQ.

DEAR SIR: Will some of your correspondents kindly inform a young fancier of Fantails what are the number of feathers a good specimen tail should contain. Is thirty-two a good number, and would a bird possessing that number be considered a good bird to begin stocking a coop with? Please answer through the columns of your *Journal*.

Yours respectfully,

A. B.

NEW YORK, March 8, 1874.

EDITOR FANCIERS' JOURNAL.

I would like to explain, through the columns of your sprightly paper, my experience with eggs this spring, and ask if it agrees with that of any one else.

We keep pure bred fowls, and all winter have used the

eggs to cook with. I had frequently said to myself when beating the whites for cake, "Our eggs beat up so quickly, it seems not so hard to make cake as it used to." Along in February, the fowls, as to gender, were kept in separate pens for a week or two preparatory to breeding. We used the eggs the same as before, but the whites would *not* beat stiff! No, not with a half hour's beating. So I tried again of those that had been laid when cocks and hens were together, and they, although older, beat up nicely. I concluded that, for cake-making, as well as for other purposes, eggs are best fertilized.

Respectfully,

MRS. D.

DAVENPORT, IOWA, March 6, 1874.

The above is entirely new to us, and we would be pleased to hear from others, if there are any who have had a similar experience.

LAKE SHORE POULTRY ASSOCIATION.

J. M. WADE, ESQ.

DEAR SIR: At a meeting of the fanciers of this section, held March 7th, the above-named Society was formed. The following gentlemen were chosen as permanent officers for the ensuing year:

President—W. P. Atkinson.*Vice-Presidents*—C. L. Crosby and J. Thornton.*Recording Secretary*—F. P. Kimble.*Corresponding Secretary*—W. D. Janes.*Treasurer*—H. C. Nick.

Executive Committee—The above-named officers, together with the following: C. F. Webster, John A. Zeimer, John Walsh, C. M. Wheeler, Gustave Ebisch.

Very respectfully,

W. D. JANES,
Secretary.

ERIE, PA.

PENOBSCOT COUNTY POULTRY SOCIETY.

THE annual meeting of the Penobscot Poultry Society was held in the Common Council room, City Hall, Bangor, Maine, yesterday afternoon. The annual reports were read and accepted; that of the Treasurer shows a balance in the treasury of one dollar. The following officers were elected for the ensuing year:

President—Albert Noyes, Bangor.*Vice-Presidents*—O. H. Ingalls, Bangor, and Simon G. Jerrard, Levant.*Secretary*—John H. Hayes, Bangor.*Treasurer*—William G. Duren, Bangor.

Trustees—J. E. Shaw, Hampden; E. P. Ferguson, Bangor; Geo. D. Stockwell, East Eddington; J. P. Kenniston, Simpson's Corner; J. E. Harriman, Bangor; Orrin Favor, Brewer; and William P. Woodworth, Bangor.

Article II of the Constitution was changed by inserting seven, instead of five, as the number of Trustees. The Trustees were authorized to arrange for a poultry supper at the next annual meeting.

MAINE POULTRY ASSOCIATION.

AT a meeting of the corporators of the Maine Poultry Association, held at Augusta, January 20th, 1874, the following officers were elected for the ensuing year:

President—Albert Noyes, Bangor.

Vice-Presidents—Charles H. Haskell, E. Dana, Jr., Portland; W. P. Atherton, Hallowell; H. Leavitt, Skowhegan; Ezra Manter, Winterport; George D. Stockwell, East Eddington; Seward Dill, Phillips; S. T. Holbrook, Oxford; J. A. Lord, Kennebunk; Frank Buck, Orland.

Secretary—Frederick Fox, Portland.*Treasurer*—Fred. F. Harris, Portland.

Board of Directors—Fred. Atwood, Winterport; R. O. Conant, Portland; B. M. Hight, Skowhegan; W. E. Leighton, Augusta; B. H. Lewis, Deering; E. L. O. Adams, Portland.

At a meeting of the Board of Directors, held at the Mansion House, Augusta, on Wednesday, January 20th, it was voted to hold an exhibition in Portland on January 12th, 13th, 14th, and 15th, 1875.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

HOUDANS, CREVECEUR. B. R. Game, Black Spanish.—Will Exchange for Silver-spangled Hamburg or Partridge Cochins good Birds from first-class Stock. Address S. J. SMITH, Stony Brook, New York.

WANTED TO EXCHANGE.—1500 Brandywine Raspberry Plants, or an Alderney Bull 11 months old, for Fancy Pigeons or Berkshire Pigs. On June 21, 1871, Raspberries sold in Wilmington market as follows: Black Caps, 12½ cents per quart; Philadelphia, 25 cents do.; Brandywine, 40 cents do. A. R. TATNALL, Wilmington, Del.

WANTED.—A new or good second-hand Martin-box, for which I will exchange White Leghorn Eggs from stock that took first premium and two specials at Philadelphia show in December, 1872. A. R. TATNALL, Wilmington, Del.

LONDON FIELD NEWSPAPER.—Fifty numbers, from January to September, 1873, also several of 1871 and 1872; in good condition, some uncut. Subscription price, \$12 per year. Will Exchange for good Partridge Cochin Cockerel or White Leghorn Pullets, Buff or Partridge Hens. Address DR. MUNROE, Newark, New York.

KITTATINING AND LAWTON BLACKBERRY, Philadelphia, Clark, and Duhring Raspberry Plants, to Exchange for good-sized Aquarium in perfect order. Black Red Game Bantams (took first premium at the Bucks Co. Poultry Exhibition) for Wright's Illustrated Book of Poultry. T. H. WALTON, P. O. Box 130, Doylestown, Pa.

RACING JOCKEY JACKET AND CAP.—New, cost £5 5s. in England. Maroon satin body, green sleeves. Cap same color. Silver-plated hunting spurs and yellow tops for boots. Will Exchange for trio of Buff, Partridge, or White Cochins, or White Leghorn Pullets. Address DR. MUNROE, Newark, New York.

WANTED.—A really good and first-class Partridge Cochin Cockerel (early hatch), or Cock not over two years old. For one nearly up to the standard many things to offer in exchange. Must be in perfect health. Address DR. MUNROE, Newark, New York.

I WILL EXCHANGE an extra fine Aylesbury Drake for first-class Black African Bantam Hens, or will buy Hens. C. B. ELBEN, Pittsburg, Pa.

WILL EXCHANGE Guinea Fowls, Guinea Pigs, Maltese Cats, Fox Squirrels, Gophers, or Prairie Dogs, for Partridge Cochins or cash. P. H. VAN VRANKEN, Wauwatosa, Wis.

PIGEONS, FERRETS.—One fine White Male Ferret, tame as a kitten, to exchange for Toy Pigeons. FRED. MATHER, Trout Farm, Honcove Falls, N. Y.

WANTED.—In Exchange for Light Brahmas or Houdans, Black Breasted Red Bantams. P. A. VAN VRANKEN, Wauwatosa, Wis.

WANTED.—To Exchange 10 pairs of Pea Fowls for Greenbacks. P. A. VAN VRANKEN, Wauwatosa, Wis.

WILL EXCHANGE Eggs of 20 varieties of pure bred Fowls for Pigeons or White Bantams. P. A. VAN VRANKEN, Wauwatosa, Wis.

WANTED.—Brown Leghorns, Partridge Cochin Pullets, Bronze Turkeys, in exchange for Carpenter Seedling Potatoes, or any variety of choice Farm and select Garden Seed. Address J. R. V. HAWKINS, Goshen, N. Y.

WRIGHT'S NEW POULTRY BOOK (in parts), complete, to exchange for EGGS for hatching, from good strains of Creveceurs or Golden Polands. Address J. HENRY SYMONDS, Box 57, Boston, Mass.

WILL EXCHANGE ADVERTISING in the "Northwestern Poultry Journal," at regular cash rates, for trios of pure, well-marked Brown or Black Leghorns, Black or Silver-Spangled Hamburgs, Dominiques, or Plymouth Rocks. The expressage to be prepaid, and both expressage and a fair cash price for the fowls to be paid for in advertising as above. This offer for thirty days from March 5th. Address T. T. BACHELLER, Minneapolis, Minn.

GAME FOWLS.—A few pairs of Black B. Reds and Dusty Miller Games will be exchanged for Earl of Derby Games, or Brown Leghorns. Address G. W. WARNE & CO., 1305 Chestnut St., St. Louis, Mo.

CURRENT ROOTS OR CUTTINGS WANTED in exchange for Fancy Pigeons, or Dark Brahma Coeks. Address JOS. M. WADE, 39 N. Ninth St., Philadelphia, Pa.

SHADE TREES WANTED in exchange for Dark Brahmas, or Fancy Pigeons. Address JOS. M. WADE, 39 N. Ninth St., Philadelphia, Pa.

JOS. M. BROOKS, COLUMBUS, INDIANA, will exchange a Key Check Outfit, Dies, Ornamenting Stamps, Stock, &c., for Light Brahma Hens. A good chance for some man or boy to make money that has the time to attend to this business. No hens wanted weighing less than 10 lbs. each. Write for full particulars. JOS. M. BROOKS, Columbus, Ind.

The THOROUGHbred BERKSHIRE BOAR "DEXTER" is now offered in exchange for first-class Fancy Fowls of reliable strains, or will sell very low. Pedigree sent on application. Also, EGGS for hatching, packed in very best manner, from Light Brahmas, Houdans, and G. S. Sebright Bantams, of the very best prize-winning and imported strains. Circular free. Address CHAS. O. MORRISON, New Albany, Ind.

BULL DOG, extra fine, and a good watchdog—will exchange for any other property except dogs. JOS. M. WADE, Philadelphia, Pa.

FOR EXCHANGE, or will **SELL,** a thoroughbred English Greyhound Slut, mouse color, about 15 months old, measures 63 inches from point of nose to tip of tail, 27 inches high at shoulder; price, \$50, or will exchange for other dogs. EBEN P. DAY, Hazleton, Pa.

STONY BROOK POULTRY YARDS.—B. R. Game, Houdan, Creveceur, Golden-Pencilled Hamburg, G. Sebright Bantams, Black Spanish. Will exchange any of the above varieties for Partridge Cochin and Dark Brahma hens, or \$3 each. S. J. SMITH, Stony Brook, N. Y.

WILL EXCHANGE Light Brahmas, Dark Brahmas, or Partridge Cochins, for SILVER-SPANGLED POLANDS. G. E. CLEETON, New Haven, Conn.

THE AMERICAN POULTRY ASSOCIATION.

Price, \$1 per Copy.

And at WHOLESALE can only be supplied by the Undersigned,

And in Lots not less than 100,

AT THE LOWEST RATES.

Don't fail to order from

EDMUND S. RALPH,
Secretary of the American Poultry Association,
Buffalo, New York.

EGGS.—SILVER-SPANGLED EGGS for Sale from choice Stock, at \$4 per dozen. Address J. MORTON HALL, A. V. R.R., Pittsburg, Pa.

H. N. WHEELER, Mystic River, Conn., Breeder of pure Brown Leghorns from the old Mystic River Stock, imported by Capt. Isaac Gates—the last in 1855. Eggs, \$3 per dozen. Orders taken now.

FOR SALE.—Six Trios of Partridge Cochins, *Williams Strain*, will be sold at a bargain, to make room for breeding. Will sell in trios, pairs, or single. Address F. BECK Box 63, Lock Haven, Pa.

EGGS FOR SALE.—From Light Brahmas, Dominiques, Black African Bantams, and Aylesbury Ducks, including my late imported Ducks—all premium Birds. For premiums given my Birds, see pages 107 and 116, *Fanciers' Journal*. C. B. ELBEN, Pittsburg, Pa.

CANADA.

EGGS FROM IMPORTED ENGLISH BIRDS.

First prize and cup winners in England. Several first and specials at Detroit, Mich., and Buffalo, N. Y., this winter. Also first at all our large shows in Canada. Eggs low. List of prices free. Also, a few grand English and home-bred Birds to part with low.

H. M. THOMAS, Brooklin, Ontario, Canada.

FOR SALE.—One Brown Breasted Red Game Stag, \$5, and a few Light Brahma Pullets, \$2 each.
GEORGE STRAYER,
Lock Haven, Pa.

PEDIGREE ST. BERNARD DOG.

WANTED.—A thoroughbred St. Bernard Slut to mate with imported "Dragon." "Dragon" came from the "Hospice," and has pedigree signed by the Chief of the Brothers. Slut will have best of care, and be returned in good order, with such share of pups as may be agreed upon. Address
H. G. T., Milford, Conn.

EGGS FOR HATCHING.—I am now prepared to book and furnish Eggs from my imported and home-bred Dark and Light Brahmas, also, Partridge Cochins. Having bought in the spring of 1873 Mr. Philander Williams' (Taunton, Mass.) entire stock of Partridge Cochins, numbering some 80 odd head, consisting of all his imported, home-bred, and prize winning Fowls, which he valued very highly, and having bought of Joseph M. Wade (late Wade & Henry), Oak Lane Poultry Yards, Philadelphia, in 1873, quite a number of Dark Brahmas, among which were a number of prize winning Birds and 5 imported Hens. These, in addition to my last year's importations, gives me one of the finest flocks in America. My mode of packing Eggs insures their safe carriage. Orders solicited, and satisfaction guaranteed. Address
T. S. COOPER, Linden Grove, Coopersburg, Pa.

THE "POULTRY WORLD" FREE TO ALL who purchase Eggs from my premium strains of White and Brown Leghorns and Partridge Cochins to the amount of \$6 and upwards. Send for new illustrated circular. Address
J. M. MCKINNEY,
Box 61, Ithaca, N. Y.

Address JAMES B. TREW, Tonawanda, N. Y.

PURE BRED STOCK, AND WHERE TO GET THEM!
RIVERSIDE STOCK AND POULTRY YARDS.
WM. WRIGHT, AND S. BUTTERFIELD, Proprietors.

We shall sell a limited number of sittings of Eggs, at \$5 per sitting, from Light and Dark Brahmas, Buff and Partridge Cochins. Our Light Brahmas are Williams' strain, pure. Yard No. 1—Cock Young Alexis, is mated with six prize Hens, all standard birds, and winners at Detroit and Buffalo Show. Yard No. 2—Cock Duke of Essex is also mated with standard birds, among them are the winners of 1st, at Detroit, for Chicks of 1873. Yard No. 3—Dark Brahmas; are our own direct importation of 1873, and are first-class birds of high merit, and we can safely recommend them to the fancier. Yard No. 4—Buff Cochins, imported from England, from Rev. Mr. Brooks' and Taylor's strains, and selected by our Mr. B. for breeding purposes. Yard No. 5—Imported Partridge Cochins; are standard birds, and mated with great care for breeding. We also make the importing and breeding of Lincoln and Cotswold Sheep, Suffolk, Essex, and Berkshire Pigs a specialty. Mr. S. Butterfield being personally acquainted with all the leading breeders in England, will leave on or about the middle of June to make a selection from the best pens of premium birds at the various shows in 1874. Any orders entrusted to him will be executed according to instructions, on commission or otherwise. All communications addressed with stamp, to
WM. WRIGHT,
Griswold St., Detroit, Mich.,
Or Riverside Stock Farm, Sandwich, Ontario, Canada.

First-class fowls for sale at reasonable prices. Eggs for hatching packed by the most successful method. Send stamp for new illustrated catalogue and price list. Address as above.

NATIONAL BEE JOURNAL.—MRS. ELLEN S. TUPPER, Editor and Proprietor. Devoted exclusively to Bee culture. Two Dollars a Year. The *National Bee Journal* is issued on the 15th of each month, contains sixty-four pages, printed on fine paper, in neat, clean type, and for the year 1874 has been greatly improved. Mrs. Tupper, having purchased the *Journal*, has removed it to Des Moines, Iowa, where it will hereafter be published under her own supervision. She will write for no other publication but her own, and in that she will give the result of that long practical experience which has placed her among the best, if not the best, authorities in this country on the honey bee.

Arrangements have been made with prominent bee keepers in this and foreign countries, for timely articles each month, upon important topics. A special department has been assigned to "Notes and Queries," in which the various questions which arise in the practical experience of bee keepers each month, will be given, with pertinent answers by the editor. These will be condensed into the smallest possible space, and will be one of the most interesting features of the *Journal*.

The *Journal* will keep entirely clear of all entangling alliances with patent rights of whatever nature, and will be independent in the expression of its opinions. It will aim to be reliable, give only such information as will be of practical utility to its patrons, discarding theories and misleading propositions.

A limited space is devoted to advertising, which will be given to unobjectionable notices, at fair rates; and the large and rapidly increasing circulation of the *Journal* makes it a valuable advertising medium.

For circulars, containing club rates, premiums, advertising rates, etc., address MRS. E. S. TUPPER, Des Moines, Iowa.

J. Y. BICKNELL, Westmoreland, Oneida County, N. Y.

Circular containing a few practical hints, and Price List of Fowls and Eggs, FREE.

WHITE LEGHORNS.

THE adjoining cut represents White Leghorns bred by C. A. Pitkin, Hartford, Ct., who we believe to be the largest and best breeder of White Leghorns in the country, besides breeding very largely of previously imported Leghorns. He reports making two importations in 1873—one of two trios and one of three trios—and states that White Leghorn fowls are the most profitable of any now bred. He has also five Brown Leghorn hens and one cockerel, which were bred from Brown Leghorns (one cock and

three hens) imported in 1851 by Capt. Isaac Gates, of Mystic Riv., on bark Asa Fish. The said stock has been bred in that vicinity ever since, and Charles Niles, second mate of the Asa Fish when the importation was made, is now living and will confirm the facts above stated. The stock can be seen at any one time, and they have white ear-lobes. He believes these to be the first Brown Leghorns brought to this country. If any one knows of any earlier importation, let us hear from them.

(For the Fanciers' Journal.)

THE BUFFALO CONVENTION.

MR. EDITOR.

THE Convention recently held at Buffalo under the auspices of the American Poultry Association, has been spoken of by a writer in one of our poultry journals, as successful in every respect. To those whose only source of information has been the published reports of its meetings, this may seem a somewhat hasty verdict. In order to arrive at any correct judgment, it is necessary for us to ascertain the purpose for which the Convention was convened, and then to see what has been accomplished, and what will be its probable affect upon the poultry interests of America. The call of the Secretary stated that the object of the Convention was the revision of the "American Standard of Excellence." That there was need of a thorough revision of the existing Standard, no one who has made a study of its contents and kept his eyes and his mind open to the light which has been thrown upon the subject since the first edition was issued, will for a moment question. But the question naturally arises whether any Convention can, by yea and nay votes upon the several propositions submitted, compile or revise a Standard which will be any improvement upon its predecessors. The history of such theoretical Standards does not offer much encouragement. The English Standard was short-lived, and commanded little respect from the best informed English or American fanciers. The first edition of the American work died in its infancy from its own inherent weakness. The second edition still survives, but has been for some time laid away among the old and useless rubbish of the past. The subject seems to be so gen-

erally misunderstood, that it is very doubtful if any body of men could so construct a Standard as to make it acceptable, or fair and impartial in its application. We believe the making of a Standard requires more research, more study, and more deliberate thought, than the majority of poultry fanciers have either the time or the ability to give, and unless this information, thoroughly digested, and thoughtfully applied, can be brought to bear upon the work, the time spent upon such a Standard will be sadly misapplied, and the work will not be worth the paper upon which it is written. The fate of all former Standards should teach us the worthlessness of all Standards made upon the false basis of controlling the judges in their arbitrations, rather than upon the sound one of embodying the most accurate and consistent judging. This plan, which was advanced by Mr. Wright, and has been so ably set forth and advocated by him, appears much more simple and impartial in its application. From a convention composed of gentlemen of intelligence, refinement, and business tact, we should have expected more individuality than appears to have characterized its meetings. We should very naturally have expected some presentation of new ideas, and some able and spicy arguments in their support, or some thoughtful suggestions drawn from past experience, whose wisdom would have been apparent to every mind. But instead of this, which we had so fondly anticipated, we have only a tame acquiescence in the old formulas which have proved of so little use, and grown so rusty and patched that the originals can hardly be recognized. We confess ourselves sadly disappointed, that among so many intelligent men no one was found to say a word in advocacy of the ideas which have been so often and so ably set forth by Mr. Wright upon this subject in all its bearings

as a system, and in regard to its application. We are told that

"In the elder days of art,
Builders wrought with greatest care,"

but in our times of hurry and struggle, thoroughness does not appear to be considered an essential. The work of months is crowded into days, and that of years into months. How then can we expect a work like a Standard as it ought to be, which should take years of study and reflection to perfect, to be hurried through a three days' Convention, and reflect the highest type of American judging? Of the Standard itself we are not permitted to speak, for it has not yet seen the light; but whatever it may be, it is evident that its authors did not fully comprehend the situation, or appreciate their opportunity, or they would never have hung such a millstone about its neck as their instructions to the judges will prove to be, for it will most assuredly destroy any vitality which it may possess, and as assuredly consign it to the fate of its predecessors. That the Convention should have been so thoughtless as to incur their work with such a dead weight, seems to us a mystery. In taking this ground, they have fairly turned their backs upon all the experience of the past six years, as well as upon all the information which has accumulated upon the subject. That any body of highly intelligent men could for a moment suppose that judges worthy the name could be obtained, after the experience we have had of such a system, who would undertake such arduous work, is past our comprehension; but we are certain that if any of them had passed through the experience we have had in obtaining judges and assigning their duties, and have heard, as we have repeatedly heard, from them, the most thorough condemnation of such a system, they would have paused before they had committed themselves or their Convention to such a measure. If we have accurately weighed the testimony given in the published reports of the Convention, we confess ourselves unable to see any good which will result to the poultry interest of America from its actions. Had the Convention, instead of going over the too oft-repeated formulas, and the outgrown systems, risen to the occasion and made a new departure, they might, and undoubtedly would, have given a new impetus to the whole poultry interest; but they have chosen otherwise, and we must patiently wait and

"By ceaseless study learn; by actions teach,"

until our fanciers are brought to understand and appreciate the needs and demands of the time.

Looking then at the work of the Convention from whatever point we may, we do not see anything to give encouragement, but rather a feeling of disappointment that no progress has been made; that so far as this subject of a Standard is concerned, we stand just where we did before, with a little more emphasis upon our conservatism, and that a splendid opportunity for American fanciers to take the lead in the needed reforms in poultry matters has been most heedlessly thrown away.

W.

FEBRUARY 25, 1874.

A lady asked a pupil at a public examination of a Sunday-school:—"What was the sin of the Pharisees?" "Eating camels, marm," quickly replied the child. She had read that the Pharisees "strained at gnats and swallowed camels."

(For Fanciers' Journal.)

ADVENTURE WITH A SHARK.

DURING the late war, when a regiment of Confederate soldiers were encamped at Virginia Point, opposite the city of Galveston, on Galveston Bay, a number of soldiers were bathing, when a huge shark made his appearance among them. The keen eyes of the "Rebs" were not long in taking in the situation, and they seized pieces of drift wood and, by beating upon the water and shouting vociferously, the finny monster was driven into water so shallow as to be unable to turn on his back to defend himself. Spades, axes, and tent-poles were then freely used in dispatching the unwelcome visitor. When drawn ashore he measured twelve feet in length, and was of the variety known as the blue shark. The soldiers neatly stripped off his rough and shining skin, and used it in polishing their muskets and swords. The joints of the vertebra, after bleaching in the sun on the sand, were appropriated by the regiment for salt-cellars.

Not long since I somewhere read of the perilous adventures of a seafaring man who by some accident fell overboard from a vessel sailing from Manilla to San Francisco. The sea being very rough, his whole strength was seemingly required to keep on the surface. Imagine his dismay when he saw that he was besieged by hungry sharks, who made determined efforts to dismember his limbs. Being an expert swimmer, by dexterous diving he managed to keep the sharks at bay and himself afloat for an hour, when a boat from the ship picked him up.

The jaws of the shark sometimes measure several feet, and are studded with several rows of lance-like teeth, which cut with the keenness of a knife. Instances are recorded where the limbs of men have been dismembered by a single closure of the jaws, as if they had been as brittle as a reed. The writer has in his possession a petrified tooth of a shark, found in a bed of marl near the coast, which measures two inches in length and one inch across its base. It is lance-shaped and exceedingly sharp, and is by no means of the average size.

It is a source of great amusement in sailing across the ocean, when becalmed, to observe the sailors fishing for sharks, which always follow in the wake of a vessel to devour anything that may be thrown overboard. A hook made for this purpose is secured to a chain at least one foot long (the shark being capable of biting through a rope with ease); the other end of the chain is fastened to a stout rope, which is secured to the vessel. A severe plunge of a captured shark would be quite sufficient to draw overboard several men. A large piece of pork is used in baiting the hook, and allowed to tow alongside. Sharks are generally eager to catch it, and have been known to leap several feet out of water to seize the bait before it reaches the surface. When once caught its mighty struggles create great excitement, for it exerts its whole strength to tear away from the hook; but the skilled seamen delight in using a harpoon, the handle of which is heavily loaded with lead, which gives force when dropped upon the struggling fish. When landed on deck its ponderous jaws open widely and close with great force; its tail twirls with wonderful agility, dealing heavy blows upon the deck, until the sailors render him senseless with an axe. The stomach is often the receptacle of treasures. As they are known to devour anything thrown overboard, the sailors consider this the curiosity shop, and examine it with a deal of care. One having enjoyed the enlivening sport of shark-fishing can well realize the relief it affords the dull monotony of a sea voyage. Even ladies regard it as very pleasant pastime, while on land they would think of it as horrible.

JAMES S. BAILEY, M.D.

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

BLACK HAMBURGS.

THESE fowls are as yet, perhaps, less known than any of their class, and a few words may therefore be in place as to their merits, which will no doubt make them popular when recognized. They combine great utility with extraordinary beauty, being unsurpassed as continuous layers of large eggs (not as large as the Spanish, as some have said), which they yield almost all the year round, and standing first of all black fowls for grace of shape and brilliancy of plumage.

As table birds they are excellent, plump, juicy, and, like Games, always fat enough to kill as they run. They also resemble Games in looking lighter than they weigh; their neat plumage and compact shape accounting for this.

Cocks weigh five and a half to six pounds, and hens average four, fully matured. The chicks of this breed are easily raised, feathering evenly and in proportion to their strength; neither running naked for weeks, like Spanish, or putting all their strength into wings, like young Games. May pullets will lay in November, and all winter with proper care; *i. e.*, plenty to eat and good shelter. They, in common with all fowls, have a high appreciation of full liberty; but I have found them bear confinement as well as any but Asiatics, and better than Games and the other varieties of Hamburgs.

In this vicinity I have found them better layers than Spanish in the very hot and very cold months. They have the fault of being great flyers, and liking to lay astray; but I have found mine easy to make tame, and by making nests in barrels, &c., near their houses, and leaving nest eggs in them, I manage to persuade them to select my choice of nests.

ROSE COMB.

NEW YORK, March 7, 1874.

(For Fanciers' Journal.)

UTILITY AND PROFIT OF FOWLS.

WHEN the very interesting subject of fowls is broached, the following remark, or something similar to it, is often heard: "Fowls are of no use; they are dirty, require care, and, above all, do not pay." In fact, this seems to be the prevailing opinion among "non-fanciers." The remark comes, perhaps, from one who has never kept fowls, or it may be from one who has kept them; but from whichever of these the remark emanates, it is useless to say it is substantially incorrect. In the first place, he contends, "Fowls are of no use." Now, for a man to say this is absurd, to say the least. Hardly a day passes without our friend partaking of some article of food partially composed of the products of poultry, and as for the fowls themselves, they are invaluable for the table; this, combined with the fact that, if our friend has leisure time to examine his stock, or is surrounded by children

who have leisure time to examine it, he or they may learn a great many lessons of value from the poultry, makes it plain that fowls are of some use, and we may proceed. Again, he says, "They are dirty." Now, that all animals are dirty to a greater or less extent it is needless to remind our readers; but how absurd it would be for a farmer to give up his sheep or cattle because they "are dirty."

Fowls, with a little attention *every day* (mark the words), are as clean as any of our domestic animals, if not cleaner. The fowl, when in good health, will keep him or herself cleaner than any mortal could keep him or herself, so that all the birds want is to have their pen or inclosure cleaned *every day*. But some say we cannot spare the time every day to clean our hen-houses. Let me tell them that ten minutes or a quarter of an hour will suffice to clean a very large hen-house, provided it is done *actually every day*. Where the floors are covered with sand or earth, it is perhaps unnecessary to clean your house out so often. But our uninitiated friends make another objection, *viz.*: "Fowls require care." Now, in the first place, it is perfectly useless for a man to keep fowls unless he has a natural love for pets, for the reason that such a man is almost sure to leave the care of his fowls to some servant, who takes no special interest in the fowls, and then his birds are a most miserable failure; so that unless the care bestowed on his fowls is a pleasure, he can derive no profit, and must give them up at once. But when the management of his birds becomes a pleasure, as it does to an ardent fancier, then the *care* ceases, so the argument of our antagonist is done away with, and instead of being a care, they become a great and ever-increasing amusement.

Lastly, he says, "Fowls do not pay." There is very little to be added to the substantial proofs on this subject; let our friend look at the poultry papers and read the accounts of the profits on fowls. There are plenty of men who have made them pay, we should judge as well, if not better, than sheep, pigs or cattle, with far less trouble.

Let no one therefore make the excuse for not keeping poultry that they "do not pay," when such tremendous prices are realized from sales of first-class birds and their eggs. Our friend may keep any breed, or he may keep dunghills, but whatever he keeps, if he keeps them right, they will pay; if he does not keep them right they will not pay, but will become an unnecessary evil, costing more than they come to, and doing more harm than good.

If a man procures a dozen hens and a cock, and puts them in a yard, leaving them to the care of an uninterested servant, they become a burden and expense to him; whereas, if he looks after them a little himself, the little trouble it costs him is nothing compared to the satisfaction he will have on seeing that his profits have been much more than his losses.

Hoping that we have not trespassed too much on your valuable and successful *Journal*, I remain, yours truly,

BLACK RED.

NEW YORK, March 13, 1874.

(For Fanciers' Journal.)

SOME QUESTIONS ABOUT FOWLS AND "FOWL" MATTERS.

FRIEND WADE.

DEAR SIR: As I try to keep posted on all matters pertaining to fancy fowls and pigeons, I would like to ask a few questions, and have you or some of your many readers answer them through the *Fanciers' Journal*

What is meant to be understood when we see breeders offering standard fowls for sale, and at prices varying so much? Now, I have some good fowls, and have paid good prices for those that I have bought. I have dealt with men that I thought were honest; have had from them a description of the fowls that they had for sale, also their price for the same, and oftentimes have I, after getting their description, claiming them to be standard birds and so on, with prices so low when compared with other dealers, been afraid to order for fear something was wrong.

Now, as I said, I have some good fowls; but I have not, nor never had, what I call a standard bird, not in the meaning of the word as I understand it. I understand the word standard to mean one hundred points, and unless a bird can figure this he or she is not a standard bird.

One other question I would like to have answered, for I feel somewhat interested. Is there not some way that a man (if he is entitled to be called such), can be shown up when he will stoop so low as to misrepresent his fowls, get a man's money, and then send stock that is not as described? I know of parties that have received for their money fowls that were not fit to be called by the name claimed for them, and could they have been sent to some competent judges of the same, they would have been willing to have given them the fowls, and paid express charges, to have had the parties that sold them showed up in such a manner as they deserved.

One more question and I am through. What is the use of parties that have been defrauded to come out in a long letter stating that A, B or C had cheated them in some "fowl transaction," as I often have seen in poultry papers? After reading the same I never have yet been able to see or learn either party's name. There seems a disposition on the part of poultry papers to suppress all such names, for fear some one would be injured by publishing them; and I am free to confess that it might, in some cases, where parties have received what they claimed was not as it should be, at the same time they had received their money's worth, having invested two or three dollars, and had expected to receive a bird with one hundred points, although they themselves could not count the points even should the bird contain them. But there are cases where, I believe, parties should be published, so that others might not be caught by the same rascal.

Having said more than I intended, and probably more than I should, I will wait and see if the few questions will be answered.

Yours truly, A. K. MARTIN.

BINGHAMTON, March 9, 1874.

(For Fanciers' Journal.)

FLOORS FOR FOWL HOUSES.

MR. EDITOR.

DURING the past three years I have been favorably impressed with the idea of using anthracite coal-dust, or screenings from coal-yards, for floors. Noticing the average good health of my neighbor's fowls, whom I knew gave them but little attention, I made it my business to watch the habits of his flock. Sometimes he fed them, but as that depended upon his convenience it was only an occasional luxury to them, and they were *compelled to forage or die*. Near by were the coal-yards where horses and mules are often fed while loading, &c., and considerable grain is dropped in the coal-dust. Here they were obliged to scratch for their living. As they were in good order, I bought several of them for table use, thereby saving my own more valuable ones. They were always found in a healthy condition, and

on examination never found any other gravel in the gizzards but small particles of coal. Since then I have used it for floors, covering the ground with it about five inches deep, and have found it to answer a good purpose. It being very loose is easily raked up, and does not become tainted as soon as dry earth, whilst at the same time it affords the desired gravel and a number one dust-bath for dark colored fowls. During stormy weather, when confined in the house, by scattering whole grain on such a floor, they can have tall amusement in scratching it around, and keeps them from mischief otherwise.

Respectfully,

A. C. HUNSBERGER.

CENTRAL ILLINOIS POULTRY ASSOCIATION.

JOS. M. WADE, ESQ.

I herewith send you a brief report of the first annual exhibition of the Central Illinois Poultry Association, held in Conservatory Hall, in this city, Thursday, Friday, and Saturday, February 19th, 20th, and 21st, 1874, requesting its publication in your valuable *Journal*.

Our exhibition, I believe, is the first one exclusively for poultry held in this State, and although it was a feeble attempt compared with what we hope to attain to, yet we think it very creditable, considering the fact that we are all beginners and had such a brief space of time in which to work the matter up since we organized. Many breeders were prevented from coming because of the lateness of the season, as they had made up their breeding-pens and did not want to disturb them. The weather was very inclement also (it rained almost constantly), which made the attendance much less than it would otherwise have been. We are very well satisfied with this our first attempt, but we hope next season to at least treble both the number of entries, variety on exhibition, number of visitors, and amount offered in premiums, of this year. The time (which we have not yet decided upon) will be announced in due season.

Below I give a list of entries and awards:

CLASS I—ASIATICS.

Light Brahmas.—Entries—C. Letters, two trios; W. H. Gilbert, one trio; B. R. Upham, one trio; James O. Hamilton, two trios; Thomas Mason, two trios; J. M. Huckstep, two trios. Awards—1st, J. M. Huckstep; 2d, Thomas Mason; 3d, J. M. Huckstep. *Dark Brahmas*.—Entries—H. M. Pratt, two trios; T. P. Stacy, one trio; Robt. Mason, two trios; J. S. Hilcher, one trio, imported; J. M. Huckstep, one trio. Awards—1st, J. M. Huckstep; 2d and 3d, H. M. Pratt. *Buff Cochins*.—Entries—J. M. Culley, two trios; George W. Fox, one trio; P. A. Bartlett, one trio; E. De Freitas, one trio. Awards—1st, George W. Fox; 2d, P. A. Bartlett. *Partridge Cochins*.—Entries—J. M. Culley, one trio; George W. Fox, three trios; T. P. Stacy, one trio; P. A. Bartlett, two trios; Charles Cassell, one trio; Timothy Mason, three trios; O. D. Fitzsimmons, one trio; J. M. Huckstep, one trio. Awards—1st, Charles Cassell; 2d, P. A. Bartlett; 3d, J. M. Culley. *Black Cochins*.—1st, T. H. Smaltz.

CLASS II—DORKINGS.

No Entries.

CLASS III—GAMES.

Black-breasted Red.—Entries—A. J. Taylor, three pairs; Ira Ennis, one pair; J. L. Craven, one pair. Awards—1st, Ira Ennis; 2d, A. J. Taylor. *Brown Red*.—1st, J. L. Craven. *Duckwing*.—1st, J. L. Craven. *Silver Gray*.—1st, J. L. Craven.

CLASS IV.

White Leghorns.—1st, William M. Buckingham.

CLASS V.

Silver Spangled Polands.—Entries—E. De Freitas, one trio; R. Mason, one trio. Awards—1st, E. De Freitas; 2d, Robert Mason. *Golden Polands.*—1st, Harry W. Richards.

CLASS VI—FRENCH.

No Entries.

CLASS VII.

Golden Spangled Hamburgs.—1st, R. Mason. *Silver Spangled Hamburgs.*—Entries—Irving Washington, one trio; A. Foreman, two trios; Thomas Mason, two trios. Awards—1st and 2d, Thomas Mason.

CLASS VIII.

Black-breasted Red Game Bantams.—Entries—S. R. King, three trios; Robert Mason, one trio; Charles Cassell, one trio. Awards—1st, Charles Cassell; 2d, R. Mason. *Gold Laced Bantams.*—Entries—A. Foreman, one trio; P. A. Bartlett, one trio; J. M. Huckstep, one trio. Awards—1st, P. A. Bartlett; 2d, J. M. Huckstep. *White Bantams.*—1st, J. M. Huckstep.

CLASS IX.

Plymouth Rocks.—1st, H. M. Pratt.

CLASS X.

Bronze Turkeys.—Entries—J. L. Craven, one pair; Benson Retter, one pair. Awards—1st, Benson Retter; 2d, J. L. Craven.

CLASS XI.

China Geese.—1st, J. L. Craven.

CLASS XII.

Top-knot Ducks.—1st, J. L. Craven.

CLASS XIII—CANARIES.

No Entries.

CLASS XIV.

Dressed Chickens.—Entries—W. H. Gilbert, one; Wm. Buckingham, one; J. O. Hamilton, one. Awards—1st, William Buckingham.

CLASS XV.

Best Sitting Pure-bred Eggs.—Entries—P. A. Bartlett, Thomas Mason. Award—P. A. Bartlett.

SPECIAL PREMIUMS.

Barn-yard Fowls.—W. H. Surton. *Best trio Partridge Cochins.*—Entries—Charles Cassell, one trio; P. A. Bartlett, one trio; J. M. Huckstep, one trio; J. M. Cully, one trio; T. Mason, three trios. Award—Charles Cassell. *Best Partridge Cochins.*—Entries—P. A. Bartlett, Charles Cassell. Award—P. A. Bartlett. *Best Partridge Cochins.*—Entries—P. A. Bartlett. *Best trio Light Brahmas.*—Entries—J. M. Huckstep, one trio; Thomas Mason, one trio; B. R. Upham, one trio. Award—J. M. Huckstep. *Best Light Brahma Cock.*—Entries—B. R. Upham, Thomas Mason, J. M. Huckstep. Award—J. M. Huckstep. *Best Light Brahma Hen.*—Entries—B. R. Upham, J. M. Huckstep, and Thomas Mason. Award—J. M. Huckstep. *Best trio Dark Brahmas.*—Entries—J. M. Huckstep, J. S. Hilcher, imported. Award—J. M. Huckstep. *Best Dark Brahma Cockerel.*—Entries—R. Mason, H. M. Pratt. Award—H. M. Pratt. *Best trio Imported Dark Brahmas.*—J. S. Hilcher. *Black-breasted Red Game Bantams.*—Chas. Cassell. *Dressed Chickens.*—Entries—W. H. Gilbert, J. O. Hamilton, and Wm. Buckingham. Award—Wm. Buckingham. *Game Cock.*—J. L. Craven. *Wild Turkey.*—David Schoonorn.

SWEEPSTAKES.

Entries—H. M. Pratt, one trio Plymouth Rocks; J. M. Huckstep, one trio Light Brahmas and one trio Dark Brahmas; G. W. Fox, one trio Buff Cochins; W. S. Surton, one trio Barnyard; Charles Cassell, one trio Partridge Cochins; P. A. Bartlett, one trio Partridge Cochins. Awards—1st, G. W. Fox; 2d, J. M. Huckstep.

Respectfully,

B. R. UPHAM,

JACKSONVILLE, ILL., March 10, 1874.

Secretary.

Correspondence.

(For Fanciers' Journal.)

JOS. M. WADE, Esq.

DEAR SIR: Among other *on dits*, please announce the following for the readers of the *Journal*:

LARGE EGGS.

To compete with friend Ferris on the large egg question, please say that Richard Carter, of this place, has a Light Brahma hen that lays at intervals—about once every ten days—eggs measuring $6\frac{1}{2}$ inches the short way and 8 inches the long way, weighing 4 ounces and a fraction. Her average egg—and she lays very regularly—measures 6 by $7\frac{1}{2}$ inches. Let some egg mathematician report who is ahead.

I have a hen that regularly lays *round* eggs. As a specimen, her last measures $5\frac{1}{2}$ by 6 inches. Who beats for round?

AGED BANTAM.

A. M. Trimmer, also of this place, has a Bantam hen *seventeen years old*, lively as a cricket, lays every year, raises two broods each year, sometimes three; is the best sitter and mother on his place, and still shows no signs of “shuffling off her mortal coil.” She weighs nineteen ounces, is highly valued as a gift from a deceased friend, and will be kindly cared for as long as she lives.

Yours truly,

W. H. BAKER.

CLINTON, N. J., March 14, 1874.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: Will you please correct mistake in your *Journal*. I took first and special in the Angora Rabbit class, whereas you have credited the same to H. Maynes? I would also like to know when and where the premiums will be awarded.

Respectfully yours,

HAYWARD MORGAN.

FRANKFORD, PHILA., March 10, 1874.

We cannot say when the premiums will be awarded, but probably Mr. Saunders, Treasurer, No. 705 Walnut Street, could give the desired information.

(For Fanciers' Journal.)

FOWLS ON A FREE RIDE.

MR. JOS. M. WADE.

DEAR SIR: In the first place, permit me to say that nine out of ten of your readers will doubt what I am about to relate, about a pair of game fowls that in the winter of 1873 took a free ride from New York City to Rochester, N. Y. However incredible it may appear, it can be vouched for by many leading citizens of this place, who saw them sitting on the truck of the sleeping coach that passes this station at 9.20 A.M. (west). This car leaves New York at 6.30 P.M. These chickens were kept about the railroad yards by some of the workmen, and were in the habit of roosting about under the cars. Well, that bitter cold night they roosted on this sleeper and *came west*, and were not noticed by the train-men until they arrived here, when they were pointed out to one of the brake-men, who said he would “coop them birds when he arrived in Rochester.” The Mercury must have stood at twelve degrees below zero as they went drifting outward on the express in the teeth of one of the worst northwesterers we had that winter. We, of course, expected they were frozen stiff and fast to the iron bar upon which they sat, but on stirring them up a little they took their heads from under their wings and seemed comfortable, as the train moved off into a cloud of steam and snow, when they put their heads under their wings again and went on “deadhead,” though on the Hudson River and N. Y. C. R. R.

Yours truly,

J. H. WATLING.

SENECA FALLS, N. Y., March 11, 1874.

P. S.—The distance was more than three hundred miles.

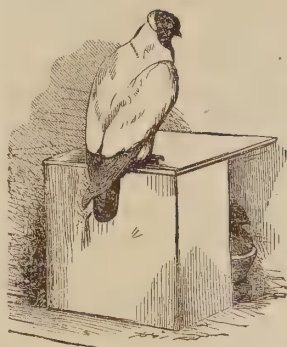

PIGEON DEPARTMENT.

(For Fanciers' Journal.)

NUNS.

THE Nun is a very interesting member of the Toy family, and a flight of first-class birds is a beautiful sight, especially

when they have been taught to fly high and to keep much upon the wing. The dark color tipping the four extremities (wings, tail, and head) of the white body presents a pleasing contrast as we look upwards at the flight as it sails over us. And not alone as birds of flight are they of interest; upon a well-kept lawn or fancy stable-eaves they are attractive. The variety should be kept by itself. It does

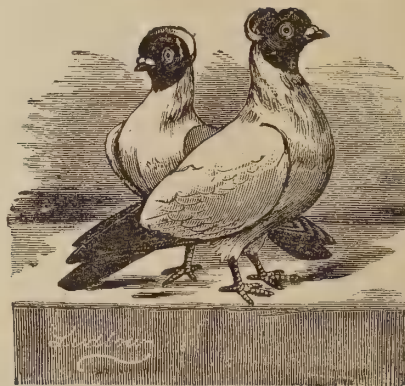

not mix well with the other varieties, and any cross from it is useless unless the manipulator has distinct projects in his mind as to the wherefore of his cross. An amateur can breed Nuns with great success, as the variety is one of the oldest and best established, and when the stock is truly bred and cared for there is little to be done except culling out the foul-marked young ones.

The culling out can be done by any one who has an eye for colors and a knowledge of the markings of the Nun. The culling out, it must be remembered, does not refer to the plucking out of foul feathers, but to the selection and *killing* of all young birds whose coloring is not as perfect as it ought to be. Many amusing anecdotes might be rehearsed of the culling of fowls from the Toys, and few fanciers but know very thoroughly the meaning of the word; in fact, it is astonishing with what a keen sense of the finer meaning of words a fancier looks at a bird that is liable to foul feathers. He is always a little suspicious, even of the most honest dealer; and many a careful breeder has to bear for a time the onus of the treachery of unscrupulous imposters. I have been cheated so often that I never now ask a man if his birds are clean. What is the use of causing a man to lie as well as cheat? In these last sentences I am not striking at any particular person or class of persons; but a foul feather is such an eyesore, and so many birds are improved by the extraction of it, and so few people can tell when it is out, that the temptation to draw a little hard on it is as much as a conscientious man can withstand. He will pick up his bird, and would willingly give a dollar if the foul was not there. By and by he begins to finger that feather, and then he would give two dollars if it was not there. Now is the time for him to let that bird go if he wishes to remain easy in mind, but he cannot, and presently the feather drops out, and the bird drops to the floor as clean as a pin. But, how about that man's conscience? Why the first time his friend praises that bird the guilty indi-

vidual would give five dollars if that foul feather were back in its place. The bird has become an upbraiding object to him, and the foul has been transplanted from the bird to that man's honor, and it sticks there and rankles until the feather grows again, and experience teaches him that a foul-marked bird can be better borne than foul-marked honor.

Nearly twenty years ago (by the way, I used that expression once before, and it got me the name of "an old bachelor," which is not so, as I am a young one) I gave to a friend a pair of Nuns, and after giving, was obliged to build a place for them, which we did, on the lawn, in front of the house. It was in a Southern State, where the cold of winter seldom affected the birds, and our house was all out-doors—that is, in the centre of the circular plot formed by the carriage-drive. We set a post ten feet high; three feet and a half from the ground was a circular platform, and near the top of the post was a fancy roof. The boxes were built around the post, and a lattice-work of wire imprisoned the birds until such times as the fair owner allowed them liberty. There they lived for years, and their family increasing, was kept in the purest order and fineness by the regular selection of the fittest subjects.

The selection of the best birds can be accomplished by any one, for Nuns are small white birds, with black, blue, yellow, or red heads, tails, and tips of wings. For instance: Take a white, hooded bird in your hand, and color its head with black as far back as the lower inside edge of the hood, and continue the coloring from the corners of the hood to a point on the front of the neck, about an inch and a half

below the insertion of the beak, so as to have the appearance of a bib; then color the tail back of a line passing across the vent and encircling the posterior part of the rump, and the primary flight (the ten outer) feathers of each wing, and you have the coloring of the Nun. The beak is black, as are the beaks of all black-headed pigeons; eyes, pearl; hood, large and evenly turned, the inside perfectly white in fine birds; the legs bare and red; toe-nails in standard birds black.

In judging Nuns, I have always thought of the following points:

1. Coloring, a pure white with deep black, the lines of division distinctly drawn, and no foul feathers of either color appearing.
2. Eyes, pearl.
3. Hood well shaped, and clean on the inside.
4. Feet, clean red, with black toe-nails.
5. Colors, black, blue, red, yellow, and dun.

The last color I should like to see done away with, as it stands in the way of purity of tone in the yellow. A flight of Nuns of the four colors is a good problem for a fancier;

and as he breeds them he will find some of the young that have colored heads and tails, but no colored flights. What is he to think of these? Why, call them Moore Heads, or Moore Caps, and enter them for premiums in those classes, as other men do. The name for such in Germany is the Bearded Pigeon, but they have been called in this country German Nuns. He will also have some of the young that will have the colored head only, the rest of the body being white; these are called in Germany the Death's Head. Then, again, some of the young will have well-marked tails and wings; but the color of the head, instead of forming a bib on the neck, will stop at a line even with the eye, so that the top of the head is the part colored; and such birds were called by the ancient fanciers Helmets, and by the moderns Snells, more especially if the flights should also be white; therefore, to be a good Snell is to be an indifferent Nun—that is, a Nun that has lost all the black except that of the tail and the little on the top of the head, is called a Snell or Helmet in these days.

These Snells have their admirers, and they have been bred as a separate variety for many years. They are of all colors, and are both plain-headed and capped. An enthusiastic fancier imported a pair of Helmets, at considerable cost, in the days when such importations were rare. Upon asking him how he liked his Helmets, the answer came, "They are nothing but d—d yellow-headed Snells." So much for a name.

When carefully bred the Snell is a pretty toy for young fanciers to trifle over, but I do not think it is worth perpetuating as a variety. For the benefit of those who may like it, I subjoin the following points:

1. Coloring, white with black tail and scalp, the black of the scalp covering the head above a line drawn from the corners of the beak through the centre of the eyes.
2. Eyes, pearl.
3. Feet, clean and red.
4. Colors, black, blue, red, and yellow.

The plain-headed are preferable, as presenting most distinctive marks from the Nuns. The upper half of the beak partakes of the color next it on the head, and is darker than the lower half.

When the Nun or Snell ran nearly out—that is, had no black except the tail and a spot on the head at the insertion of the beak—the bird was called a Spot, which name at last came to designate a bird that had lost all black color except the spot on its head, so that now when we hear a Spot spoken of we can imagine to ourselves a washed-out Nun, perfectly white, except the spot on the head at the base of the beak, which gives to the bird its name according to the color, as Yellow Spot, Red Spot, &c. There is also a White Spot connected with Priests in an analogous manner. Now, some philosopher may say this mode of reasoning is all wrong; that the Spot was the original of the Helmets and Nuns; that a descendent of the Spot becoming impure by the addition of more color to the head and tail, becomes a Helmet, and with still more color in the head, wings, and tail, becomes a Nun. Well, suppose the reasoning from this end of the problem to be true, it but proves the interdependence of these strains of pigeons which are dignified with the names of *varieties*.

DR. W. P. MORGAN.

BALTIMORE, MD.

Items Interesting and Amusing.

A Scranton paper, in giving an account of a shooting affray, says the wounded man is expected to recover, as the pistol ball lodged in his dinner pail.

"Do you think," asked Mrs. Pepper, "that a little temper is a bad thing in a woman?" "Certainly not," responded her gallant husband, "it is a good thing, and she ought never to lose it."

G. T. Hollingsworth, Utica, New York, killed a Light Brahma hen November 7th, that weighed when dressed, 11½ pounds. She was one of a trio purchased in Canada.

An old farmer in New Hampshire recently killed a pig, and being asked how much it weighed, replied that it did not weigh as much as he expected, and he did not expect it would.

It is stated that three ounces of carbolic acid put into twelve quarts of lime water or white-wash, and brushed over the inside of the hen-house, there will soon be an end of insect life within those doors. Try it.

10,000 worn-out horses and mules are annually consumed for food in the city of Paris. In the year 1861 less than 1000 supplied the horse-meat market. The appetite for this dainty food seems to grow by what it feeds on.

The English Society for the Prevention of Cruelty to Animals has offered premiums to the amount of £400 for improvements in the means of conveying cattle, and inducing railway companies to adopt them.

The *Danbury News* says a horse ran away on Liberty street, on Saturday afternoon, and a man on the sidewalk, with a wonderful presence of mind, threw his hat at the animal, screamed fire, and immediately jumped over a fence and disappeared in a cellar-way.

It isn't always best to call things by their right names. A young gentleman called a coach-dog a Dalmatian hound, and was informed by his fiancée that if he could not refrain from profanity in her presence they must henceforth be strangers.

A Bennington girl, whose domestic nature is equal to her natural simplicity, was invited by an advent exhorter to join his sect, get her white robe ready, and prepare to ascend. "I can't," the maiden replied, "father and mother are going, and somebody must stay and see to the cattle."

An Iowa girl of nineteen summers has, with her own hands, during the past season, raised 1000 bushels of corn, 500 heads of cabbage, 100 bushels of onions, and calculates on netting \$500. Some impecunious and lazy eastern youth, who has only been able to raise a feeble moustache during his life, will probably "go west," and marry this amazing heroine.

The annual meeting of the breeders of short-horn cattle, was held in Cincinnati last week, and various questions concerning breeding were discussed. In a discussion as to whether white, roan, or red cattle were best in the quality of their flesh, most of the breeders favored white and roan. Mr. Christie, of Canada, asserted that, judging from observations during thirty years' experience, the yellow-reds were emphatically the best. Dense reds, he said, were not of the original stock.

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

FANCIERS' JOURNAL AND POULTRY EXCHANGE,

JOSEPH M. WADE, Editor and Proprietor.

Published Weekly at 39 North Ninth Street, Philadelphia.

SUBSCRIPTION.

Per Annum,.....	\$2 50
Six Copies, one year,.....	12 00

ADVERTISEMENTS

From reliable parties, on any subject interesting to Fanciers, will be inserted at 10 cents per line, set solid; if displayed, 15 cents per line of space will be charged; about 12 words make a line, and 12 lines make an inch of space.

1 inch of space, set solid.....	\$1 20,	displayed.....	\$1 80
1 column, about 108 lines, set solid.....	10 80,	"16 20
1 page, 216 lines, solid.....	21 60,	"32 40

Advertisements from unknown parties must be paid for in advance.

SHERMAN & Co., PRINTERS, PHILADELPHIA.

FANCIERS' GAZETTE.

A new weekly paper, with the above title, is announced by Messrs. Cassel, Petter & Galpin, to be published in London, the first number to appear about April 10th. Like the *Fanciers' Journal*, it will treat on all subjects interesting to the fancier.

It will be under the editorial management of Mr. Lewis Wright, so well known by his various writings on poultry, and *more especially* his "Practical Poultry Keeper," "Brahma Fowl," "Book of Poultry," &c., &c. In connection with the above announcement, we wish to state that we are indebted to Mr. Lewis Wright, for the title of our own Journal. As will be seen by referring to the prospectus in No. 1, we had long contemplated publishing a weekly Journal, and during the spring of 1873 corresponded with Mr. Wright, with a view of securing his services as a regular contributor.

It was during this correspondence that Mr. Wright informed us that "sometime ago I had thought of starting a weekly paper, and had I done so I would have named it the *Fanciers' Journal*, but as I am permanently engaged here I will make you a present of the above title." We at once saw its value and had it copyrighted, and hence Mr. Wright's paper will be called the *Fanciers' Gazette*, he not wishing to create confusion by having two papers of the same name, even in different countries.

Subscriptions to the *Fanciers' Gazette* will be received at this office.

BOOK OF PIGEONS.

MESSRS. Cassel, Petter & Galpin, have commenced the publication of an exhaustive work on Pigeons, by Robert Fulton, to be edited and arranged by Lewis Wright. It will be illustrated by life-like, colored plates, also by numerous engravings on wood, by J. W. Ludlow. Mr. Wright, and Mr. Ludlow, are well known to nearly every fancier

in this country. Mr. Fulton is not so well known. We have visited his lofts (which are models), and have met him at several fairs in England, and are satisfied that what he does not know about a pigeon, is not worth knowing.

REMARKS ON EXCHANGE COLUMN.

A BULL-DOG, extra fine, awaits in the garden for you, young man. For anything else than dogs you can take him, if you can. Send on your bids and leather your legs, for he'll chew your calves to quids.

LEGHORN PULLETS vs. JEWELRY. Gentlemen, where is your gallantry, and where are your Leghorn Pullets? A woman—evidently a practical woman—expresses her desire to exchange corals and gold for chickens. Turn out your best, for you have wives or sweethearts who admire the jewelry, and she wants eggs.

AN INDIAN DELHI SHAWL is up. Who will take it down, and show his art in placing it about the shoulders of some fair woman? A heart may be caught by that shawl. Two lives bound beneath its fringes into one. Oh, what a flood of happiness can be won by sending on your exhibition poultry.

B.

PEABODY POULTRY SHOW.

LIST OF ENTRIES.

George F. Barnes, one coop Black Leghorns, one coop Brown Leghorns, one coop Partridge Cochins. Charles E. Teague, one cage, Canary Bird. W. M. Ward, two coops Dark Brahmas, two coops Light Brahmas, one coop Black-breasted Red Games. Charles E. Bradford, one coop Brown Leghorns. C. H. Simonds, one coop Light Brahmas, one coop Plymouth Rocks. Robert G. Buxton, one coop Mountain Geese (old), one coop Mountain Geese (young), one coop Rouen Ducks, one coop Aylesbury Ducks, one coop Light Brahma Fowls, one coop Light Brahma Chickens, one coop Partridge Cochins, one coop Silver Laced Bantams. Arthur Elliot, one coop Buff Cochins Chickens, one coop Light Brahma Chickens. F. B. Messer, two coops Dark Brahmas, two coops Buff Cochins, one coop Black Leghorns, one coop Cuban Ducks. H. C. Larrabee, one coop Games. Fred. Osborne, one coop Light Brahmas. E. C. Spofford, one coop Light Brahmas, one coop Dark Brahmas, one coop Partridge Cochins, one coop Game Bantams. W. F. Wiley, one coop Dark Brahmas, one coop Partridge Cochins. Charles Jacobs, one coop Dark Brahma Fowls. John Perkins, two coops Brown Leghorns. Charles E. Farnham, one coop Partridge Cochins. George Jones, one coop Black Leghorns. S. D. Dow, one coop Brown Leghorns, one coop Black Cochins, one coop Light Brahmas. Sumner Southwick, one coop Black Leghorns, one coop Light Brahmas, one coop Partridge Cochins. Daniel Buxton, one coop Partridge Cochins, one coop Plymouth Rocks. H. B. Wheeler, one coop Light Brahmas, one coop Black Bantams. Herbert M. Berry, one coop Silver Hamburgs, one coop Black-breasted Red Games (Bantams), one coop Dark Brahmas. George B. Chandler, one coop Dominiques, one coop Bantams. C. A. Williams, one coop Brown Leghorns. Jessie Tyler, one coop Black-breasted Red Game Bantams, one coop Brown Leghorns. John C. Jowdrey, ten cages Canary Birds and one Aviary. Geo. H. Clotney, one coop Buff Cochins. E. A. Poole, one coop Buff Cochins. J. H. Poole, one coop Partridge Cochins, one coop Dark Brahmas, one coop Silver Spangled Hamburgs, one coop Brown Leghorn Cochins, and Pullets crossed with Light Brahma. J. N. Estes, one coop Buff Cochins, one coop Light Brahmas. Eddie Barrett, one coop Black Bantams. Albert Carlton, one coop Light Brahmas, one coop Sebright Bantams. C. M. Poor, one coop Light Brahmas. Samuel Newman, one coop Silver Polish Fowls, one coop Light Brahma Fowls, one coop Light Brahma Chickens, two

coops Plymouth Rocks, one coop Muscovy Ducks, one coop Buff Cochins, one coop Partridge Cochins. Joseph G. Basford, one coop Silver Sebright Bantams. H. A. Southwick, one coop Partridge Cochins, one coop Plymouth Rocks. T. H. Jackman, one coop Black Cochins, one coop Plymouth Rocks. G. P. Tilton, one coop Light Brahmas. George D. Walton, one coop Dark Brahma Fowls, one coop Light Brahma Fowls, one coop Cinnamon Cochins, one coop Partridge Cochins, one coop Plymouth Rock Fowls, one coop White Cochins, one coop White Leghorn Chickens, one coop Brown Leghorn Chickens, one coop Plymouth Rock Chickens, one coop Partridge Cochins, one coop Light Brahma Chickens, one coop Black Cochins, one coop Black-breasted Red Game Chickens. W. H. Harrington, one coop Black-breasted Red Game Bantam Fowls, one coop Black-breasted Red Game Bantam Chickens, one coop Duckwing Chickens. A. F. Poor, one coop Partridge Cochins. J. L. Colcord, one coop Clear-leg Light Brahmas. W. N. Brookhouse, one coop Sumatra Games, one coop Sumatra Chickens, one coop Brown Leghorn Chickens. Geo. W. Taylor, one coop Sumatra Games, one coop Plymouth Rocks, one coop Plymouth Rock Chickens. Samuel Stimpson, one coop Light Brahmas. D. B. Wallace, one coop Buff Cochins, one coop White Cochins, one coop Plymouth Rocks, one coop Black Spanish, one coop Black-breasted Red Games, one coop Brown Red Games, one coop Blue Red Games, one coop Ginger Red Games, one coop Red Dunn Games, one coop Earl Derby Games, two coops English White Games, two coops Duck-Wing Games, three coops Muff Games, one coop Irish Gray Games, three coops Pile Games, one coop Clairbourn Games, one coop Brass Back Games, one coop White Georgian Games, two coops Black-breasted Red Games (Bantams). J. E. Clement, one coop Brown Leghorns, one coop White Leghorns. Underhill, one coop Brown Leghorns, one coop Light Brahmas, one coop Plymouth Rocks. David Osborne, one coop Plymouth Rock Fowls, one coop Partridge Cochins, one coop Brown Leghorns. F. Johnson, one coop two Dark Leghorn Pullets, for exhibition.

At noon the Convention was formally opened by an address from its President, Samuel Newman, Esq., as follows:

Members of the Peabody Poultry Association:

GENTLEMEN: Some twenty-eight years ago there was held in Boston what was then called a "hen show," but more properly speaking a poultry exhibition.

As we were passing up Tremont Street on that occasion, many persons were noticed wending their way to the Public Garden; there, under a mammoth tent, was a large collection of coops, containing poultry of different varieties, from the small Sebrights, with their golden and silver lace, to the tall and muscular Shanghai; also the mammoth geese from the farm of Col. Jaquith, to the variety of different breeds of fowls by George P. Burnham, of poultry notoriety, and from whose pen are several treatises connected with the poultry interests; and among many of the prominent contributors from this town, and pioneers on that occasion, I may mention the names of Pierce and Osborn, of the Buxtons and Southwicks, and many others, some of whom have continued with unabated interest up to the present time; and before you may be seen fine specimens from their poultry yards.

Although the interest manifested at that exhibition seemed to lull and be dormant with some for a time, nevertheless it has awakened to new life and zeal and effort, until at the present time poultry associations have been and are being formed in almost every State in the Union. Yes, and I may say in some towns and counties also. And when we look back to our early agricultural shows we well remember what little interest was manifested in the exhibition of poultry, in its rearing and improvements. How marked the change!

Now you can seldom, if ever, attend one of our State or county shows without seeing a place allotted for the poultry stands, without which our agricultural shows would lose one of their prominent features.

And why should not the poultry interest be considered of great importance to our State and county agricultural shows? Surely they contribute not a little to the gatherings on these occasions; for as we were accustomed to pass and repass on the grounds you might see large numbers of the ladies, who make up a considerable part of the visitors, frequenting the tent under which were arranged the poultry stands and coops containing the birds of many colors; also that wonderful invention, Graves' incubator or hatching machine (and which has been so kindly offered on this occasion), where were to be seen the young birds just emerging from the shell, and as the visitors looked with delight on the new comers to our exhibitions, and hear the sweet notes of the Canary, and the sonorous sounds of the Leghorns, the Polish, the Sebrights, and Hamburgs, and the loud and prolonged crow of the Asiatics, may we not be proud of our interest in this delightful employment?

And now to speak of some of the advantages that are to accrue to the poultry breeder in the health and happiness which it brings to him, as he is accustomed to visit his poultry yards to attend to the wants of his pet birds. How pleasant the employment! And who that has a few leisure moments, after the cares and perplexities of daily toil, does not find a visit to their yard pleasant and delightful? And again, let me allude to the products of the poultry yard, its extent, its utility as articles of food, and the many ways that we are benefitted from the products of the poultry.

We have but to turn to the neighboring city of Boston, at this season of the year, to be reminded of the extent of the products that come to us from the State of Maine, with its acres of pines, and from the granite hills of New Hampshire, in almost every railroad car and in steamers, to assure us that the raising of poultry is one of the largest, if not the largest, business of those States. And as our annual Thanksgiving and Christmas approaches, how many do we see in our thoroughfares and market-places for the purpose of selecting the well fattened turkey and the plump chicken, with which to furnish their tables on these days of feasting; also the fresh laid eggs, which in the hands of the ladies furnish a large part in preparing the delicacies for the sick and the convalescent, aye (and of which those in health would not object to partake of); and form the waving plumes on our soldiers' caps, and the snow white feathers that adorn our ladies' bonnets, if so they may be called.

I might here mention, also, the profits resulting to the poultry breeder, from his favored stocks of fowls; but as there are so many journals, some of which are devoted entirely to the poultry interest, and in which are so many articles relating to the subject, many of which are in the hands of some of our poultry breeders, one or two will suffice. In our own vicinity I know of parties that have made this business a specialty, and as a result of their labors quite large incomes have accrued. I also know of some ladies who have given their attention to this object, and who have been very much interested in the raising of the birds. I know of one who at one of our Agricultural Exhibitions, exhibited several coops of fowls, and who I heard discussing their merits, bearing off the largest number of prizes for her pet birds; and why should not the ladies take an active part in the raising and caring for these birds? Surely they can better appreciate their wants

than can the gentlemen, for they certainly have had large experience in bringing up families, that is to say, some of them. And from the poultry yards of Queen Victoria, comes across the waters the echo that the poultry interests there are progressing, as we learned from one of our own citizens, who has lately returned home from a foreign shore.

I might also speak of men of influence, and men of letters, both in England and in America, who are connected in some way with the poultry interests of one Massachusetts Poultry Association as officers or honorary secretaries. And here let me relate an incident in the life of one of our best men that has come to my notice. I refer to the late Dr. Todd of Pittsfield, a man of rare ability as a theologian, and whose time was always occupied in acts of beneficence, and who was accustomed to repair to the little workshop at leisure moments to make presents for the children, in whose welfare he was most interested. He also was a lover of poultry, of which he kept some beautiful specimens. On one occasion a brother minister called on him, and after the usual salutations and talking on various subjects, the Doctor said to him: "Well, sir, what is *your* hobby?" "My hobby!" he replied; "I haven't any hobby." "Havn't any hobby! I thought every one had a hobby."—When the visitor returned the compliment and asked the Doctor, "Well, sir, what is yours?" "My hobby," says the Doctor, "is my fowls."

And now to conclude: Gentlemen, contributors to this our first Poultry Exhibition, Members and Officers of this Association, let me congratulate you on the prospective success of the Exhibition, and as our town is second to no other in many of its enterprises, so may it be second to no other in this.

LIST OF PREMIUMS.

Light Brahmas, 1st & 3d, Samuel Newman; 2d, R. G. Buxton. *Dark Brahmas*, 1st & 2d, W. M. Ward; 3d, C. P. Jacobs. *Partridge Cochins*, 1st, E. C. Spofford; 2d, Daniel L. Buxton; 2d & 3d, H. A. Southwick. *Buff Cochins*, 1st, D. B. Wallace; 2d & 3d, Samuel Newman. *White Cochins*, 1st, D. B. Wallace. *Black Cochins*, 1st & 3d, S. J. Dow; 2d, Thomas Jackman. *Plymouth Rocks*, 1st, Samuel Newman; 2d, D. B. Wallace; 3d, J. C. Underhill; *Brown Leghorns*, 1st, C. E. Bradford; 2d, David Osborne; 3d, S. J. G. Buxton. *Spangle Game Bantams*, 1st, J. G. Basford. *Black-Breasted Red Game Bantams*, 1st, H. F. Spofford; 2d, D. B. Wallace; 3d, Wm. Harrington. *Yellow Duck-Wing Game*, 1st, D. B. Wallace. *Silver Duck-Wing Game*, 1st, D. B. Wallace; 2d, Wm. Harrington. *Brown Red Game*, 1st, D. B. Wallace. *Black-Breasted Red Game*, 1st, D. B. Wallace; 2d, W. M. Ward. *Earl Derby, Ginger Red, White Pile, White Georgian, Red Pile, and Spangle Game*, 1st, in all the above classes of Game, D. B. Wallace. *Mountain China Geese*, 1st & 2d, R. G. Buxton. *Aylesbury and Rouen Ducks*, 1st, R. G. Buxton. *Muscovy Ducks*, 1st, Samuel Newman. *Crested Ducks*, 1st, F. B. Messer. *Special Premium on Best Cocks*—Light Brahma, Samuel Newman, Dark, W. M. Ward; Partridge Cochins, H. A. Southwick, Buff, D. B. Wallace; Brown Leghorn, J. C. Underhill, Black, George F. Barnes, White, G. D. Walton; Plymouth Rock, Samuel Newman; Black-Breasted Red Game Bantams, D. B. Wallace; Black-Breasted Red Game, D. B. Wallace. *Special Premium on Best Hens*—Light Brahma, Samuel Newman, Dark, W. M. Ward; Partridge Cochins, E. C. Spofford, Buff, D. B. Wallace; Brown Leghorn, C. E. Bradford, Black, F. B. Messer, White, J. E. Clement; Plymouth Rock, D. B. Wallace; Black-Breasted Red Game Bantams, D. B. Wallace; Black-Breasted Red Game, W. M. Ward.

The special premium of \$5, offered to the largest and best variety exhibited by any one person, was awarded to D. B. Wallace, of West Peabody.

Ten dollars were received from Henry Saltonstall, and ten dollars from Francis Appleton, for special premiums.

Notwithstanding the unfavorable weather, the attendance to the exhibition was large, about 1500 tickets being sold.

PEABODY, January 14th, 1874.

(For Fanciers' Journal.)

HOGS vs. HENS.

Two Dutchmen were disputing as to which was the most contrary animal, a *hog* or a *hen*. "Shon," said one of them, "you may say vat you please about hogs; jüst vait, und I dell you vat a hen do mit me de oner day. I dinks I jüst like to have some of dem leedle chicks, so I make a goot nest mit straw; vell, den I goes oud mit mineself to got a hen. Vell, I sees von, mit a nice red hed, und ven I try to cotch her she vas so contrary I have to chase dat parn around mit her du or dree dimes pefore I cotch her. Vell, den I pud de eggs in dat nest, und pud dat hen on mit de eggs. You dinks she set for me? Not much. She shumps right away off quick, and runned away jüst so fast as she can. Vell, den I make a leedle pox, about so big von vay, und so big dat oner vay; den I chase her round mit de parn again, und ven I got her I gived her a goot crack und puts her on de eggs und cover her up mit de pox. Puty soon after a vile I dinks I took a look und see how she gits along. I lifd up de pox jüst a leedle vays, and, mein Got, de — hen vas set standin. Now, you say vat you please about hogs, but I says a hens is much de contrariest."

 **TEACHING CANARY BIRDS.**—In an old civilization every cranny and corner of public wants is filled. A crowd of poor men are always ready to take advantages of any opening of this kind to make a livelihood. One of the curious professions is that of a canary-bird teacher, where the bird is taught to sing. Most of his time is occupied in training birds to sing in his lodgings, but he also gives lessons in the town if required. The ordinary bird costs three francs, but when it has received its education its value is quadrupled. Should it turn out to be a *rara avis*—say the Patti of canary birds—the price becomes difficult to fix. Owners of birds often send them for a time to school to this professor to finish their education. For developing the musical faculties of the feathery pupil, a charge of five francs is made. There are probably more amateurs of these songsters here than elsewhere; hence the existence of such a singular calling.—*Galaxy for February.*

 **HOW DID HE TELL HIM?**—In Charlestown, recently, a large dog gave chase to a poor little "black and tan" whose hind leg had been injured, but, failing to overtake him, turned about, and trotted slowly back. In a short time the small dog returned followed by a large Newfoundland, who, upon reaching the corner, "seemed to be looking for something," when the little dog gave two or three sharp barks, as much as to say, "That's the big dog who chased me," at the same time indicating by his actions the large black dog, who was then at some distance. Whereupon the little dog's ally immediately attacked, and severely punished the aggressor, who was glad enough to try the swiftness of his feet for safety. After this little affair the small dog and his friend returned down the street, apparently much pleased with their part of the late transaction. How did the small dog impart the idea to the large one?

STARTING A HENNERY.

A STORY of close management is told about a Yankee who had lately settled down in the West. He went to a neighbor and thus accosted him: "Wal, I reckon you hain't got no old hen nor nothin' you'd lend me for a few weeks, have you, neighbor?" "I will lend you one with pleasure," replied the gentleman, picking out the finest one in the coop. The Yankee took the hen home, and then went to another neighbor and borrowed a dozen eggs. He then set the hen, and in due course of time she hatched out a dozen chickens. The Yankee was again puzzled; he could return the hen, but how was he to return the eggs? Another idea. He would keep the hen until she laid a dozen eggs. This he did, and then returned the hen and eggs to their respective owners, remarking, as he did so: "Wal, I reckon I've got as fine a dozen of chickens as you ever laid your eyes on, and they didn't cost me a cent, nuther."

Oregon has resolved to protect by law the game remaining in its valleys. For years past it has been the custom to make extensive raids upon the elk, moose, and deer, to get their skins, the bodies being left on the ground. An Act of the Legislature makes it unlawful to kill or offer for sale, any deer, moose, or elk, during the months of February, March, April, May, and June, and making it unlawful to take or kill, at any time, elk or deer, for the sole purpose of obtaining their horns and skins.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

WILL EXCHANGE, HOUDANS—one Cock and five Hens—for Lt. Brahmas of Wade's or Williams' strains, or \$20, and one Cock and four Hens, Sumatra Games, for Wright's New Book (bound) on Poultry, or \$15.

PURE BRED STOCK, AND WHERE TO GET THEM!
RIVERSIDE STOCK AND POULTRY YARDS,
WM. WRIGHT, AND S. BUTTERFIELD, Proprietors.

We shall sell a limited number of sittings of Eggs, at \$5 per sitting, from Light and Dark Brahmas, Buff and Partridge Cochins. Our Light Brahmas are Williams' strain, pure. Yard No. 1—Cock Young Alexis, is mated with six prize Hens, all standard birds, and winners at Detroit and Buffalo Show. Yard No. 2—Cock Duke of Essex is also mated with standard birds, among them are the winners of 1st, at Detroit, for Chicks of 1873. Yard No. 3—Dark Brahmas; are our own direct importation of 1873, and are first-class birds of high merit, and we can safely recommend them to the fancier. Yard No. 4—Buff Cochins, imported from England, from Rev. Mr. Brooks' and Taylor's strains, and selected by our Mr. B. for breeding purposes. Yard No. 5—Imported Partridge Cochins; are standard birds, and mated with great care for breeding. We also make the importing and breeding of Lincoln and Cotswold Sheep, Suffolk, Essex, and Berkshire Pigs a specialty. Mr. S. Butterfield being personally acquainted with all the leading breeders in England, will leave on or about the middle of June to make a selection from the best pens of premium birds at the various shows in 1874. Any orders entrusted to him will be executed according to instructions, on commission or otherwise. All communications addressed with stamp, to WM. WRIGHT, Griswold St., Detroit, Mich., Or Riverside Stock Farm, Sandwich, Ontario, Canada.

Eggs packed in baskets or boxes, as requested. I have this year intro-
duced new blood into all my yards from the best Breeders in the country.
Write for what you want. Address C. N. BROWN,
Unadilla Forks, Otsego Co., N. Y.**FRANK FITCH, CLYDE, N. Y.** Breeder of Pure Bred Poultry
and Berkshire Pigs, from imported stock. Eggs for hatching in season.
Catalogue and package Mammoth Corn free, for stamp.
Choice Seed Potatoes also for sale.**WHO CAN BEAT THIS?**—I received at the Buffalo Show, 24
premiums and only exhibited 19 pairs of Pigeons; so that any one want-
ing first-class Pigeons will do well to write me at once, with their order.
I can supply POUTERS, most all colors. CARRIERS, Black, Dun, Blue,
and Yellow. JACOBINES, Yellow, and White Mottled. TURBITS,
Blue-Winged, Yellow-Winged, and Solid Yellow. ISABELLA POUTERS,
Yellow and Red. TRUMPETERS, the best on this continent; Black,
Solid Yellow, and Yellow Hungarian Trumpeters. Also, Latin or Ground
Tumblers. I am now booking orders for the coming season, and to se-
cure first-class birds orders must be sent at once with 25 per cent. of the
purchase money, then I will book orders accordingly, and deliver the
birds during the Summer or coming Fall. My FANTAILS are not ex-
celled in this country. I can supply Red, Black, Blue, and White Cal-
cuttas; also, Solid Yellow. Circulars and Engravings of Pigeons sent on
receipt of six cents in postage stamps.

Editor and Proprietor. Devoted exclusively to Bee culture. Two Dollars
a Year. The *National Bee Journal* is issued on the 15th of each month,
contains sixty-four pages, printed on fine paper, in neat, clean type, and
for the year 1874 has been greatly improved. Mrs. Tupper, having pur-
chased the *Journal*, has removed it to Des Moines, Iowa, where it will
hereafter be published under her own supervision. She will write for
no other publication but her own, and in that she will give the result of
that long practical experience which has placed her among the best, if
not the best, authorities in this country on the honey bee.Arrangements have been made with prominent bee keepers in this and
foreign countries, for timely articles each month, upon important topics.A special department has been assigned to "Notes and Queries," in
which the various questions which arise in the practical experience of
bee keepers each month, will be given, with pertinent answers by the
editor. These will be condensed into the smallest possible space, and will
be one of the most interesting features of the *Journal*.The *Journal* will keep entirely clear of all entangling alliances with
patent rights of whatever nature, and will be independent in the expres-
sion of its opinions. It will aim to be reliable, give only such information
as will be of practical utility to its patrons, discarding theories and mis-
leading propositions.A limited space is devoted to advertising, which will be given to un-
objectionable notices, at fair rates; and the large and rapidly increasing
circulation of the *Journal* makes it a valuable advertising medium.For circulars, containing club rates, premiums, advertising rates, etc.,
address MRS. E. S. TUPPER, Des Moines, Iowa.**J. Y. BICKNELL, Westmoreland, Oneida County, N. Y.**Circular containing a few practical hints, and Price List of Fowls and

T. L. McKEEN.

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

VOL. I.

PHILADELPHIA, APRIL 2, 1874.

No. 14.

THE annexed design, by T. P. Chandler, is for a combination house for fowls, pigeons, and rabbits, or other small pets. The centre building is octagonal and 16 feet across, and radiating from this are five wings which can be run out to any desired length. But in this plan they are calculated to be 20 feet long and 6 feet wide, the walls 4 feet high and 7 feet to peak of roof; one side of the roof is to be shingled and the other side is to be made of hot-bed sash, which can be removed at pleasure, as the heat of the summer increases. The angles made by the five wings can be used as yards and easily made larger if thought necessary.

The two front wings can be used exclusively for waterfowl, in locations where a pond can be made, as shown in the engraving. The building as shown is not expensive and could be made an ornament to any gentleman's establishment and is so arranged that it can be used for the proper keeping and breeding of any kind of poultry or other pets; and if the proprietor should tire of all kinds of pets it can, with very little trouble and cost, be turned into either a hothouse or greenhouse, or, for that matter, an orchard house or grapery; or, if desired, each alternate wing could be used for this purpose.

(For Fanciers' Journal.)

THE BUFFALO CONVENTION.

CHURCHMAN vs. BABCOCK.

J. M. WADE, Esq.

DEAR SIR: I have read Mr. W. H. Churchman's reply to F. W. Babcock, as printed in your *Journal* (No. 11).

I think Mr. C. gets unnecessarily excited over a little adverse criticism, and if not more guarded in his expressions may do more harm to the Association than its enemies can possibly do.

It is to be expected that the Association and its work will be severely criticised, and if we get excited and angry over it, we will give to many the impression that there is some truth in these charges.

When Mr. Churchman said in his opening address at Buffalo, in alluding to the charges made against the Association—"Never was there such a preposterous idea entertained by any human mind, that God Almighty gifted with the power of thought and reason" (see *Fanciers' Journal*, No. 5), I thought the expression unduly strong.

When, in the article above referred to, he calls the Association which met at Buffalo, "*the strongest, most prosperous, and dignified body of men ever assembled together for any honorable purpose*," he evidently shows strong symptoms of brain fever.

I was much pleased with the Convention, and heartily indorsed all that Bro. Atwood said of it in his article, in your *Journal*; but when we claim that we were the "*strongest and most dignified*" body of men ever assembled, and fret and worry over criticisms, we do much to make ourselves appear ridiculous. When the revised standard has been generally examined, and the number and nature of the changes noted, it will be evident that the interest at large will be benefited by them, and that no special advantage will accrue therefrom to the members of the Convention. It is true that a ticket signed by the President and Secretary of the Association was necessary to gain admission to the hall in which the Convention was held. It is also true that a resolution was passed, and since published, that membership in the Association was necessary to entitle one to vote on the revision of the standard; the former regula-

tion was made necessary by the fact that the Buffalo exhibition was in progress in the room next to the hall, and the continuous interruptions which would otherwise have occurred, would have greatly interfered with the transaction of business; as regards the latter, it could in no way interfere with the rights or privileges of those who were not in Buffalo, and had no design of attending the Convention at any rate.

F. R. W.

(For Fanciers' Journal.)

READ YOUR STANDARD.

It is wonderful how faulty the knowledge of many persons is relative to the good, or even the essential points of fowls. A short time ago I visited the pens of a good pigeon fancier; after we had finished looking at the pigeons, he remarked to me: "I have some Buff Cochins, I want you to tell me what you think of them." He admitted that he knew but little about fowls, and thereby disarmed criticism at once. I could not help feeling sorry for him, for what he showed me for Buff Cochins, had nothing in common with this choice breed of fowls, except color, and even this was very imperfect; the shape was decidedly un-Cochin-like, being more that of a game fowl; the comb was as good a rose-comb as one commonly finds among Hamburgs, and the wings, particularly the flight feathers, were white. Frankness compelled me to tell the man that he had been terribly cheated. He had a few Light Brahmas, that in essential points, were on an equality with the Buff Cochins mentioned.

The same afternoon I went to see another flock of pigeons; the fancier was a new man in the business, with probably a year's experience. He had among his collection some valuable birds; but, strange to say, he valued some mottled Shaker, or, as a friend expressed it, "*Scoop-tail*" fans, more than his better birds, Carriers, Barbs, and Owls. Now a true *fan* is, in my estimation, a widely different bird from the Shaker, or "*Scoop-tail*."

Two years ago, April 3d, an auction sale of choice poultry, foreign and home-bred, was held in New York; as a matter of curiosity, and partly because I had a desire to secure some first-rate stock, I attended. Entry—was two so-called Grouse Cochin hens; they were large and handsome, so far as size and proportions were concerned, but in color, one was black, and the other a dark, dull cinnamon, and both had combs which could only be called defective, or imperfectly developed pea-combs. These fowls, it may be well to say, were put up for sale by a gentleman whose advertisement used to read "unsurpassable Buff and Cinnamon Cochins." In fact, I was misled once by this plausible advertisement, and bought three "first-class hens," according to description, but found when they came to hand that their combs were all imperfectly developed pea-combs; and I believe if I were to try, I could find a trio of their progeny to day in this section to match up for show, with well-developed pea-combs. I meant to write to the party to ask him to read his standard, but felt that I might possibly say more to him than I would probably feel was prudent.

But, to return to the auction. When I saw the cage of Grouse Cochins above referred to, it became a question at once in my mind, as to whether any one could be so foolish as to buy them for breeders. Imagine my surprise at seeing a lively competition in bids as soon as the fowls were up

for sale, and my still greater surprise when a month later I saw the advertisement of the successful bidder, offering "eggs for hatching from *first-class* Partridge or Grouse Cochin fowls." He bought more of the same kind of stock that day, and probably had others but little better at home. Now it is but charitable to suppose that both buyer and seller in this case, were not careful readers of the standard, otherwise these fowls would not have been offered for sale, or once offered, would not have been purchased, except for the table.

The standard is one means of diffusing knowledge relative to the essential points of breeds, but by no means the only one. Our poultry exhibitions have done much in this department of the work; but one of the most useful of all means are the poultry journals of to-day. Indeed I would as soon think of doing without my medical magazine, if I were a doctor, as do without my poultry papers (and I take and read four), and attempt to rear good fowls. There is no doubt that our poultry papers have done more in the past four years than any other, probably than all other sources combined, to awaken an interest in good fowls and disseminate valuable knowledge as to the best methods of breeding them; and it will be admitted, the more knowledge relative to them the better fowls we shall produce.

A. N. R.

LOCK HAVEN, PA.

Catalogues, Circulars, and Cards of Breeders Received.

WILLIAM E. STITT, Columbus, Wis.—16 pages and cover. Illustrated by 5 engravings of Dark Brahmas, White Cochins, Houdans, Games, and Game Bantams. 16 varieties described. It is one of the best catalogues received. Send for a copy.

THOMAS H. WALTON, Doylestown, Pa.—Card. Brown Leghorns exclusively.

A. M. HALSTED, Rye, N. Y.—8 pages. Describing and illustrating his specialties for 1874—Brown Leghorns, Crevecoeurs, and Silkies.

WILLS & PETER, Blooming Grove Poultry Yards, Bloomington, Ill.—Illustrated and descriptive catalogue. 12 pages. 5 illustrations.

A. H. DRAKE, Stoughton, Mass.—Card. Plymouth Rocks a specialty.

DR. H. B. BUTTS, Louisiana, Mo.—Descriptive catalogue of Jersey Cattle, Berkshire Pigs, and Fancy Poultry. 16 pages. 7 illustrations.

S. L. BARKER, Windsor, Conn.—Circular. Black Leghorns, Light Brahmas, and Black Red Game Bantams.

J. Y. BICKNELL, Westmoreland, Oneida County, N. Y.—Circular. 4 pages. 39 varieties of Fowls and 13 varieties of Fancy Pigeons, Stone Drinking Fountains, Poultry Books, &c. This veteran fancier puts out a very interesting circular, which ought to be in the hands of every fancier. We traded with "Bicknell" many years ago, and found everything as represented all the time.

J. F. FERRIS, Stamford, Conn.—A beautiful 4-page circular. Illustrated with 11 varieties of Fowls and Ducks.

GEORGE O. BROWN, Montvue Poultry Yards, Brooklandville, Md.—2-page circular, describing 5 varieties. These yards are very convenient to Southern fanciers.

TURNING EGGS.

How great is the instinct of our poultry? People in this progressive age of ours recommend turning the eggs destined to be hatched, every day until given to the hen's care, not once thinking that no amount of turning the shell will turn the egg. To prove this, for the benefit of the doubtful ones, break the shell in the middle of the egg, pick off the pieces with a penknife, and, looking in, there will be seen a bright yellow speck on the yolk; paste a piece of paper over it, and turn it to the opposite side, then break it again, and the same speck will be seen, the heavy side always being down, proving that the contents of the egg are movable; and they will remain so until brooded over by the hen one week, when the egg becomes attached to the membrane lining the shell. Then the time for turning them has arrived; this the good motherly hen well knows, and turns them over herself very skilfully until the wee things are hatched, thus showing to wise man one of the many lessons taught by nature, even to the humblest of her creatures.

Many persons are not aware that the hen knows better than to attempt turning her eggs at first. There are other curious things connected with incubation that will well repay the careful student of the mysteries of animal life.

WILLIAM J. PYLE.

(For Fanciers' Journal.)

NASHUA POULTRY CLUB.

THE Nashua (N. H.) Poultry Club held their second annual exhibition at the City Hall, on Wednesday, Thursday, and Friday, March 11th, 12th, and 13th. There were one hundred and twenty-eight entries, a very large majority being highly valued birds. The severe weather prevented the financial part from being a success, but in all other respects it was far beyond expectations. Below we give the list of awards. When no town is mentioned, the address is Nashua, N. H.

Light Brahmas.—Fowls—1st, C. C. Russell. Chicks—1st, George F. Andrews; 2d, Charles C. Russell; 3d, Arthur W. Phelps. *Dark Brahmas.*—Fowls—1st and 2d, John F. Reed. Chicks—1st and 2d, John F. Reed. *White Cochins.*—Fowls—1st, Charles L. Spaulding, Hudson. Chicks—1st and 2d, Charles L. Spaulding, Hudson. *Black Cochins.*—Chicks—2d, Calvin K. Daggett. *Buff Cochins.*—Fowls—1st, Charles C. Russell. Chicks—1st, 2d, and 3d, Charles C. Russell. *Partridge Cochins.*—Fowls—1st, W. H. Knowles. Chicks—1st and 2d, W. H. Knowles; 3d, Chas. L. Spaulding, Hudson. *Plymouth Rocks.*—Fowls—1st and 2d, Virgil C. Gilman. Chicks—1st, 2d, and 3d, Virgil C. Gilman. *Dominiques.*—Chicks—1st and 2d, George F. Andrews; 3d, Albin Beard. *Brown Leghorns.*—Fowls—1st, A. Beard.

Chicks—1st, 2d, and 3d, A. Beard. *White Leghorns.*—Chicks—1st and 2d, John F. Reed. *Black Leghorns.*—Chicks—2d, J. Watson Reed, Winsor, Conn. *Silver Spangled Hamburgs.*—Fowls—2d, Andrew J. Tuck. Chicks—1st and 2d, Andrew J. Tuck. *Golden Spangled Hamburgs.*—Chicks—1st, Andrew J. Tuck. *Golden Penciled Hamburgs.*—Fowls—1st, Andrew J. Tuck. Chicks—1st, Andrew J. Tuck. *Black Hamburgs.*—Chicks—1st, Andrew J. Tuck. *Black Spanish.*—Chicks—1st, Col. D. W. King; 2d, W. T. Evans, Manchester; 3d, Col. Dana W. King. *Black Red Game.*—Fowls—1st, N. C. Lucier; 2d, O. A. Hamblett, Milford. *Blue Red Game.*—Chicks—1st, N. C. Lucier. *Clairborn Game.*—Chicks—1st, N. C. Lucier. *Red Pyle Game.*—Chicks—1st, N. C. Lucier. *Blue Tassel Game.*—Chicks—1st, N. C. Lucier. *White Georgian Game.*—Chicks—1st, N. C. Lucier. *White Game Bantams.*—Chicks—2d, F. O. Marshall, Hudson. *White Booted Bantams.*—Chicks—1st, W. G. Garmon, Manchester. *White Bantams.*—Fowls—1st, W. G. Garmon, Manchester. *Black Bantams.*—Fowls—2d, C. A. Mason. *Natives.*—Chicks—1st, Joseph Maloon; 2d, D. F. Rogers. *Crosses.*—1st, D. F. Rogers. *Houdans.*—Chicks—C. A. Kittridge. *Bronze Turkeys.*—1st and 2d, Charles L. Spaulding, Hudson. *Rouen Ducks.*—1st and 2d, A. Beard. *Common Ducks.*—1st, Albert Marshall.

PIGEONS.

*Black Jacobins, White Runts, Dun Carriers, Black Tumblers, White Fantails, White Pouters, Blue Pouters, Red Tumblers, Yellow*Jacobins, Silver Duchess.*—1st, H. S. Ball, Shrewsbury, Mass. *Ring Doves.*—1st, Miss Hattie L. Gilman.

Mocking Birds.—1st, Rev. John O'Donnell. *Collection of Stuffed Birds.*—1st, O. H. Phillips.

(For Fanciers' Journal.)

IN No. 12 of the *Fanciers' Journal* "Reader" asks for information in regard to purifying the ground in his hen-yards, also the floors of his henhouse. I should judge from his inquiry that his yards are bare; if so, I think my method will purify them. Let "Reader" take a spade or digging fork and spade his yard all up, being careful to turn the top soil under to the depth of ten or twelve inches. I think he will find that this will purify them effectually. If the floors of his henhouse are of earth, I would dig them out to the depth of eight or ten inches and fill in with fresh sand or earth; if the floors are of boards, then scrape them well with a hoe, and take good fresh lime and slake it; to each gallon of whitewash add two ounces carbolic acid, and whitewash the henhouse thoroughly, slap it into every crack, corner, and crevice, stirring the mixture frequently while applying it, and he will not be troubled with vermin for the next three months, and I think the house will be thoroughly disinfected.

W. E. FLOWER.

SHOEMAKERTOWN, March 21, 1874.

RHODE ISLAND POULTRY AND COLUMBARIAN SOCIETY.

FIRST ANNUAL EXHIBITION.

THE "Rhode Island Poultry and Columbarian Society" opened their first annual exhibition at Howard Hall yesterday forenoon, at 10 o'clock, with altogether the largest collection and finest show of fowls of all kinds, ducks, geese, and various breeds of pigeons that has ever been exhibited in this city.

When the exhibition opened, at 10 o'clock yesterday morning, four hundred and ten entries were recorded on the Secretary's books, and the coops were all classified, numbered, and arranged on long tables with wide aisles between them, and the coops all neat, light, and so open that the

peculiarities of form, size, and plumage of each specimen exhibited could be distinctly seen, a great improvement in this respect over any previous exhibition here.

On the right of the central aisle, opposite to the entrance to the hall, the entire table is filled with coops of fine specimens of Partridge Cochins; the table on the left is filled with coops of Plymouth Rocks and Sultans. In the second aisle, to the right, the tables are filled with coops of White, Black, and Buff Cochins, and over twenty varieties of Game Fowls; at the head of the table, on the right, third aisle, is a large and very fine collection of Asiatic Fowls from Philander Williams, Esq., of Taunton, Mass., and a fine collection of Dominique Guinea Fowls, from William Ballou, North Providence, for exhibition; several coops of fine ducks, White China, and Hong Kong Geese. On the left hand side of this aisle are the coops of Dominique, Black, Spanish, White and Brown Leghorns.

The first aisle, on the left from the door, the tables are filled with coops of Light and Dark Brahmas; the second aisle, on the left from the door, is occupied with coops of White-crested and Silver Polands and Houdans, on the right side; and White, Gold, and Silver Hamburgs, two coops of Rumpless, two of Frizzles, one of Partridge Cochins, and a large collection of Gold and Silver Bantams, from Geo. F. Seavey, of Cambridgeport, Mass.; two pairs fine Pea Fowls, from Mrs. Hezekiah Allen, of Cranston, for exhibition. On this table a lot of patent "Fowl Drinking Fountains" are exhibited by Henry T. Root. In the third and last aisle on the left side is quite a large collection of Black, Gold, and Silver Hamburgs, two coops of "Silkies," from Sam. W. Clarke, of Warwick, and five large coops of very large fowls entered for a name, and hanging above the tables are cages of Canary Birds from Henry T. Root and B. F. Gilmore.

In front of the stage is a table filled with a large collection of fine specimens of stuffed birds and animals, from John Hague, taxidermist, and three bull buffalo heads, killed, stuffed, and mounted by Mr. Newton Dexter, of this city. Dr. J. R. Goodale, of Pawtucket, has on exhibition in front of the stage, his patent "Rhode Island Incubator," with "Mother Attachment," for hatching chickens by artificial heat, in active operation, and close by is that funny fowl called the "What is it?" a cross between a turkey and Guinea fowl, which came from Woonsocket, and is going the rounds of all the poultry shows.

The stage is occupied with a large "dove-cote" with coops of fancy pigeons, including some very beautiful specimens. There are entries in this exhibition from New York, Connecticut, New Hampshire, and Massachusetts, in addition to the large number from our own State and city.

The Rhode Island Incubator, hatching chickens to order by warm water, a little orphan asylum for motherless chickens, is one of the attractions, and the inventor, Dr. Goodale, of Pawtucket, is present to explain its mode of construction and operation.

Besides the large collection of living specimens of the feathered tribe, there is a fine exhibition of preserved birds and animals that makes an attractive and interesting addition to the exhibition.

LIST OF ENTRIES.

Providence.—Edmund Davis, Plymouth Rock Chicks, one coop; Dark Brahma Fowls and Chicks, Brahma Fowls and Chicks, one coop each. William H. Grant, Providence, one cage Turtle Doves, one Parrot. Oliver Kendall, one coop

each S. S. Poland Fowls and Chicks, one coop Buff Cochin Fowls, one of Fantail Pigeons. James B. Peck, one coop each S. P. Hamburg Fowls and Chicks. Robert Plews, five coops B. R. Game Bantam Chicks, one coop Game Bantam Pullets, one coop G. Duckwing Bantam Chicks, one coop G. S. Hamburg Pullets, three coops B. Cochin Chicks. E. F. Wright, one coop W. C. B. Poland Fowls. C. G. Sanford, two coops Brahmas. Geo. W. Adams, two coops Black and Ginger Red Chicks, one coop Game Chicks. J. C. Farmer, one coop S. S. Hamburg Chicks. J. H. Snow, one coop S. S. Hamburg Chicks. Adam Horst, one cage Canaries and Linnets, two coops Pigeons. Henry T. Root, one cage Canaries. W. J. Inman, three coops Cochins, one coop Dark Brahmas, one coop White Leghorns, one coop Black Spanish. E. B. Perry, one pair Mountain Geese, two coops Fowls. S. B. Westcott, two coops Cochins. L. P. Bullas, twelve coops Fowls and Chicks. L. Jas. Bullock, three coops Brahmas and Cochins. W. Hazzard, six coops Brahmas, Cochins, Bantams. Mrs. P. Chambers, one coop Cochin Chicks. John H. Lee, two coops Fowls, Ducks for a name. E. B. Whitmarsh, three coops Cochins. Edward Burt, one coop Fowls (Class I). E. P. Hewett, one pair Fowls for name. Chas. McCord, four coops Fowls and Chicks. J. T. Peckham, one coop Light Brahma Chicks, one coop W. C. Poland Fowls, one coop B. B. R. Bantam Chicks, one trio Plymouth Rocks, one Plymouth Rock Cockerel, one coop Sutton Fowls, one coop P. Cochin Chicks, two coops Dark Brahma Fowls and Chicks, one coop Game Bantams, one coop Houdans, five coops Pigeons. Edgar Burlingame, eight cages Pigeons. Chas. Taft, one coop Hamburgs. S. P. Bullas, Hen and Chicks. A. W. Godding, one coop Dark Brahma Chicks. W. V. L. Wilcox, one coop Buff Cochins. Oliver Kendall, five cages Pigeons. Elisha Dyer, third, one coop Game Fowls. Geo. W. L. Potter, one cage Pigeons.

From all other places.—A. H. Carson, Newport, one coop Fowls (Class I), one coop Fowls (Class V), one coop Pigeons (Class XV). John H. Chace, Newport, one coop Golden Duckwing Bantam Chicks, one coop Silver Sebright Bantam Fowls, one coop Golden Sebright Bantam Chicks, one coop Rouen Ducks, one coop S. S. Hamburg Fowls, one coop Dark Brahma Fowls, one coop Houdan Chicks. H. G. Pearce, Central Falls, one lot Brahma Chicks. J. R. Goodale, Pawtucket, one coop Chicks (Class V), one coop Chicks (Class VIII), one coop Chicks (Class I), one coop Fowls (Class I), two coops Chicks (Class XIII), one coop Chicks (Class IX), one coop Fowls (Class IX), two coops Pigeons, one Coop Incubator and Mother. Joseph Dart, Oxford, Mass., one coop White Leghorn Chicks, one Transportation Coop. George P. Anthony, Westerly, one coop Pekin Ducklings. Thomas J. Gough, Peacedale, one coop Chicks (Class IV). Thomas W. Gardiner, Pawtucket, one coop Buff Cochin Chicks. F. G. Kinney, Worcester, seven coops Brown Leghorns. Benjamin White, Pawtucket, two coops Sultan Chicks, eleven coops Pigeons, one coop White African Owls. W. E. O. Roberts, South Scituate, two coops White Cochins. C. Cushing, Anthony, R. I., two coops Brahmas, one coop Black Hamburgs. J. H. Congdon, Anthony, R. I., one coop Hamburg Chicks. L. E. Gray, Foxboro', four coops Game and Plymouth Rocks. H. K. W. Allen & Son, North Attleboro', four coops Fowls (four varieties), three coops Ducks, three coops Geese. P. B. Thomas, North Attleboro', one coop Toulouse Geese. Otis Munroe, Bristol, two coops Yellow Duckwing Fowls. Augustus Aumann, Pawtucket, one coop Brown Leghorn Chicks. C. C. Holland, Pawtucket, two coops Brahmas, two coops Cochins. H. A. Rhodes, East Greenwich, two coops Partridge Cochins, one coop Dark Brahmas. H. & E. Jennings, Newton Lower Falls, six coops Bantams, one coop Black Africans. Albert W. Jones, Milford, Mass., one coop Black Spanish Fowls. William Cooke, Pawtucket, four coops Black Cochins. Albert F. Babbitt, Pawtucket, one coop Dominiques. Warren & Thompson, Oxford, Mass., one coop B. B. Red Game Chicks. Edward Thurber, Woonsocket, two coops Brahmas. E. L. Aldrich, Hyde Park, Mass., six coops Houdans. Wright Buckley, Valley Falls, nine coops Bantams, five coops Brahmas, one coop Patagonian Fowls. Joshua Vose, Manton, one coop Partridge Cochins, one coop Crevecoeurs, one coop Houdans,

one coop Plymouth Rocks. C. A. Chace, Killingly, Conn., Partridge Cochins. S. S. Van Buren & Co., Hartford, Conn., one coop Dominique Leghorns. A. H. Rogers, Worcester, thirteen coops Fowls and Chicks, one cage Ring Doves, one Madagascar Rabbit. George F. Seavey, Cambridgeport, four coops Hamburgs, four coops Bantams. Charles H. Pond, Attleboro', two coops Game Chicks, one coop Hamburgs. Robert Harris, Attleboro', two coops Game Chicks. L. R. Lockwood, Worcester, three coops Brahmas and Cochins. E. H. Hero, Milford, nineteen entries, varieties not named. J. L. Carpenter, Attleboro', four coops Fowls and Chicks, one cage Pigeons. H. A. Rhodes, East Greenwich, two coops Cochins. J. H. Simonds, Boston, three coops Fowls. Philip Short, Attleboro', two coops Chicks. W. Pierce, Jr., South Scituate, seven coops Fowls and Chicks. S. W. Clarke, Apponaug, five coops Fowls and Chicks. James H. Hammett, Newport, five coops Game Fowls. F. A. Todd, New Haven, Conn., twelve coops Fowls and Chicks. D. A. Seager, Westerly, sixteen coops Fowls and Chicks. Robert W. Reid, Greenpoint, Long Island, two coops S. P. Hamburgs. Sam'l W. Crossman, North Providence, one coop Brahmas. J. G. Moffitt, Pawtucket, two coops Game Chicks. R. R. Yates, Northboro', one coop White Leghorns. Thomas Richardson, Manton, one coop Hamburgs. Elijah Capron, Attleboro', three coops Chicks. A. D. Lean, Attleboro', one coop Cochins Fowls. A. W. Godding, Providence, one coop Dark Brahma Chicks. Philander Williams, Taunton, nine coops Fowls and Chicks. H. A. Rhodes, East Greenwich, two coops Cochins and Leghorns. H. R. W. Allen & Son, Attleboro', one coop Pearl Guinea Chicks, one coop Cristia Ducks. Samuel W. Clarke, Warwick, three coops Fowls and Chicks. W. V. L. Wilcox, Providence, one coop Buff Cochins. E. H. Hero, Milford, one cage Pigeons. Mr. H. Allen, Cranston, one coop Pea Fowls.

The following is the list of premiums as far as awarded by the committees:

GALLENACEOUS DIVISION.

CLASS I—ASIATICS.

Dominique Fowls—1st, T. A. Todd, New Haven, Conn., \$3. *Dominique Chickens*—1st, T. A. Todd, New Haven, Conn., \$3. *Buff Cochins Fowls*—1st, W. Hazard, North Providence, \$3; 2d, W. L. Tobey, Valley Falls, \$2. *Buff Cochins Chickens*—1st, W. Hazard, North Providence, \$3;

(To be continued.)

Correspondence.

(For Fanciers' Journal.)

JOSEPH M. WADE.

DEAR SIR: In the *Journal* of last week, in the report of premiums at the New Hampshire Poultry Exhibition, you have, "White Cochins Chicks, 1st, C. L. Spaulding; 2d, D. L. Gilmour"—it should read, 1st, C. L. Spaulding; 2d, C. M. Boynton; 3d, C. L. Spaulding.

Yours respectfully,

CONCORD, N. H., March 18, 1874.

C. M. BOYNTON.

(For Fanciers' Journal.)

DEAR WADE: I received last week from England, one pair each Black-breasted Reds, Brown-breasted Reds, Yellow Duckwings, and Red Pyles. They are beauties, and very large and strong. They commenced to lay the day after I received them.

Yours truly,

MARCH 18, 1874.

P. W. HUDSON.

(For Fanciers' Journal.)

JOS. M. WADE.

DEAR SIR: If "Reader" will mix one part raw carbolic acid with two parts kerosene oil, and thoroughly sprinkle the floor of his henhouse, it will effectually destroy all ver-

min and purify the house. Of course the floor ought to be cleaned of all droppings, &c., and, if composed of gravel, it ought to be well raked previous to sprinkling. I have used this mixture myself and found it answered first-rate.

Yours truly,

EBEN P. DAY.

HAZLETON, PA., March 23, 1874.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: One of my Light Brahmas laid an egg the other day, the circumference of which the long way was 8 inches, and the other way $6\frac{3}{4}$ inches; weight, $4\frac{1}{2}$ ounces. The eggs I sell at \$5 per dozen—are not all guaranteed to be of this size.

Respectfully yours,

WILLIAM ATWOOD.

BIG FLATS, N. Y.

(For Fanciers' Journal.)

JOS. M. WADE, ESQ.

DEAR SIR: In your report of the annual exhibition of the Pennsylvania Poultry Society there is an error in the Buff Cochins class. My chicks took second, instead of third, premium; also special for best pen. Please give credit accordingly, and oblige,

Yours truly,

A. P. GROVES.

PHILADELPHIA, March 24, 1874.

MR. JOS. M. WADE.

DEAR SIR: The *Fanciers' Journal*, always welcome, was doubly so last week (March 12th), when I saw that the philosophers' stone (egg) was discovered to all chicken raisers. So, last evening I got my "large kerosene lamp," with a basket of eighty eggs of the Black Hamburgs, Brown Leghorns, Houdans, Dark and Light Brahmas, and sat me down to see what kind of chicks I would have this season. I followed the instructions, fixed my fingers and the egg as directed, and held the egg as near the light as possible—quite near enough, as the blisters show on my little finger—and yet I did not have light enough to find the air chamber in but one of the Black Hamburg eggs, and concluded that it was, as Sothorn says, "one of those things no fellow could find out;" but it is too important a matter to give up, and if there is any more light to be had, I would much like to have it.

After writing so far, I thought that I would make another attempt, and held the egg in the left hand, between the two fore fingers, and bent the little finger and the right hand on the top of the big end, and there was the air chamber as plain as need be. It is surprising how plainly it is to be seen in that position, after trying the way proposed by Mr. Pyle so unsuccessfully.

I shall report my success with this discovery, and hope others will.

Yours truly,

JNO. D. OAKFORD.

BALTIMORE, March 18, 1874.

MR. JOS. M. WADE.

DEAR SIR: I have received this day a trio of Silver Pencilled Hamburgs from Henry Beldon, they are extra fine and valued higher than my Goldens, and I believe the best on the continent, certainly I have never seen better anywhere.

Very respectfully yours,

ANDREW J. TUCK.

NASHUA, N. H., March 27, 1874.

PIGEON DEPARTMENT.

ANTWERP PIGEONS.

WITHOUT wishing to disparage the claims of any of the beautiful varieties of the domestic pigeon now cultivated, I would say to those about to enter upon the pigeon fancy, who are undecided what particular kind to keep, try the Antwerp. It is as hardy as any, more prolific than most, and for beauty of plumage, and sprightliness of carriage, will bear comparison with any other variety, in addition to which it is more sensible than any other breed, and when once settled to a particular locality, is not readily lost.

There is no necessity for building an expensive house with a southern aspect for its reception, any spare corner in an out-house will do—east, west, north, or south, it is quite immaterial. Having selected a convenient place, build a pen about five feet high, ten feet long, and three feet deep; at each end fix shelves a foot deep, and about a foot apart, placing a division in the centre of each, which will give two nesting places on every shelf. These should be supplied with loose boxes about nine inches square, and three inches deep. In the blank spaces between the rows of shelves, and at the back of the pen, fit up about a dozen rests for the birds to perch upon, of any description, according to fancy. The old-fashioned triangular shape is as good as any. A pen of this size will hold ten pairs of birds comfortably. The aperture for egress and ingress may be put in the most convenient place, and should be fitted with a bolting wire to prevent the birds getting out at will.

Next select your birds. If you want good ones, I would recommend the purchase of old birds to breed from. Pay a visit to any genuine fancier, who keeps birds for the love of them, and not entirely for profit. I never found such a one that was not pleased to show his birds, and to tell the distances the different birds had flown, together with their pedigree, and every particular connected with them. Select a pair to your fancy, and if for sale, do not be to a shade as to price. Visit another fancier in like manner. Cut the birds down and cross-pair them, by which means you will avoid in-breeding, and stand a fair chance of getting good young ones, but this will by no means be a certainty. There cannot be a greater mistake than to suppose that because you mate good old birds the young produced will, as a matter of necessity, be good also. I have mated first-class birds for homing purposes, and the young produced have been worthless. If your birds do not "hit," you must change the old ones till they do, otherwise you will never have a pen of good Antwerps, as unless the birds possess the homing faculty to an average degree, they are not fair representatives of the breed, although they may have all the outward points required in a good bird. You may breed any color; but Dun, Red Chequer, Blue, and Blue Chequer, are the only colors recognized by standard breeders. I prefer a pen of birds to match in color, and if well matched it is difficult to decide which color is the most attractive. The

Light Duns, with bright red bars on the wings, and red necks, are certainly as handsome as any; Light Blues, with good black bars on the wings and tail, and rich metallic lustre on the neck, are also very pretty.

When you wish to try your young birds, do not commence with them too early, let them be from four to five months old; they may then be thrown up a mile or two from home, and it will soon be seen which are likely to make good homing birds. If, when tossed up, a bird hangs about the place where it is loosed, flying low, and without spirit, ultimately dropping upon some convenient building, or with other birds, condemn it at once, and should it return home, kill it without hesitation, however handsome it may be; if, on the contrary, the bird when tossed from the hand gets well up in the air, ranging wide, and flying resolutely, not taking notice of any birds that may be put up to it, there is every probability, if properly trained, that it will make a good bird.

I find it an excellent plan to clean out my birds' pens daily; it occupies but a few minutes, if a scraper similar to those used by pig-killers be kept for the purpose. Keep a barrel of sand near the pen, and after cleaning sprinkle a few handfuls on the bottom, and at the front of the nesting places, this gives the pen a neat appearance, and conduces much to the comfort of the birds. Exercise your birds once daily—morning is the best time—and they will soar as high as Tumblers, flying from twenty to fifty minutes, and sometimes much longer; when they alight allow a little time for gritting, and to run the building, then whistle them in and feed, giving just as much as they will pick up freely; feed again about four o'clock, giving clean water daily. By these means your birds will be kept in constant health, and from their lively disposition and neat appearance will be a source of constant pleasure and amusement.—*Journal of Horticulture.*

(For Fanciers' Journal.)

A GOOD REMARK.

WHEN I was at the Buffalo Show, January last, I noticed that a great many birds were taken sick from placing their food upon the sawdust which covered the bottoms of their coops, so that in picking up the food they would also take up some of the sawdust with it. I have also seen some of the water vessels half filled with sawdust, which, making the water sour, caused the birds to sicken and die. I have lost valuable birds from these causes, and have seen three other birds that have died from the same cause. I have received letters from other parties telling me the same story. From my little experience, I think gravel would be best for that purpose, because gravel will help to keep the birds in good health, and the difference in price would be very little.

Another great mistake is by putting Pouters and Fantails in an ordinary pigeon coop, as you, my dear Editor, will admit that a Pouter and a Fantail require more room than an ordinary-sized pigeon. For instance: I took a fine pair of White Calcuttas and a fine pair of Black Fantails to the show, and received only a second premium for them, whilst two inferior birds took first premiums. Mr. Cryer, our judge, said, after looking them over again, that mine was the best, and Mr. Ball, of Buffalo, whose birds took the premium over mine, said the same thing, that my Calcuttas and Black Fantails ought to have taken the first premium.

MITCHELL, ONT.

H. GOEBEL.

Bird and Small Pet Department.

(For Fanciers' Journal.)

CAGED SONG BIRDS.

THE Cardinal Grosbeak deserves a prominent place among American caged song birds. It sings well in confinement, and thrives upon such seeds as are used for the Canary. It has been termed the Virginia Nightingale, in consequence of its singing by night as well as by day. Its varied song is musical and clear. Both sexes sing; the female quite equals the male in compass of voice. There is a peculiar richness in the vermilion plumage of the male. The female is of a rich brown, tinged with red. Both have crests, which they elevate at will, giving them a gay and spirited appearance. They are geographically distributed from New England to Central America, and are particularly numerous south of Pennsylvania, where they are found the year round. In the Northern and Eastern States they are migratory. They build their nests of small dry twigs and dry grass, and usually place it in shrubs in the vicinity of a small rivulet. They lay four dull white eggs, marked thickly, but irregularly, with spots of olive brown. Their young are easily reared by hand, and old trapped birds are easily domesticated.

The Rose-Breasted Grosbeaks are allied closely to the Cardinals, though differing in color, the general color being black, white, and rosy crimson; the last is confined to the breast, narrowing in width as it descends on the belly. It is a northern bird; winters in the middle States, and wanders in the summer into high northern latitudes. Its song is remarkably sweet, and its notes clear and mellow, singing by night as well as by day. The prevailing colors, white, black, and crimson, contrast richly, making it a desirable cage bird, though unfortunately it is scarce, and seldom seen confined in cages.

The American Goldfinch, popularly known as the Yellow-bird, is held in high esteem, although very commonly seen. Its lemon-yellow body and black and white wings contrast nicely. They are docile in confinement, and sing sweetly, though their notes are weak. They afford fine amusement for the boys during the pairing season, as they are easily taken by means of a call-bird and trap-cages. They sing as happily confined as in the wild state, and eat freely the same seeds as the Canary. The female is less gaudy in plumage than the male. They construct a neat nest, lay five dull white eggs, spotted at the larger end.

The Indigo Finch is much admired on account of its beautiful indigo-colored plumage. Its song is sweet and vigorous, though short, and it continues to sing during the hot months, when most birds in the wild state are silent. The female is brown, tinged with blue. They are usually shy birds, and it requires one well skilled in the business of trapping them to succeed in catching any considerable number in a single day. For this purpose a decoy bird is employed, and then, by frequenting the vicinity in which they are found, by a little manoeuvring they are taken. They are usually found on the line of a railroad; and by a roadside not much frequented the adept will soon hear the familiar song of the Indigo Finch. The cage containing the decoy bird is then held in front of the trapper, as he advances in the direction of the songster, occasionally flitting his fingers against the wire cage, which causes the decoy to flutter and chirp. This attracts the attention of the outside bird; the cage is imme-

diately set upon the ground, and before the trapper has gone many yards from the cage the stranger is upon it, if not caught. The Indigo Finches are always found in pairs, though the female is seldom caught. She does not sing, but only twitters. They are hardy and easily reared. In confinement during the winter they lose their beautiful plumage, though in exceptional cases it is not at all changed. They build their nests in low bushes, suspended by two twigs. They lay four blue eggs, having a blotch of purple at the larger end. In confinement their diet should be the same as the canary's. They are very fond of beet leaves.

JAS. S. BAILY, M.D.

Items Interesting and Amusing.

☞ Flowering plants have been discovered in eighty-two degrees north latitude, the regions of eternal winter.

☞ Rabbits are ruining hundreds of farms in England and Scotland by their depredations. They are kept by the landed gentry for sport.

☞ A million dollars worth of ostrich feathers are imported into England every year from the Cape of Good Hope. Every pound of these feathers is worth fifty guineas, or \$250.

☞ "A horse! a horse! my kingdom for a horse!" cried a celebrated tragedian. "Wouldn't a jackass do as well?" inquired an affected young man, rising in his seat. "Yes," triumphantly exclaimed the actor, "just step up this way, sir." The young man sat down.

☞ A gentleman from Philadelphia let loose a carrier-pigeon at the depot in Elizabeth at 10.20 A.M. on Thursday. Upon his arrival in New York he ascertained by telegraph that it had reached home at eleven o'clock A. M., thus flying a distance of eighty-three miles in forty minutes. (?)

☞ An ingenious dyer out West uses a poodle dog as an advertising agent. The variegated creature, through the art of his master, shows purple ears, an azure body, black fore legs, and yellow hind legs, head emerald, and tail solferino. That dog should be named either Rainbow, or Prism, or Joseph.

☞ At a Louisville hotel, on Saturday night, a large rat sprang from the money-drawer, on its being opened by the barkeeper, with a new crisp, ten-dollar note in its mouth. For the next ten seconds the atmosphere behind the bar was disturbed with boots, brooms, brushes, mop-handles, and sundry loud noises, but the larcenous rodent escaped from the storm of missiles and expletives under the ice-box; fortunately for the owner, leaving the abstracted note on the floor.

☞ A young gentleman of this city walked into a barber-shop, got shaved, and had his boots cleaned. He gave the barber twenty-five cents, and was handed by the boot-black five coppers. He told the boot-black to brush his new spring hat, and keep the coppers, and turned to wash his hands. The boot-black did brush that hat as never hat was brushed before, for on turning around to get a towel, the gentleman to his horror saw his \$7 spring style undergoing the manipulations that are required to polish a pair of cow-hide brogans! That hat now looks like a ruffled chicken.—*Richmond Whig*.

SHERMAN & CO., PRINTERS, PHILADELPHIA.

A SINGULAR incident occurred on the premises of a gentleman residing near Philadelphia. His barn and out-houses were swarming with rats, and to exterminate them he procured a pair of good terrier dogs. Last week one of them captured a rat of extraordinary size, which he proceeded to shake in a manner that would have soon terminated its existence; but at this critical period two cocks appeared on the scene of battle and attacked the dog so ferociously as to compel him to release his hold upon the rat and flee for his life; meantime the rat made good his escape.

SECOND ANNUAL GREAT NATIONAL DOG SHOW, AT COL. WOOD'S MUSEUM.

THE Dog Show just closed at the Museum in this city has been more successful than the one held one year ago. It was opened on Monday, March 16th, and the dogs were judged during the week, the prize dogs being kept on exhibition until the 28th. As far as the show was concerned, it was a perfect success, there being one hundred and twenty-six entries, and over one hundred dogs offered that could not be accommodated. Had the show been properly advertised, as some of our leading poultry shows are, it would have brought many more visitors from a distance than it did. The following is a list of premiums as awarded:

Breed.	Premium.	Name.	Owner.
English Greyhound,	1st,	Zoe,	Mr. Volmer.
"	2d,	Jack,	C. L. Sharpless.
Russian Greyhound,	1st,	Prince,	Robert Farr.
Italian Greyhound,	1st,		Mrs E. Ward.
"	2d,	Duke,	J. C. Long,
Newfoundland,	1st,	Leo,	Mr. Picot.
"	2d,	Shiloh,	D. Garrett.
Calis Spaniel,	1st,	Prince,	T. L. Altemus.
"	2d,	Lude,	Robert Crissey.
Maltese Dog,	1st,	Mite,	Mrs. Gates.

Breed.	Premium.	Name.	Owner.
St. Bernard Dog,	1st,	Ponto,	William Love
Corole Dog,	1st,	Lillie,	Robert Jackway.
"	2d,	Sport,	Geo. F. Bostwick.

COMMITTEE—Thomas J. Drake, John Thornley, and George B. Garrett.

CRYSTAL PALACE POULTRY SHOW.

THE last Crystal Palace Show is thought to have been the largest and best arranged show ever held in any country, thanks to the indefatigable exertions of a hard-working committee. The poultry alone mustered 2200 pens, the pigeons 1200, and the rabbits 150. Two of the judges announced on the schedule, namely, Messrs Hewitt and Tegetmeier, were unable to officiate through illness; but Capt. Heaton acted in the place of Mr. Hewitt; and Col. Stuart Wortley, than whom there could be no better authority, kindly offered to take the French breeds in the place of Mr. Tegetmeier. The other judges were Messrs. Teebay, Dixon, and J. H. Smith.

In the colored Dorkings the cocks formed a good class, the first and second prize cocks being in beautiful condition. The hens were good, many being very first-rate in quality. In cockerels the first-prize bird was a splendid fellow, the second also remarkably good. The pullets were not equal in quality to the hens. The cup and second prize went to Mrs. Arkright.

Silver-gray Dorking cocks were good; Mr. Raines may well be proud of the cup cock; he is a splendid bird. In the hens, Mr. Cresswell's first and second-prize birds were remarkably good. The cockerels were good, but the pullets, with the exception of the prize bird, were indifferent.

The Buff Cochins were good, but not numerous. In buff hens Mr. Taylor's cup bird was far in advance of the others. The best class of Cochins in quality were the buff cockerels. Mrs. Tindal exhibited two wonderful perfect birds in this class, but one of them was amiss, apparently from cold.

In Partridge cocks the first-prize bird was a grand fellow; but taking the Partridges as a whole, they did not appear as good as they were years ago. White Cochins were numerous, and good birds were to be found in all the classes.

The Black Cochins were stilty, and poor in quality. We are glad to see that some spirited fanciers have taken them in hand; there is room in this pretty variety for improvement.

Dark Brahmas mustered very strongly. The adult cocks, from their variable condition (many being just recovering from moult) must have tried the judges, and we shall not be surprised if their positions are changed in a few weeks. The class contained many splendid birds. The Dark Brahma hens were a wonderful class; perhaps never before was so grand a lot of hens exhibited at any show. The dark cockerels were numerous, and the class contained many splendid birds. The dark pullets mustered 104 entries, and were one of the best classes of Brahma pullets ever seen. The prize and commended birds were remarkably close in quality, taking all points, but the first and second prize pullets were by far the most beautiful in penciling. Light Brahmas were excellent. The beautiful pullets shown by Mrs. Frank Cheshire, were the admiration of all. The cup cockerel exhibited by Mr. Haines, was also a most beautiful bird. The first-prize hen, belonging to Mr. Maynard, and also the second-prize hen, belonging to Mr. Crook, were wonderfully perfect. The race betwixt these two nens was the most close in the whole show. The Light Brahmas have certainly made the greatest advance in quality of any breed during the year.

The Spanish classes were not as good as we have seen. French fowls were numerous in all the classes. Both Creve-cœurs and Houdans were good, especially the chickens of the latter.

Hamburgs were all good classes. The Golden-Spangled hens were perhaps the most beautiful. The Golden-Penciled hens were also excellent.

Bantams were very numerous. The Game Bantams were many of them out of condition, but all the classes except the Wheatan were good. In large game the Black Reds appear to be losing ground in quality, many of the cocks being very muddy in color, and with brown muddy eyes, instead of the beautiful red eyes of the old kind. Black Reds are now very common, in both the cockerels and pullets.

In Ducklings the best bird was the cup cock—he is a great beauty. Both Aylesbury and Rouen were good, the cup going to a splendid pair of Rouen. Fancy duck were a beautiful lot, and the East Indian also came out strong.

It would be a hopeless task to attempt an enumeration of all the excellences displayed by the grand collection of pigeons which were collected together at the Crystal Palace during the past week. We will therefore direct the attention of our readers to some of the most striking features of this truly great show. Commencing with Pouters, which head the list, it may be safely said, that a better lot of birds were never seen together in London; and it is quite probable that this arose from the fact of the announcement by the committee of the names of two most eminent Pouter fanciers as judges, and quite bears out our idea of the advisability of publishing the names of the judges in all cases.

Blue Pied cocks head the list, Mr Hill's first prize bird being excellent in every respect, Messrs. Baker's, Fulton's, and Gresham's, were also well worthy their positions. In

Black Pied cocks, Mr. Pratt won first and cup with a grand bird, though rather failing in color. In red or yellow Pieds Mr. Rose came to the fore with a bird which worthily sustained the reputation of this gentleman's stud. White cocks were a grand lot, and must have given the judges much trouble. Mr. Gresham took first, and the class was described by the judges as "extra good." Cocks bred in 1873 gave great promise of future excellence, and many of them, we believe, will be heard of again. The hen classes were filled, Messrs. Gresham, Stuart, and Fulton, dividing the honors in old birds; but in young hens Mr Gresham swept the board with three magnificent specimens, and the judges described it as an extraordinary class.

Carriers are always shown very numerously at the Crystal Palace, and the numbers and quality on the present occasion we believe to be far in advance of any previous year. Mr. Siddons' first prize old black, and Mr. Montgomery's "cup" dun, were excellent specimens; the latter bird, which is well known to most carrier fanciers, being shown in superb condition. Mr. Fulton had some grand birds in both classes, but some of them we thought exhibited symptoms of being over-shown. Young blacks numbered no less than fifty-two birds, from the best lofts in the kingdom, and we were glad to see one or two new exhibitors taking good positions. Mr. Massey took first, closely pressed by Mr. Heritage's bird, while no less than six birds were very highly commended. The cup for best young Carriers, however, went to the winner in the next class, viz.: for duns, in which Mr. Fulton took first and second prizes. Judging from the number of birds exhibited, it would appear that Dragons are the fashionable birds at the present time among London fanciers; the winning silvers shown by Messrs. F. Graham and Bishop were indeed good specimens, but the awards in the blues were not so satisfactory, the best birds being amongst the highly commended; the superb and brilliantly colored yellows of Mr. S. C. Betty took all the prizes in the class with birds which we believe have never been equalled. Mr. Graham's highly commended birds in this class were also deserving especial notice.

The class for Almond Tumbler cocks was described by the judge as the "best collection he had ever seen;" and certainly the form and carriage, perfection of ground color and markings in Mr. Hallam's cup and second-prize birds were enough to excite the envy of any fancier. In the second for Tumbler cocks, any other variety, we thought Mr. H. Adams' third prize red superior to the first prize.

Barbs mustered better than we have seen them for a year or two past, and, owing to the fact that birds had to be in the Palace on Saturday, and that no exhibitor or attendant was allowed in the Palace until after the judging on Monday, the majority of the birds were sound and clear in eye and wattle, and did not present the offensive appearance we have been accustomed to see. Mr. Firth's cup black cock, Mr. Fulton's red cock, and the first-prize hen of Mr. Montgomery left little to be desired. The class for young Barbs of 1873 was a good one, and had twenty-five entries, of all colors. Mr. P. H. Jones took first and fourth with a black cock and good-colored red hen, Mr. J. Firth and Major Cryer taking second and third, while a large number of birds were highly commended, and we thought among these were some which should have taken a better position. We must also say we did not quite agree with the awards in class for red or yellow Jacobins; we thought that more than one of either Capt. Heaton's or Mr. Fulton's birds were superior

to the first-prize bird, which, although having very ample hood and chain, was very loose and straggling.

Fantails had only one class, principally whites, and in a class so hard to judge, when a lot of good birds are assembled, it is difficult to criticise the awards, and much more so to make them. Trumpeters contained a good lot of birds of the new type, Mr. Fulton taking first and cup with a grand black; Mr. Lederer second and third.

English Owls formed one of the best classes in the show, and contained many birds of surpassing merit; but there appears to be a diversity of opinion among judges and breeders as to the proportions of an English Owl, some saying it should have a gullet and dewlap, others ignoring these properties, and going in for birds without them. It would be well if this question could be settled, so that breeders might know what to work for. However, in the present case, all the prize and commended birds were good specimens, some of the latter only wanting age to qualify them for the superior degree. Foreign Owls, as they get acclimatized and breed with us, appear to lose the specific character of the imported birds, and show a tendency to become larger and coarser than we like to see them. The two classes of Turbits made a grand show, Messrs. Dew, Jones, and Gregory in blues and silvers, and Messrs. Ropes, Croft, Salter, and Jones in the class for "any other color," showing splendid birds.

The class for best collection of four pairs, any variety except Carriers, Pouters, and Short-faced Tumblers, had twenty entries, many of the pens containing not only beautiful, but valuable, birds; but we cannot congratulate the judges on their awards in this class. The cup was given to a pen of White Fantails, in fine feather and condition; the second prize to a pen of Grizzled Dragons; and equal thirds to a pen of Mealy Antwerps and a magnificent pen of birds shown by Mr. Fulton, which, in the opinion of the majority of fanciers, should have had the cup. We would suggest some alteration in the conditions of this class in future shows.

There were three classes for Antwerps, comprising over one hundred and fifty birds. In the special class for homing birds, it was a condition that all birds to which a prize was awarded in the pen could only claim their right to the prize on being returned to the show, after being tossed from the Palace at noon on the second day of the show; but unfortunately the state of the atmosphere was so very unfavorable that the committee, in the exercise of their discretion, did not have the birds thrown. The prizes will therefore be given as awarded to the birds in the pens; but there is little doubt that, had the weather been suitable, every bird would have found his way home and back to the Palace. It is only necessary to mention the names of Sutherland, Lubbock, Tegetmeier, and Sparrow, to prove the truth of our surmise.

The judges were: For Pouters, Messrs. J. Montgomery and M. Stuart; for Carriers, Barbs, and flying class of Antwerps, Mr. Corker; Dragons and Short-faced Antwerps, Mr. Jones Percival; Jacobins, Fantails, Nuns, Trumpeters, Owls, and variety class, Mr. Harrison Weir; Turbits, Magpies, Runts, Almonds, other Short-faced Tumblers, Flying Tumblers, Mr. F. Esquilant; and the collection of four pairs, by the last three gentlemen combined. The pigeons were under the care and supervision of Mr. P. H. Jones and a staff of attendants, who performed their duties most satisfactorily.

The Rabbits were numerous and very good; they were judged by Messrs. Heath and Rayson.—*Field*.

[We omit the list of awards as being too long for our columns at this time, and not of sufficient interest to warrant crowding out other matter.—*Ed.*]

(For Fanciers' Journal.)

YOU AND YOUR NEIGHBOR.

READER, have you ever noticed the disposition on the part of some men to claim that the goods they want to sell you are just a little better than those of any one else in the neighborhood? In some business communities this exists to a greater extent of course than in many others.

The only phase under which we wish to consider it here, however, is in its bearing on stock interests. If there is one thing which can provoke a stock fancier or breeder more than another, it is for a neighbor to misrepresent his stock; and yet how often is it done. It seems the special destiny of some men to hunt for points of criticism; they are never satisfied unless they are showing something to be wrong.

We once had a neighbor of this kind, and he was the plague of our life. Whenever he got a new trio of birds they were sure to cost twice as much as our own, though he did not pay half as much. Did he buy a new Partridge Cochin cockerel, he was sure to weigh fourteen pounds or over, though when tested by the scales he did not draw ten. When he talked about his fowls, he always spoke of having reared his distinctive breeds longer than any other man in America. No, he did not go quite so far as that, but he did claim to know good fowls better than any one else in the neighborhood; and when he advertised,—well, did you ever hear of the "*only white ear lobe strain in America?*" or the "*unsurpassable Buff and Cinnamon Cochins?*" He had them. That was his style. Catch him keeping second-rate fowls. No indeed, he did not breed that kind. He would talk to you by the hour about the parents of his stock, and show you his book of feathers, to prove that they were from the best in the country; but somehow he outgeneraled himself. With all the slurs and unjust criticisms that he made on the stock of his neighbors, they still succeeded in a quiet way, and by minding their own business in disposing of theirs more readily than he; in fact he talked so much that he outdid himself; nevertheless it was more than provoking to hear him speak in his sneering way, and hear him tell the visitor to his yard, that Mr. So and So kept nothing but mongrels, or at best a very inferior strain.

Now we do not believe that any man gains anything by sharp practice of this kind, though he may impose upon the beginner in the fancy, it won't hold out. The time will come when all will know and understand his way of dealing, and take his talk for what it is worth. It is best at all times, and we say this particularly to beginners, to depend on the merits of your stock, and not on your representation of it. Strive to improve your stock, and make it equal to the best, and then invite your buyer to see it and judge of its merits for himself.

A. N. R.

LOCK HAVEN, PA.

THE official list of awards of the Bucks County Poultry Society, at its late show, gives Prof. A. N. Raub first premium on Black-wing Turbits. This was omitted in the published list. He won five first and two second premiums on seven entries.

POULTRY SHOWS FOR 1874 & 1875.

Bucks Co. Poultry Association. Doylestown, Pa., December 8, 9, 10, and 11. Theo. P. Harvey, Secretary, Doylestown, Pa.

Maine Poultry Association. Portland, January 12, 13, 14, and 15. Fred. Fox, Secretary, Portland, Maine.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

WILL EXCHANGE, HOUDANS—one Cock and five Hens—for Lt. Brahmas of Wade's or Williams' strains, or \$20, and one Cock and four Hens, Sumatra Games, for Wright's New Book (bound) on Poultry, or \$15. Address T. D. ADAMS, Lock Box 61, Franklin, Pa.

FANCY PIGEONS.—Wanted in exchange for Fancy Pigeons, Cochins Fowls, or Owls and Barbs, for other varieties. Stock must be strictly first-class. Send description to

W. ATLEE BURPEE, 1332 Arch St., Philadelphia.

TO EXCHANGE.—A Black and White Fox Hound Pup (male), 9 months old, for Buff Cochins.

EBEN P. DAY, Hazleton, Luzerne Co., Pa.

I WILL EXCHANGE an extra fine Aylesbury Drake for first-class Black African Bantam Hens, or will buy Hens.

C. B. ELBEN, Pittsburgh, Pa.

WILL EXCHANGE ADVERTISING in the "Northwestern Poultry Journal," at regular cash rates, for trios of pure, well-marked Brown or Black Leghorns, Black or Silver-Spangled Hamburgs, Dominiques, or Plymouth Rocks. The expressage to be PREPAID, and both expressage and a fair cash price for the fowls to be paid for in advertising as above. This offer for thirty days from March 5th.

Address T. T. BACHELLER, Minneapolis, Minn.

SHADE TREES WANTED in exchange for Dark Brahmas, or Fancy Pigeons. Address

JOS. M. WADE, 39 N. Ninth St., Philadelphia, Pa.

BULL DOG, extra fine, and a good watchdog—will exchange for any other property except dogs.

JOS. M. WADE, Philadelphia, Pa.

PIGEONS.—I will exchange Blue and Black Trumpeter Pigeons for Fantails, Pouters, Jacobins, Nuns, Carriers, Tumblers, or Owls.

Address M. W. MINER, 121 Fourth St., Peoria, Ill.

WILL EXCHANGE—Eggs from 16 varieties of Land and Water Fowls, for Fancy Pigeons, minor pets, &c. Send stamp for particulars.

L. T. & W. CHARLES, Hornellsville, N. Y.

WANTED TO EXCHANGE.—A lot of Salem and Iona Grape Roots, for Fancy Pigeons.

D. S. McCALLUM, Hornellsville, N. Y.

WANTED TO EXCHANGE.—Plymouth Rock Eggs for a Brown Leghorn Cock; must be first-class.

C. C. CORBETT, Norwich, Conn.

WANTED TO EXCHANGE.—A Halsted Incubator for greenbacks.

C. C. CORBETT, Norwich, Conn.

WANTED TO EXCHANGE.—The following varieties of Eggs for B. Red Game Bantams: Dark and Light Brahmas, White Guineas, and Plymouth Rocks.

C. C. CORBETT, Norwich, Conn.

WILL EXCHANGE Light Brahmas, Williams' stock, for White Leghorns or Red Game Bantams, from any reliable strain.

W. FRANK BACON, Cambridgeport, Mass.

WILL EXCHANGE a fine pair of Dark Brahmas (P. Williams' strain), for either G. S. Hamburgs or Brown Leghorns.

Address S. T. JONES, Box 669, Lock Haven, Pa.

BANTAMS TO EXCHANGE.—I will exchange one pair of fine Bantam Chickens for Poultry Book, either Wright's or Bement's. Send for particulars and state which you have.

Address WM. D. BELL, 550 N. Queen St., Lancaster, Pa.

WATCH DOG.—Half-Blooded Newfoundland; one that is well-trained, and knows his business; very fond of children; will exchange for D. Brahma Hens, Buff or Partridge Cochins. Dog is first-class; Hens must be the same. Address

R. Y. FAIRSERVICE, E. Newark, N. J.

SPLENDID THOROUGHBRED NEWFOUNDLAND DOG, one year old, to exchange; half cash, balance in Partridge or Buff Cochins, or Dark Brahma Hens or Pullets. Stock must be first-class. Address

R. Y. FAIRSERVICE, East Newark, N. J.

WANTED.—To exchange two good Plymouth Rock Cockerels, for two large and fine Pullets or yearling Hens of same breed.

V. C. GILMAN, Highland Farm, Nashua, N. H.

WANTED.—One trio Brown Leghorns; must be fine in all respects; for which I will exchange Eggs from Partridge Cochins and White Leghorns, the finest in this part of the country. Send for Circular.

Address J. H. MCKINNEY, Ithaca, N. Y.

I WILL GIVE four Game Pullets in exchange for three Partridge Cochins Hens or Pullets; am not particular as to leg-feathering; or the same number of sittings of Brown Leghorn Eggs, for above-named P. C.'s, want only for sitters. Address

T. J. McDANIEL, Hollis Centre, Me.

BUFF AND WHITE COCHINS. Dark Brahmas, S. S. Hamburgs, White Leghorns, all very fine birds; will exchange for good Partridge Cochins or Light Brahmas, or will sell very cheap.

Address CHRIST. HALTEMAN, N. Maine St., Dayton, O.

WILL EXCHANGE one trio handsome Blue Red Games, one trio Dark Brahmas, one pair Silver Duckwing Games, one Yellow Duckwing Stag, for Buff Cochins or Black Red Game Hens or Pullets.

EBEN P. DAY, Hazleton, Pa.

WILL EXCHANGE a Violin, double inlaid on edge, lion head, for Poultry or Rabbits. Address

F. A. M. E. BROOKS, Sinnemahoning, Cameron Co., Pa.

WILL EXCHANGE Houdans, pure bred, one cock and eight hens, for Light Brahmas. Address

EDWARD SNYDER, P. O. Box 48, Phillipsburg, N. J.

WILL EXCHANGE two superior Red Barb Hens and a nearly perfect Yellow Swallow Cock for one Smooth-headed Yellow Magpie Cock and Blue-capped Magpie Cock. Must be first-class birds.

Address MITCHELL & CARRVER, P. O. Box 7.

WANTED TO EXCHANGE a pair of Buff Cochins, Clippers, Gray or White Games, at fair value, for Black Leghorn Eggs or Brown Leghorn Fowls, Duckwing or B. B. Red Game Bantams, or Dominique Game Fowls, or for Greenbacks, cheap.

W. R. DUDLEY, Augusta, N. Y.

EGGS FOR HATCHING.—I am now prepared to book and furnish Eggs from my imported and home-bred Dark and Light Brahmas, also, Partridge Cochins. Having bought in the spring of 1873 Mr. Philander Williams' (Taunton, Mass.) entire stock of Partridge Cochins, numbering some 80 odd head, consisting of all his imported, home-bred, and prize winning Fowls, which he valued very highly, and having bought of Joseph M. Wade (late Wade & Henry), Oak Lane Poultry Yards, Philadelphia, in 1873, quite a number of Dark Brahmas, among which were a number of prize winning Birds and 5 imported Hens. These, in addition to my last year's importations, gives me one of the finest flocks in America. My mode of packing Eggs insures their safe carriage. Orders solicited, and satisfaction guaranteed. Address

T. S. COOPER, Linden Grove, Coopersburg, Pa.

BLACK RUSSIAN CHICKS, bred by me, were awarded 1st and 2d premium at the great fair in Boston, 1873. I was also awarded 1st premium on Fowls and 1st on Chicks at Connecticut State Fair, 1873. Eggs from above stock, \$4.00 per sitting. Am selling eggs from Light Brahmas weighing from 11 to 13 pounds. Partridge Cochins and Plymouth Rocks for \$3.00 per sitting. All first premium and standard stock. For further particulars send stamp for descriptive circular to

LUCIUS DUNBAR, West Bridgewater, Mass.

ITALIAN GREYHOUNDS, and COACH DOGS.—A pair of each for sale; fine dogs. Also, a lot of first-class singing Canaries, and bright metal cages.

J. C. LONG, Jr., 39 N. Ninth St., Philadelphia.

JOS. M. WADE,

Philadelphia, Pa.

C. H. WARREN, Verona, Oneida County, N. Y., sells Fowls of most of the leading varieties, including Ducks and Turkeys. Eggs in season, at from \$2 to \$2.50 per dozen. Eggs warranted fresh and true to name.

FANCY PIGEONS, Owls, Turbits, Jacobins, Magpies, Nuns, Tumblers, Plain and Starling Quakers, all fine birds. I want White and Blue Jacobins. Address, with stamp,

D. FRANK ELLIS, Cambridge, Mass.

H. K. PAYN, Albany, N. Y., can furnish a limited number of Eggs for Hatching from Light and Dark Brahmas; Buff, White, and Partridge Cochins; Black-breasted Red and Golden Laced Sebright Bantams. Satisfaction guaranteed. All Eggs warranted fresh and true to name. Send for illustrated price list. Free.

HAMBURG.—At the N. H. Exhibition I was awarded the Special Premium for best collection of Hamburgs, comprising: GOLDEN PENCILED of my own importation, from Henry Beldon's yards. The cock "John Bull" won first at two shows in England, and first and special at Buffalo, N. Y. Also, I was awarded first and special for best hen at Buffalo, and in trio have won at Massachusetts, first on Fowls and first on Chicks; at Rhode Island, first on Fowls; at N. H., first on Fowls and first on Chicks, and special for best Fowls and Chicks; at Nashua, first on Fowls and first on Chicks. Eggs, \$10 per dozen. SILVER PENCILED.—Received from Henry Beldon, March 27th, per "Republic," a trio of extra fine Silver Penciled, fully equal to my Golden Penciled; as good as any in America. A few dozen Eggs will be sold for \$10 per dozen. GOLDEN SPANGLED, Ongley's strain. Won at N. E., third; at N. H., first and special for best trio; at Nashua, first. Eggs, \$5 per dozen. Trio, \$25. BLACK, from Cutter's and Shedd's stocks. Won first at N. H. and first at Nashua. Eggs, \$2 per dozen. Trio, \$15. SILVER.—Won third at N. E., second at N. H., first and second at Nashua. Eggs, \$2 per dozen. I can also furnish fresh eggs from other first premium varieties, at the annexed prices: Light and Dark Brahmas, White and Buff Cochins, White Leghorns, Dominiques, each, \$3 per dozen; Houdans, Black Spanish, \$2.50; Bronze Turkeys, \$5; Black-breasted Red, Blue Red, Red Pyle, and White Georgian Game, \$5. Everything warranted as represented. Cash must accompany orders. Nothing C. O. D.

ANDREW J. TUCK, Box 602, Nashua, N. H.

EDGEWORTH POULTRY YARDS.—Eggs for Hatching: Dark Brahmas: Steel Gray hens mated with my selected imported cockerel "Wragg," at \$5 per 13. Light Brahmas: extra selected hens mated with very choice cockerel, at \$3 per sitting of 13.

R. F. SHANNON, P. O. Box 568, Pittsburgh, Pa.

J. Y. BICKNELL, Westmoreland, Oneida County, N. Y., sells Eggs from the same fowls that he breeds his PRIZE BIRDS from. He has had many years of experience in packing and shipping Eggs, and personally attends to it in every instance. Price List and Practical Hints free.

BANTAMS.—14 varieties. 26 premiums at Massachusetts Exhibition, 1874. W. B. ATKINSON, Box 530, Boston, Mass.

SEND STAMP for my elegant NEW DESCRIPTIVE CIRCULAR AND PRICE LIST OF FANCY FOWLS AND PIGEONS. Address W. T. ROGERS, Box 137, Doylestown, Pa.

MOLINE POULTRY YARDS, MOLINE, ILL. S. C. WHEEL-LOCK & CO., Proprietors, Breeders of Asiatics and French Fowls, Eggs in season from first-class stock. Have for sale a few trios of Dark Brahmas and Buff Cochins, not strictly first-class birds. Price, \$6 per trio. Also, 4 White Cochins Hens and Cock, Warner and Williams' strain. Price, \$25. Send for Price List.

FOR SALE ON EXCHANGE.—A splendid pair of French, pure white Poodle Dogs, male and female, seven months old, as nice as can be found, for Dark Brahma Chicks; must be first-class birds in every respect. Address G. DILLENBERGER, 69 Clifford St., Providence, R.I.

EGGS from my PRIZE-TAKING FOWLS, at \$5 per doz. Golden-Pencilled, and Black Hamburgs, Black Spanish, and Black B. Red Games, and Duck-Wing Game Bantams. All orders booked in rotation, and forwarded when desired. Address DUNCAN McR. KAY, Galt, Ontario, Canada.

FOR SALE ON EXCHANGE.—A pleasant suburban Residence, 5 miles out from North Penn Depot, west side, and adjoining Oak Lane Station; consisting of French Roof, Pointed Stone House (nearly new) of 10 rooms, and large Frame Stable, and Carriage House, and other out buildings, with about 1½ acres of excellent land, in a healthy and pleasant neighborhood. Would sell or exchange for city property of a less value, one-third cash. Price, \$12,000.

JOS. M. WADE, 39 North Ninth St., Philadelphia. The above is part of the Oak Lane Poultry Yard property.

R. M. GRIFFITH, Belper Cottage, Wilmington, Del.—I now offer for sale Eggs from the following varieties of Fowls, being fowls that took first premiums of all the varieties mentioned, namely: White Cochins, White Polish, Golden and Silver-spangled Polish, and White Crest Black Polish, Golden and Silver-spangled Hamburgs, and Brown Leghorns. A few pairs or trios of fine Fowls for sale at reasonable rates. Also, very choice Pigeons of 65 varieties. Blood will tell. 31 first premiums, 13 second, and 4 specials, at Buffalo, N.Y.; 25 first, 12 second, and 6 specials, at Pennsylvania Exhibition at Philadelphia. Send a green stamp, stating what you want.

EGGS FOR SALE.—From Light Brahmas, Dominiques, Black African Bantams, and Aylesbury Ducks, including my late imported Ducks—all premium Birds. For premiums given my Birds, see pages 107 and 116, *Fanciers' Journal*. C. B. ELBEN, Pittsburgh, Pa.

PURE BRED STOCK, AND WHERE TO GET THEM!
RIVERSIDE STOCK AND POULTRY YARDS.
WM. WRIGHT, AND S. BUTTERFIELD, Proprietors.

We shall sell a limited number of sittings of Eggs, at \$5 per sitting, from Light and Dark Brahmas, Buff and Partridge Cochins. Our Light Brahmas are Williams' strain, pure. Yard No. 1—Cock Young Alexis, is mated with six prize Hens, all standard birds, and winners at Detroit and Buffalo Show. Yard No. 2—Cock Duke of Essex is also mated with standard birds, among them are the winners of 1st, at Detroit, for Chicks of 1873. Yard No. 3—Dark Brahmas; are our own direct importation of 1873, and are first-class birds of high merit, and we can safely recommend them to the fancier. Yard No. 4—Buff Cochins, imported from England, from Rev. Mr. Brooks' and Taylor's strains, and selected by our Mr. B. for breeding purposes. Yard No. 5—Imported Partridge Cochins; are standard birds, and mated with great care for breeding. We also make the importing and breeding of Lincoln and Cotswold Sheep, Suffolk, Essex, and Berkshire Pigs a specialty. Mr. S. Butterfield being personally acquainted with all the leading breeders in England, will leave on or about the middle of June to make a selection from the best pens of premium birds at the various shows in 1874. Any orders entrusted to him will be executed according to instructions, on commission or otherwise. All communications addressed with stamp, to WM. WRIGHT, Griswold St., Detroit, Mich., Or Riverside Stock Farm, Sandwich, Ontario, Canada.

Address H. H. TSHUDY, Lititz, Pa.

BLACK LEGHORNS.—Imported direct from Italy. Eggs, \$5 per doz. Light Brahma Eggs, \$3 per doz. Black-Breasted Red Game Bantam Eggs \$3 per doz. All Imported or Prize birds. Young Fowls after Sept. 1st. S. L. BARKER, Windsor, Conn.

BROWN LEGHORNS.—After six years of improvement by careful breeding and study, I this year, for the first time, present my stock, and feel that they will greatly improve whatever flock or strain they may be added to. Their qualities for early market and profitable egg-producers are familiar to all.

BAKIES.—As I was the first to import into the United States the now famous *Dark Brahmas*, I have pleasure in again being the first to import the *Bakies*; they are very rare and choice in England; are in shape exactly like the *Creepers* that are now so often referred to by farmers as being the most profitable fowl they can remember; the *Bakies* are a black body, dark very short legs, comb and white ear-lobe like Brown Leghorns, and as they cannot do the mischief at large same as most fowls, present altogether a very desirable, handsome, profitable fowl. Imported by steamship Batavia, Liverpool to Boston, March, 1874.

C. CARROLL LORING, Boston or Dedham, Mass.

MOCKING-BIRD TO EXCHANGE for Brown Leghorn Pullets. Also, 20,000 live Trout for sale. Eggs—Light Brahmas, Houdans, White Cochins, \$1.50 per doz. Live Mink for Breeding. Partner wanted. SPRING GROVE TROUT WORKS, Ossipee, N. H.

H. N. WHEELER, Mystic River, Conn., Breeder of pure Brown Leghorns from the old Mystic River Stock, imported by Capt. Isaac Gates. Eggs, \$3 per dozen. Orders taken now.

WILLIAM ATWOOD, Big Flats, Chemung Co., N. Y.

AYLESBURY DUCKS of the best blood in this country. DRAKES of 1873, \$3; per pair, \$5; EGGS, \$3 per doz. Partridge Cochins Eggs, \$2 per doz. E. S. DEMMON, Fitchburg, Mass.

EGGS FOR SALE.—From all the principal varieties of Fowls, especially Polands, Hamburgs, Houdans, and Bantams. REV. C. W. BOLTON, Armonk, West Chester Co., N. Y.

HAVING SOLD my entire stock of Dark Brahmas to A. A. Miller, of Oakdale, Alleghany Co., Pa., I will give my attention to Light Brahmas, Dominiques, and Aylesbury Ducks. Eggs from the above for sale. All first-prize birds. C. B. ELBEN, Pittsburgh, Pa.

FOWLS AND EGGS.—I can furnish now a few trios of Light Brahmas, Dark Brahmas, and Partridge Cochins. Eggs of above in season. And White and Buff Cochins, Houdans, Silver-Spangled Hamburgs, Silver-Spangled Polands, Gray and White Dorkings, B. B. Red Games, White Leghorns, Gold Sebright Bantams, Bronze Turkeys, Bremen Geese, Aylesbury, Cayuga, and Rouen Ducks, &c. Mode of transporting eggs is as good as the best. My Fowls and Chicks were awarded over \$500 in premiums the past FALL. Send me two 3 cent stamps for new Descriptive Catalogue of Poultry, worth dollars to a beginner. Will exchange NURSERY STOCK for standard pure bred Poultry. For information and PRICE LIST, address JAS. M. WILLS, Bloomington, Ills.

W. W. ELLIOTT, McEwensville, Pa., Breeder of Light and Dark Brahmas, from the best strains. Also, Houdans from Cooper, Ireland.

GAME FOWLS! GAME FOWLS!!—Send for Price List to J. A. BENTLEY, Potter Hill, R. I.

FOR SALE.

4 Hens and 1 Cock, Dark Brahmas, Williams & Warner's Stock.....\$12
3 Hens and 1 Cock, White Cochins, Philander Williams' Stock..... 10
3 Hens and 1 Cock, Black Cochins..... 8
1 trio Light Brahmas..... 6
3 Hens and 1 Cock, White Leghorns, O. A. Pitkin's Stock..... 8
Address THOMAS PARKER, Johnstown, N. Y.

WHITE COCHINS, LIGHT BRAHMAS, WHITE LEGHORN, RED PILE GAME. I have some very fine White Cochins, equal to any in the country, with Chicks and Fowls at reasonable prices. Also, Light Brahmas, White Leghorn, Red Pile Game. Address GEO. A. MEACHAM, North Cambridge, Mass.

WM. H. CHURCHMAN,

CLAYMONT, DELAWARE,

IS NOW BREEDING ONLY

LIGHT AND DARK BRAHMAS,

From the best Strains to be obtained in this or any other country.

A FEW CHOICE BIRDS TO SPARE, OF EACH COLORING.

As my yards are well protected, I shall be able to supply

EGGS FOR HATCHING,

WELL PACKED, VERY EARLY IN THE SEASON.

EATON'S MATCHLESS PIGEON PORTRAITS, Life-Size. One pair Carrier and Pouter. Price \$5. The above Engravings are now out of print and seldom to be had at any price. Address JOS. M. WADE, 39 N. Ninth St., Philadelphia.

JOHN P. BUZZELL, Clinton, Mass., Breeder of Light and Dark Brahmas and Partridge Cochins. At the Great Show in Boston, 1873, my stock was awarded First Prize on Light Brahma Fowls; Fourth Prize on Light Brahma Chicks; Second Prize on Dark Brahma Chicks. A few Fowls of the above Stock for Sale. Also, Eggs from these prize-winning Cocks, mated with superior Hens.

SUGAR MAPLE, White Ash, and Red Beach, 50c. per 100; \$2 per 1000. Tulip, Linden, and Sweet Chestnut, \$3 per 100; \$15 per 1000. By mail, 25c. per 100 extra. Send stamp for catalogue and description. A. BATTLES, Girard, Pa.

EGGS FOR SALE.—I am now booking orders for Eggs, delivered any time after February 15th, from my first-prize pedigree stock of Light Brahmas (Cock *Recherche*, mated with P. Williams' and Felch Hens), at \$6 per dozen. Dominique Eggs, \$3 per dozen. Black African Bantam Eggs, \$2 per dozen. Aylesbury Duck Eggs, \$6 per dozen. All of which are first-class first Prize Stock. Eggs packed with care in patent boxes. Two fine Aylesbury Drakes for sale, direct from imported stock. C. B. ELBEN, Pittsburgh, Pa.

A. M. CAREY, SELINGSGROVE, PENNA., Breeder of First-Class Fowls. Good specimens of the following varieties for sale now at very low prices: Light Brahmas, Partridge Cochins, Houdans, Silver-Laced and Black Red Game Bantams. CORRESPONDENCE SOLICITED.

POULTRY.—Poultry breeders, fanciers, farmers and everybody interested in keeping fowls for pleasure or profit, should subscribe at once for the NORTHWESTERN POULTRY JOURNAL, a large, new, three-column, splendidly illustrated monthly, published in Minneapolis. The only poultry paper west of Illinois, the largest west of Connecticut, and the SOLE ORGAN of fanciers for the great Northwest. ONLY \$1.00 PER YEAR, with new co-operative features, giving large benefits to all subscribers. Specimen copy 10 cents, postpaid. Agents wanted. Address T. T. BACHELLER, Editor N. W. Poultry Journal, Minneapolis, Minn.

EGGS from 1st Premium Brown Leghorns, at \$3.00 per sitting. A. N. RAUB, Lock Haven, Pa.

CALCUTTA FANTAILS.—White Crested Calcutta Fantails, out of my imported stock. Having four pair to spare I will sell them at a reasonable price. They have thirty-two and as high as thirty-six feathers in their tail. Also, a few pair of very fine Toy Pigeons. Address, with stamp, GEO. SCHWINN, Nos. 21 & 23 W. Pratt Street, Baltimore, Md.

OAKDALE POULTRY YARDS,

A. A. MILLER,

Breeder of Leading Varieties of

FANCY POULTRY,
LAND AND WATER.

Address

A. A. MILLER, Oakdale Station,

Alleghany Co., Pa.

DARK BRAHMA

EGGS

EARLY IN THE SEASON,
FIVE DOLLARS PER DOZEN.

JOS. M. WADE.

PHILADELPHIA, PENNA.

EGGS

From First Premium
BROWN LEGHORNS,
AT THREE DOLLARS
PER SITTING.

A. N. RAUB,
LOCK HAVEN, PA.

BULL DOG FOR SALE.—Extra fine, one and a half years old. White, with colored spot on the face. Free from scars, and a perfect specimen. Price \$30. Address JOSEPH M. WADE, No. 39 N. Ninth St., Phila., Pa.

TREES, AT WHOLESALE, TO CLEAR GROUND.

Apple Trees, No. 1,—6 to 8 feet, per 50, \$7; per 100, \$13; per 1000, \$90
" good trees, 5 to 6 " " 50, \$5; " " 9; " " 60
Peach, very fine, trimmed already for planting. One year old, general assortment, 4 to 6 ft., \$7 per 100; \$55 per 1000. Good, 3 to 5 ft., \$5 per 100; \$30 per 1000. Pear, standard, No. 1—\$6 per doz. Currants, Red Dutch, \$7 per 100; \$50 per 1000. Blackberry, Lawton, \$3 per 100; Kittatinny, \$3 per 100; Wilson's Early, \$4 per 100. Irish Juniper, 3 ft., \$25 per 100. Evergreens, very fine—American Arborvitae, 2½ ft., \$12 per 100. Siberian, 2½ ft., \$20 per 100. Hovey's Golden, 2½ ft., \$18 per 100. Hemlock Spruce, 10 in., \$6 per 100; \$50 per 1000. Norway Spruce, 2 ft., \$18 per 100; 3 ft., fine, \$30 per 100. Sugar Maples, 7 to 9 ft., \$6 per doz. Asparagus Roots, Giant Purple-Top, \$1 per 100; \$4 per 1000. One year old, 75c. per 100; \$3 per 1000. Philadelphia Raspberry, \$3 per 100; \$18 per 1000. Herstine, \$1.50 per doz; \$10 per 100. Linneus Rhubarb Sets, \$4 per 100; \$30 per 1000. Strawberries—Chas. Downing and Kentucky, \$1 per 100; \$5 per 1000. All articles packed to carry any distance. Price List free. Address JOSIAH A. ROBERTS, Paoli, Chester Co., Pa.

W. H. TODD, VERMILION, OHIO.—High-class Poultry; Asiatics a grand specialty. Over thirty varieties of Land and Water Fowls—winners of 854 prizes at great State and Poultry Shows in three years. Fowls to spare and Eggs for Hatching. Price List free. New Catalogue, large and splendid, describing forty breeds, with large life-like cuts of all the Brahmas and Cochins, and eighteen varieties of Land and Water Fowls, giving much valuable information, for 10 cents.

KINNEY'S BROWN PRINCE

I took 1st, 2d, 3d and SPECIAL ON BROWN LEGHORNS, AT THE BUFFALO SHOW, JUST CLOSED. I took 1st on both Fowls and Chicks, and three specials, and all the other premiums awarded BROWN LEGHORNS, at Providence, in 1874. Send stamp for Circular. F. J. KINNEY, Worcester, Mass.

IRISH GRAY GAMES.—One trio, or three Hens and one Cock. These birds took first premium at Bucks Co. Poultry Show. Will exchange for Brown or Dominique Leghorns, or will sell very low for cash. Address E. F. TAYLOR, Box 63, Doylestown, Pa.

WHITE SWANS.—Just imported from Europe, and arrived in fine condition. Price, \$50 per pair. **BLACK SWANS**, very rare and choice birds, to arrive in three weeks. Now booking orders. Price, \$35 per pair. LEWIS RUHE, 98 Chatham St., New York.

NEW HIGH-CLASS SERIAL WORK ON PIGEONS, UNIFORM WITH THE ILLUSTRATED BOOK OF POULTRY. IN MONTHLY PARTS.
PRICE, 50 CENTS PER NUMBER. SENT SAFELY BY MAIL ON RECEIPT OF PRICE.

THE ILLUSTRATED BOOK OF PIGEONS.

BY ROBERT FULTON, ASSISTED BY THE MOST EMINENT FANCIERS.

EDITED AND ARRANGED BY LEWIS WRIGHT, Author of "*The Illustrated Book of Poultry*," "*The Practical Poultry-Keeper*," "*The Brahma Fowl*," &c.

CONTAINING

STANDARDS FOR JUDGING, AND ILLUSTRATED WITH LIFE-LIKE COLORED PLATES,

PAINTED BY MR. J. W. LUDLOW EXPRESSLY FOR THIS WORK, AND WITH
NUMEROUS ENGRAVINGS ON WOOD.

Part I ready about April 20. For sale at this Office. Sent free by mail on receipt of price.

STANDARD OF EXCELLENCE,

AS REVISED AT THE

BUFFALO CONVENTION,

January, 1874. Price, \$1.00.

A COPY OF THE ABOVE WILL BE SENT FREE TO EVERY NEW SUBSCRIBER TO THE "*FANCIERS' JOURNAL*," who remits
\$2.50 BEFORE THE 1ST OF MAY, 1874.

Address JOS. M. WADE, 39 NORTH NINTH STREET, PHILADELPHIA.

Completed in Twenty-five Parts.

THE ILLUSTRATED BOOK OF POULTRY,

By L. WRIGHT.

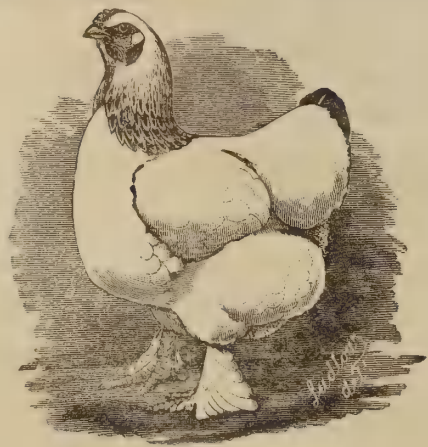

AUTHOR OF "THE PRACTICAL POULTRY KEEPER," "BRAHMA FOWL," &c., &c.

ILLUSTRATED WITH FIFTY COLORED PLATES OF CELEBRATED PRIZE BIRDS

OF EVERY BREED, PAINTED FROM LIFE, EXPRESSLY FOR THIS WORK,
AND WITH NUMEROUS ENGRAVINGS ON WOOD.

**NOW READY, FROM ONE TO TWENTY-FIVE, INCLUSIVE, AT FIFTY CENTS EACH,
OR COMPLETE IN ONE VOLUME, \$15.00.**

HYBRIDS OR MULES.

BY JAMES S. BAILEY, M.D.

THE subject of mule or hybrid breeding is one of great interest to the fancy. Authentic accounts have been obtained of some, while we have reports of others without authenticity.

At several poultry exhibitions the writer has noticed a hybrid said to have originated by crossing a Turkey hen with a Guinea cock. It has been illustrated in an agricultural paper, but the likeness was so unlike the original bird that, placed side by side, it would not have been recognized.

An identical bird, though of different sex, came into the writer's possession about two years ago, and with much difficulty the former owner and breeder was found, and through him and his family a correct history of the origin of the hybrid was obtained. The accompanying illustration was drawn from it by the distinguished artist, T. Kirby Vanzandt, of Albany, N.Y. In the sketch he has succeeded in catching the spirit and attitude of this curious bird. It was presented to the Commissioners of Central Park, New York City, and if still living can be seen there.

Mr. Matthew Flausburgh, of Stony Hill, Albany County, N. Y., in 1865, obtained some Guinea eggs from a neighbor, but not having enough for a sitting, placed with them some eggs from the barn-door fowl; in due time they hatched and were reared together. The next year two of this brood—a Dominique cock and a Guinea hen—mated. The fact having been noticed by the family, the ovules from their amours were preserved carefully and set with a few turkey eggs. It is a known fact that hen eggs hatch in three weeks and guinea and turkey eggs in four weeks. This fecundation so influenced the Guinea eggs that they hatched in three and a half weeks, while the turkey eggs hatched in the time which is usually required for them. The chicks from the Guinea eggs presented a snuff-color, instead of the striped appearance of the true Guinea young. Only three eggs of this fecundation proved fertile, two only living a few days, while one matured, as seen in the engraving.

Tegetmeier refers to this hybrid, and says that "they are true hybrids, being perfectly sterile and incapable of reproduction among themselves or with either of the species from which they were derived." Its plumage is mottled and sprinkled confusedly with brown, drab, and white, freckled with black, the white predominating, causing it to appear gray at a distance. It weighed six pounds, and stood thirteen inches high.

The cusque of the Guinea fowl was absent, but it had small wattles and a loose pendant fold of skin under its gullet, which was thinly covered with feathers. Its voice resembled the Guinea, and it was exceedingly shy and timid. It had no affinity for domestic fowls, but preferred the society of turkeys, having been reared with them. As the hybrid advanced in age the color of its plumage grew lighter.

This bird was more minutely described in the *Country Gentleman* some two years ago.

The Golden Pheasant sometimes crosses with the common domestic fowl. Its progeny is also a true mule, and like the hybrid just described, cannot be further crossed.

In order to favor this production, the Pheasant must have been bred among domestic fowls. The male Pheasant occasionally pairs with a favorite hen, providing he has none of his own species to mate with. It is usual for only a small proportion of eggs thus fecundated to prove fertile. The introduction of a Pheasant hen will immediately alienate the attentions of the cock Pheasant from his newly made mate.

A friend, who had succeeded in rearing this cross, once stated that the cock Pheasant was exceedingly capricious, and would sometimes destroy several hens by picking them to pieces upon the rump before selecting one to his entire notion. Mr. Hewitt, who has given this subject considerable attention, describes the cross of the Golden Pheasant cock with five varieties of fowls, viz.: Spanish, Game, Buff Bantams, Golden and Silver Spangled Hamburgs.

All of these hybrids were described as being exceedingly wild, with heads devoid of combs, wattles, or deaf-ear, with tails approaching the conformation of the Pheasant, but not so lengthy.

In size they far exceeded the hen producing them. In color they were excessively darker than the hen which produced them, while their shape conformed more closely to the Pheasant.

The hybrid bred between the Pheasant and Spanish hen at adult age was black, and of a dull sooty hue, with yellow eyes, and weighed nearly seven pounds. Around the face, instead of being white, presented the velvety appearance peculiar to the Pheasant.

In the cross between the Black-breasted Red Game hen, the scapular and breast feathers were penciled with as much regularity as in the male Pheasant. The ground color was exceedingly dark, and these pencilings were not visible. The face of this hybrid was plain and feathered to the eyelid. The eyes were of a deep hazel. Its weight was about six and a half pounds.

In describing the other three crosses, as much dissimilarity was observed as in those described. Mr. Hewitt remarks that the markings were as variable as they could be, and the birds as pugnacious as it is possible to imagine, and were always sterile and unsociable.

Another interesting hybrid is a cross between the Musk drake and the Common duck, which produces a mule of symmetrical form and of various colors. They are only useful for table consumption, and when fattened far excel any other variety. They are also sterile.

A specimen of a cross between the domestic hen and Partridge cock was owned in this city by Mr. Charles. It was a hen, and weighed two and a half pounds. In color it was yellow, finely penciled with black, had a single comb, and was compactly built; and, as Mr. Charles remarked, was heavily meaty across the thighs. The flesh was quite dark, like the Partridge. Its legs were blue and slightly feathered. She resembled a young game cock about the head. The feathers under the wings were heavily barred like a Partridge. The story is thus related in reference to the production of this hen: Mr. James Sickles, of Long Island, owned an old yellow hen which disappeared in the spring, he supposing that she had died. In the fall she returned with a brood of chickens, followed by a Partridge cock, who, when disturbed, flew in an adjacent tree-top. A hired man observing him, and not comprehending the circumstance, shot at him; but, missing his mark, the Partridge disappeared and never returned. There were several other chicks in this brood, and every one of the cockerels manifested decidedly game properties. One of them immediately engaged with a game cock, and gained decided advantage, although destitute of spurs. This cross was very productive when bred with domestic fowls.

(For Fanciers' Journal.)

THE AMERICAN STANDARD OF EXCELLENCE.

At the time of writing I have received *two copies*, and have paid *two dollars* for them.

Here is where the rub comes. If I had paid twenty-five, or even fifty cents a piece for such *pamphlets*, containing as they do really valuable matter, and a kind that no poultry breeder can do without, I should not have complained; but, after working for several days at Buffalo in assisting to embody, in *plain language*, the points and characteristics that should belong to fowls, to entitle them to a *place* in a poultry exhibition; and after objecting to putting the price at one dollar each; and having been told that we wanted a

good nice *book*, one that all America would be proud of, especially the members of the American Poultry Association, who were to *own* and *publish* it;—I say, after all of the above, to have such a miserable little *pamphlet* sent me as the American Standard of excellence that I have received, and for which the American Poultry Association *obliged* me to pay a dollar, I confess I was something *more* than *disappointed*—"a little riled." Now, Mr. Editor, I don't know *who* makes the *profit*, but there must be a *comfortable* one somewhere.

There are one hundred thousand standards wanted today; fifty thousand at twenty-five cents each, like these one dollar ones, and there is profit *enough* at that; and fifty thousand bound in *leather* covers, that might be got up in *good shape* and sold at one dollar each, and a good profit made on them.

You will meet some who will call me a *croaker* and other pet names, for saying these things; tell them I am a member of the American Poultry Association, and am ashamed to charge one dollar for a poorly gotten up pamphlet that I can furnish as *good*—ten thousand copies—for the sum of one thousand dollars, or ten cents a copy; and I want to know who gets the *profit*? and also, who has the right to impose upon the members of the American Association in such a manner?

Now I am aware of the truth of the old adage, that "the *weakness* of the *material* is the *strength* of the trade;" still I would advise the American Poultry Association to do as some street sellers of rolls of salve and other *patent* things do; as they cannot *sell* a standard for *less* than a dollar, to make every person that *buys* one of these—their *still born* edition—a present of a good, substantial, readable standard, with an alphabetical index in it. A MEMBER.

 THE BAOBAB.—The baobab is a plant of monstrous size, the most colossal and most ancient vegetable monument on earth; has round, woolly leaves, which consist of from three to seven leaflets radiating from a common centre, and giving them somewhat the appearance of a hand, and magnificent white flower. It is an enormous tree, holding among plants the place that the elephant holds among animals—a hoary witness of the last changes which the earth has undergone, and deluges that have buried beneath their waves the productions of early ages. Several baobabs that have been measured were found to be from seventy to seventy-seven feet in circumference. From its branches hang, at times, colossal nets, three feet in length, and resembling large oval baskets open at the bottom, and looking from the distance like so many signal flags.

It would take fifteen men, with their arms extended, to embrace the trunk of one of these great trees, which, in the countries through which the Senegal flows, are venerated as sacred monuments. Enormous branches are given off from the central stem a few feet from the ground and spread out horizontally, giving the tree a diameter of over one hundred feet. "Each of these branches," says Mr. Danton, "would be a monster tree elsewhere, and taken together, they seem to make up a forest rather than a tree."

It is only at the age of eight hundred years that the baobabs attain their full size, and then cease to grow.

The fruit of this tree is oblong; the color of the shell passes in ripening from green to yellow and brown. The fruit is called "monkey bread." It contains a spongy substance, paler than chocolate, and filled with abundant juice.

The bark is ashy gray in color, and almost an inch in thickness. The negroes of the Senegal grind it down to powder, and in this state they use it to season their food, and to maintain a moderately free perspiration, which enables them the more easily to withstand the heat. It serves also as an antidote for certain fevers.—*The Wonders of Vegetation.*

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

SCIENTIFIC BREEDING OF LIGHT BRAHMAS FOR EXHIBITION.

ARTICLE V.

CULLING OR PICKING OUT POOR BIRDS, AND SEPARATING THE SEXES.

In a well-kept flock of chickens, as in a well-kept garden, an occasional weed will appear, in spite of all the care and skill which may have been exercised in selecting and mating the sire and dam. These the fancier should have the courage to pick out and destroy at the earliest moment that he is enabled to discern them. I think it advisable to carefully examine each brood at eight weeks old. If properly fed and cared for, the chicks at this age ought to weigh from three to four pounds to the pair, and are just the right size for frying or broiling. Any chick found with crooked toes, or any other deformity, should be sent at once to the gridiron. The effects of breeding from such birds will be lasting and grievous. At twelve weeks or three months old the birds must be separated as to sex, if extra fine large birds are desired. The cockerels may be put in a yard with an old cock, who will prevent their fighting, and in most cases will agree very well with them. At this age the birds should receive another thorough weeding. Cockerels that do not show plenty of black in the hackle may be killed with impunity. Any approach to knock-knee or leg weakness should condemn the bird at once. Occasionally a bird will be met with whose wing feathers grow twisted or in a spiral position. This should be stamped out whenever found. Birds with crooked backs and wry tails should be killed as soon as possible. The fancier should be careful how he discards otherwise fine birds for too much black, as some pullets will be much spotted on the back until six months old, and still moult out clean; but a pullet whose hackle is cloudy or lead-color will rarely make a show bird.

It requires considerable courage for a fancier to pick out and kill his birds in this manner, but he should remember that one bad sheep spoils a whole flock; this saying is equally true when applied to fowls. He should also remember that a bad chick takes the same amount of food and care as is required to rear a good one. When he has killed his poor birds, and receives a visit from a brother fancier, he will not shrink from showing his stock, for he will know that there is no danger of that scrawny, crooked-backed, wry-tailed, twisted-winged, knock-kneed bird stalking out in front of his visitor, and cocking his head to one side with a look which says louder than words, *I am a specimen of my owner's stock*. Well then, having disposed of his poor birds to the best advantage, and in a manner which will redound

to the credit of every fancier, he will have more time and room for his good ones. During the hot summer months a suitable shade must be provided, or the birds will become sadly sunburned, and instead of their plumage being white, they will be a disagreeable yellow. Those who are so fortunate as to have plenty of shade trees and shrubbery, under which the birds can seek shelter from the hot sun, need feel no anxiety on this score. My own yards heretofore were unprotected, and consequently I was compelled to make artificial shade in the following manner: Plant two posts in the ground two feet deep and about the same height above ground, and about ten feet apart; across these nail a piece of scantling. Now sink two more posts directly opposite the other two, but only one foot high; nail a piece of scantling across the same, as on the other. Cover these with boards, and cover the boards with three or four inches of earth. This will make a nice cool retreat, to which the birds will not fail to resort during the hot weather.

W. E. FLOWER.

SHOEMAKERTOWN, PA., March 28, 1874.

(For Fanciers' Journal.)

HENS' NESTS.

In looking back through the pleasures of memory to "ye olden tyme" of my boyhood days, I seem again to find myself, basket in hand, at sunset time, rambling through the orchards, bushes and hedges, under the barns and brush-heaps, into stumps and logs, and many other outlandish places—in fact, only such as a boy or old hen would find—"hunting the eggs." This Lenten season brings back the thought of my hidden hundreds when Easter came, as well as my boyish pride when in the morning I delivered up to my dear old mother the snowy treasures. Those good old days are gone, and have carried with them much of the sweetest romance of life; and business, ever jealous of our time, has driven me from the old farm, down by Cayuga, into town. I left the old barnyard favorites, but brought with me my taste for fowls, and having the disposition to keep step with my fellow-fanciers, I find a goodly variety of the more noble sorts about me.

The object of this epistle is not to give advice about making hens lay, as any fancier would be behind the times should his hens not lay after the instructions given by my fellow-countryman Wright, as well as the counsel from a host of your own good American writers on this subject. In the first place I gave a hint of what sort of places our old hens in the country used to use for nests. Well, instinct and their affection for their progeny caused them to hide their nests just where they did. They never laid a single egg without intending not to have it found by man, or any other animal. A hen is just as careful to hide her nest and eggs from one animal as she is from another, and in those old times I speak of hens did just what our city fowls would do had they the same chance, and I can not remember of ever finding a nest lying around loose, or in sight; but, instead, I frequently found it where it took hours to do so, and have often watched some old favorite strolling away into the fields while I followed after, until she got to where the nest was not, and would fly upon the top of the fence and dress herself while I remained in sight. On becoming provoked, I would drop down into the tall grain out of sight, and so would she, and when I went where she was she was not there, but had evaded me by sneaking off into the grain to her

nest. All this goes to show that in making the nests in our city poultry buildings, where space is too limited to allow of a wide range for our fowls, it should be our object to imitate nature as much as possible in the construction of proper nests for them.

I could mention a score or more of elaborate poultry-houses throughout the country where everything was designed to be in keeping with the beautiful pets which they shelter. Patent feed-boxes, patent roosts, and patent everything was the fashion, and I must confess that I have been as much a victim as any one, so far as the use of the above *useless appendages* are concerned. I had a fine set of nests made the entire length of our buildings, with doors arranged to open into the hall, &c.; but, after a year's trial, I have discarded them, and find, after all said and done, the simplest contrivance is the best. To give a simple definition of what is wanted, I will only say, *darkness and difficulty*; some long, dark box lying on the floor for the larger birds; what I mean by long is three or four feet, by sixteen inches wide, and fourteen inches high. Keep the nest in the farthest end by a cross-board four inches high. Let the entrance be in the end and next to the floor, and so small that it will be a "tight squeeze" for the hen to enter or come out; and lastly, place the open end so close in a corner of the room that even the entrance will be hard to get at. You can use your own mode of getting the eggs out, say by a small hand-hole with a lid to it on top of the box. We had a fine coop of Buff Cochins, and also one of Dark Brahmas, addicted to the provoking habit of egg-eating. I suppose that this habit was first contracted by the eggs being accidentally broken by the hens in the exposed and uncomfortable nature of our fancy nests. Of course, a hen's motherly affection and care for her eggs gives way to her appetite on sight of a broken one, hence the habit of eating them. In this dilemma I closed those puckered-up *things*, and placed in their stead the nests described in this article, and the result was that we got all the eggs they laid. As hens *will not* eat their eggs after they have hidden them, or when they are near in sight while the whole flock are wandering about the coop throughout the day. After the habit was broken up entirely in these two coops, our Light Brahmas and Partridge Cochins fell into the habit, and nearly *lived on eggs*; in fact, I do not know but that they would have become *self-sustaining*, had we not given them the long, dark, difficult, &c., box, whereupon we were rewarded at once with well-filled baskets. The small entrance to the nest also prevents the cock from getting into them, as they often will where possible, seemingly to show, in their politeness and solicitude for their charge, the whereabouts of a nest. A few weeks ago I placed a common open-top box in our Plymouth Rock coop, furnished it with plenty of clean straw for their nest, they having shown signs of laying. The box was no sooner in position than the cock took to nest first, and scratched, fluttered, and tore about, and was in every position imaginable, all the time clucking, while the hens all stood around *amazed*—so did I.—I took away the open box, and gave them the dark nest, and Mr. Cock has stayed outside since. Only yesterday I made some new nests for our White Leghorns; they were hardly in place before the cock took to one of them, and such a time as he had; why he would have broken all the eggs in the nest, had they not been *china nest eggs*, but I declare, I must again apologize for the length of this article. In the future I *will* try to write less. Should I at any time write too much for *my* share of space

in your paper, you may *curtail* a little. I have only referred to nests for the larger classes of birds: the rule will apply to all, only *elevate* the closed nest if preferable, always remembering nature's rule—difficulty, darkness,—then plenty of room inside.

J. H. WATLING.

SENECA FALLS POULTRY YARDS,
SENECA FALLS, N. Y., March 23, 1874.

(For Fanciers' Journal.)

HINTS TO BEGINNERS.

No man should engage in any business without some knowledge of what he is about to enter into. Especially does this rule apply to dealers in fancy fowls. I am well aware that a good many of those who advertise fancy poultry for sale, at the present time, were in the first start taken with the "hen fever" spontaneously, and without any knowledge of what a good fowl should be; would at once write to a score or more of advertisers, and the one that would make the price the lowest would receive his order, and the chances are one hundred to one that his fowls would be very inferior, and yet the purchaser would feel confident that he had just as good fowls as anybody. I used to have a good deal of sympathy for such men, but at the present time, when there are so many books and periodicals published devoted especially to the Poultry interest, and when Poultry exhibitions are of so frequent occurrence, there is no excuse for a breeder to sell inferior fowls on those grounds.

I would therefore recommend to all who contemplate starting in the Poultry business a few practical suggestions: First of all, procure a copy of the new American standard of excellence, and become perfectly familiar with it as far as the kind or kinds of fowls you anticipate breeding is concerned; subscribe for the *Fanciers' Journal*, or some other good periodical devoted to poultry and poultry appurtenances; attend to all the first-class poultry exhibitions that you conveniently can, for I am convinced that an amateur can learn more by visiting exhibition-rooms than in any other manner, for he there has an opportunity of examining the premium fowls, notice all their fine points, compare them with less meritorious birds, and in this manner he will soon become familiar with the kind which he proposes to breed. Then take but one or two kinds to commence with. Be sure that you have found a reliable breeder of your varieties; and this may not always be an easy matter, for in many instances breeders that win Premiums at our exhibitions are not what they should be. I know of some men that will buy a first-class trio of fowls in the fall and take them to all the principal Poultry fairs during the winter and win prizes with them, and in the spring advertise eggs from first premium stock (when in reality that one trio was all he had that were fine), and would *sell* dozens of eggs from them and *send* eggs from very inferior fowls. Neither does it follow that because a man has been engaged in the business ten, fifteen, or twenty years that he is honest and reliable, but it is probable that he will at least be a good judge of the varieties he breeds; then if he does not do by you as he agrees, you may be certain that he is dishonest, and should be publicly branded as a fraud. Yet, I can say with much pride that there are very many noble, honest, and reliable men engaged in the poultry traffic, many of whom are successful exhibitors, and on such men I would recommend you to bestow your patronage.

UNADILLA FORKS, OTSEGO CO., N. Y.

(For Fanciers' Journal.)

THE PREJUDICE AGAINST POULTRY BREEDING.

No. I.

It cannot be denied that a prejudice does exist, in many quarters, against the breeding of fine poultry. Recently, when one of our prominent breeders was pointed out to a gentleman, he said, "He is a fine looking man for a *chicken dealer*." This man was only expressing an idea which prevails to a considerable extent. Many regard the care of poultry as too trivial a business for a man, but as the appropriate work of women and children. Perhaps the majority of farmers regard it as unprofitable stock, which must, however, be endured to please their wives and daughters, who derive no inconsiderable revenue for the supply of their wants from the sale of eggs and chickens.

The husband and father fails to consider how many calls upon his purse, or perplexing store bills are thus saved him, nor does he reflect how many delicacies, in the way of puddings, custards, &c., find their way to his table, of which he would feel it necessary to deny himself if all the eggs had to be purchased for cash.

Fowls have a wonderful facility of adapting themselves to adverse circumstances, or they would utterly fail to render any profit to many farmers. The great wonder is that cholera, roup, gapes and kindred diseases do not destroy more flocks than they do. Where shelter is provided at all, it is frequently permitted to become so filthy as to breed vermin and disease. Large numbers of poor, ill-fed fowls are obliged to roost on trees and fences, and thus have to withstand winter's storms, and the chill rains of spring and autumn.

Many feel a distrust of all poultry breeders on account of the impositions of unprincipled breeders. This business in the past has afforded a fine field for dishonest operations, and there were many who were not slow to avail themselves of the opportunity. Much of this distrust is not without sufficient cause, for there is no question but the confidence of the public has been shamefully abused. Inferior fowls have been sent out at prices which ought to have commanded the best of stock. Birds of fine appearance, but impure blood, have been sold as first-class fowls. Eggs have been sent out which were not what they were represented to be. But the time is well nigh past when these men can thus practice their impositions. The poultry journals, the numerous exhibitions, and, above all, the National Association, by bringing together breeders from all parts of the land, will serve to expose the dishonest, and eventually drive them to some other more profitable field of operations. We ought to be so careful in the admission of members to the Association, that membership in it will come to be regarded as an assurance of a breeder's integrity. The resolutions adopted at Boston have the right ring, and will do much to restore public confidence. Let every one who proposes a new name for membership be ready to vouch for the integrity of the applicant, and let no man of doubtful character be admitted.

If the general public could have looked in on the Convention at Buffalo it would have done more to remove prejudice than any number of newspaper articles. Many in the body were men of means, of culture, and of high social position; men actively engaged, professionally or in business, who have found poultry breeding not only a pleasant diversion, but also a source of profit.

If the National Association fulfills its present promise, and I doubt not it will, it will render invaluable aid in various ways to State and local organizations, and will greatly assist in establishing the poultry interest on a firm basis.

Correspondence.

(For Fanciers' Journal.)

MR. EDITOR.

DEAR SIR: I would like to inquire if you or some of your readers if there is any difference between White and Pearl Guineas? Also, whether Muscovy and Plata Ducks are not the same? I remain respectfully yours, E. W.

(For Fanciers' Journal.)

MR. JOS. M. WADE,

DEAR SIR: I have a Light Brahma pullet six months old, that weighs eight pounds, which laid an egg $7\frac{1}{2}$ inches by $6\frac{1}{2}$ inches, and weighs $5\frac{1}{2}$ ounces. She has laid several large eggs, but this is the largest one. Yours truly,

G. MACREADY.

SIOUX CITY, IOWA.

(For Fanciers' Journal.)

EDITOR FANCIERS' JOURNAL:

YOUR correspondent, Mrs. D., of Iowa, gives the very reason—according to *my* experience—why her eggs that she used *last*, beat better than the others, in the words "although older." We keep hens, therefore have fresh eggs, but I *always* take my *oldest* eggs when beating for cake, *especially* for frosting, as new laid eggs may foam some, but settle back into liquid if left a short time, when older eggs would have kept stiff. I have known this reason to have been given by bakers. Mrs. D. might keep some of her non-fertile eggs three weeks or more and see if they do not beat as light as the others. Respectfully, &c.,

Mrs. R.

PROVIDENCE, March 27, 1874.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: I noticed in *Fanciers' Journal* for March 26, a communication from Mr. A. K. Martin, asking what poultry breeders mean when they offer "*standard fowls* for sale."

Whenever I see the term in an advertisement, or circular, I consider that the one using it, is either ignorant of what a standard fowl *should be*, or else is endeavoring to deceive his customers. I have owned, bred, and sold a great many hundred (perhaps a thousand) fowls, and I never yet owned, or saw a *standard* bird. I have never yet seen a bird that I considered to deserve over ninety-five points, and I can count on my fingers all that I have seen entitled to over ninety.

To say that a bird is *standard*, is to assert that he is perfect; that there is not a feather, not a point—either in shape, size, symmetry or condition—that *can* be improved. It must be evident to every thinking man, that no educated and respectable fancier would make any such assertion as this. It would be well, perhaps, to class such men in the same category with those who advertise their fowls as *the best in the world*. In the latter case, however, we understand that the world meant, is *their own little world* of half a dozen admiring friends and neighbors, beyond which, their range of vision cannot penetrate. Yours truly,

A. M. HALSTED.

RYE, N. Y., March 28, 1874.

PIGEON DEPARTMENT.

SILVER DRAGOONS' BARS.

As I have frequently the honor of acting as judge at Pigeon shows, I have been requested by several fanciers to state my views on this subject. Mr. J. Percival, an old fancier, and likewise judge, having already done so, I shall enter into no argument with any one, for more than enough has been written and said on the subject. What I wish to put forth is, that it is by no means a new idea that Silver Dragoons should have black bars, for nearly forty years ago I had some, and they were then thought to be correct by a next-door neighbor, a Dragoon fancier then of more than thirty years' standing. I hope other gentlemen acting as judges will give their opinion, without any further discussion, as to which way they would award the prizes, both varieties being present—viz., Silver Dragoons with brown bars and Silver Dragoons with black. Without any hesitation I say I should give the prize to those with the black bars, all other points being equal.—HARRISON WEIR, in *Journal of Horticulture*.

POLYGAMY IN PIGEONS.

As bearing on the subject named by "*Onus Probandi*" in the *Journal* of February 12th, I send you an account of the following facts. A common Ash cock of mine was mated with a common Blue Chequer hen, and they had a young one in the nest which died at about a fortnight old. I had, among others, an unmated Blue Chequer hen, which if possessed among two or three dozen more of the same kind by a Lancashire dealer would be called "A Rock fra Lincolnshire (Lincolnshire) fur shootin'," but which, I suppose, is a Chequered Dovecote Pigeon. I had it from a farm in Herefordshire. The Ash cock is a very merry bird, and upon the death of his young one he was soon ready to go to nest again; and finding his own hen (which we will call the Blue Chequer) was not of the same mind, he turned his attentions to what we will call the "Rock." This seemed to rouse the jealousy of the Blue Chequer, and in a short time she laid him two eggs, which he helped to sit regularly, but when he was not sitting he employed his time in nesting or flying with the Rock. In due time the eggs laid by the Blue Chequer were hatched, and the young ones reared, the Ash helping to feed them. Both were Blue Chequers, but with a decided likeness in the head, beak, and general shape to the Ash cock. Before these young ones were able to fly about the Rock laid two eggs in another nest, built for her by the Ash cock, and he helped her regularly to sit, but when he was not sitting he employed his time in nesting and flying with the Blue Chequer (whose young ones could now feed themselves), and as a result she laid him two eggs about six days after the Rock.

And now his work began; he helped both hens to sit, and I seldom saw him fly about outside. Yesterday, March 8th,

both of the Rock's eggs hatched; but until the young ones grow larger I shall not be able to prove that the Ash helps to feed them, though I have seen him sit over them.

I have examined the eggs of the Blue Chequer, and found one "addled"—no formation whatever having taken place, and I am now waiting for the other egg to hatch, when it will be interesting to observe whether the Ash cock helps to feed both nests, and also what likeness the progeny bear to him when full-grown. I say it will be interesting to observe what likeness both lots of young ones bear to him when full-grown, as I lately had a case in which a hen, that had been a long time unmated, laid two eggs (while yet unmated), one on the floor, the other on the shelf. I put them under a pair I had sitting, and two young ones were hatched and reared, which when full-grown bore an unmistakable likeness to a certain cock I had, which had a mate and young ones of his own at the time. I only regret that it has not occurred among fancy breeds where parentage could have been traced without any doubt, inasmuch as the characteristics of distinct fancy breeds are so much more marked than those of the Homing Antwerp type, which is the sort I keep.

CLUB ROW, THE FANCY AND ITS VOTARIES.

[MANY of our readers must be unaware that "Club Row" is in Church Street, Bethnal Green, London, and a newspaper correspondent, speaking of its vicinity, says: "Among its inhabitants are street venders of every kind of produce, travellers to fairs, tramps, dog fanciers, dog stealers, sharpers, shop lifters, and pickpockets. It abounds with the young Arabs of the streets. Sunday is a day much devoted to pet pigeons and singing-bird clubs, prizes being given, and a ready sale following each award."—EDS.]

To those who spend the greater portion of their lives far from the din of the city, and whose homes, it may be, are nearer to the cover of the fox than to the busy mart and crowded streets, any one of the many specialties which London possesses is heard of with interest. Nor is it to such alone. London being the head and heart of our empire, and pre-eminently great in all its characteristics, all Englishmen take pride in its greatness, and never weary reading of its wonders, and I have therefore ventured to send you these few jottings.

"Club Row on a Sunday morning" had been described to me in such terms that determined me at the first favorable opportunity to pay it a visit. Previous information somewhat prepared me, but the scene itself surpassed all I had imagined. To begin with: In Club Row and adjacent streets there are about eighty "fanciers'" shops, possibly more than that number; and as a means of comparison, when we consider that Manchester and Salford combined can only muster about half a dozen all told, this in itself excited no little surprise. All the shops, or with scarcely an exception, in the locality named, seemed devoted to the same line of business. In some the atmosphere was simply unbearable, the proprietors evidently not believing "cleanliness is next to godliness." Happily there were exceptions. As regards the birds, it would have been possible to have obtained anything from a Tomtit to a Brahma cock, though I cannot say much in praise of the quality. The thoroughfares were thronged to a degree that made it difficult to thread one's way through the mass of venders and purchasers, for the trade was not restricted to the shops.

Here was one with a poor Starling; tied to his finger with a bit of string; another with a small basket or tray of ground-sel; there a man with an odd rooster under his arm, others with Pigeons, and even down to a poor Sparrow.

Last, but not least, the fanciers themselves; and, sad to say, did we require to find human beings the lowest in the social scale, I verily believe they are to be found in the scene I have attempted to describe. Dickens's description of "the young noblemen at Dotheboys Hall" occurred to me more than once, and as I write I see again the "pale and haggard faces, lank and bony figures: children with the countenances of old men, some young lives which from the earliest dawn of infancy had been one of horrible endurance of cruelty and neglect. There were faces which should have been handsome darkened with the scowl of sullen dogged suffering." And amid all this a banner with a scriptural text borne by a few supporting a street preacher, and as the various sounds catch the ear I find mixed with the hymn of praise the bitter curse of the drunkard and the foul oath of the blasphemer. It was a scene I shall not soon forget; and as the carriage rolled along westward, and the contrast became greater, thoughts rose to me especially of the young children, children who, from the force of circumstances, and from no cause of their own, have been nursed in the lap of vice and misery, and are left there by those who are quarreling *how* they should be taught.—*Journal of Horticulture*.

Items Interesting and Amusing.

🐨 A kangaroo is a curious chap;—when it's wide awake it's leaping.

🐨 A. J. Fox, Mascher Street, above Thompson, this city, has just killed the Holstein bull, imported and owned by the Doylestown Agricultural Society. Being too large for further service they decided to kill him. His weight was 2850 pounds.

🐔 Said a great Congregational preacher
To a hen: "You're a beautiful creature!"
The hen just for that
Laid two eggs in his hat—
And thus did the Hen-re-ward Beecher!

—*Boston Advertiser*.

🐔 FROZEN EGGS.—It often happens that eggs will get frozen so as to crack the shells in severe cold weather, and are of course unfit to sell; but if they are kept frozen until needed for use, and then brought into a warm room and boiling water poured over them, then left till cool, the egg will be uninjured, and will heat as nicely as if it had not been chilled, and is just as good for any use. After being once thawed, it must be used immediately; if allowed to stand a day or two, it will not be fresh or nice.

🐔 The seventh annual report of the State Fish Commissioners pronounces the breeding works on the Penobscot among the best in the world. The establishment is now hatching 2,225,000 eggs, and has a capacity of 4,000,000. It is patronized by all the New England and some of the Western States. The state has made its first experiment in hatching shad the past year; the number hatched is 100,000. About 15,000 salmon have been caught on Penobscot River and Bay during the year. The Commissioners call for stringent fish and game laws, and state that the moose and other large animals are almost extinct.

🐟 Fifty thousand trout are to be placed in Ossipee lake and Six-mile pond in Ossipee, N. H.

🐖 A queer hog story comes from Salem, Oregon. The owner of the ferry at Buena Vista had two hogs which mysteriously disappeared about three months ago, at which time they weighed about three hundred pounds apiece. About that time a new warehouse was built near the ferry at Buena Vista, and filled with wheat, which was shipped a week ago, when the temporary structure was removed, and under the floor were found the missing swine, alive, but not weighing near so much as when last seen. They had evidently gone under the warehouse to find wheat which leaked through the floor, and were detained there by the settling of the building. They lived on what wheat leaked through a crack, and occupied a circular place they had worn for themselves, but during all that time they must have been without water.

🐎 The *Turf, Field, and Farm* says: In a small town near the Alleghany mountains, in front of a tavern, there was a pump with a large trough, which was for watering horses. The handle of the pump, when not in use, was forced up, and all that was necessary was to draw it down to make the water flow into the trough. On a particular day, at the time the wagons reached the tavern, there was but little water in the trough, not nearly enough to supply the horses. When one of the horses that was first unharnessed got to the pump, he laid his head over the handle, pressed it down, and made the water issue from the spout. As he raised his head, the handle would spring up; but down again he would press it, and force the water into the trough. In this manner that horse kept pumping with his head, until all the horses had finished drinking. He then left the handle, went round to the trough, drank as much as he wanted himself, and then deliberately walked into the stable and took his place in one of the stalls.

🐾 SPORTING IN TEXAS.—Sportsmen find an agreeable abiding place in Texas. On the prairies almost every kind of wild animals abound. In the Northwest are the wild horse or mustang, and the fierce buffalo. The deer and the antelope, and the mountain goat are plentiful, not to mention the jaguars, the pumas, wildcat, black bears, ocelots, wolves and foxes, and such smaller game as peccaries, opossums, raccoons, hares, rabbits, and squirrels. A special feature of wild life is the prairie dog or marmot, dwelling in holes burrowed in the ground. Their numbers are so great that the traveller may sometimes journey for days together without losing sight of them. The feathered tribe are also abundant, including birds of prey, and birds of sport. There is the bald-headed eagle and the Mexican eagle, vultures, owls, hawks, wild turkeys, wild geese, prairie hens, canvas-back and other ducks, teal, brandt, pheasants, quails, grouse, woodcocks, pigeons, partridges, snipes, plovers, red birds, and turtle doves. By the waters are also found the crane, the swan, the pelican, the water turkey, and the kingfisher. The smaller birds are numerous, and among them many of the most brilliant plumage, as the oriole, the paroquet, the cardinal, the whippoorwill, and the sweet-toned mocking bird. Blackbirds abound, and the wood-peckers, blue-jays, starlings, red-birds, swallows, martens, and wrens. In the rivers and bays there are all the varieties of water-life from alligators to perch, pike, trout, green turtles, and oysters.—*Correspondence of the Baltimore American*.

SHERMAN & Co., PRINTERS, PHILADELPHIA.

THE CONNECTICUT STATE POULTRY SOCIETY

ARE about establishing permanent society rooms in which to transact all business, and to hold social talks, and to be used as reading rooms; all the journals relating to poultry and pet stock will be kept on file. Breeders are requested to send their circulars and cards to the Recording Secretary, Dr. Geo. N. Parmele, Hartford, Conn., who will see that they are made good use of. The next quarterly meeting will be held in Hartford, May 12th. The members are very enthusiastic, and are already at work preparing for the next exhibition, which will be held in Hartford, Tuesday, Wednesday, Thursday, and Friday, December 15th, 16th, 17th, and 18th.

THE Philadelphia Pigeon Flying Association have arranged the following five sweepstakes of one hundred dollars each, to take place as follows:

From Trenton, N. J., (over 30 miles), May 4th, for one hundred dollars. From Monmouth Junction, (about 50 miles on New York road), June 8th, for one hundred dollars. From Atlantic City, (61 miles), July 6th, for one hundred dollars. Atlantic City, (61 miles), August 10th, for one hundred dollars. New York, (92 miles), September 7th, for one hundred dollars. First bird to receive fifty dollars, second bird 30 dollars, third bird twenty dollars. Entry fee five dollars for each bird; any number of birds allowed to be entered. Open to all. For further information, address

THOMAS GRIST, President.

TRIPS AMONG THE FANCIERS.

JOS. M. WADE.

DEAR SIR: Having recently made a visit to the justly famous poultry yards of the estate of H. H. S. Sharpless, and thinking that a brief description of what I saw might

be interesting to the readers of the *Fanciers' Journal*, I herewith send it to you.

Upon my arrival I was taken in charge by the polite manager, Mr. James Brennan, who, like a true fancier, is ever ready and willing to show his stock. The hen-house is built in the form of an L, facing the east and south, and is about 96 feet long by 18 feet in width, and is divided into eight rooms 10 by 12, with a passage way three feet in width running along the back part. The floors are of cement, covered with earth and sand. The nest boxes are arranged along the partition, so that the eggs can be removed from the passage way without entering the rooms. The front of the house is nearly all glass, and each room has a separate yard attached to it. The yards are laid out in the form of a triangle, being about 90 feet in length and some 60 feet in width at the widest end. The house and yards each have a water-trough supplied by a pipe running across the yards from a large tank, into which the water is pumped by a water-wheel. Altogether the house and yards were perhaps the most complete in their arrangement of any we have ever visited. We presume that most of your readers know that Dark Brahmas are the specialty at these yards. At present the breeding stock consists of some forty hens and pullets and seven cocks. We do not think it necessary for us to say much in their praise; their record in the various show-rooms throughout the United States says all that is necessary as to their quality.

Our attention was next called to the young chicks, of which there were some ninety or a hundred, from three weeks old to one or two days. The chicks are given free range upon the lawn, some five or six acres or more, with abundant shelter from sun and rain. Besides all these conveniences there is a large grapery, 20 by 50 feet, on the premises, in which the early hatched broods are kept until the weather is favorable for letting them run. We were much pleased with our visit, and can assure your readers, who fancy good Dark Brahmas, that they will be amply repaid should they make a journey to the above yards.

Yours truly,

WM. E. FLOWER.

While on the Peninsula during the war, an officer came across a private belonging to one of the most predatory companies of the Irish Brigade, with the lifeless bodies of a goose and hen, tied together by the legs, dangling from his musket. "Where did you steal those, you rascal?" "Faith, I was marching along with Color-Sergeant Maguire, and the goose—bad cess to it!—came out and hissed the American flag." "But the hen, sir; how about the hen?" "The hin, sir, bless ye, was in bad company, and laying eggs for the ribbles."

TO MAKE A VARNISH THAT WILL IMITATE GROUND GLASS.—Mr. J. Garratt has favored us with the following:—To make a varnish to imitate ground glass, dissolve 90 grains of sandarac and 20 grains of mastic in 2 oz. of mashed methylated ether, and add, in small quantities, a sufficiency of benzine to make it dry, with a suitable grain—too little making the varnish too transparent, and excess making it crapy. The quantity of benzine required depends upon its quality—from half an ounce to 1½ ounces or even more; but the best results are got with a medium quality. It is important to use washed ether, free from spirit.—*British Journal of Photography.*

Bird and Small Pet Department.

(For Fanciers' Journal.)

A SHORT EXPERIENCE WITH RABBITS.

My passion for pets led me a short time ago to buy a pair of Angora rabbits, partly for my own gratification, but largely for the amusement of my children. I spent a day in making hutches for them, and prided myself on having made such as were comfortable, convenient, and well adapted to the wants of the pets. I thought I had read all the cautions, and had thoroughly protected myself against both cats and rats, and hoped by careful painstaking and close attention to keep them in good health, and make them productive.

I have had them just three days. Imagine my mortification when my family found both of them this cold March morning lying outside of their hutches dead, the gates of the hutches rudely and violently torn open, the wires of the fronts twisted and bent, and the gates and roofs of the hutches gnawed almost through.

What did it all? Some stray cur, too thievish to come around in the daytime to make his attack. I had made no provision for protection against dogs, particularly that part of the race which seems created for no purpose whatever, unless it be to wander around at night, the embodiment of all that is malicious and devilish, worrying cats and tearing up flower-beds.

I want the dog that did the mischief; I will pay more for him than he is worth to any one else. I would like to keep rabbits again; I have a decided fancy for them; but I cannot do it as long as some one else owns that dog. I promise, too, that if that dog gets into my possession, he shall not worry any one else's rabbits. I have no spite against him, that is, not in general, but I don't think he is filling his proper place. If dogs have their sphere, it is evident, that he either does not understand it, or at least is not in his proper place, and it is well that he should, for the public good know it, and the sooner the better. Had he eaten my pets, I could reconcile myself to the loss, on the ground of its being nature and instinct, to appease the cravings of hunger; but there is not the mark of a tooth anywhere to be seen on them, showing that it was purely a case of malice, as they were evidently frightened to death, and then dragged from their hutches and left lying on the ground close by.

The point, however, which I wish to make in this article, is one that I have not before seen noticed anywhere. It is this: Unless you can protect yourself against the incursions of dogs, particularly at night, it is useless to think of attempting to keep rabbits. Closing up the hutches carefully at night will not prevent their death, for they are almost as liable to die of fright or excitement, as they are from the wounds of an enemy. To those, therefore, who propose keeping rabbits, either as pets, or for profit, it is well to give this word of caution: Protect yourself not only against cats and rats, but against dogs as well.

A. N. R.

LOCK HAVEN, PA.

 A Nimrod in Adams County, Pa., reports that during the last hunting season he shot 124 gray squirrels, 9 rabbits, 2 ground hogs, 12 pheasants, and 6 crows, also a very large black snake; and at another time three very large copper-head snakes at one shot.

(For Fanciers' Journal.)

THE BLACK MARTIN.

MR. EDITOR.

In No. 8, page 123, of the *Journal* I find a few questions in regard to the Black Martin which seem to be exactly what I would have been glad to know last spring, while building several bird-houses, which I intended to be free to any or all of the little feathered visitors that might choose to gladden our home with their songs during the summer.

In the first place I set up a pole twenty feet high, on top of which I placed a two-room rustic bird-house. In less than an hour three or four pairs of common Swallows were quarreling for possession, and did some terrible fighting. At last, after two or three days, all but two pairs left. These remaining pairs continued the conflict until but one pair remained. I watched these as they began building their nest at once. I had supposed that the partition between the rooms was so made that the birds could not pass from room to room without coming outside, but in this I was mistaken, as they would enter one door and come out of the other while at work. On finishing their nest they closed up one door completely with mud, straw, &c. This satisfied me that where the partitions between the different rooms are not completely closed, only one pair of birds will occupy one bird-house. In a few days the Swallows were sitting; but one morning they were surprised by a swarm of Black Martins, who seemed determined to drive out the occupants; but the Swallows were game to the last, and finally held possession, while the Martins, perched upon the surrounding buildings, chattered over their defeat. As Martins were what I wanted, I put up a six-room bird-house down in the garden. It was hardly up before it was known to all the Martins in town, who came flocking to view the premises, and seemed generally satisfied. My neighbor Burt, just over the fence, as he stood leaning on his hoe, watching me, told me that he thought I had them. I thought so too, hopefully watching and expecting to see them busy carrying housekeeping material; but not a thing would they carry, but kept up a continuous clatter, and from early dawn till dark we all enjoyed their social songs. All at once away they went. They had hardly left before a pair of common Brown Wrens quietly took possession and, without any ceremony, began building a nest. It took about four days to finish, and I suppose they had begun to lay, but, like the Swallows, they too had an assault from the Martins (two pairs of them). I expected, of course, to see the Wrens eaten up, but they cleaned out the Martins in less than fifteen minutes. So my Martins were gone again; but, in about half an hour, back they came, flanked by six pairs more (now eight pairs in all), and with one swoop down they come on those poor Wrens, as I supposed; but they did not need one bit of sympathy from any one, for they so completely routed the whole army of Martins that they reminded me of Don Quixote when he assaulted the windmill; and notwithstanding my repeated loss of the Martins, I will say right here that I believe that the little Brown Wren will whip more pounds of bird of any kind than it weighs grains. But to my subject. After the Martins had gone again the Bluebirds took up their abode in part of the house occupied by the Wrens. They had soon completely finished their nests and were hatching when they too had a visit from the Martins, but, as usual, our old friends were defeated, and they sat gossiping about it all around on the housetops.

By this time I began to mistrust that the Black Martin would not build a nest for itself so long as it can find one ready-made. I believe that is just why they always came the second time, about when they expected to find a finished nest. It seemed just so to me. Of course the material composing a Swallow's, Bluebird's, or Wren's nest would not be sufficient for a Martin's nest, but it would go some way in building it. Maybe I suspect them unjustly. But I was determined to have some Martins, if it took all summer, so I built a large house expressly for them on the roof of my poultry-house. It contains thirty-two rooms about eight by ten inches, three stories high, twelve inches to ceiling in each story. While we were building the same Martins flew around us, inspecting the work, and frequently came so near that we might have caught them. The finishing and painting took so long that they finally left before the job was completed, as none of them took up their abode with us, but often during the summer they would circle about for hours, frequently flying in and out, and after a social chat fly away to their eaves and cornices about town, where they were forced by the lateness of the season to make their nests. When they return this spring I can accommodate forty to fifty pairs, and when the rooms are all taken I will build more for them. In a few days I shall furnish each room with a few handfulls of soft hay made to imitate nests, to attract them. Their beautiful blue-black and glossy plumage, together with their almost clamorous sociability, causes me in a very great measure to forget that they may be a little inclined to aristocracy, so far as labor is concerned. Let them all come; they shall find food and protection. The Sparrows may feed with the Cochins, Brahmas, Plymouth Rocks, and the rest of their giant friends, undisturbed. The motherly Robin will always find plenty of strawberries early in the summer for her young, and lots of all the other luscious fruits all through the season.

I remembered the birds when I planted my trees and vines, years ago, and somehow we are cheered all summer long by the different birds of our country, and do not miss what little they eat. Talk about their stealing fruit. They do not steal it; God gave it to them. I never planted a bed of flowers but that I was amply repaid for the trouble and expense by seeing the scores of little Humming Birds flocking there to feed, to say nothing of the pleasure we all derived from their beauty and fragrance.

But pardon this my first trial of your patience. In the future, if agreeable, I may drop you an occasional line on not only birds, but all the other pets, in rotation.

Yours truly, J. H. WATLING.

The first shad taken this year in the Delaware was near Chester, and sold for five dollars.

The introduction of salmon into the rivers of Australia, after repeated failures, has been accomplished at last.

There is a severe drought in most of the jurisdictions of Cuba, and the animals are suffering for water.

John Henry, of South Hadley Falls, accidentally shot himself in the head while hunting ducks, on Sunday, and expired soon after.

A boy was caught stealing chestnuts near a cemetery. "What's your name?" "Tweed," blubbered the boy. The frightened farmer dropped the boy and fled.

Mr. Samuel Maxwell, of Vanceboro' Maine, killed two bears and captured another alive, one day last week in that town, and within two miles of the settlement.

Christian Sharpe, inventor of the Sharpe rifle, the best firearm of its day and still has no superior, died suddenly in Vernon, Conn., on Thursday night, aged 63.

Two malevolent dogs ate up \$200 worth of mutton for John Farnum, at Lanesboro, R. I., last week, in just half an hour; to be exact, they killed 35 sheep, and wounded half a dozen more.

A boy named James Wright was accidentally killed at Seabrook, in a gunning float, recently, by J. Rowe. Wright was sculling the float, and Rowe's gunlock caught on a seat as he raised the weapon, and both barrels were discharged in the back of Wright's head.

A young man was carrying a goose at a dinner table one day, when, by an awkward move, he knocked it into the lap of a lady who was sitting opposite, in the glory of a green satin dress. Instead of showing his verdancy by profuse apologies and a confused manner, he simply said; "I'll trouble you for that goose, Miss!" Can the annals of society furnish an example of self-possession more sublime?

(For Fanciers' Journal.)

THE BUCKS COUNTY POULTRY ASSOCIATION.

At the last meeting of the executive committee it was decided that the next annual exhibition should be held on the 8th, 9th, 10th, and 11th of December, 1874. Already we have the most promising indications that our next fair will be the largest ever held in the State. The president has named a committee to obtain special premiums. We intend to make the specials one of our grand points. The North Pennsylvania Railroad which terminates at Doylestown, will issue excursion tickets from Philadelphia and other points. Bucks county is fairly awake on the poultry question. At the next exhibition the members of the association living in the county will exhibit fine specimens of the following breeds of fowl: Silver Pencilled, Silver Spangled, Golden Spangled, and Black Hamburgs; White, Brown, Black, and Dominique Leghorns; Black Breasted Red, Duckwing, Irish Grey, and Earl Derby Games; Crevécœurs, Houdans, and Japan Silkies; Light and Dark Brahmas; Buff and Partridge Cochins; Plymouth Rocks and Dominiques; Golden Sebright, Black Red Game, Duckwing Game, Black African, and Japan Bantams.

All the breeds above named, are bred by members of the Association from the best stock procurable, so you see, Mr. Editor, we will have something to show visitors at our next fair.

Respectfully,

W. T. ROGERS.

DOYLESTOWN, PA.

POULTRY SHOWS FOR 1874 & 1875.

Bucks Co. Poultry Association. Doylestown, Pa., December 8, 9, 10, and 11. Theo P. Harvey, Secretary, Doylestown, Pa.

RIVERSIDE STOCK AND POULTRY YARDS.

WM. WRIGHT, AND S. BUTTERFIELD, Proprietors.

We shall sell a limited number of sittings of Eggs, at \$5 per sitting, from Light and Dark Brahmas, Buff and Partridge Cochins. Our Light Brahmas are Williams' strain, pure. Yard No. 1—Cock Young Alexis, is mated with six prize Hens, all standard birds, and winners at Detroit and Buffalo Show. Yard No. 2—Cock Duke of Essex is also mated with standard birds, among them are the winners of 1st, at Detroit, for Chicks of 1873. Yard No. 3—Dark Brahmas; are our own direct importation of 1873, and are first-class birds of high merit, and we can safely recommend them to the fancier. Yard No. 4—Buff Cochins, imported from England, from Rev. Mr. Brooks' and Taylor's strains, and selected by our Mr. B. for breeding purposes. Yard No. 5—Imported Partridge Cochins; are standard birds, and mated with great care for breeding. We also make the importing and breeding of Lincoln and Cotswold Sheep, Suffolk, Essex, and Berkshire Pigs a specialty. Mr. S. Butterfield being personally acquainted with all the leading breeders in England, will leave on or about the middle of June to make a selection from the best pens of premium birds at the various shows in 1874. Any orders entrusted to him will be executed according to instructions, on commission or otherwise. All communications addressed with stamp, to

Selinsgrove, Pa.

EGGS FOR HATCHING from Superior Light and Dark Brahmas. Also, Silver-Spangled Hamburgs, at \$2 per doz.

Address

H. H. TSHUDY, Lititz, Pa.

BLACK LEGHORNS.—Imported direct from Italy. Eggs, \$5 per doz. Light Brahma Eggs, \$3 per doz. Black-Breasted Red Game Bantam Eggs \$3 per doz. All Imported or Prize birds. Young Fowls after Sept. 1st.

S. L. BARKER, Windsor, Conn.

BROWN LEGHORNS.—After six years of im-
mense breeding and study, I this year, for the first time, present my stock,
and feel that they will greatly improve whatever flock or strain they
may be added to. Their qualities for early market and profitable egg-
producers are familiar to all.

BAKIES.—As I was the first to import into the United
States the now famous *Dark Brahmas*, I have
pleasure in again being the first to import the *Bakies*; they are very
rare and choice in England; are in shape exactly like the *Creepers* that
are now so often referred to by farmers as being the most profitable fowl
they can remember; the *Bakies* are a black body, dark very short legs,
comb and white ear-lobe like Brown Leghorns, and as they cannot do
the mischief at large same as most fowls, present altogether a very de-
sirable, handsome, profitable fowl. Imported by steamship Batavia, Liv-
erpool to Boston, March, 1874.

C. CARROLL LORING, Boston or Dedham, Mass.

MOCKING-BIRD TO EXCHANGE for Brown Leghorn Pul-
lets. Also, 20,000 live Trout for sale. Eggs—Light Brahmas, Houdans,
White Cochins, \$1.50 per doz. Live Mink for Breeding. Partner wanted.
SPRING GROVE TROUT WORKS, Ossipee, N. H.

H. N. WHEELER, Mystic River, Conn., Breeder of pure Brown
Leghorns from the old Mystic River Stock, imported by Capt. Isaac Gates.
Eggs, \$3 per dozen. Orders taken now.

EGGS FOR HATCHING.

Light Brahma—with Felch & Buzzell cross, \$3.00 per doz.
Partridge Cochins—very finely marked birds, 3.00 “
White Leghorn—took premium at Boston Show, Feb., 1874, 3.00 “
Brown Leghorn—stock from the best strains in the country, 3.00 “
Orders filled in rotation, and nothing sent C.O.D.
Address with stamp, A. & E. WHITMAN,
Fitchburg, Mass.

EGGS FOR SALE.—\$3 for 13, delivered at Express office, from pure
bred Pea-Comb Light Brahmas, from Philander Williams' stock; Dark
Brahmas, and Buff Partridge Cochins from Todd's stock; Gold and Silver-
Spangled Hamburgs from imported stock. Also, FERRITS for sale from
late importations. FOWLS FOR SALE SEPT. 1st, 1874.
Address WM. G. BAKER, Norwalk, Huron Co., Ohio.

AYLESBURY DUCKS EGGS—Mrs. Wm. Taylor, Riverside,
Burlington Co., N. J., can spare a few sittings of Eggs at \$4 per sitting,
carefully packed.

THE “POULTRY WORLD” FREE TO ALL who purchase
Eggs from my premium strains of White and Brown Leghorns and Par-
tridge Cochins to the amount of \$6 and upwards. Send for new illustrated
circular. Address J. M. MCKINNEY,
Box 61, Ithaca, N. Y.

(For Fanciers' Journal.)

REMINISCENCES OF THE "HEN FEVER."

BY GEO. P. BURNHAM.

A friend sends me a copy of the new "American Standard of Excellence."

After a careful examination of the contents of this little work, I am not surprised at meeting with various sharp criticisms upon its merits and defects, in your columns and in other leading poultry journals.

In my judgment *too much* is attempted in this "standard," and I clearly coincide in opinion with one of your correspondents, "W;" first, that "there was no need of this (so-called) thorough revision of the previous American Standard;" secondly, that "the history of such theoretical standards does not offer much encouragement to the mass of fanciers and breeders;" thirdly, that the utter "worthlessness of all standards made upon the false basis of controlling the judges in their arbitrations," by fixed technical rules, is apparent; and finally, that the new standard, being the result of but three days' labor, it could not, of course, be what it purports to be, namely, anything approaching "a thorough revision;" or, at best, in this brief time, much of an improvement upon former attempts in this direction.

Take a single example of the *additions* made to the list of "distinct breeds" of fowls in this standard, for which premiums are to be awarded at American poultry exhibitions hereafter, to wit: the "Plymouth Rocks," which variety are, in this work, for the first time I think, recognized as a *breed*.

Now, no one pretends that this fowl is a distinct breed (or variety), as are the Games, the Cochins, the Black Spanish, &c. It is simply a *cross*, no doubt a very good one, but still only a mixture of two or three strains of established blood, which, being bred from, among themselves, must inevitably go back to the original blood. While the originator of this stock breeds from the *parent* strains, he can produce average good birds, to which he may appropriately give this (or any other) chosen name. But the man who purchases the *progeny* of him as "Plymouth Rocks," and breeds them together in the expectation that he will get chickens (beyond the first generation subsequently) *like the fowls he buys*, is destined to disappointment. And this kind of fowl is recognized in our new "American Standard of Excellence" as a distinct *breed* of poultry!

I have not a word of fault to find with the bird alluded to. It is a good one. I have said this before in one of my articles sent you. But I say now, that the recognition of any known *cross* of fowls, as a specific variety, by such authority as our American Standard ought to be, is a palpable error; and I apprehend that we shall very shortly learn, from the other side of the water, how ridiculous such assumptions are in the estimation of clever breeders and good fanciers in England.

Years ago, in the early days of the poultry mania in America, after the societies and clubs in Great Britain had put forth their original standard, the subject of adopting this in the first New England Association was bruited. Then it was tinkered, "improved upon," "revised," Americanized, and—went into the tomb of the Capulets.

Dr. Bennett, Miner, Devereaux, Capt. Williams, Plaisted, Colonel Jacques, Hatch, Cornish, Childs, Ad. White, Dr. Wight, Alden, Buckminster, Burnham—*et id omne*—all had *breeds* of fowls which they had manufactured, first or last, which each insisted was better, finer, handsomer, larger, or more prolific than other people's fowls, and to which each owner gave an original name.

I remember, for instance, the original "Plymouth Rocks" of those days, the "Fawn-colored Dorkings," the "Chittaprats," the "Wild Indians," the "Wild Indian Games," the "Hong Kongs," the "Prince Alberts," the "Burampooters," and many other crosses that were in the early years turned out "for a market," until their name became legion; and the purposes of the standard were entirely annulled, because everybody was bent upon getting the name of his mongrel cross into the list as a pure *breed*. The consequence was that the standard was ignored, and every one bred and crossed and named his stock to suit his own fancy, until the first decadence commenced, which resulted finally in earning for the chicken trade the title of humbug for years afterward prior to the war.

Subsequently, when the interest in poultry breeding revived (after 1865-'66), a new impetus was given to this trade, and since then we have gone on improving our opportunity, and enhancing the value of domestic fowls in this country immensely. The English standard was for a time adopted again. Then it was "improved," "revised," and "adopted" to our needs and requirements in this country. But this was only short-lived. The original issue of the American work, as "W" states, "died in its infancy from its own inherent weakness." The second edition served but a temporary and unsatisfactory purpose, and was of but small account, as we all know. And now we have the *new* one, prefaced with a list of arbitrary instructions to govern judges at our shows; a dictum which would kill it dead at sight if there were no other weighty objections to much of the arrangement of this last "revision."

Individually this subject is of little account with me. I long since graduated in the show business. I put no fowls into the exhibition rooms of late years. *I have been there*, however, and my fowls have carried off the palm so often, and in so satisfactory a manner, that I am now content to see others enjoy the sport, and the cost of this operation. But this "standard" matter is one of large interest to the fancier and breeder everywhere who goes for fine points, and who intends to become a competitor at our exhibitions.

When the recent Buffalo Convention held its sessions upon this important subject, therefore, it was hoped and expected

that the participators in the deliberations would have given us something really new, useful, and acceptable to the fanciers of the United States. The chairman claims that the National Association which met then and there was "*the strongest, most prosperous, and most dignified body of men ever assembled together for any honorable purpose*;" an assertion which seems to be rather steep, but the accuracy of which I do not propose to question, though I must say that this enthusiastic remark of the presiding officer reminds me of what P. T. Barnum, Esq., said at the last fowl exhibition of the old "National Poultry Association" I ever attended, of which Phineas T. was President, which took place at his Museum, in New York, and at which I was awarded twenty-one leading premiums for my Brahmas, Cochins, Shanghais, &c., I remember.

"Gentlemen," observed President Barnum, "we meet here to-day to discuss one of the most important subjects ever yet considered by the American people! And, whatever topics we may elsewhere debate, I am confident you will all agree with me that no one affecting the social rural economy of this nation approaches in magnitude the dearest interests of ourselves, our wives, our sweethearts, and our children, in comparison with the pleasing and honorable art of rearing good domestic poultry."

The stunning plaudits that greeted this sentiment evinced the sympathy and belief of his listeners in its truth. Mr. Barnum was then a fresh convert, and he went into the chicken business with all the zeal and vim that characterized his prior shrewd manipulations of Joice Heth, the Fejee Mermaid, the Woolly Horse, and the famous "What is it?" I have no doubt he was honest in his declaration at the moment he uttered the above expressive sentence, and Mr. President Churchman, I can conceive, was equally honest in his assertion. But, if the gentlemen at Buffalo were really, as we will not dispute, "*the strongest and most dignified body of men ever assembled together for an honorable purpose*," and if, as a result of their convention, they force upon State Societies this faulty, imperfect, and unacceptable "revision" of the old tunes, with the fearful accompaniment of the arbitrary and senseless rules upon which judges *must* hereafter decide upon the merits of show fowls, the mountain has labored to bring forth a very small mouse; and, in my judgment, these dignified managers of our poultry exhibitions have got American societies, breeders, and fanciers emphatically in the future "where the hair is short!"

There is a remedy for this evident mistake, however. Mr. Babcock, in his recent article upon the arbitrary and one-sided action of the Buffalo Convention, makes a strong point in his assertion that this standard of 1874 was adopted by a select few, with closed doors, charging three dollars admission fee, which, if unpaid, excluded those who would otherwise have joined in the debates. And a writer in the *American Rural Home* correctly assumes that "no close corporation or *secret* deliberation on a matter that so affects all classes of American fanciers will be permitted." This exclusiveness is all wrong, and the error should, as it may, be promptly set right.

I am an old breeder, a constant friend to the best interests of the poultry fanciers of this country *at large*, and at this late day in my experience have "no axe to grind" in this matter. I suggest that a mass meeting of American poultry breeders from all quarters be called at once, at some convenient central point in New York State, where, with open doors and amidst free speech, this whole subject may be

fairly and fully discussed and voted upon; where a standard may be properly revised and corrected by the voice of the masses interested. To this general convention I would especially invite the presence of every member of the so-styled new "American Poultry Association," and I would give every man and woman who breeds poultry in this land, and who can attend, a fair chance to talk and vote upon this important subject of an "American Standard of Excellence."

Let such a convention, through its openly-chosen committees, report, after full deliberation, upon the details of the standard, and then adopt it in every State Society in the Union. Secure good, fair, impartial, competent exhibition judges subsequently, *untrammelled by silly arbitrary "instructions"* as to the performance of their rightful duty, and abandon the worse feature of all in this proposed new "American Standard," to wit, its monopoly by *copyright*.

Such a convention will undoubtedly be called, if the general dissatisfaction that is now cropping out in this vicinity is any indication of this future disposition of the majority of New England breeders, who already note that the fatal rock upon which the early "National American Society" split is again within sight, namely, its attempted arbitrary exclusiveness and selfish monopoly.

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

THE PROGENY WILL TELL.

NOTHING is more common when you visit your neighbor's yard, or your neighbor visits your's, than to have criticisms freely given and asked on the fowls. Some make it a point on such occasions, to point out all the beauties they see, while others who are accustomed to judge their own birds, severely point out the defects only; the absence of faults being the Standard of Excellence. Often it is better to remain quiet altogether, for if you pick faults, it is thought to be from motives of jealousy, especially if you happen to breed the same variety of fowl yourself, and if you speak well of them, your recommendation is given in the most unqualified manner to the first amateur who wishes to purchase. I once visited a yard, which, from its show and flaming advertisements, one would think to be in the front rank. It was stocked with fowls at a high price, from the most famous yards. No expense was spared in any way to make the establishment a success, and as the owner led his visitor from one elegant run to another, he could scarcely repress the question which the look of pleasure on his face had already asked,—"*Did you ever see such runs, and such fowls?*" It was the old story. Like Alnaschan counting his wealth in futurum, so our friend had caught the fever, and invested in first-class stock, determined to step to the front rank with six different varieties at once. He pictured the crowd of admirers around his coops at the great shows,

and looked with extreme satisfaction on the numerous medals and cups which they brought him at the close of the season; but sighed withal like Alexander, because there were no more worlds to conquer. With such an one you see at once that you will not be thanked for adverse criticisms, and if you do, you are told that Mr. — (naming high authority), said they were splendid, and worth more than the cost. So they are, no doubt, but then for what do we buy fowls, to breed, or to exhibit? For both you say, but it is rarely ever you can have both, and I think it is better to breed your fowls, after you are fairly started, than to buy them "ready made." Now, the main objection I had to all the above runs was, that they were not mated for breeding. The result was worse even than I anticipated, for on visiting the same yard in the fall, the produce of one run, almost to a chick, was vulture-hocked; another had scarcely any leg feathering; were mottle-breasted, where they ought to have been black; and the spangled birds were marked like Sebright Bantams. Now, the sellers of the above birds were not to blame altogether. They sold exhibition fowls, and if they had them in their own yard, could probably mate them to advantage; but, as it takes "three generations to grow an avenue of oaks," so I think it takes three seasons to know something of the points, and how to breed one variety of fowls, let alone six different kinds. One thing is always sure, and tells no tales, *and that is the progeny*. Comment is unnecessary. I have no doubt we would be surprised, if we could get an accurate description of the progenitors of some famous fowls. Many of us have birds which nobody wants to buy, and, at the same time, we are not eager to part with; and why? because they have been tried, and have given great satisfaction. The grand thing is, to *study each bird*, balance point with point, note down results; if we fail with one pen, another may succeed; but one thing is certain, nature will not leave us long in the dark, and sooner or later the progeny will tell.

GEO. C. ATHOLE.

(For Fanciers' Journal.)

"WHAT I KNOW ABOUT ROUP."

I am well aware that roup is frequently the result of exposing fowls to cold winds, and dampness, yet cannot fully agree with Mr. Lamb's article in No. 9. It was very fortunate for him that his fowls were not of the tender or delicate kind, or they would not have been so easily cured. The various causes of roup are well known to most experienced breeders, yet, as the wide circulation of the *Journal* will bring his article before many who are unacquainted with this terrible pest (long may they remain in blissful ignorance on that point), I wish to give them the benefit of my experience. In my opinion, most cases of roup are the effect of contagion, disseminated through the flock by one or more affected fowls. Seven years ago I became thoroughly acquainted with it. I had a choice lot of fowls in a large room, which was kept dry and clean, with no chance for cold wind to reach them; a south door was opened during fine weather to give them sunshine, which is very desirable to promote animal health and vigor. My first "chicken fever" was then fast developing, and I must admit, that, although I have tried many remedies, the disease still has as firm a hold on me as ever. But my chickens, I doted on them, and enjoyed their society till I discovered something was the matter with them. The

noise attendant upon their hard breathing, and their frequent chorus of "the youk," were doleful sounds to me. Although I had neighbors who delighted in my misfortune, and told me that my fancy fowls would always be sick, while their common ones would not. I have often smiled since, when interrogated by the same persons with "What shall I do for my fowls? they have got the pip." An investigation disclosed the fact that they had the roup, the effects of roosting over pig-stys or other filthy apartments. Time and perseverance, however, conquered the disease. In my first experience with roup overcrowding was the sole cause. To the inexperienced let me say, keep your coops clean and dry; do not expose your fowls to cold winds and dampness, and be especially careful not to overcrowd them. Coal ashes, dry earth, or any deodorizing substance frequently strewn over the droppings will be sufficient, without often removing them. If you discover a fowl whose breathing is attended with labor, and the throat distends at every breath, remove it at once, and apply some remedy, many of which are given in all poultry books and journals. Roup is easily cured in the first stages; I have often cured it by one application of kerosene oil to the head and throat, after giving one teaspoonful internally. Always give a diseased fowl all the sunshine you can. Roup is often accompanied by canker in the mouth and throat. In cases of canker I remove the white substance and apply pulverized alum with *perfect success*. I had a case not long since, where the tongue, mouth, and throat, were completely coated thick with canker, and a frothy substance issued from the mouth. Such cases I had always before considered incurable, and, had not the bird been a valuable one, I should have used my old and sure remedy, the hatchet. In five days, however, he was entirely cured, the only remedy being a daily application of pulverized alum. I hope to hear from others on this point.

J. Y. BICKNELL.

HEAD OF DOMINIQUE COCK.

DRAWN from life by T. P. Chandler, from the bird which took first premium at the last show of the Pennsylvania Poultry Society, held in this city. It was exhibited by Thomas Mayne, who took first, second, and third premiums.

PREJUDICES AGAINST POULTRY BREEDING.

No. II.

WHILE many poultry breeders and dealers have acted in bad faith toward their customers, yet many of the charges which have been made have been without foundation; they have their origin in a mistaken idea as to what the buyer had a right to expect for the purchase money. A man who knows little about fowls goes to a show—say, for instance, the Buffalo show—where some of the best breeders in the nation have their very best birds on exhibition; fowls which could not be purchased at any price, and he admires them very much. He goes home thinking of the fowls, and finally determines to purchase for himself. He obtains the address of some breeder, sends him perhaps twelve or fifteen dollars for a trio, which he considers an extravagant price, and expects to get as good fowls as those he saw at the exhibition, and is ready to charge the breeder with dishonesty if they are not first-class show birds.

A man sends for a setting of eggs; they are badly handled by the express companies and few of them hatch, and the dealer is at once charged with destroying their vitality. If the eggs hatch well it is expected that the whole brood will be first-class birds, and if they are not he says the breeder has sent him his poorest eggs. There are many persons of means and leisure who breed poultry for pleasure rather than for profit, and they are willing to sell fine birds for merely nominal rates, in order to get rid of surplus stock, or for the accommodation of neighbors. If any other persons in the same neighborhood are obliged to pay two or three times as much for the same kind of stock to regular dealers, they are apt to think themselves cheated, when perhaps they have only paid a fair price for their purchases.

Heretofore there has been little uniformity in prices throughout the country, one breeder selling for thirty dollars first-class birds, for which others would ask fifty, or even seventy-five dollars. This great diversity in price has given rise to much hard feeling on the part of purchasers, and has been the occasion of many unfounded charges of unfair dealing. I have a right to value my stock highly, and ask a good round price for it, provided I do not mislead or deceive the buyer by any exaggerated or false representation. But when a breeder advertises that he has not only *the largest and best, but the only stock of a certain description in the world*, while a large number of others are breeding just as good, he not only unduly exaggerates the importance of his own stock, but wilfully misrepresents his brethren; and I am by no means certain that this would not come within the scope of the resolution passed by the National Association at Boston. By means of the journals and shows the people will become better educated, and prices will become more uniform.

A friend purchased a prize trio of chickens from one of the most noted breeders, and from them, and some other pullets mated with the cockerel, he raised some very fine pullets, but did not get a single cockerel that he was willing to breed from. I mention this not to discourage young breeders, but as showing what care and judgment in mating is requisite, and with all this the best of breeders sometimes fail.

Those who purchase eggs ought to understand that they have some risks to run; and after the breeder has done his

very best, disappointments will frequently occur. Charges of dishonest dealing ought to be received with caution; but if thoroughly established, the guilty parties ought to be exposed.

RHODE ISLAND POULTRY AND COLUMBARIAN SOCIETY.**FIRST ANNUAL EXHIBITION.**

(Continued from page 213, No. 14.)

2d, J. R. Goodale, Pawtucket, \$2; 3d, William Pierce, South Scituate, highly commended. *White Cochins*—1st, D. A. Segar, Westerly, \$3; 2d, W. E. O. Roberts, South Scituate, \$2. *Black Cochins*—1st, D. A. Segar, Westerly, \$3; 2d, William Cooke, Pawtucket, \$2. *Black Cochins*—1st, William Cooke, \$3; 2d, Robert Plews, North Providence, \$2; 3d, D. A. Segar. *Partridge Cochins*—1st, S. O. Chase, Killingly, Conn., \$3; 2d, L. R. Rockwood, Worcester, Mass., \$2; 3d, James L. Bullock, Providence. *Partridge Cochins*—1st, E. Capron, Attleboro', Mass., \$3; 2d, H. A. Rhodes, East Greenwich, \$2; 3d, J. T. Peckham, Providence. *Light Brahma Fowls*—1st, Edward Thurber, Woonsocket, \$3; 2d, J. L. Bullock, Providence, \$2; 3d, J. L. Carpenter, Attleboro'. *Light Brahma Chickens*—1st, Wright Buckley, Valley Falls, \$3; 2d, James L. Bullock, Providence, \$2; 3d, Edward Thurber, Woonsocket. *Dark Brahma Fowls*—1st, W. F. Inman, Providence, \$3; 2d, C. G. Sanford, Providence, \$2; 3d, Edward Bent, Providence. *Dark Brahma Chickens*—1st, Wright Buckley, Valley Falls, \$3; 2d, J. T. Peckham, Providence, \$2; 3d, H. Allen & Son, North Attleboro'.

CLASS III—HAMBURGS.

Silver Spangled Hamburg Fowls—1st, George F. Seavey, Cambridgeport, Mass., \$3; 2d, John H. Chase, Providence, \$2; 3d, Charles Taft, Providence. *Silver Spangled Hamburg Chickens*—1st, George F. Seavey, Cambridgeport, Mass., \$3; 2d, S. P. Bullas, Providence, \$2; 3d, Charles H. Pond, Attleboro'. *Silver Penciled Hamburg Fowls*—1st, Robert W. Reid, Greenport, L. I., \$3; 3d, James B. Peck, Providence. *Silver Penciled Hamburg Chickens*—1st, Robert W. Reid, Greenport, \$3; 3d, James B. Peck, Providence. *Golden Spangled Hamburg Fowls*—1st, George F. Seavey, Cambridgeport, \$3; 2d, Thomas Richards, Norton, Mass., \$2. *Golden Spangled Hamburg Chickens*—1st, George F. Seavey, Cambridgeport, \$3; 2d, S. B. Bullas, Providence; 3d, J. H. Congdon, Attleboro'. *Black Hamburg Chickens*—1st, C. Cushing, Anthony, \$3.

CLASS IV—SPANISH.

Black Spanish Fowls—1st, H. W. K. Allen & Son, North Attleboro', \$3; 2d, Albert W. Jones, Milford, Mass., \$2; 3d, S. B. Bullas, Providence. *Black Spanish Chickens*—1st, W. F. Inman, Providence, \$3. *Dominique Leghorn Fowls*—1st, S. S. Van Buren & Co., Hartford, Conn., \$3. *Dominique Leghorn Chickens*—2d, J. T. Peckham, Providence, \$2. *Brown Leghorn Fowls*—1st, F. J. Kinney, Worcester, Mass., \$3. *Brown Leghorn Chickens*—1st and 2d, F. J. Kinney, Worcester, Mass., \$3 and \$2. *White Leghorn Fowls*—3d, William L. Tobey, Valley Falls. *White Leghorn Chickens*—1st, Joseph Dart, Oxford, Mass., \$3; 2d, R. R. Yates, Northboro', Mass., \$2; 3d, C. L. Read, Providence.

CLASS V—FRENCH.

Crevecoeur Fowls—1st, D. A. Segar, Westerly, \$3; 2d, Joshua Vose, Manton, \$2. *La Fleche Chickens*—1st and 2d, J. R. Goodale, Pawtucket, \$3 and \$2. *Houdan Fowls*—1st and 2d, E. C. Aldrich, Hyde Park, Mass., \$3 and \$2; 3d, Joshua Vose, Manton. *Houdan Chickens*—1st, 2d, and 3d, E. C. Aldrich, Hyde Park, Mass., \$3, \$2, and highly commended.

CLASS VI—POLISH.

Silver Spangled Poland Fowls—3d, Oliver Kendall, Providence. *Silver Spangled Poland Chickens*—1st, D. A. Segar, Westerly, \$3; 2d, Oliver Kendall, Providence, \$2. *White-crested Black Poland Fowls*—1st, James T. Peck, Providence, \$3; 3d, E. F. Wright, Providence. *Golden Spangled Poland Fowls*—2d, W. L. Tobey, Valley Falls, \$2.

CLASS VII—GAME FOWLS.

Black-breasted Red Game Fowls—1st, George W. Adams, Providence, \$3. *Black-breasted Red Game Chickens*—2d, L. E. Gray, Foxboro', Mass., \$2. [There were several very fine specimens of Black-breasted Red Game Fowls with yellow legs entered, but, as the National Standard excludes all of this class with yellow legs, they were therefore ruled out by the committee in awarding premiums.] *Brown-breasted Red Game Fowls*—1st, L. E. Gray, Foxboro', \$3. *Ginger Red Game Chickens*—1st, George W. Adams, \$3; 2d, T. A. Todd, New Haven, Conn., \$2.

CLASS X—MISCELLANEOUS.

Plymouth Rock Fowls—1st, J. T. Peckham, Providence, \$3. *Plymouth Rock Chickens*—1st, L. E. Gray, Foxboro', \$3; 2d, E. Capron, Attleboro', \$2; 3d, L. E. Gray, Foxboro'. *Sultan Fowls*—1st, W. L. Tobey, Valley Falls, \$3; 2d, James T. Peck, Providence, \$2. *Sultan Chickens*—1st and 2d, Benjamin White, Providence, \$3 and \$2; 3d, Sam. W. Clarke, Warwick.

CLASS XII—ORNAMENTAL.

Pearl Guinea Fowls—1st, H. W. K. Allen & Son, North Attleboro', \$3.

AQUATIC DIVISION.

CLASS XIII—DUCKS.

Muscovy Ducks—1st, H. W. K. Allen & Son, North Attleboro', \$3; 2d and 3d, William Pierce, South Scituate, \$2 and premium. *Aylesbury Ducklings*—3d, H. W. K. Allen & Son, North Attleboro'. *Common White Ducks*—3d, W. L. Tobey, Valley Falls, \$2. *Top-knot Ducks*—1st, H. W. K. Allen & Son, North Attleboro', \$3. *Rouen Ducks*—1st, J. H. Chase, Newport, \$3; 2d, H. W. K. Allen & Son, North Attleboro', \$2. *Pekin Ducks*—1st, George P. Anthony, Westerly, \$3.

CLASS XIV—GEESE.

Hong Kong Geese—1st, E. P. Perry, Providence, \$3; 2d, E. S. Sisson, South Portsmouth, \$2; 3d, H. W. K. Allen & Son, North Attleboro'. *Toulouse Geese*—1st, P. B. Thomas, North Attleboro', \$3; 2d, H. W. K. Allen & Son, North Attleboro', \$2. *White China Geese*—1st and 2d, E. S. Sisson, South Portsmouth, \$3 and \$2. *Bremen or Embden Geese*—1st, W. L. Tobey, Valley Falls, \$3; 2d, H. W. K. Allen & Son, North Attleboro', \$2.

SECOND DAY.

CLASS VII—GAMES.

Yellow Duckwing Game Fowls—3d, Otis Munroe, Bristol. *Duckwing Game Chickens*—2d, J. H. Hammett, Newport, \$2. *Black Game Chickens*—1st, S. P. Bullas, Providence, \$3. *White Game Chickens*—2d and 3d, J. G. Moffitt, Pawtucket, \$2 and premium. *Pyle Game Chickens*—1st, 2d, and 3d, F. A. Todd, New Haven, Conn., \$3, \$2, and premium.

CLASS X—MISCELLANEOUS.

Frizzled Fowls—1st, A. H. Rogers, Worcester, \$3. *Frizzled Chickens*—1st, A. H. Rogers, Worcester, \$3. *Patagonian Fowls*—1st, John H. Lee, Providence, \$3. *Silkie Chickens*—1st, Sam. W. Clarke, Warwick, \$3.

CLASS IX—BANTAMS.

Golden Sebright Fowls—1st, George F. Seavey, Cambridgeport, Mass., \$3; 2d, W. Hazard, Providence, \$2; 3d, E. B. Perry, Providence. *Golden Sebright Chickens*—1st, George F. Seavey, Cambridgeport, Mass., \$3; 2d, S. P. Bullas, Providence, \$2; 3d, George F. Seavey, Cambridgeport, Mass. *Black Bantam Fowls*—1st, A. H. Rogers, Wor-

cester, \$3. *Black Bantam Chickens*—1st, W. & E. Jennings, Newton Lower Falls, Mass., \$3. *White Bantam Chickens*—1st, A. H. Rogers, Worcester, Mass., \$3.

CLASS VIII—GAME BANTAMS.

Black-breasted Red Game Fowls—1st, W. & E. Jennings, Newton Lower Falls, \$3; 2d, D. A. Segar, Westerly, \$2. *Black-breasted Red Game Chickens*—1st, W. & E. Jennings, Newton Lower Falls, Mass., \$3; 2d, S. P. Bullas, Providence, \$2; 3d, Wright Buckley, Valley Falls. *Brown Red Game Fowls*—1st, A. H. Rogers, Worcester, \$3. *Yellow Duckwing Game Fowls*—1st, A. H. Rogers, Worcester, \$3; 2d, W. & E. Jennings, Newton Lower Falls, Mass., \$2. *Yellow Duckwing Game Chickens*—1st, John H. Chase, Newport, \$3; 2d, A. H. Rogers, Worcester, \$2; 3d, Robert Plews, North Providence. *Silver Duckwing Game Fowls*—1st, A. H. Rogers, Worcester, \$3. *Silver Duckwing Game Chickens*—1st, W. & E. Jennings, Newton Lower Falls, Mass., \$3; 2d, Wright Buckley, \$2; 3d, A. H. Rogers, Worcester. *Pyle Game Fowls*—1st, A. H. Rogers, Worcester, \$3. *Pyle Game Chickens*—2d, W. & E. Jennings, Newton Lower Falls, Mass., \$2. *Irish Gray Game Chickens*—1st, A. H. Rogers, Worcester, \$3; 2d, W. & E. Jennings, Newton Lower Falls, Mass., \$2. *White Game Fowls*—1st, A. H. Rogers, Worcester, \$3.

COLUMBARIAN DIVISION.

CLASS XV—PIGEONS.

Blue Pied Pouters—1st, Benj. White, Pawtucket, \$2; 2d, Oliver Kendall, Providence, highly commended. *Black Pied Pouters*—1st, Benj. White, \$2; 2d, E. H. Hero, Milford, Mass. *Red Pied Pouters*—1st, Benj. White, \$2. *Mealy Pouters*—1st, Benj. White, \$2. *White Pouters*—1st, J. R. Goodale, Pawtucket, \$2. *Almond Tumblers*—1st, Benj. White, \$2; 2d, Oliver Kendall. *Red Tumblers*—1st, Oliver Kendall, \$2. *Black Bald-headed Tumblers*—1st, Edgar Burbridge, Providence, \$2. *Splashed Tumblers*—1st, Oliver Kendall, \$2. *Yellow Mottled Tumblers*—1st, E. H. Hero, Milford, \$2. *Highflyer Tumblers*—1st, Edgar Burbridge, Providence, \$2. *Kite Tumblers*—1st, Edgar Burbridge, \$2. *Black Barbs*—1st, Oliver Kendall, \$2; 2d, Benj. White. *Red Barbs*—1st, Edgar Burbridge, \$2. *Black Jacobins*—2d, J. R. Goodale. *Red Jacobins*—1st, E. H. Hero, \$2. *Yellow Jacobins*—2d, Edgar Burbridge. *Red Mottled Jacobins*—1st, E. H. Hero, \$2. *White Owls*—1st, Benj. White, \$2. *White Crested Calcutta Fantails*—1st, Benj. White, \$2; 2d, E. H. Hero. *White Smooth Heads*—1st, E. H. Hero, \$2. *Black Crested Pigeons*—1st, E. H. Hero, \$2. *Black Smooth Heads*—1st, E. H. Hero, \$2. *Black Mottled*—1st, E. H. Hero, \$2. *Red Mottled*—1st, E. H. Hero, \$2. *Yellow Mottled*—1st, E. H. Hero, \$2. *Blue Winged Turbits*—1st, J. R. Goodale, Pawtucket, \$2. *Black Nuns*—1st, E. H. Hero, \$2. *Black Magpies*—1st, E. H. Hero, \$2; 2d, J. R. Goodale. *Blue Magpies*—1st, J. T. Peckham, \$2. *Black Spots*—1st, E. H. Hero, \$2. *Red Spots*—1st, E. H. Hero, \$2. *Blue Swallows*—1st, Edgar Burlingame, Providence, \$2; 2d, E. H. Hero. *Black Mottled Trumpeters*—1st, Edgar Burlingame, \$2. *White Dutch*—1st, E. H. Hero, \$2. *Ring Doves*—1st, A. H. Rogers, Worcester, \$2; 2d, Wm. H. Grant. *White German Toys*—1st, J. R. Goodale, \$2.

CLASS XVI—RABBITS.

Lop-eared—1st, A. H. Rogers, Worcester, \$3.

CLASS XVIII—SUNDRIES.

Best Incubator, J. R. Goodale, \$5. Best coop of Hens and Chickens, S. P. Bullas, Providence, \$2. Best collection of Stuffed Birds, John H. Hague, Providence, \$3. Best collection of Stuffed Animals, John H. Hague, \$3. Best collection of Singing Birds, to be cased in attractive cages, Henry T. Root, Providence, \$5. Heaviest Cock on Exhibition, Jas. L. Bullock, Providence (12½ lbs.), \$3. Heaviest Hen on Exhibition, S. B. Bullas, Providence (11 lbs.), \$3. Best Transportation Coop, Joseph Dart, Oxford, Mass., \$5.

JUDGES: Philander Williams, of Taunton, Mass.; H. S. Ball, of Shrewsbury, Mass.

SPECIAL PREMIUMS.

1. H. A. & G. M. Church, Providence, for best collection not less than ten varieties of meritorious land and water fowl, by one exhibitor, gold vest chain, \$30; W. L. Tobey, Valley Falls. 2. M. T. Freeman & Co., Providence, for best pair Partridge Cochins, \$5; H. A. Rhodes, East Greenwich. 4. Anthony & Stebbins, Providence, for best collection Black Cochins Fowls and Chickens, \$5; Wm. Cooke, Pawtucket. 9. James Campbell, Providence, best collection Brown Leghorns, \$5; F. J. Kinney, Worcester. 10. J. T. Peckham, Providence, for largest and best collection of Hamburgs, \$5; George F. Seavey, Cambridgeport, Mass. 11. Edmund Davis, Providence, best trio of Plymouth Rock Fowls, \$10; J. T. Peckham, Providence. 13. Amos Whitney, Hartford, Conn., best pair Light Brahma Chickens, \$10; Wright Buckley, Valley Falls. 14. John Healy, Providence, best pair Buff Cochins, \$5; Wm. Hazard, Providence. 15. Edmund Davis, Providence, best Plymouth Rock Cockerel, \$5; J. T. Peckham, Providence. 18. "Pet Stock Pigeon and Poultry Bulletin," best pair Rouen Ducks, Volume 3, and subscription to Volume 4, of Bulletin, \$2.50; J. H. Chase, Newport. 20. F. J. Kinney, Worcester, best Brown Leghorn Cock or Cockerel of any age, \$5; awarded to Mr. Kinney. 21. Best Brown Leghorn Hen or Pullet of any age, \$5; also awarded to Mr. Kinney. 22. A. J. Robinson, Providence, best Black-breasted Red Game Bantam, silver cup, value \$10; W. & E. Jennings, Newton, Lower Falls, Mass. 23. Walter L. Tobey, Valley Falls, best pair Dark Brahma Chickens, \$5; Wright Buckley, Valley Falls. 24. Wright Buckley, Valley Falls, best collection Game Bantams, \$5; A. H. Rogers, Worcester, Mass. 25. H. H. Stoddard, Hartford, Conn., best S. S. Hamburg Pullet, Vols. 1 & 2, "Poultry World," value \$5; George F. Seavey, Cambridgeport. 26. Joshua Gray, Providence, largest and best collection of Houdans, pair silver cups, value \$10; E. C. Aldrich, Hyde Park, Mass. 27. "Pet Stock Pigeon and Poultry Bulletin," best collection Pigeons, bound Volumes 1 & 2 of Bulletin, value \$2.50; E. H. Hero, Milford, Mass. 28. John W. Mahon, Hartford, Conn., best pair Dominique Leghorn Fowls, one pair Light Brahma Chickens, value \$15; S. S. Van Buren & Co., Hartford, Conn. 29. Joseph M. Wade, Philadelphia, best Golden Duckwing Game Bantam Cockerel, subscription to "Fanciers' Journal," value \$2.50; J. H. Chase, Newport. 30. Farrington & Co., Providence, largest and best collection of Bantams other than Game, silver cup, value \$5; G. F. Seavey, Cambridgeport. 31. J. Snow & Co., Providence, largest and best collection of Geese, order for silk hat, value \$8; H. W. K. Allen & Son, North Attleboro'. 32. William Millin & Co., Providence, best pair of Fowls or Chickens of any new variety, one watering pot, value \$2.50; Wright Buckley, Valley Falls. 33. A. Crawford Greene, Providence, best pair Black Spanish Fowls or Chickens, order for 500 circulars, value \$5; W. F. Inman, Providence. 34. J. M. Wade, Philadelphia, largest and best collection of Golden or Silver Sebright Bantams, subscription to "Fanciers' Journal," value \$2.50; George F. Seavey. 35. "A Friend," Providence, best pair White Sultan Fowls, \$5; W. L. Tobey, Valley Falls. 36. Oliver Kendall, Providence, best collection of Pigeons, \$5; E. H. Hero, Milford. 40. "A Friend," Providence, best pair White-crested Black Poland Fowls, \$5; J. T. Peckham, Providence. 42. J. Herbert Collingwood, jeweler, Providence, best pair Sultan Chickens, four toes not to disqualify, vest chain, value \$6; Sam. W. Clarke, Warwick. 43. Sam. W. Clarke, Warwick, best Houdan Cock, \$5; Joshua Vose, Manton, R. I.

A party of northern gentlemen sojourning at Jacksonville, Florida, last month, took a hunting trip up the Ocklawaha, and returned to Palatka on the 18th, with the following report of the result of their eight days' trip: Alligators seen, 243; killed, 79; limpkins killed, 130; water turkeys, 25; great heron, 4; white heron, 2; painted gallinell, 20; coots, 150; eagles, 4; great owls, 2; black bass taken, 150 pounds.

PIGEON DEPARTMENT.

THE MAGPIE.

THE Magpie is one of the most beautiful of the Toys. It excites admiration wherever it is seen. The specimen I shall describe is a perfectly marked bird, and the winner of first prizes. He is two years old, and has the blood as well as the color, his young ones being like him. He is a golden-yellow bird, with white wings and breast. The white of the breast is marked in front by a line crossing the point of the breast-bone, and extending up each side to the under part of the shoulder joint, the lines then extend backwards to a line passing directly across the vent, the ends of which they intersect at the roots of the outer tail feathers of each side. All the parts (including the thighs) within these boundaries are of the purest white, and, where the colors are divided, the line is as sharp as though cut by a knife. Beak of a yellowish-white, pearl eye, and a hood broad and well-shaped, feet smooth and red. He is rather smaller than the common pigeon. By his side is standing a blue hen with white wings, breast and thighs; the dividing lines being the same as those of the yellow bird. Her beak is dark, eye pearl, and feet red, head plain; there is a dark bar across the tail.

In the same cage are red and black Magpies; the red is of a bronzed hue, and not the bright red, as I should like. Black and white are the original colors of the Magpie, and, I think, the best, as the contrast is greater than in any of the others.

From the description you perceive some are capped, and others are plain headed; the capped are in fashion just now. The four colors mentioned are the standard ones, viz.: a pure golden-yellow, not a pale yellow; a light blue, not a black blue; a bright red, not a bronzed red; and jet black, with a metallic lustre that must extend even to the tip of the tail. Blues and yellows are the rarest.

The eyes must be pearl, feet red, and beak a color corresponding with that of the bird.

This variety is of German origin, and bred from Tumbler strains. They have almost lost the tumbling trait, though I have seen them, when flown with Tumblers, revolving with the best of them.

If you will cross these with Tumblers, so as to get the coloring of the one and the tumbling of the other thoroughly settled in the one strain, you will have as handsome a flight as ever cleaved the air. A few seasons would be sufficient to accomplish the purpose, and it would be schooling yourself for higher experiments which you will wish to try, and for which you will need other knowledge than that found in books.

The prices for Magpies range from \$4 to \$15, though I have known \$30 paid for a yellow cock.—DR. W. P. MORGAN.

Items Interesting and Amusing.

Engaged for the next set—Hens.

Lap-dogs are not worn so much as formerly.

Seth Green is about to introduce the "grayling" as a substitute for trout. At least he caught two of 'em in the Au Sable River, Mich., and says they'll do.

Jenkins told his son, who proposed to buy a cow in partnership, to be sure and buy the hinder half, as it eats nothing and gives all the milk.

An anxious anti-cruelty-to-animals-inquirer wishes to be informed if such wholesale drowning should be tolerated, as putting the "City of Peking" into the Delaware?

A golden eagle was recently captured near Chetope, Kansas. The lucky captor was immediately offered ten dollars in bank notes for it, which he naturally refused, as he felt entitled to a premium on it.

A Spaniel named Curly, is the regular mail carrier between a settlement called Lake of Two Woods, Dakota, and the Minnesota line, twelve miles away. Letters and papers are placed in a sack, and tied about the dog's neck; he is told to go, and never fails to reach his destination. Arriving, the mail is overhauled, the faithful servant is treated to a good dinner, and started on his return trip.

Ex-Marshal Bazaine, now fulfilling his sentence on the island of Sainte Marguerite, only goes out for two hours in the day, walking in the court belonging to his prison, under the surveillance of two keepers. His meals are furnished by the boatman of the island, who is at the same time sutler of the troops. His guard is composed of ninety soldiers of the line and five jailors.

"What's hay?" asked a man of an honest granger in Burlington the other morning. The P. of H. told him \$13.50, and followed him around the wagon, as he examined the hay very carefully. He expressed himself as perfectly satisfied with the price, and liked the looks of the hay. "Shall I put it into your barn?" asked the granger. "Well, no," the man said, "I have no barn; I only want a good, clean straw to chew." The hay merchant looked as if he would like to make him eat the whole load.

A spunky hen and an unwise boy caused the total destruction by fire of a complete set of farm buildings in Greenfield, N. H., on Saturday last. The boy undertook to "break up" a sitting hen, and, after all other plans which his inventive genius could suggest had failed, he deliberately set fire to the nest under her, which was in a barn or shed adjoining. But even this did not conquer or drive her, and the result was that the hen, barn, sheds, and house, which were attached, were entirely consumed.

A schoolmaster delivered an address to his scholars, of which the following passage is an example: "You boys ought to be kind to your little sisters. I once knew a bad boy who struck his little sister a blow over the eye. Although she didn't fade and die in early summer time, when the June roses were blowing, with the sweet words of forgiveness on her pallid lips, she rose up and hit him over the head with a rolling pin, so that he couldn't go to school for more than a month, on account of not being able to put his hat on."

We hear great stories of the mammoth fruits and vegetables of California, but think they will hide their diminished heads at a yam which grew near Tongatabo, Sandwich Islands. This vegetable monster was twelve years in growing, and when ripe weighed a ton. It grew on a spot called Tabud, from a chief of that name who was killed there. The captain of a whale ship obtained permission to take it on board of his ship, but being interdicted from breaking it up on the shore, was forced to leave it.

A rather strange affair was discovered in a stable in this place, a few days since. While hunting in its secluded portions, two rat nests were discovered; one with ten young rats, and the other with eight small rats and two kittens, with their eyes yet closed, and appearances indicated that they had been there for some days; but how they got there was the question—whether stolen and adopted by the head of the rat family, or whether forsaken and carried there by the mother cat; but to prevent any future trouble they were all destroyed.

A very simple and yet useful instrument, called an egg-tester, has been gotten up by William J. Pyle, of West Goshen, a successful chicken raiser. It consists of a simple tin tube about six inches long, with one end the size and shape of an egg, tapering off to a smaller size at the other end; and by placing an egg in the large end, and looking through the tube with a bright light striking on the egg after it had been set upon about a week, you can readily discover whether the egg is a good one, and will hatch or not. The object of it is to examine eggs, being set upon at the end of a week, and to throw out all that are not good, and then remove the good ones to another sitting hen, and put fresh eggs in the place of those removed, thus preventing the disappointment so often experienced at having so few chickens hatched.

BREEDING HIGH-COLORED AND DARK CRESTED CANARIES.—Select for your breeding stock, high-colored birds, not quite clear, but having some slight marks or ticks about them. An absolutely clear bird is perfection, and to breed from such, is to insure decline. From such as I have indicated, you may expect to get high-colored, clear birds. I give this as a general rule, without going into the theory of the matter. Your buff cocks have what are known as gray crests. If you pair them with close-feathered hens having markings about them, you will get plenty of dark crests, and the more exact the marking of the hens, the greater chance there is of getting well marked and crested young ones. By pairing two buffs, you will get feather and compactness of crest, but at a sacrifice of color. All marked canaries are not higher in color than clear birds, but a depth of color is sometimes seen in a marked or ticked bird, which is not attainable in a clear one.—W. A. BLAKSTON, in *Journal of Horticulture*.

SHERMAN & Co., PRINTERS, PHILADELPHIA.

LARGE SALE OF FOWLS.

MR. C. N. BROWN, of Unadilla Falls, Otsego County, New York, has purchased the entire stock of fowls (excepting Houdans) of George H. Warner, New York Mills, Oneida County, New York. This addition to the fine stock previously owned by Mr. Brown must make one of the finest yards in this country. We believe Mr. Brown to be thoroughly reliable, and wish him all success in his new enterprise.

J. F. FERRIS, Stamford, Conn., has recently purchased the breeding stock of Light Brahmas, lately owned by H. A. Grant, Jr., Tarrytown, New York.

SPEAKING of "Raising Turkeys, Hens, Geese, &c., successfully," W. A. Browning, in his "Complete System"—the result of forty years' experience—says: "There should be a yard of one-fourth of an acre, in which nothing but turkeys should be allowed to go during the early part of the season. A yard set to pears, peaches, plums, and such fruit as every farmer should have, is just the place; and in trimming the trees or bushes, leave the brush in heaps, for the turkeys love to get into the brush, out of sight, to lay. In the latter part of March suitable nests should be made, and the turkeys made to stay in the yard until they lay." He also suggests selecting a lot having in it a spring or brook, along the margin of which they may find early vegetation, as well as a constant supply of water. We like the combined advantage of raising fruit and poultry in the same yard. For other valuable hints, read the above treatise (Jewett City, Conn.), which is well worth the price of 25 cents.

Arrangements are being made by the Doylestown Agricultural Society, to give full effect to its Spring Exhibition, and it expects, as usual, a full measure of success.

Correspondence.

(For Fanciers' Journal.)

THE FANCIERS' JOURNAL.

MR. EDITOR.

It is with pleasure that I receive from week to week the *Fanciers' Journal*, which I consider an excellent educator of the masses, as well as those interested in your specialties.

It is well adapted to more widely diffuse knowledge, and for creating a taste among people for things beautiful in nature. I have extended its circulation, by freely loaning each number of my paper to those disposed to peruse its pages; and the invariable opinion expressed in reference thereto has been: "It is an excellent journal and just what is needed."

Fanciers well versed in this kind of literature highly commend it, and not only praise the paper for its real merit, but say it is an instructive and pleasant pastime to peruse weekly matter of such vital importance. I would not do justice to myself if I did not express my own favorable opinion in reference to how well you are employing your great influence and talent through the columns of the *Fancier*, in furthering the important work of scientific breeding of blooded stock, for pleasure and for profit. In this way you materially aid in educating the rising generation to appreciate the beautiful, as well as that which is bred to perfection.

While the extended premium lists published to some would seem uninteresting, yet they subserve a great purpose, by encouraging competition, and by assisting those who are desiring to purchase from reliable parties, and those who only keep and sell stock competent for the show pen.

In breeding from pure stock, we always get creatures of worth, and those that will always command the price of the original investment. I can only say, go on in the great work you have undertaken, and while you are now considered as the pioneer, others will gladly follow in your wake.

Yours, very truly,

JAMES S. BAILEY.

ALBANY, N. Y., April 4th, 1874.

(For Fanciers' Journal.)

EDITOR FANCIERS' JOURNAL.

ON the 12th of March I sent to Mr. John K. Fowler, of Aylesbury, England, four White Leghorn hens. Two years ago I sent him a lot of Leghorns and Cayuga ducks, and in a letter to me, dated February 7th, 1874, he says: "The Leghorns bred me some splendid stock, and I have been successful in taking prizes with them at the Crystal Palace and other large shows."

J. Y. BICKNELL.

WESTMORELAND, N. Y.

(For Fanciers' Journal.)

EDITOR FANCIERS' JOURNAL.

DEAR SIR: As I have many inquiries about feed for fowls and chickens from those ordering eggs or fowls from me, and just getting a letter from a party, who, from twelve White Leghorn eggs sent him in February, hatched eight chickens from them, March 14th, and lost nearly all of them—killed them with kindness—I will give you a list of what he fed them: "Eggs, bread crumbs, oat meal, a little meat, chopped onions, canary seed, and wheat screenings;" now this is variety enough for fowls which one wished to have lay their level best; and, even then, I would omit the

onions, for I have seen fowls paralyzed or lose the use of their legs, and finally die from over-eating chopped onions. Cabbage is much better for winter, and grass for summer. Chickens will do best on corn meal and wheat screenings; while they stay with the hen they should have the same feed all the time. You would not give a baby any and everything; if you did, you would not raise many. I put my chickens out doors in a warm dry place, and feed them twice a day; early morning, so they will not run in the grass and get drabbed searching for food; and in the afternoon, so they will brood before dew falls, or if too early in the spring for dew, before evening chills. I seldom ever loose a chicken after they are strong enough to stand up. I have seen salt recommended to be put in chicken feed; if I wanted to kill mine quick, I would mix in a good quantity of it, and feed to them. I have also seen recommended boiled addled eggs; I think them unwholesome, but others can use them if they wish. Some say "wheat screenings are useless," but I find at \$1.65 per hundred, and at least three-fourths wheat, they are much cheaper than clear wheat, and the cheapest feed I have ever used. I bought some cracked wheat, and paid six dollars per hundred for it, but did not see much difference, except in price. Very respectfully yours,

C. A. PITKIN.

HARTFORD, CONN., April 7, 1874.

(For Fanciers' Journal.)

EDITOR JOURNAL.

I have a valuable hen that lays about every other day a soft-shell egg. She will sometimes be on the nest two hours; then again she will go off and on several times without laying. There is plenty of old plaster, gravel, egg shells, broken bone, and chalk for her to use, but it all seems to be of no benefit. She is not fat, but in a good healthy condition. Will you, or some of your readers, tell me of a remedy? I would also like to know what amount of epsom salts and castor oil is considered a dose for an adult fowl.

Yours,

R.

FULTON, N. Y., April 7, 1874.

Bird and Small Pet Department.

HOW BIRDS LEARN TO SING AND BUILD.

WHAT is instinct? It is the "faculty of performing complex acts absolutely without instruction or previously acquired knowledge." Instinct, then, would enable animals to perform spontaneously, acts which, in the case of man, pre-suppose ratiocination, a logical train of thought. But, when we test the observed facts which are usually put forward to prove the power of instinct, it is found that they are seldom conclusive. It was on such grounds that the songs of birds was taken to be innate, albeit a very ready experiment would have shown that it comes from the education they receive. During the last century Barrington brought up some linnets, taken from the nest, in company of larks of sundry varieties, and found that every one of the linnets adopted completely the song of the master set over him, so that now these linnets—larks by naturalization—formed a company apart when placed among birds of their own species. Even the nightingale whose native sound is so sweet, exhibits, under domestication, a considerable readiness to imitate other singing birds. The song of the bird is, there-

fore, determined by its education, and the same thing must be true as to nest-building. A bird brought up in a cage does not construct the nest peculiar to its species. In vain will you supply all the necessary materials; the bird will employ them without skill, and will oftentimes even renounce all purpose of building anything like a nest. Does not this well-known fact prove that, instead of being guided by instinct, the bird learns how to construct his nest, just as a man learns how to build a house.—*Popular Science Monthly*.

FUN IN ANIMALS.

It is well known that lambs hold regular sports apart from their dams, which only look on composedly at a little distance to watch, and perhaps enjoy their proceedings. Monkeys act in the same manner, and so do dogs, the friskiness of which resembles that of children. Mr. Leigh Hunt once told Dr. Robert Chambers that he had observed a young spider sporting about his parents, running up to and away from it in a playful manner. He has likewise watched a kitten amusing itself by running along past its mother, to whom she always gave a little pat on the cheek as she passed. The elder cat endured the pats tranquilly for a while, but at length becoming irritated, she took an opportunity to hit her offspring a blow on the side of the head, which sent the little creature spinning to the other side of the room, where she looked extremely puzzled at what had happened. An irritated human being would have acted in precisely the same manner.

PET CROWS.

It was my lot once upon a time to be down with fever in India. The room in which I lay was the upper part of an antiquated building in a rather lonely part of the suburbs of a town. It had three windows, close to which grew a large banyan tree, beneath the shade of whose branches the crew of a line-of-battle ship might have hung their hammocks with comfort. The tree was inhabited by a colony of crows. We stood—the crows and I—in the relation of over-the-way to each other. Now, of all birds that fly, the Indian crow must bear the palm for audacity. Living by his wits, he is ever on the best of terms with himself, and his impudence leads him to dare anything. Whenever by any chance Pandoo, my attendant, left the room, these black gentry paid me a visit. Hopping in by the score, and, regarding me no more than the bed-post, they commenced a minute inspection of everything in the room, trying to destroy everything that could not be eaten or carried away. They rent the towels, drilled holes in my uniform, stole the buttons from my coat, and smashed my bottles. One used to sit on a screen close by my bed every day and scan my face with his evil eye, saying, as plainly as could be:—"You're getting thinner and beautifully less; in a day or two you won't be able to lift a hand, then I'll have the pleasure of picking out your two eyes."

Amid such doings my servant would generally come to my relief, perhaps to find such a scene as this:—Two or three pairs of hostile crows, with their feathers standing up round their necks, engaged in deadly combat on the floor over a silver spoon or a tooth brush; half a dozen perched upon every available chair; an unfortunate lizzard, with a crow at each end of it, getting whirled widely round the room, each crow thinking he had the best right to it; crows

everywhere, hopping about on the table and drinking from the bath; crows perched on the window sill, and more crows about to come, and each crow doing all in his power to make the greatest possible noise. The faithful Pandoo would take all this in at a glance; then would ensue a helter-skelter retreat, and the windows darkened by the black wings of the flying crows; then silence for a moment, only broken by some apologetic remark from Pandoo.

When at length happy days of convalescence came round, and I was able to get up, and even eat my meals at the table, I found my friends, the crows, a little more civil and respectful. The thought occurred to me to make friends with them; I consequently began a regular system of feeding them after every meal time. One old crow I caught and chained to a chair with a fiddle string. He was a funny old fellow, with one club foot. He never refused his food from the very day of his captivity, and I soon taught him a few tricks. One was to lie on his back, when so placed, for any length of time, till set on his legs again. This was called turning the turtle. But, one day, this bird of freedom hopped away, fiddle string and all, and a whole fortnight elapsed before I saw him again. I was just beginning to put faith in a belief common in India—namely, that a crow, or any other bird that has been for any time living with human beings, is put to instant death the moment he returns to the bosom of his family—when one day, while engaged breakfasting some forty crows, my club-footed pet reappeared and actually picked the bit from my hand, and ever after, until I left, he came regularly thrice a day to be fed. The other crows came with surprising exactness at meal times; first one would alight on the shutter outside the window and peep in, as if to ascertain how nearly done I happened to be, then fly away for five or ten minutes, when he would return and have another keek. As soon, however, as I approached the window and raised my arms I was saluted with a chorus of cawing from the banyan tree; then down they swooped in dozens, and it was no very easy task to fill so many mouths, although the loaves were government ones.

These pets had a deadly enemy in a brown raven—the bramla-kite. Swifter than arrow from bow he descended, describing the arc of a great circle, and carrying off in his flight the largest lump of bread he could spy. He, for one, never stopped to bless the hand of the giver; but the crows, I know, were not ungrateful. Club-foot used to perch beside me on a chair and pick his morsels from the floor, always premising that two windows at least must be open. As to the others, their persecutions ended; they never appeared except when called upon. The last act of their aggression was to devour a very fine specimen of praying mantis I had confined in a quinine bottle. The first day the paper cover had been torn off, and the mantis had only escaped by keeping close at the bottom. Next day the cover was again broken and the bottle itself capsized; the poor mantis had prayed in vain for once. Club-foot, I think, must have stopped all day in the banyan tree, for I never went to the window to call him without his appearing at once with a joyful caw. This feat I used often to exhibit to my shipmates who used to visit me during my illness.—*Chambers' Journal*.

On Tuesday last, Edward Ashbridge, of East Goshen, slaughtered his mammoth hog which had excited considerable interest in the neighborhood as to its weight. When dressed, it weighed 1026 pounds.

THE SKYE TERRIER.

SIR: Before the type of Skye terrier is finally settled, I would fain, as an old fancier, say a word or two as to what the Skye terrier was in the days when I knew Skye.

It is thirty years ago and more, and all my old friends are, I believe, gone long ago; but I speak of the dogs of Mackinnon, of Corrychattachan; of Macleod, of Drynach; of Mackinnon, of Kilbride; of Macleod, of Orbst; of Martin, of Duntulm (pure white); of Macdonald, of Monkstadt; all of whom had numbers of the dog generally termed the Skye terrier.

The sport we used them for was otter hunting, sending four or five of them into the cairns by the lock side to start the otter, at which we might get a shot as he bolted to the water. They were the gamest little creatures. I have known one bitch stay a whole night in a cairn rather than leave an otter she could not reach—very bold. Any dog wincing at the threat of a stone was believed to have a colley strain.

The outline of figure was that of the weasel: long back, head set on neck at right angles, like the figure of "Charlie" (*Field*, Feb. 14), but in a waving line like a ferret's; brain pan large, muzzle long and pointed, nose fine and pointed and black, as also the palate; the eye, especially the bitch's, large, expressive, like a gazelle's; the head hair silky and long; the ear soft as a mouse's, not tufted, the best pricked, but often drooping, or one erect, the other not. The back long and wavy; the legs short and bandied, but not turnspit; the foot clean, small as a fox's, and not hairy (dew claws always twisted off); the tail, as nearly as possible straight, in a line with the back, not too long and feathered. The hair not cumbrously long, nearly quite straight, often, indeed generally, a little waved; not too hard, but never flabby, sometimes very short, but not curly. Any color so that it was all one, and the nose black: the slate-blue gray most prized.

There is a very good picture of one such as was considered perfection in those days in her majesty's "Islay," by Landseer, sitting up to beg of a macaw on a perch.

Some of the creatures I have seen at English shows, with snub noses, large hairy paws, woolly coats and curly tails are "Skyles" only in an entirely conventional and anglican sense.—*Field*.

LOSS OF SONG IN A CANARY WHILE MOULTING.—The loss of song is one of the usual accompaniments of moulting; even though the moulting may be complete, the bird will not, probably, break into full song this side of Christmas. He will be none the worse for a good rest. The time occupied in moulting varies from three or four weeks to months. Birds which are apparently fully moulted will, upon examination, frequently show a great number of half-developed feathers.—W. A. BLAKSTON, in *Journal of Horticulture*.

POULTRY SHOWS FOR 1874 & 1875.

Bucks Co. Poultry Association. Doylestown, Pa., December 8, 9, 10, and 11. Theo. P. Harvey, Secretary, Doylestown, Pa.

Maine Poultry Association. Portland, January 12, 13, 14, and 15. Fred. Fox, Secretary, Portland, Maine.

Connecticut State Poultry Society. Hartford, Conn., December 15, 16, 17, and 18. Dr. Geo. L. Parmele, Sec'y.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

WILL EXCHANGE—First-class Light Brahma, or Silver Gray Dorking Cocks, for Plymouth Rock or Dark Brahma Hens or Pullets. Also, White Leghorns for Brown Leghorns. Also, B. B. Red Games for Partridge Cochins, or any of the above for "Post-Office Orders" to a small amount. Address J. F. FERRIS, Stamford, Conn.

WANTED TO EXCHANGE—Dark and Light Brahma, Houdan, or White-faced Black Spanish Eggs, of premium and imported strains, for the same varieties, or Duckwing Game Bantam or Buff Cochins Eggs. Also, Light Brahma Cockerels in exchange for Eggs. W. D. NEILSON, 215 South Fifth Street, Phila.

TO EXCHANGE—Light Brahma Hens, and one Dark Brahma Cock, for Silver Spangled Hamburg Cock and Black Leghorn Pullet or Hen, or will exchange Light Brahma Eggs for them, or for other Eggs. E. J. TEMPLE, Wilmington, Windham Co., Vermont.

WILL EXCHANGE—Partridge Cochins, Buff Cochins, Black-breasted Red Game Fowls, for Aylesbury and Rouen Ducks, or Bronze or White Turkey Eggs. Send for particulars. Address JOS. D. GILLESPIE, Kerhonkson, Ulster Co., N. Y.

TAME DEER FOR FOWLS.—He is a choice Yearling Buck, very gentle—a real pet; will exchange for choice Light or Dark Brahmas, Buff, Partridge, or White Cochins. Send in your birds to J. B. BRIGGS, Russellville, Ky.

FOR EXCHANGE, or will sell, two pairs White Fantail Pigeons (smooth-neck), one pair Brown Leghorn Hens, and Eggs for hatching from a choice White Earlobe Stock of Brown Leghorns, second to none in America. W. J. WHEELER, Box 318, Worcester, Mass.

RUMPLESS FOWLS.—One pair, extra fine. Cock white, with rich buff wing-bows. Hen white throughout; has laid since January 10, 1874, almost continually. Will exchange for Pigeons—either Pouters, Fantails, or Nuns. Must be first-class birds. Address A. H. FITCH, JR., Wolcott, N. Y.

RABBITS—Dutch, common, and grades, for Nun Pigeons, Turtle Doves, or cheap for cash. To make room for imported stock. GEO. W. PARMELE, Hartford, Conn.

LAWN MOWER, in good order, to exchange for other property. What offers? JOS. M. WADE, 39 North Ninth St., Phila.

WHITE COCHINS.—A choice 1st premium trio, to exchange for trio good Black Cochins, or Brown Leghorns, by T. T. BACHELLER, Minneapolis, Minn.

THE BEAUTIFUL CHROMO, "Faith and Hope," in exchange for a good Black-breasted Dark Brahma Cockerel. Address P. O. Lock Box 22, Philadelphia, Pa.

WILL EXCHANGE—Dark Brahmas and Golden Spangled Hamburgs for Wright's Illustrated Book of Poultry. My stock is good. For further information, address WM. ATWOOD, Big Flatts, Chemung Co., N. Y.

WILL EXCHANGE the following for anything reasonable—Theological and Philological Books preferred, or \$15 per pair: One pair Black Cochins, 1st premium at Buffalo, 1873; one pair Black Cochins, 2d premium at Philadelphia, 1874. GEORGE C. ATHOLE, 152d Street, New York.

FANCY PIGEONS.—Wanted, first-class Colored Fantails, English and African White Owls, Yellow Balls, and Beards, in exchange for other varieties. Address, with particulars, W. ATLEE BURPEE, 1332 Arch Street, Philadelphia.

WILL EXCHANGE—Two trios Sicilian Fowls and ten Black Spanish Hens for Fancy Pigeons or cash. Address D. FRANK ELLIS, Cambridge, Mass.

TO EXCHANGE.—A Black and White Fox Hound Pup (male), 9 months old, for Buff Cochins. EBEN P. DAY, Hazleton, Luzerne Co., Pa.

WILL EXCHANGE Light Brahmas, Williams' stock, for White Leghorns or Red Game Bantams, from any reliable strain. W. FRANK BACON, Cambridgeport, Mass.

WILL EXCHANGE one trio handsome Blue Red Games, one trio Dark Brahmas, one pair Silver Duckwing Games, one Yellow Duckwing Stag, for Buff Cochins or Black Red Game Hens or Pullets. EBEN P. DAY, Hazleton, Pa.

WILL EXCHANGE two superior Red Barb Hens and a nearly perfect Yellow Swallow Cock for one Smooth-head Yellow Magpie Cock and Blue-capped Magpie Cock. Must be first-class birds. Address MITCHELL & CARRVER, P. O. Box 7.

OBRIIG BROS., Breeders and Dealers in Pigeons, Poultry, Pheasants, Song and Ornamental Birds, 472 Grand Street, Williamsburg, L. I. THEO. OBRIIG, C. E. OBRIIG.

Send for Price List and Circular. Correspondence solicited and satisfaction guaranteed.

LIGHT BRAHMAS.—Breeding stock reduced to a few very choice specimens, from which I offer Eggs at \$3 per dozen, carefully packed and delivered to express.

One or two nice young trios at \$6 per trio, if applied for at once. Also, one very fine 1st premium Hen of the Autocrat stock, weighing 11 pounds, at \$10. My stock are the produce of this last hen crossed with Natick and Col. Purse (out of Honest Abe) of the Felch strain. BURR H. NICHOLLS, Lockport, N. Y.

UNADILLA FORKS, OTSEGO CO., N. Y., March 31, 1874.

I have this day purchased of G. H. WARNER, New York Mills, N. Y., HIS ENTIRE STOCK OF FANCY POULTRY, including all his imported and premium stock of the following varieties: Dark Brahmas, Light Brahmas, Buff Cochins, Partridge Cochins, White Cochins, Black Cochins, La Fleche, Crevecoeurs, White Dorkings, Silver Gray Dorkings, Gray Dorkings, Duckwing Game Bantams, B. B. R. Game Bantams, Golden Sebright Bantams, Aylesbury Ducks, and Rouen Ducks.

The above fowls were exhibited at four shows the past winter, including that of the Central New York Agricultural Society, Central New York Poultry Association, Western New York Poultry Society, and the show at Macon, Ga. Mr. Warner made 121 entries and received 91 premiums, amounting to \$509.

I shall also continue to keep and breed the same varieties that I have bred for several years, namely, Houdans, S. S. Hamburgs, Golden S. Hamburgs, White Leghorns, Brown Leghorns, Golden Polands, W. F. Black Spanish, B. B. Red Game, Duckwing Game, Rumpless Brown Red Game Bantams, White-crested Ducks.

The above Fowls are all selected with great care and expense, and the two yards united will make the most complete yard of Fancy Fowls in the United States. Persons desirous of obtaining either Poultry or Eggs may rest assured that they will be dealt with in a square and honorable manner. Every order will receive my prompt and personal attention.

In order that the price may be within the reach of all, I shall reduce the price of Eggs to \$3 per dozen—two dozen for \$5. Eggs from the same stock that I breed from myself.

Thanking you for past favors, and asking for a continuation of the same, I am, yours very truly, C. N. BROWN, Unadilla Forks, Otsego Co., N. Y.

EGGS FOR HATCHING.—From superior stock Dark Brahmas, Light Brahmas, Partridge Cochins (Todd's strain), White Leghorns, Black Spanish, White and Golden Sebright Bantams, Cayuga and Plata Ducks, White Holland and Bronze Turkeys. Address DAVID W. BURNSIDE, Portland Mills, Parke Co., Ind.

EGGS.—From Buff and Partridge Cochins, Light and Dark Brahmas from Van Winkle's, Heinstein's, Williams', and Buzzell's strains, \$2 per sitting. JOHN C. WARNER, Blooming Grove, N. Y.

FOR SALE.—A first-class rosewood guitar. For particulars, address F. A. M. E. BROOKS, Sinnemahoning, Cameron Co., Pa.

CHICKENS.—Orders now being booked for furnishing, in June and July, Young Chickens, in flocks of from eight to twelve each, with hen to mother them, from pure strains of Brahmas, Cochins, Leghorns, and Hamburgs (all varieties), and Dominiques, Plymouth Rocks, &c. Prices reasonable. Terms cash, one-half only in advance. Send stamp with letters of inquiry to Order early. T. T. BACHELLER, Minneapolis, Minn.

DOMINIQUE LEGHORNS.—Eggs from this variety supplied, in rotation as received, at \$3 per sitting (13 eggs). Also, Eggs or Poultry of all the leading varieties furnished at short notice by JOHN DYER, JR., General Dealer and Breeder, No. 39 Federal Street, Alleghany City, Pa.

W. L. PAYNE, Zoar, Mass., Breeder of Light Brahmas of P. Williams' strain, and Plymouth Rocks of A. H. Drake's strain. Eggs, \$2 per 13, warranted to give satisfaction. Send stamp for description of fowls.

EGGS, \$3 PER 13.

WHITE LEGHORNS.

Fowls for sale after September 1st.

To persons sending me \$12 for four sittings of Eggs, I will send the *Fanciers' Journal* for one year.

To persons sending \$6 for two sittings, I will send the Standard of Excellence, as revised at Buffalo.

"THE BEST IS THE CHEAPEST."

Why it is believed my White Leghorns are superior to all others: From the fact that my stock has been awarded Fifty-four Prizes in 1872-73, and that the committee, in revising the standard, used and carefully examined a cockerel bred by me, and reported accordingly.

I can now fill orders for EGGS from my Selected Breeding Stock, on receipt of price,

\$5 PER DOZEN,

Cash or P. O. order on New Haven.

J. BOARDMAN SMITH,

P. O. Box 28, North Haven, Conn.

SEND FOR PRINTED PEDIGREE of my Brown Leghorns, from which I am selling Eggs at \$3 per dozen, and guaranteeing satisfaction. T. H. WALLIN, Box 130, Doylestown, Pa.

"Smith's Pet."

THOROUGH-BRED POULTRY.—The subscriber offers Eggs from Light Brahmas, Buff and White Cochins, Brown Leghorns, and Plymouth Rocks, at \$3 per sitting. The above fowls have received the leading premiums at first-class shows, thus characterizing them as birds of the highest merit.

MARK PITMAN, North Beverly, and 22 School St., Boston, Mass.

NATIONAL BEE JOURNAL.—MRS. ELLEN S. TUPPER, Editor and Proprietor. Devoted exclusively to Bee culture. Two Dollars a Year. The *National Bee Journal* is issued on the 15th of each month, contains sixty-four pages, printed on fine paper, in neat, clean type, and for the year 1874 has been greatly improved. Mrs. Tupper, having purchased the *Journal*, has removed it to Des Moines, Iowa, where it will hereafter be published under her own supervision. She will write for no other publication but her own, and in that she will give the result of that long practical experience which has placed her among the best, if not the best, authorities in this country on the honey bee.

Arrangements have been made with prominent bee keepers in this and foreign countries, for timely articles each month, upon important topics.

A special department has been assigned to "Notes and Queries," in which the various questions which arise in the practical experience of bee keepers each month, will be given, with pertinent answers by the editor. These will be condensed into the smallest possible space, and will be one of the most interesting features of the *Journal*.

The *Journal* will keep entirely clear of all entangling alliances with patent rights of whatever nature, and will be independent in the expression of its opinions. It will aim to be reliable, give only such information as will be of practical utility to its patrons, discarding theories and misleading propositions.

A limited space is devoted to advertising, which will be given to unobjectionable notices, at fair rates; and the large and rapidly increasing circulation of the *Journal* makes it a valuable advertising medium.

For circulars, containing club rates, premiums, advertising rates, etc., address MRS. E. S. TUPPER, Des Moines, Iowa.

AYLESBURY DUCKS of the best blood in this country. DRAKES of 1873, \$3; per pair, \$6; EGGS, \$3 per doz. Partridge Cochins Eggs, \$2 per doz.
E. S. DEMMON, Fitchburg, Mass.

EGGS FOR HATCHING.—I am now prepared to book and furnish Eggs from my imported and home-bred Dark and Light Brahmas, also, Partridge Cochins. Having bought in the spring of 1873 Mr. Philander Williams' (Taunton, Mass.) entire stock of Partridge Cochins, numbering some 80 odd head, consisting of all his imported, home-bred, and prize winning Fowls, which he valued very highly, and having bought of Joseph M. Wade (late Wade & Henry), Oak Lane Poultry Yards, Philadelphia, in 1873, quite a number of Dark Brahmas, among which were a number of prize winning Birds and 5 imported Hens. These, in addition to my last year's importations, gives me one of the finest flocks in America. My mode of packing Eggs insures their safe carriage. Orders solicited, and satisfaction guaranteed. Address
T. S. COOPER, Linden Grove, Coopersburg, Pa.

BLACK RUSSIAN CHICKS, bred by me, were awarded 1st and 2d premium at the great fair in Boston, 1873. I was also awarded 1st premium on Fowls and 1st on Chicks at Connecticut State Fair, 1873. Eggs from above stock, \$4.00 per sitting. Am selling eggs from Light Brahmas weighing from 11 to 13 pounds. Partridge Cochins and Plymouth Rocks for \$3.00 per sitting. All first premium and standard stock. For further particulars send stamp for descriptive circular to
LUCIUS DUNBAR, West Bridgewater, Mass.

FOR SALE—Eggs for Hatching, from pure Dark Brahma Fowls. Fresh and true to name. Price, \$4 per sitting of 15 eggs. Cash must accompany each order. Address R. D. B., P. O. Box 306, Bridgeton, N. J.

TO REDUCE BREEDING STOCK, I offer for sale a few good birds:

One trio Light Brahmas, at.....	\$12 00
One trio W. C. Black Polish.....	12 00
One pair White Leghorns.....	8 00
One pair Silver Gray Dorkings.....	8 00
One pair B. B. Red Games.....	8 00

ALSO, GOOD BREEDING COCKS.

Light Brahmas, White Leghorns, B. B. Red Games, Silver Gray Dorkings, &c., \$3 to \$6 each.

E G G S,

From Twenty Varieties, at \$2 to \$3 per nest.

Send for Illustrated Circular.

J. F. FERRIS, Stamford, Conn.

BREEDERS' AND GROWERS' DIRECTORY.

The most complete Directory of Breeders and Growers of every class ever published in this country, to be issued this season. For information, address early,
T. T. BACHELLER,

Editor N. W. Poultry Journal, Minneapolis, Minn.
Send 10 cents for sample of Poultry Journal, &c.

R. M. GRIFFITH, Belper Cottage, Wilmington, Del.—I now offer for sale Eggs from the following varieties of Fowls, that took first premiums of all the varieties mentioned, namely: White Cochins, White Polish, Golden and Silver-spangled Polish, and White Crest Black Polish, Golden and Silver-spangled Hamburgs, and Brown Leghorns. A few pairs or trios of fine Fowls for sale at reasonable rates. Also, very choice Pigeons of 65 varieties. 31 first premiums, 13 second, and 4 specials, at Buffalo, N. Y.; 25 first, 12 second, and 6 specials, at Pennsylvania Exhibition at Philadelphia. Send a green stamp, stating what you want.

Also, three Bloodhound Pups for sale.

PURE BRED STOCK, AND WHERE TO GET THEM!

RIVERSIDE STOCK AND POULTRY YARDS.

WM. WRIGHT, AND S. BUTTERFIELD, Proprietors.

We shall sell a limited number of sittings of Eggs, at \$5 per sitting, from Light and Dark Brahmas, Buff and Partridge Cochins. Our Light Brahmas are Williams' strain, pure. Yard No. 1—Cock Young Alexis, is mated with six prize Hens, all standard birds, and winners at Detroit and Buffalo Show. Yard No. 2—Cock Duke of Essex is also mated with standard birds, among them are the winners of 1st, at Detroit, for Chicks of 1873. Yard No. 3—Dark Brahmas; are our own direct importation of 1873, and are first-class birds of high merit, and we can safely recommend them to the fancier. Yard No. 4—Buff Cochins, imported from England, from Rev. Mr. Brooks' and Taylor's strains, and selected by our Mr. B. for breeding purposes. Yard No. 5—Imported Partridge Cochins; are standard birds, and mated with great care for breeding. We also make the importing and breeding of Lincoln and Cotswold Sheep, Suffolk, Essex, and Berkshire Pigs a specialty. Mr. S. Butterfield being personally acquainted with all the leading breeders in England, will leave on or about the middle of June to make a selection from the best pens of premium birds at the various shows in 1874. Any orders entrusted to him will be executed according to instructions, on commission or otherwise. All communications addressed with stamp, to
WM. WRIGHT,
Griswold St., Detroit, Mich.,
Or Riverside Stock Farm, Sandwich, Ontario, Canada.

EGGS FOR HATCHING.—Dark Brahma and Buff, White, and Partridge Cochins, \$3 per sitting; White Leghorn, Houdan, Plymouth Rock, and S. S. Poland, \$2; and S. S. Hamburg, \$2.50 per sitting. All from first-class and premium stock.

E. A. PECKHAM, Danielsonville, Conn

FOR SALE.

The location of these yards especially recommend them to Southern buyers. Send your orders early.

BROWN LEGHORNS.—After six years of im-
mortal breeding and study, I this year, for the first time, present my stock,
and feel that they will greatly improve whatever flock or strain they
may be added to. Their qualities for early market and profitable egg-
producers are familiar to all.

BAKIES.—As I was the first to import into the United
States the now famous *Dark Brahmas*, I have
pleasure in again being the first to import the *Bakies*; they are very
rare and choice in England; are in shape exactly like the *Creepers* that
are now so often referred to by farmers as being the most profitable fowl
they can remember; the *Bakies* are a black body, dark very short legs,
comb and white ear-lobe like Brown Leghorns, and as they cannot do
the mischief at large same as most fowls, present altogether a very de-
sirable, handsome, profitable fowl. Imported by steamship Batavia, Liv-
erpool to Boston, March, 1874.

C. CARROLL LORING, Boston or Dedham, Mass.

MOCKING-BIRD TO EXCHANGE for Brown Leghorn Pul-
lets. Also, 20,000 live Trout for sale. Eggs—Light Brahmas, Houdans,
White Cochins, \$1.50 per doz. Live Mink for Breeding. Partner wanted.
SPRING GROVE TROUT WORKS, Ossipee, N. H.

H. N. WHEELER, Mystic River, Conn., Breeder of pure Brown
Leghorns from the old Mystic River Stock, imported by Capt. Isaac Gates.
Eggs, \$3 per dozen. Orders taken now.

EGGS FOR HATCHING.

Light Brahma—with Felch & Buzzell cross, \$3.00 per doz.
Partridge Cochins—very finely marked birds, 3.00 "
White Leghorn—took premium at Boston Show, Feb., 1874, 3.00 "
Brown Leghorn—stock from the best strains in the country, 3.00 "
Orders filled in rotation, and nothing sent C.O.D.
Address with stamp, A. & E. WHITMAN,
Fitchburg, Mass.

EGGS FOR SALE.—\$3 for 13, delivered at Express office, from pure
bred Pea-Comb Light Brahmas, from Philander Williams' stock; Dark
Brahmas, and Buff Partridge Cochins from Todd's stock; Gold and Silver-
Spangled Hamburgs from imported stock. Also, FERRITTS for sale from
late importations. FOWLS FOR SALE SEPT. 1st, 1874.
Address WM. G. BAKER, Norwalk, Huron Co., Ohio.

AYLESBURY DUCKS EGGS.—Mrs. Wm. Taylor, Riverside,
Burlington Co., N. J., can spare a few sittings of Eggs at \$4 per sitting,
carefully packed.

THE "POULTRY WORLD" FREE TO ALL who purchase
Eggs from my premium strains of White and Brown Leghorns and Part-
ridge Cochins to the amount of \$6 and upwards. Send for new illustrated
circular. Address J. M. MCKINNEY,
Box 61, Ithaca, N. Y.

T. O. WARDWELL,

BREEDER OF

SUPERIOR DARK BRAHMAS, PARTRIDGE COCHINS & BANTAMS.

At the Show held in Boston, February, 1874, my stock were awarded
the following premiums:

(For Fanciers' Journal.)

CHURCHMAN, SWEET, ET AL. vs. HALSTED.

"HEAR ALL SIDES AND THEN DECIDE."

[We do not wish to be understood as indorsing all that our correspondents may have to say and do not hold ourselves responsible for their opinions.]

By a vote of the Convention, we were requested to publish its report in which the account of the expulsion of our correspondent appears, and as he was not heard before the Convention, we cheerfully grant him the use of our columns for that purpose, which are open for the free discussion of all subjects pertaining to the interests of fanciers.—ED.]

This was an action brought by the plaintiffs from malice and jealousy against the defendant, upon a trumped-up charge, in which the case was tried without any notice whatever being given to defendant; without any copy of complaint being served upon defendant, as is required by law; in fact, without any knowledge whatever on the part of the defendant of any complaint or action against him. The case was tried without judge, jury, or witnesses, and decided entirely upon the false testimony of the complainants; the defendant being tried, found guilty, and sentenced without a hearing, and without any knowledge of any action against him. The cause of action was an *assumed* one; one of which, *had* the defendant been guilty, it would have been impossible for the complainants to take legal cognizance of: First, because the laws (Constitution and By-Laws) recognize no such offence and prescribe no punishment; second, because the defendant being a delegate, action *must* be taken against the *Society* he represents, and *not* against the individual; and third, because the assumed offence was committed (if committed at all) *before the defendant became a member of the Association*—therefore, had there been any by-laws to govern action in such cases, he was *not* amenable to them. The whole case is analogous to the star-chamber inquisitorial cases which hold so infamous a place in history.

I would willingly leave this case with the above record, but the great number of letters, as well as *personal* inquiries for my statement of the case, warrant me in giving publicity to some facts which both the above-mentioned "complainants" repressed.

If my readers will refer to the *Poultry World* for January, 1874, page 7, they will find an article headed "*Representation of State Societies at Buffalo.*" This article originated with me, and was sent by me to H. H. Stoddard, after consultation with him at the Hartford show, to be mailed in the form of a printed slip to all our prominent poultry breeders. Five days *after* this slip was disseminated the President of the American Poultry Association sent out an invitation to the State Societies to send delegates to the Convention. This was on or about January 1st, two weeks before the proposed meeting.

On the same page of the *Poultry World* for January, the reader will find another article, headed "*The Standard,*" and signed "*Veteran.*" This also was written by me. The fears I then and there expressed have since been proved to be well founded. My only regret in regard to the article is that I made its application so *general*. This (as did the former article) brought out a verbose and bombastic reply, *immediately* upon the opening of the Convention, from *both* the above-mentioned parties, *and from no one else*, proving, as Mr. Stoddard himself remarked to me, that "*both shots struck home.*" Some time during the Convention Mr. Stoddard was induced to break faith with me and disclose who wrote the obnoxious articles. It was doubtless a case of "*Tickle me, Toney, tickle me, do; you tickle me and I'll tickle you.*" And then commenced the plotting which terminated with the infamous resolution passed at Boston on February 5th. Unfortunately (or probably fortunately, as the end is not yet) I was obliged to leave the Convention at the close of the second day, being called home by telegram, on account of sickness in my family.

These *honorable* and *high-toned* complainants speedily took advantage of my absence. First they circulated the report that I had come to the Convention to copyright the doings of the meeting for my own personal benefit. Knowing that I had at one time owned the copyright of "*The American Standard of Excellence,*" and supposing that I *still* owned it, and knowing also that by this Convention they were appropriating the individual property of the owner of that copyright, they doubtless felt "*uneasy in their shoes.*" A month or more before the meeting the President of the Association had authorized a party to try and buy my copyright, but, as I had already sold it to another party, I could not treat with him.

After I left they said, "See how quickly he left after we passed the resolution prohibiting any minutes being taken except by the Secretary of the Association. He had no news from home; that was only a sham." When I received the telegram in question I was sitting at a table, writing up my report as chairman of the Committee on Crevecoeurs, &c. Mr. George W. White, I think it was, was sitting opposite. The messenger handed the telegram to him, and he passed it across to me. I have no doubt but Mr. White will certify to the correctness of this statement.

The next move was the Willis affair, which I have already answered in my protest to the Association. There is, however, something yet in this matter which the public does not know, and which I propose to ventilate. The members of the Association were told (by the same parties) that if any proofs were needed of my culpability in the affair, the register of the Bloomer House bore witness of my guilt; that I had there entered the names of Mr. Estes, Mr. Willis, and myself, and *that* alone was enough to convict me. Mr. Churchman cannot plead ignorance of Mr. Wade's handwriting; and Mr. Wade will certify that *he*

engaged rooms for us at the Bloomer House, and entered our names on the register to secure them. This fact was brought up in the debate at Buffalo, and there, on the floor of the house, publicly refuted by Mr. Estes. And yet, I am told, the lie was still persisted in at Boston, to influence those who were not present at Buffalo.

Mr. Estes also publicly called the attention of this honorable and truthful President of "the strongest, most prosperous, and dignified body of men ever assembled together for any honorable purpose," to the fact that action could only be taken against the society, and not against the individual; but, no! the "boss" ruled otherwise, and his pliant tools did as they were bad(e). I do not wish to be understood as saying that all the members of the Association were under the influence of the "Ring;" far from it. I know that by far the larger portion of the members will repudiate with indignation the actions of those who have used their high positions to carry out their own petty malignant schemes. I know that a number took strong ground against such hasty action in the matter; but the "boss" had sent forth his decree and, according to the law of the Ring, which hateth him they have injured, the decree must be enforced.

I have taken legal advice upon this matter, and there is not a doubt but that the President and Board of Officers have laid themselves open to an action for libel. Whether I shall take this course or not will depend a great deal upon future events. My lawyer advises me that I am still a member of the American Poultry Association; that the resolution passed is null and void, being illegal for the reasons heretofore stated.

With this I shall drop the matter through the press, unless forced to reply to other attacks.

A. M. HALSTED.

RYE, N. Y., April 10, 1874.

(For Fanciers' Journal.)

REMINISCENCES OF THE "HEN FEVER."

BY GEO. P. BURNHAM.

The *Cochin* fowl is a good domestic bird. Its true history, in a few sentences, may prove interesting to your readers, though a vast deal has been written and said hitherto for and against this stalwart representative of the *gallus giganteus*. It occurred to me to set down among the "Reminiscences" I am writing for the *Fanciers' Journal* what I know about this variety upon seeing in your columns or elsewhere recently that "the first Partridge Cochins were imported into England in 1847"—a statement I never before met with, and which is unquestionably an error in date.

The first Cochins (or Cochin Chinas) of which we have any modern account, so far as I am informed, were sent from China by the British ambassador there, to Her Majesty Queen Victoria, in 1843 or 1844. The monstrous proportions of these fowls astonished the people of England vastly, and the English illustrated journals were shortly occupied with pictures and accounts of these giant chickens, which were a huge novelty to Messrs. John Bull.

They were wonderful in dimensions and carriage, extraordinary layers (Mr. Walters, the Queen's poultry-keeper, verifying some one's curious statement that "the hens laid two eggs in a day frequently, and sometimes three"). They were hardy, flame-colored, very quiet, and altogether were a most valuable acquisition to the poultry of the old coun-

try, as everybody, on sight of them, admitted. These "Cochins" were perfectly smooth-legged, and Harrison Weir's pictures of them in the *London Illustrated News*, "by royal permission," gave very accurate portraits of this rare consignment, which at that time (1844) were described as belonging to the family of the *Otis tarda*, or Great Bustard, from their kindred formation and immense size.

I read these accounts, saw the engravings in the London papers, and in 1847 sent to England for half a dozen of them. The Queen presented a prize pair to Lord Heytsbury, then Lord Lieutenant of Ireland, and he sent them to J. Joseph Nolan, of Bachelor's Walk, Dublin, to breed. I communicated with Mr. Nolan, and finally purchased two cocks and four pullets of this Queen Victoria "Cochin China" stock, which were the first Cochins imported into America by a citizen of the United States by at least two years in point of time. I bred these smooth-legged fowls, with others that I received subsequently from Canton for several years, and disposed of hundreds of fine birds from this stock, though I never thought them equal to the Gray Shanghais (or Brahmas) by a long mark.

These were the original "Cochins," however. They were so called by the English breeders, and this name, for the Queen's stock, was never changed. Why they were denominated "Cochin Chinas" no one has ever yet been able to determine. Certainly they never saw Cochin China, and nobody in that Southern Chinese province ever saw any such fowls there. Mr. Fortune, who was for a long time a resident and traveler in the East, says that "whoever thus named these birds has much to answer for, since denizens of Cochin China say of these fowls, when subsequently seen by them, that they astonished those people quite as much as the sight had exercised Englishmen." Still, these were the first known "Cochin Chinas," of which, as I have stated, I imported the first of their progeny into Massachusetts.

The Cochins of to-day are heavily feathered upon the legs, as we all know. I received from China, fifteen or twenty years ago, three or four different lots of variously colored fowls, most of which were thus feathered to the toes. In the case of my *Cochins* I called them "Royal Cochin Chinas," to distinguish them from the others, which I denominated White, Buff, Brown, or Gray *Shanghais*, because the latter (with the exception of one lot I imported from Canton) all came direct from Shanghai.

In course of time other parties imported fowls from England or China, and the poultry societies in Great Britain decided upon calling the Chinese fowls "Cochins." The American associations followed this lead; the "standards of excellence" discarded the name of Shanghais altogether from their lists, and adopting Dr. Bennett's name for the grays and the English style for the other colors, we now have only the "Cochins" and "Brahmas" for this Chinese stock, which is quite as well since everybody agrees to it.

The original "Cochin Chinas" imported into England, and first bred in this country in my yards, were quite unlike the present fowls bearing this name, as I have briefly stated. The modern "Cochin" is a far better bird in all respects. At that early day, however (near thirty years since), the first-comers were deemed very extraordinary fowls, and I sent samples of these chickens all over this country for years afterwards. They have quite run out now. I have not seen a smooth-legged "Royal Cochin" for many a day.

As to Partridge Cochins, the first I ever met with were

imported from China thirty years ago by Rev. Mr. Marsh, of Dedham, and they were good ones too. I alluded to this fine stock in a late paper sent you. There were exhibited by Isaac N. French, of Holbrook, Mass., at the last Boston Show, some splendid specimens of this variety—pullets at ten months old drawing ten pounds, and perfect in penciled plumage. They are hard to beat, and are the genuine China stock. Mr. French has bred them a great many years in their purity, and gets a round price for his best birds even at this late day. For their class, I consider this strain of blood the very best we have ever had in this country, and I have bred and exported to England hundreds of this family, first and last. But *these* fowls came from Shanghai also. They are very heavily feathered upon the legs, and were known in the old days as "Marsh Shanghais," to distinguish them from the imported "Forbes Shanghais," the "Cushing Shanghais," the "Burnham Shanghais," &c.

There is now no question existing as to the leading fact that the Queen's Cochins and the Cochins of the present time all originated in China. But the first mentioned were long-tailed, long-bodied, long-legged, smooth-limbed birds. The "Cochins" of to-day must be heavily feathered to the tips of their toes, or they are disqualified in the exhibition-room in competition for fowl-show premiums—as every one is now aware.

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

"YOU AND YOUR NEIGHBOR."

I MUST add a little testimony to A. N. R.'s article, under the above heading, in No. 14. Last spring one of my neighbors borrowed some Duckwing Games of me, procured some Black Reds of another neighbor, then advertised as follows: "My Duckwing and Black Reds I sell eggs from, are imported, and their progeny are from a noted breeder in England, who has made these two varieties a specialty for over twenty years; and I have reason to believe they are the best of the kind ever imported into this country." He did not have an imported bird in his yard; all his Duckwings were bred from my stock. This season he advertises largely, and claims to sell eggs from "Duckwing Games (imported strain)." He represents to his customers that his fowls are the very best, and that his neighbors sell inferior stock and eggs, from common fowls and mongrels. I hope the time will come, when we will have a detective department in our journals, and that such humbugs will be ventilated.

J. Y. BICKELL.

WESTMORELAND, N. Y.

THE CANADA GOOSE.

A WRITER in the *New England Farmer* thus describes the Canada or wild goose:

Among the birds which migrate far from northern latitudes during the winter months, there is no species viewed with more general interest than the Canada goose, especially in New England, and yet in the majority of cases the extent of the knowledge of these birds is confined to their harsh note of "awhonk honk," and their regular and systematic manner of flight. The plumage of this goose is very handsomely marked; the head a glossy black, as is also the neck, except a band of white across the throat; the upper part of the body is grayish brown, the wing coverts pale gray edged with brown, the lower parts of the body shading into grayish white, the abdomen pure white and the tail black.

The movements of the Canada goose upon the land are rather awkward, but upon the water they are extremely graceful, resembling the gray swan. The native land of this magnificent bird is far to the north, great numbers of them being found in Labrador and the adjacent islands; here they remain during the short summer of those latitudes, breeding quite abundantly. Their nests are usually formed upon the ground, of small sticks and plants and coarse grass; the eggs are of a dull greenish tint, rather elliptical in form, and somewhat larger than a medium hen's egg; the period of incubation is four weeks. The male bird during this time never leaves the side of the female, except to procure food, and takes her place at intervals. The young brood follow their parents to the water at a very early age, and are watched over and taught by both until they are able to care for themselves, and the whole family remain together until the following spring.

Early in September the various families begin to gather for a general departure for a more genial climate, and at the first prospect of a snow storm, the note of departure is sounded, and after an hour or two spent in teaching the young their order of march they start, usually with an extended front, then in a single line, but gradually assume the angular form in which we most commonly see them; the elder males take the front, the females follow, and the young according to their strength, the weakest having the rear. They usually continue their flight two or three days before they are sufficiently fatigued and hungry to care to take much rest, but they occasionally stop for a night or day in the neighborhood of some lake or arm of the sea to satisfy the cravings of hunger and renew their strength. Great numbers of them proceed as far south as Texas and Florida, although some remain in the Middle States, during winter, but they breed in these warm countries very spar-

ingly, and they evidently consider themselves as only sojourners in these sunny lands, and with the first approach of spring they joyfully commence their migrations northward, often so early as to encounter snow storms and fogs, which bewilder and trouble them exceedingly. They are said to have a wonderful acuteness of sight and hearing, and seem readily to distinguish between the step of a deer or other animal and that of man. They are quite shy and vigilant, especially near the sea coast, and usually one or more stand sentinels while the flock repose.

The flesh of the Canada goose is much more palatable when found inland than those taken near the sea coast, on account of the difference in their food, which in the one case is comprised largely of fresh water plants, corn, and grass, and in the other, of marine insects, shell, and a marsh grass. They, in common with other varieties of the tribe, attain a venerable age, some having been known to have lived forty or fifty years. Their weight is from five to eight pounds. They are easily tamed, and with a little care it is thought by many that they might become a valuable acquisition to our domestic fowls.

ESSEX COUNTY (MASS.) POULTRY ASSOCIATION.

THE following is the official list of premiums awarded at the first annual exhibition, held at Salem, on Wednesday, Thursday, and Friday, March 4th, 5th, and 6th:

The newspapers awarded as premiums were as follows: To No. 3, *Peabody Press*, one year; No. 7, *Salem Gazette*, one year; No. 10, *Salem Observer*, one year; No. 11, *Salem Register*, one year; No. 12, *Salem Post*, one year; No. 23, *Massachusetts Ploughman*, one year. The latter was presented by Dr. George B. Loring; the others by the publishers.

CLASS I.

Light Brahmas—Fowls—1st and 2d, Joseph Hutchinson, Lynn; 3d, J. C. Underhill, West Peabody. Chicks—1st and 2d, Mark Pitman, North Beverly; 3d, Joseph Hutchinson, Lynn. *Dark Brahmas*—Fowls—1st and 2d, Mark Pitman, North Beverly; 3d, Charles P. Jacobs, Peabody. Chicks—1st, Mark Pitman, North Beverly; 2d, W. M. Ward, Peabody; 3d, Mark Pitman, North Beverly. *Buff Cochins*—Fowls—1st, Mark Pitman, North Beverly; 2d, D. B. Wallace, Lynnfield; 3d, John Swinerton, Danvers. Chicks—1st, Mark Pitman, North Beverly; 2d and 3d, John Swinerton, Danvers. *Partridge Cochins*—Fowls—1st, E. R. Perkins, Salem; 2d, George F. Barnes, Peabody. Chicks—1st, W. B. & W. A. Atwill, Lynn; 2d, Bennett Griffin, Gloucester; 3d, E. C. Spofford, Peabody. *Black Cochins*—Fowls—1st and 2d, S. J. Dow, Peabody. Chicks—1st, E. R. Perkins, Salem; 2d, S. J. Dow, Peabody; 3d, James F. Foye, Peabody. *White Cochins*—Fowls—3d, J. E. Hathway, Salem. Chicks—1st, D. B. Wallace, Lynnfield; 2d, J. C. Underhill, West Peabody; 3d, E. R. Perkins, Salem.

CLASS II.

CLASS XIV.—No Specimens.

CLASS XV.

Stuffed Birds—1st, N. Vickary, Lynn; 2d, Raymond Newcomb, Salem.

(For Fanciers' Journal.)

A DISEASE NEW TO ME.

MR. EDITOR.

I wish briefly to describe a disease which affected two of my Ginger Red Game fowls, a stag and a pullet: The stag showed symptoms of roup, I thought, but the peculiar part of it was, that both the head and neck began to twist until it became spiral shaped; then the loss of the use of their legs. In attempting to right themselves they would tumble in all sorts of shapes; and the pullet did not seem to be sick otherwise, indeed, both would eat when held so that they could pick, but partially lost sight, as in roup. I cut off the head of the stag from Berghian motives, and let the pullet lay with her neck all twisted until she died, to see the course of the disease. I must also mention that a spasmodic twitching sometimes was manifested. I wish some one could give cause and remedy for this additional discouragement to poultry breeding, and perhaps oblige others besides.

V. M. F.

DUFFIELDS, WEST VA.

(For Fanciers' Journal.)

TO BOX A PAIR OF FOWLS.

TAKE some cheap lumber, two pieces 16 inches wide, and 24 inches long, for the top and bottom, then nail on strips of lath for the ends and sides; nail the strips on as wide apart as it will bear, so as not to let the fowls out; if you get the strips too near together, there is a liability of the fowls getting their heads fast; this makes a very convenient box for sending off fowls; it is very light, and a great saving of express charges. There is a great necessity for providing food and water for fowls for the journey. There should be a tin cup tacked in one corner of the box about six inches from the bottom, to hold the water, and a small sack of grain, so the Express Company can feed them, and mark the box thus: Feed, and water, morning and evening.

P. J. KELLER.

(For Fanciers' Journal.)

POULTRY.—STRAY GRAINS.

FEED your poultry raw onions chopped fine, mixed with other food, about twice a week; it is better than a dozen cures for chicken cholera. Garlic fed once or twice a week is excellent for colds.

Close up all cracks in poultry houses near the roosting poles. Fowls very much dislike air which reaches them

through cracks and crevices. See that plenty of pure water is within easy reach of your chickens at all times. Earth worms are greatly relished by confined fowls. Take a spade and turn over the ground once each day for your hens. Mix wood and coal ashes, dry sand, and a little flour of sulphur, and place where your fowls will dust themselves in it; it will keep them clear of vermin. Give corn meal scalded with water, in which is added two tablespoonfuls of copers dissolved; two good sized red peppers are steeped and mixed with the meal; feed it to them when they first leave the roost in the morning. This is the best preventive of chicken cholera.

P. J. KELLER.

A GREAT CURIOSITY.

LAST week Mr. Henry Kline, of Juniata township, brought to this office one of the most remarkable curiosities we ever saw. This consisted of a hen's egg, having a well developed snake inside the shell. The egg was one that was fresh laid and full size. When broken, Mr. Kline noticed something mixed in the white which he thought he would take out. He, therefore, lifted it up, when he noticed it move, and closer examination showed a tongue dart out in the most approved snake fashion, while the eyes could be plainly seen. So singular a freak of nature was worth particular notice, and so he placed the egg and snake in a glass and brought it to this office, where it was examined by a great number of persons, all of whom expressed their astonishment. The snake was about two inches long and about as thick as a turkey quill, and was almost colorless. The questions which naturally arise are, how did it come there, and what would have been the result had the egg been hatched?—*Bloomfield (Pa.) Times*.

(For Fanciers' Journal.)

SHEDD'S ALBIONS.

JOS. M. WADE, ESQ.

DEAR SIR: At your request, I send you an article on my "Albions." About twenty years ago, a gentleman received a very large white hen from a friend in New York, now supposed to have been a single comb Light Brahma. This hen was bred with a single-comb White Dorking cockerel. The progeny was bred in for two years; then another white cockerel (I do not know what breed) was bred with these pullets; the result was very fine birds were obtained. The breed was kept as pure as possible, never breeding any birds with feathers on the legs, or with five toes. When I first bought my birds they were of smaller size than they now grow. I bought them in 1864, and they were fine birds then. They have been bred with care, and will now breed true. They are very hardy, very good layers, and good mothers, not offering to sit as often as the Brahma. I have had them weigh four pounds apiece when about three months old. The plumage is pure white, except on the male bird. When two years old or more will show cream color, the legs bright orange yellow perfectly free from feathers, face bright red. I can show three generations of perfect specimens.

Yours respectfully, WM. E. SHEDD.

The Forester Club, of Penn Yan, Yates county, New York, have just placed 100,000 young salmon trout into Keuka Lake. Over 250,000 of these fish have been put into these waters within the past three years, and the largely increased number of small fish caught in the lake last year, shows that the efforts at restocking have not been without its useful results.

Items Interesting and Amusing.

 Carlisle has a hen that lays eggs with a perfectly black shell. The hen is of the Dark Brahma breed, and has laid nine of these black eggs.

 When your pocketbook gets empty, and everybody knows it, you can put all your friends in it and it won't "bulge" out worth a cent.

 Henry Williams, a boy 16 years of age, was killed a few days ago at Wells, by the accidental discharge of a gun which he was dragging along by the muzzle.

 The Spring Exhibition of the Chester County Agricultural Society, will be held at West Chester, on the sixth of June—one day only. The premium list has been revised on a liberal scale, agricultural horse-racing being quite prominent, there being no less than five premiums under this head, ranging from \$200, \$150, and so on down.

 On Ayjip's banks, contiguous to the Noile,
King Pharoah's daughter wint to walk a whoile;
And peeling off her dhubs to take a schwim,
Ran up and down the banks to dry her sekin;
And rushing thro' the rushes thick and thin
Discovered the basket that the choild lay in,
And thin and there she croid in accent woild,
"Which ay yees ladies owns this choild?"
It's none o' your own gossoon's you're quick to say;
An' that's the thruth, I've known you many a day;
But since we've found him in the bed of roses,
By all means let us christen him Moses."

 Not long since a gentleman found in his hennery a simple-minded soul of the vicinity, who lived without any visible means of support. "What are you doing here, you rascal—stealing my chickens?" "No sir; I thought of doing nothing of the sort." It unfortunately happened that the simple-minded individual wore a high hat of the dimensions of a beehive, and the crown thereof was dilapidated to a serious extent. Just as he had put in his denial, the head of a half-grown pullet was seen to protrude from the aperture. "See here," said the gentleman, "how did that chicken get into your hat?" "Well, sure, your honor," exclaimed the simple-minded individual, with an air of honest surprise and embarrassment, "that is the strangest thing that ever happened to me. I suppose the creature must have crawled up my trowsers' legs."

 MR. DARWIN'S "MISSING LINK."—On the Island of Borneo has been found a certain race of wild creatures, of which kindred varieties have been discovered in the Philippine Islands, in Terra del Fuego, and in South America. They walk unusually, almost erect, and, in that attitude, measure about four feet in height. They construct no habitations, form no families, and scarcely associate together, sleep in caves and trees, feed on snakes and vermin, on ants' eggs, and on each other. They cannot be tamed or forced to any labor, and are hunted and shot among the trees like the great gorilla, of which they are a stunted copy. When captured alive, one finds with surprise, that their uncouth, jabbering sounds are like articulate language. They turn up a human face to gaze at their captors, and the females show instincts of modesty; in fine, these wretched beings are men and women.—*Siam Weekly Advertiser*.

 A QUESTION FOR THE POSTMASTER.—A lady of Hibernian extraction, rather tall and gaunt, who supports a husband and several children on a barren ranch at the southern end of the county, afforded entertainment for a dozen or more people at the Post Office of one of our Western cities. Elbowing her way through the crowd to the window of the stamp clerk, she presented to his vision a live rooster, and demanded what the postage would be on the feathered gentleman to a neighboring station. The clerk, after considerable debate, succeeded in proving to the lady that such articles were not allowed to pass through the Post Office.

 A very peculiar specimen of the fox tribe, says the *West Chester American Republican*, made its appearance recently on the Brandywine and Doe Run hills. It was pursued from time to time by a pack of thirty trained fox hounds, but every time Reynard was equal to the emergency, and went under the Doe Run rocks, where he could not be dug out. At the hole where the fox usually went under, there were finally stationed ten dogs, and a party of men. The rest of the pack soon after found his trail, and when they began to run him pretty close, he made for the hole as usual, but seeing the unhealthy look of affairs about home, he turned, and after a long run, took the earth on the farm of Jos. L. Pratt, in Newline, where he was dug out. He proved to be one of the strangest foxes ever seen in that part of the country, having the appearance of a Maltese cat, and is of an entirely different color from the foxes of that section. He was taken to Mr. Clayton's fox kennel, on his farm near Marshalton.

 WILD GOOSE SHOOTING.—The season for wild goose shooting on Long Island has commenced. As the birds are very shy, it requires a good deal of skill on the part of the sportsman to come near enough for a shot. The method generally employed, is to obtain from fifteen to twenty wild geese, by "winging" them on their passage north or south—the old-fashioned "stoolers" being regarded as entirely behind the age. These are tamed so that they can be "lined" to stakes, when they are taken to the bars where the wild geese usually stop to feed, and fastened to stakes put down in the sand out of sight, while the gunner conceals himself in a box sunk in the sand, and partially covered by seaweed or meadow grass. When flocks of wild geese are passing, these partially tamed ones will call them, and usually they will fly near by, or alight, when the gunner rises and shoots. Experts have killed as many as twenty-five at a shot. The flocks of tame geese are regarded as very valuable.

 TEACHING A BULLFINCH TO PIPE.—A bird organ can be had at any musical-instrument shop. The bird must be taken in hand when very young, and before he has had an opportunity of learning any other song. Confine him in a dark closet, or prevent him from having his attention distracted by outward objects, by covering his cage with a cloth. Then give him his lessons early in the morning on an empty stomach, and reward a chirp with a grain of hempseed. After morning lessons give him his breakfast, and eat your own in the exercise of great faith. Always play your tune from beginning to end without a stop, with an organ—any other plan, of course, is impossible, the difficulty sometimes being to get a refractory instrument to stop when you wish it; but if you vary your instrumental solo with whistling, you must not whistle snatches of any mel-

ody, but the entire tune. Teaching Bullfinches to pipe well is an art almost entirely confined to the Continent, and well-drilled birds realize high prices. Many can pipe a simple air almost to its close, but when they come to the last bar, they finish with a cadence scarcely more melodious than the fag end of a Cochín cock's melancholy crow.—W. A. BLAKSTON, in *Journal of Horticulture*.

A MADRAS FISH STORY.—The coroner has held an inquest at the General Hospital, Madras, respecting the death of a native man who is reported to have died from suffocation by a fish accidentally jumping into his throat. It appeared that the deceased was catching fish in a shallow tank with his hands, and having caught one about six inches long and one and a half inches thick, he placed the head of it in his mouth and bit it, as the fish was troublesome and wiggled about. While thus employed one of the sharp points in the back fin stuck in his hand, and on opening his mouth and crying out for help, the fish jumped into his throat and stuck there. The deceased tried to remove the fish, but was unable to do so. He was taken to the General Hospital, and the fish was removed by small pieces. Dr. Paul stated that he tried to remove the fish, but was unable to do so, and found that the only means of removing the fish from the man's throat was by making an opening in the neck. The deceased was much exhausted, and died as soon as the fish was removed, the following day at 10 A.M. The jury in their verdict found that the deceased died from suffocation by a fish accidentally sticking in his throat.—*Madras Athenæum*.

Correspondence.

(For Fanciers' Journal.)

EDITOR FANCIERS' JOURNAL.

DEAR SIR: Can you tell me what is the matter with pigeons when they sit moping around in corners, lose all appetite, and eventually die. I have lost dozens of pigeons by this disease, and not knowing what to do to help them, have had to have their necks wrung. If you can answer the above, and give a remedy for it, I will be much obliged. Please answer through the columns of your valuable paper.

W. V. K.

SAVANNAH, GA., April 7th, 1874.

(For Fanciers' Journal.)

A LIBERAL OFFER.

JOS. M. WADE, ESQ.

I highly value your paper, and desire that it may add many fold to its already large circulation, and in order to lend my aid to that end, I will give two sittings of Brown Leghorn eggs to the first person sending you five new subscribers, accompanied with the cash, before May 1st. Eggs from my pedigree stock, fresh and well packed, and delivered to express.

Respectfully,

THOMAS. H. WALTON.

DOYLESTOWN, PA., April 13, 1874.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: It may benefit some of your readers to know an easy and safe way of packing eggs that I have adopted this season. I take a sheet of soft wrapping or tissue

paper about twenty by sixteen inches, fold it into four the long way, which gives me a four-inch strip twenty inches long, into which I roll the egg tightly, without mashing the edges of the strip down to the egg; then I take a string and tie it around the paper as close to the butt end of the egg as I can, which will be about an inch from the edge of the paper; then I shape the end out so that I have just the shape of an egg cup, and that will stand up just as an egg cup, and strong enough to prevent anything touching the butt end of the egg. The sides will be sixteen thicknesses of paper around each egg. I then take a basket six and a half inches deep by eight inches inside measure, into which I put about two inches of uncut hay boiled down, into which I set my egg cups with their eggs, and then fill in between and on top with cut hay, so that the corn goes in closely, and find that the eggs carry safely and well.

Hoping that this will help some that cannot get any patent arrangement, I am Yours truly,

JNO. D. OAKFORD.

(For Fanciers' Journal.)

MR. JOS. M. WADE.

DEAR SIR: The weekly visits of your valuable paper have long ago become fondly anticipated, and I hope for you the largest show of success, as the results of your labors in producing a poultry weekly. My papers are becoming well worn in circulating them, and very likely shall ask you to send me some back numbers to complete my file, which I wish to preserve for binding.

FLOORS OF POULTRY HOUSES.

I have noticed several articles in your paper, in regard to the best method of preparing and preserving floors in poultry houses, and would like to mention to you my plan:

In building, I first set short posts in the ground, boarding them up on both sides and filling with sand and *tan bark* between the walls, and laying my sills on top of the posts; then filling up the entire space inclosed with, at first, small stones, then coarse gravel, and last fine gravel, nearly as high as the sills; then I make divisions for pens, leaving floor a deep gravel bed, always dry, and by having the top fine the hens need no other dusting material. Every fall I take off as deep as it has become foul, and add new gravel. With a little care in gathering the droppings once a day, it will never become very foul, and the hens seem to enjoy scratching and picking it over. I believe such a floor is less likely to be troubled with vermin than when made of boards; in fact I have never been troubled at all.

Yours very truly,

J. D. HAMMOND.

(For Fanciers' Journal.)

JOS. M. WADE.

DEAR SIR: Can any of your readers inform me the cause of different hens, of the same breed, in the same yard, laying eggs the shells of which are different colors? Some of my hens lay eggs the shells of which are very dark brown, some a dark buff, and others between the two. I make a specialty of Light Brahmas, and they all have the same care, so I cannot account for the difference in color. Can any one also tell me whether or no there should be any definite color for Light Brahma eggs?

Yours respectfully,

F. T. K.

ERIE, PA., April 4, 1874.

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

AMERICAN STANDARD OF EXCELLENCE.

REDUCTION IN WHOLESALE PRICE.

We call particular attention to the advertisement in this number of the Journal, of E. S. Ralph, Secretary of the American Poultry Association, in which it will be noticed that the wholesale price of small lots has been greatly reduced. Every Fancier will want a copy of the new Standard, whether they approve of it or not.

THE RHODE ISLAND POULTRY AND COLUMBARIAN SOCIETY have opened rooms, as headquarters, in Rhodes' Block, 207 Westminster Street, Providence, which they propose to have open at all times, to be supplied with all the poultry periodicals published ; and request breeders, and other societies to send circulars and other matter which might be useful in the rooms located as above.

SEX OF EGGS.

WILLIAM J. PYLE says: " In regard to the egg mystery, I forgot to mention that when the air chamber is not visible it indicates that the life principle is absent, and of course the egg will not hatch, which can be proven by breaking the shell, when you will observe that there is no impregnation, there being no tread attached to the fibre at the large end. By the above-mentioned method it may be ascertained which is the last egg from a non-sitter that will hatch. But with the other breeds one impregnation is sufficient for a sitting of eggs. When the hen begins to cluck, this is the time to begin to breed true to her kind by a judicious selection of mate, so as to avoid 'sports,' unless you have followed the still better plan of selecting in the fall a vigorous cock to run with about thirty hens, so that when the hatching season has arrived the hens are all impregnated, and the cock is no longer needed if you require the majority of the chicks to be pullets. Better results follow this plan than when more males are employed in proportion to the number of hens in the same pen."

Bird and Small Pet Department.

(For Fanciers' Journal.)

THE CANARY BIRD.

THE Canary is now reared in almost every civilized country. More than three hundred years ago a ship sailing from the Canary Islands, laden with merchandise and a few Canaries, was wrecked on the coast of Italy. The birds escaped to the timbered lands near the coast, where they bred freely, and would have become naturalized had not the sweetness and brilliancy of their notes attracted the natives, who were possessed of so strong a desire to obtain them that by continually hunting them the wild breed became extinct. After this circumstance the captured birds spread rapidly over all Europe.

In a state of nature the Canary nests in shrubs on the banks of small streams, which are numerous in their native islands.

The original color of the Canary was not like those of the present day, but of a brownish olive-green mixed with black and yellow. The present brilliant hues of plumage have been produced by cross-breeding with other birds.

Fanciers, by careful management, have instituted rules by which the arrangement of coloring of the Canary can be bred of any shade between that of the parrot-green, orange, and lemon, but still the original color will appear occasionally, even when two lemon-colored birds are mated together.

The Canary is now bred for this market principally in Germany, in the kingdom of Hanover, where the peasants make their chief means of subsistence by their breeding. Tourists are sure to visit the Hartz Mountains, the great bird-breeding mart of the world. While the United States receive their supply mostly from this locality, some are imported from France, Belgium, and Holland.

The song of the Canary has also changed under this process of cross-breeding. One accustomed to listen to their original notes would scarcely recognize in the modern bird the song of their progenitor.

The price paid by the importer varies, but is usually about one dollar each, according to the beauty of plumage and excellence of song.

German peasants manufacture small wooden cages in large numbers from fir wood, which grows upon the mountain sides. Some are dome-shaped and some are square, and about eight inches long by four inches in height and width. Every bird has a separate cage, and every cage is made entirely of wood ; pegs, instead of nails, are used to fasten them together. They are manufactured at the small price of two cents each.

It is estimated that about fifty thousand Canaries are imported annually into America. During the passage they require careful attention daily in feeding and watering. The cages are arranged in divisions, so as to allow the keepers to pass between them to feed the birds and clean the cages. If cleanliness is neglected, sickness is engendered, and many birds will perish in consequence. The usual cargo for a single ship consists of about four thousand birds.

VARIETIES.

There are three varieties known in America, viz.: the German, French, and Belgian. The German are designated as the short and the Belgian as the long breed, while the

French are intermediate, and perhaps may have originated by a cross between the two varieties.

The German bird excels as a singer; the French bird ranks next. While the Belgian bird does not sing generally so well, it is so exquisitely formed that in the eyes of a fancier it more than compensates for its deficiency of song. Enthusiasts recognize in this highly-formed Canary ten points, viz.: Small flat head; long and slender neck; high and square shoulders; the back well rounded, so as to form a segment of a circle; general neatness of aspect and length of tail, inclining in a circle with the back; thinness and length of the bird; erectness and length of limbs; closeness of feathers; richness of color. These are the points as given by Mr. Barnsly, an English fancier. They recognize three varieties of the Belgian, viz.: Erect, roughed, and hooped. In this country the long French bird takes the place of the erect Belgian, and we only recognize the hooped bird as the Belgian. Choice specimens sometimes sell for one hundred dollars.

COLOR.

The yellow and the mealy are the colors most prized, but it is considered that the mottled and green birds have the strongest constitutions.

In Europe the breeding of Canaries is reduced to a science. Societies are formed, which hold annual exhibitions and offer prizes for competition.

Enthusiastic fanciers recognize some thirty varieties, which are arranged under two divisions, viz.: *plain* and *variegated*. The plain are designated as *gay* or *gay spangled*; the variegated as fancy birds. The Jonque or Jonquil is a bright yellow bird; the Mealy is a pale yellow intermingled with white, which makes the bird appear as if sprinkled with meal; the Lizard is a green bird spotted with yellow, with a cap of a rich yellow color; the highly-prized Cinnamon bird is so called on account of it resembling in color cinnamon bark.

DESIGNATION OF SEX.

The male bird is the songster. The female scarcely ever sings; if so, their notes are weak and effeminate, and they never fill out under their throats while articulating notes, as do the males. The male has a short stout beak and is wide between the eyes, with a flat head. The wider they are between the eyes the better. The crown of the head of the female is more round than the male.

TO DISTINGUISH OLD FROM YOUNG BIRDS.

The feet and legs of young birds are smooth and glossy; the toe-nails are short. Old birds have rough and scaly feet, with long toe-nails. It sometimes is necessary to trim the nails to prevent their being caught in the wires of the cage.

MODE OF IMPROVING THEIR SONG.

In Europe great attention is paid to improving the song of Canaries. The two modes are practiced as follows: A large cage is constructed with close partitions, being divided into sections which effectually excludes the view from each other. A superior singing bird—a Nightingale or Skylark—is placed within hearing, but out of sight. By listening to the beautiful notes they are taught to imitate. In six months they will have acquired perfection, when they can be removed to separate cages. Another method is: When young birds are first beginning to try to sing, they are separated from the parent bird to prevent them from acquiring the song of the old bird. The room is made quite dark,

with just enough light admitted to enable them to see to eat. A musical instrument is constructed, called a bird-organ, and is played for an hour each day in the room, in the hearing of the young birds. Nothing else attracting their attention, they become attentive listeners, and soon attempt to practice the song, which in the course of time they are enabled to perfectly repeat.

FOOD AND MANAGEMENT.

The food best adapted to their use is clear canary seed. Sometimes it is mixed with one-fourth of rape seed. Hemp seed should not be used, as it produces too much fat. Occasionally they should be allowed a sprig of lettuce or cabbage-leaf, or a piece of apple. They should be fed and given fresh water every day. The cage should be kept clean, and the bottom of the cage should be sprinkled with gravel. This will supersede the necessity of cuttle-fish bone, unless it can be conveniently supplied.

MOULTING SEASON.

The moulting season takes place once each year, generally during September or October. The casting-off of plumage and the formation of a new dress necessarily produces indisposition sufficient to cause them to cease their song. During this period especial attention should be given them; the temperature of their room should be uniform, and they should be free from drafts of cold air; the cage should be suspended three feet from the ceiling, in order to avoid the deleterious air and gas escaping from the combustion of coal.

MATING AND BREEDING CANARIES.

The mating of Canaries for breeding purposes requires instruction as well as experience in order to insure success.

Breeding-cages can be obtained from dealers, suitably arranged for exercise, nesting, &c. They are provided with a shelf perforated with an opening sufficiently large to contain a nest (which is usually made of wire-gauze), besides perches, feed cups, &c.

The cage should be hung at least a foot above your head, and should occupy a southerly aspect, if possible, and not be moved until the breeding season is over. Should a cage be used that had previously been employed for this purpose, it would be a safer plan to scald it with water made alkaline by baking soda, and then revarnished.

In selecting the pair, several things are to be considered: 1st, the desired sex; 2d, color; 3d, the size and shape of the birds.

A young male and an old female mated together produce mostly male offspring, which is greatly to be desired. Males and females of about the same age mated produce about equal proportions of male and female young.

2d. *Color*.—To produce a handsome yellow bird, the male should be a Jonquil; the female should be a Mealy bird. Such a union will usually produce pure yellow birds; while a clear yellow male mated with a green female will usually produce handsome mottled young. A very deep yellow male mated with a very deep green or brown hen often produces the highly-prized Cinnamon bird.

3d. *Shape*.—In breeding for form much taste can be displayed. Some prize form more than color or song.

MULES.

A female Canary will mate with several varieties of birds, and their offspring are called mules. The males from some of these crosses are fine singers, and command high prices

on account of their beauty and song. These mules mated again with the female Canary are prolific. Among the varieties of birds employed in producing mules may be mentioned the Linnet, Goldfinch, Bullfinch, Siskin, Red-pole; and Bluebird, besides several other varieties.

Before placing the male and female Canary together, this precaution should be taken: The female should be put in the breeding-cage and hung on one side of the room, while the male should be suspended directly on the opposite side of the room, in a separate cage, in sight of the female. When he sings and calls to the hen bird, and she returns his call, then they can be placed together, and though they may at first quarrel, it will only be of short duration; they will soon become reconciled with each other and will mate. When the male is observed feeding the hen, you may be certain that it is right.

After having been mated about a week the hen will lay from four to six eggs (one each day), and will sit from fourteen to sixteen days, bringing out one bird per day, in the same order as they were laid. Never disturb the eggs or they will not hatch.

The birds may be mated during the months of February, March, or April. There should always be placed in the mating-cage a piece of mortar for the formation of shell, or the hen may lay soft-shell eggs. There is also required some untwisted manilla rope, cut into sections of one inch in length, with perhaps an addition of a small quantity of deer hair, for the formation of a nest.

After the young are hatched, if the male bird gives his mate too much attention, or is quarrelsome, he should be placed in his own cage until the young are nearly feathered and leave the nest to feed themselves. After they have perched a few nights they can be separated from their mother and the male returned, and another brood reared, which operation may be repeated until seven broods are raised in one season.

FOOD FOR YOUNG BIRDS.

As additional food for young birds, besides canary and rape seed, they should be allowed hard-boiled egg and cracker rolled fine, and fed to them in small quantities several times each day. The same food should be given to the old birds during the breeding season. When the young birds are able to crack seeds, which they will do at six weeks of age, the soft food can be replaced by cracked seed or soaked rape seed. Hemp seed should never be fed, as it will kill them.

Never allow two crested birds to pair, as their progeny are liable to be bald or malformed about the head.

One male bird will serve half a dozen hens during the breeding season. This plan, in my opinion, is more certain to raise young birds. The parent birds can occupy a small room with nests fastened to the wall, with material handy for constructing nests, also food and water. A German friend pursues successfully this plan every year, and it is marvelous to note his success in raising young.

Some Canaries will never mate; nothing will reconcile them. In this event another hen should be tried until one is found that is disposed to assume the responsibility of rearing a family.

The female bird builds the nest, and the male selects the location and carries the nesting material to his mate. In constructing the nest the female is in constant motion, and

by her loving manœuvres invites her mate to the act of pairing.

The eggs are of a sea-green color, more or less spotted and streaked with reddish-brown and violet. The male sits on the nest, relieving the female, a few hours each day during the period of incubation. Should either of them become addicted to the vice of breaking their eggs, they should be bountifully fed with egg and bread, which should be constantly kept within their reach. Should they persist, the eggs should be removed as fast as laid, and their places supplied with artificial ones.

When the young are hatched the male assumes the chief responsibility of feeding them, which consumes most of his time.

Instances are recorded of talking Canaries. One is mentioned by Prof. Hawkins; a bird that was exhibited in the streets of London a few years ago. Mr. Sothly, in a communication to the Zoological Society of London, gives a description of a talking Canary, owned by a friend, that can whistle a few bars of "God Save the King," and also repeat a few words, as "Minnie," "Kiss Minnie," &c.

Not many years ago a traveling showman will be recollected as exhibiting, in the streets of the principal cities, some performing Canaries. They were taken from the cage and placed on a small stand, dressed in diminutive clothes, some harnessed in a wagon, another driving, and others riding in the carriage. At a given signal the coach started, and at the ringing of the bell they stopped to be put into their cage. They were again placed upon the table to exhibit their proficiency in drill. All were arrayed in regimentals, guns being held in one claw, one bird acting the part of drill-master, and when he whistled a few notes the soldiers hopped on the other foot, keeping time. Finally the performance ended by one of the number firing a diminutive cannon.

Dr. J. M. Bechstein, in his "Natural History of the Birds of Germany," and who is an acknowledged authority, relates the following instance of their sagacity, and remarks that instances are known in which they have not only been taught to repeat short words distinctly, but to distinguish colors, numbers, letters, &c. He also says: "I once saw a female in possession of a person named Jeanlot, of Befort, in Alsace, which selected from the alphabet, and placed in order, the letters of certain words, added, subtracted, and multiplied in German, and indicated, by means of numbers, the exact time of a watch. He had also three males with him, which were able to select letters and numbers which were named. Hunger had been the chief means used in the education of all."

DISEASES AND TREATMENT.

Canaries are subject to diseases as well as the human family, which also yield to medicinal agents.

Moulting is a critical period, and great care should be exercised at such times to keep them from being exposed to drafts of air, and to see that they are abundantly supplied with food and water; a change in diet is very beneficial. A piece of boiled carrot should be given them often, also a little hard boiled egg, which should be left on the shell, for this will keep it moist longer than if crumbled in a dish. A little saffron put in water will assist them to cast off their plumage, and a nail dropped into their water will serve as a tonic. As a consequence of moulting improperly, it is not uncommon for them to suffer from *loss of voice*; a change

in diet, with boiled egg, or white bread soaked in milk and squeezed out, will often be of benefit.

Colds are frequently contracted by caged birds when exposed, even temporarily, to drafts of air, which is manifested by frequently shaking the head, and sitting dumpishly upon the perch. Give them an abundance of soft food, also linseed, for a considerable period.

Costiveness is remedied by change of food; give them apple, lettuce, chickweed, or celery. Should they have *diarrhoea*, avoid green food, and give them crushed seed mixed with the yolk of an egg; also give them the seed of red pepper.

Asthma is also often witnessed about the season of moulting, or from taking cold. Give them a moist diet, and the small pods of cayenne pepper broken into small pieces.

Epilepsy is brought about by overfeeding and lack of exercise. It is often fatal. Venesection is recommended by cutting the claws sufficiently to draw blood. Give them a moist diet, with sweet apple.

Mites are produced by neglecting to cleanse the cage, and by not allowing the bird to bathe freely. When thus affected the bird will be observed to pick itself at all hours of the day, and by its being very restive at night, and flying about the cage.

Cleanse the cage, and dust dry sulphur under the feathers of the bird; or catch the bird and pin him up in a piece of flannel, with a few drops of spirits of turpentine upon it, taking care not to confine his head. When removed it will be full of vermin. Repeat it as often as necessary until all are removed, usually at intervals of a week; three or four operations will be sufficient. Another method is to expose the cage and bird to an intense sunlight; the mites will then leave the bird and penetrate the crevices of the cage, then remove the bird and scald the cage with water made alkaline with super-carbonate of soda.

Sore feet is sometimes caused by lack of cleanliness, or by fibres of cotton or wool entwining the feet and cutting to the bone. Remove the offending substance, and anoint with mutton suet. Allow the bird to bathe freely.

JAMES S. BAILEY, M.D.

For the past thirteen years Mr. Henry Alley, of Wenham, has sent out, to customers all over the country, seven hundred Italian queen bees, annually. The coming season he is expecting to send out nine hundred. The queens are sent by mail, and go safely.

A careless man went to the cellar and stuck the candle in what he thought was a keg of black sand. He sat near it drinking wine until the candle burned low. Nearer and nearer it got to the black sand; nearer and nearer, until the blaze reached the black sand, and, as it was nothing but black sand, nothing happened.

POULTRY SHOWS FOR 1874 & 1875.

Bucks Co. Poultry Association. Doylestown, Pa., December 8, 9, 10, and 11. Theo. P. Harvey, Secretary, Doylestown, Pa.

Connecticut State Poultry Society. Hartford, Conn., December 15, 16, 17, and 18. Dr. Geo. L. Parmele, Sec'y.

Maine Poultry Association. Portland, January 12, 13, 14, and 15. Fred. Fox, Secretary, Portland, Maine.

Western New York Poultry Society, Buffalo, New York.

February 10th to the 17th. Geo. W. White, Secretary.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

WILL EXCHANGE—Eggs from Buff Cochins (P. Williams stock), Partridges (from Van Winkle and imported stock), White Leghorns (Eldridge stock), for Eggs from any first-class birds.

GEORGE F. PARLOW, New Bedford, Mass.

WILL EXCHANGE—First-class Silver Spangled Hamburg Hens for White Leghorn Hens or Pullets (first-class), or for cash, \$2.50 each.

Address A. GAINES, Fancier, Castile, N. Y.

WILL EXCHANGE—One good Dun Carrier Cock for a good Black Barb Cock. Also, a good Lop-eared Doe wanted in exchange for Fancy Pigeons or Angora Rabbits.

JOHN THOMPSON, JR., Shoemakertown, Pa.

TO EXCHANGE—For Fancy Pigeons, one copy of Tegetmeir's Poultry Book (new edition of 1873), Colored Illustrations, &c. Not in use three weeks. Address G. H. S., 528 Cass Street, Milwaukee, Wis.

WANTED TO EXCHANGE—Silver Gray Dorking, Partridge Cochins, Houdans, or Black-breasted Red Game Eggs for Fancy Pigeons or Lop-eared Rabbits.

CHARLES S. RICE, Rensselaerville, N. Y.

WANTED—A fine large Muscovy Drake, not over two years old, for which I will exchange Eggs from first-class Light or Dark Brahmas, Buff or Partridge Cochins. Give weight, color, &c., of Drake.

Address A. D. COLEGROVE, Corry, Pa.

WANTED TO EXCHANGE—Partridge Cochins Eggs, from first premium stock, for Fantail Pigeons.

S. O. CHASE, Killingly, Conn.

EVERGREENS, FLOWERS, FRUITS.—Will exchange for Eggs or Fowls of Light Brahmas, Toulouse Geese, or Rouen Ducks, or Wright's New Book of Poultry (bound), or Cash. Send for our catalogue. None but first-class stock offered or wanted. Address WM. MORTON & SON, Allen's Corner, Cumberland Co., Maine.

I WANT TO EXCHANGE a Lowe Printing Press (cost \$23) for Chickens or Eggs. Also another small Press. Where is the man or boy that wants either of them?

C. M. GRAY, Schenectady, N. Y.

GUINEA PIGS TO EXCHANGE.—I will exchange one pair of Guinea Pigs for a pair of Angora or other Fancy Rabbits. For full particulars, address

WM. D. ZELL, 422 N. Charlotte St., Lancaster, Lancaster Co., Pa.

BLACK RUSSIANS.—Will trade a Cockerel and three Pullets for Fancy Pigeons; or will sell cheap for cash.

A. N. RAUB, Lock Haven, Pa.

WILL EXCHANGE—Two superior Red Barb Hens for pair of perfect Yellow Swallows, and pair of Inside Tumblers or Blue Owls for perfect Yellow-winged Turbids, or Blue-capped Magpie or Yellow Plain-head Magpie Cock.

P. O. Box 7, Mitchell, Ontario, Canada.

WANTED TO EXCHANGE—Dark and Light Brahma, Houdans, or White-faced Black Spanish Eggs, of premium and imported strains, for the same varieties, or Duckwing Game Bantam or Buff Cochins Eggs. Also, Light Brahma Cockerels in exchange for Eggs.

W. D. NEILSON, 215 South Fifth Street, Phila.

TAME DEER FOR FOWLS.—He is a choice Yearling Buck, very gentle—a real pet; will exchange for choice Light or Dark Brahmas, Buff, Partridge, or White Cochins. Send in your birds to

J. B. BRIGGS, Russellville, Ky.

RUMPLESS FOWLS.—One pair, extra fine. Cock white, with rich buff wing-bows. Hen white throughout; has laid since January 10, 1874, almost continually. Will exchange for Pigeons—either Pouters, Fantails, or Nuns. Must be first-class birds. Address

A. H. FITCH, JR., Wolcott, N. Y.

LAWN MOWER, in good order, to exchange for other property. What offers?

JOS. M. WADE, 39 North Ninth St., Phila.

WHITE COCHINS.—A choice 1st premium trio, to exchange for trio good Black Cochins, or Brown Leghorns, by

T. T. BACHELLER, Minneapolis, Minn.

WILL EXCHANGE Light Brahmas, Williams' stock, for White Leghorns or Red Game Bantams, from any reliable strain.

W. FRANK BACON, Cambridgeport, Mass.

THE POULTRY ARGUS,

EDITED BY

KENEGY & WOLFF,

POLO, ILLINOIS,

Is one of the best Illustrated Monthly Magazines published in the Great West, and will be fully up to the times in all matters pertaining to the Poultry Interest.

BREEDERS AND FANCIERS

Will do well to advertise in the "ARGUS." Its circulation is large and advertising rates moderate.

SUBSCRIPTION, \$1.00 A YEAR.

Send 10 cents for a Specimen Copy.

WANTED—A Partner in the Poultry Business. One who has capital, and a square man. No other. Address, at once,
T. J. McDANIEL, Hollis Centre, Me.

EGGS FROM FIRST-CLASS STOCK.

Brown Leghorn (Kinney's).....\$5 00
Dark Brahmas (Squire and others).....3 00
Dominiques (Bicknell).....3 00
Eggs, per sitting of 13, warranted fresh and true to name, and safe arrival guaranteed. My stock is equal to any in the country.
Address C. P. CARPENTER, Minneapolis, Minn.

FOR SALE—To close out surplus stock, one trio Dark Brahmas, price \$8, or Cock and three Pullets, \$10; one pair Silver Penciled Hamburgs, choice birds, price \$5. Warranted pure.
C. P. CARPENTER, Minneapolis, Minn.

SILVER GRAY DORKINGS, Partridge Cochins, Black Spanish and White Bantams, all first premium birds. Eggs at reasonable prices.
W. G. GARMON, Manchester, N. H.

WOODCUTS OF FOWLS, PIGEONS, AND OTHER PETS.

Having permanently engaged an artist and engraver, I am prepared to furnish, on short notice and true to life, Woodcuts of Fowls, Pigeons, and other Pets, at reasonable prices.

FANCIERS' JOURNAL OFFICE, Philadelphia, Pa.

WHITE HAMBURG.—A few trios of Pure-bred Birds from Premium Stock, and Eggs for Hatching. Write for Circular.
C. F. WEBSTER, Girard, Penna.

BROWN LEGHORNS.—For sale, one Cockerel and four Pullets, Kinney's strain, direct from his yards last fall. Price, \$25.00. For particulars, address
C. F. HAWKINS, Goshen, N. Y.

BLACK-BREADED BLACK RED GAMES,

WILLOW LEGS, BAY EYES,
FOR SALE.

I can spare two trios of above breed, very fine birds, matched for breeding, \$20.00 per trio; I will also sell B. B. R. Game Eggs, from my best fowls only, at \$3.00 per 13. I keep no other breed. Shall have a few chicks to spare next fall.
C. F. PERRY, Cuba, N. Y.

PARTRIDGE AND BUFF COCHINS A SPECIALTY.—Eggs from my thoroughbred Partridge and Buff Cochins, for hatching, \$3.00 per dozen. Terms, C. O. D. Address
DR. A. S. JORDAN, Riegelsville, Bucks County, Pa.

UNADILLA FORKS, OTSEGO CO., N. Y., March 31, 1874.
I have this day purchased of G. H. WARNER, New York Mills, N. Y., HIS ENTIRE STOCK OF FANCY POULTRY, including all his imported and premium stock of the following varieties: Dark Brahmas, Light Brahmas, Buff Cochins, Partridge Cochins, White Cochins, Black Cochins, La Fleche, Crevecoeurs, White Dorkings, Silver Gray Dorkings, Gray Dorkings, Duckwing Game Bantams, B. B. R. Game Bantams, Golden Sebright Bantams, Aylesbury Ducks, and Rouen Ducks.

The above fowls were exhibited at four shows the past winter, including that of the Central New York Agricultural Society, Central New York Poultry Association, Western New York Poultry Society, and the show at Macon, Ga. Mr. Warner made 121 entries and received 91 premiums, amounting to \$509.

I shall also continue to keep and breed the same varieties that I have bred for several years, namely, Houdans, S. S. Hamburgs, Golden S. Hamburgs, White Leghorns, Brown Leghorns, Golden Polands, W. F. Black Spanish, B. B. Red Game, Duckwing Game, Rumpless Brown Red Game Bantams, White-crested Ducks.

The above Fowls are all selected with great care and expense, and the two yards united will make the most complete yard of Fancy Fowls in the United States. Persons desirous of obtaining either Poultry or Eggs may rest assured that they will be dealt with in a square and honorable manner. Every order will receive my prompt and personal attention.

In order that the price may be within the reach of all, I shall reduce the price of Eggs to \$3 per dozen—two dozen for \$5. Eggs from the same stock that I breed from myself.

Thanking you for past favors, and asking for a continuation of the same, I am, yours very truly,

NATIONAL BEE JOURNAL.—MRS. ELLEN S. TUPPER, Editor and Proprietor. Devoted exclusively to Bee culture. Two Dollars a Year. The *National Bee Journal* is issued on the 15th of each month, contains sixty-four pages, printed on fine paper, in neat, clean type, and for the year 1874 has been greatly improved. Mrs. Tupper, having purchased the *Journal*, has removed it to Des Moines, Iowa, where it will hereafter be published under her own supervision. She will write for no other publication but her own, and in that she will give the result of that long practical experience which has placed her among the best, if not the best, authorities in this country on the honey bee.

Arrangements have been made with prominent bee keepers in this and foreign countries, for timely articles each month, upon important topics. A special department has been assigned to "Notes and Queries," in which the various questions which arise in the practical experience of bee keepers each month, will be given, with pertinent answers by the editor. These will be condensed into the smallest possible space, and will be one of the most interesting features of the *Journal*.

The *Journal* will keep entirely clear of all entangling alliances with patent rights of whatever nature, and will be independent in the expression of its opinions. It will aim to be reliable, give only such information as will be of practical utility to its patrons, discarding theories and misleading propositions.

A limited space is devoted to advertising, which will be given to unobjectionable notices, at fair rates; and the large and rapidly increasing circulation of the *Journal* makes it a valuable advertising medium.

For circulars, containing club rates, premiums, advertising rates, etc., address MRS. E. S. TUPPER, Des Moines, Iowa.

BANTAMS.—14 varieties. 26 premiums at Massachusetts Exhibition, 1874.
W. B. ATKINSON, Box 530, Boston, Mass.

CHICKENS.—Orders now being booked for furnishing, in June and July, Young Chickens, in flocks of from eight to twelve each, with hen to mother them, from pure strains of Brahmas, Cochins, Leghorns, and Hamburgs (all varieties), and Dominiques, Plymouth Rocks, &c. Prices reasonable. Terms cash, one-half only in advance. Send stamp with letters of inquiry to
Order early.
T. T. BACHELLER, Minneapolis, Minn.

DOMINIQUE LEGHORNS.—Eggs from this variety supplied, in rotation as received, at \$3 per sitting (13 eggs). Also, Eggs or Poultry of all the leading varieties furnished at short notice by

EGGS, \$3 PER 13.

Fowls for sale after September 1st.
To persons sending me \$12 for four sittings of Eggs, I will send the *Fanciers' Journal* for one year.
To persons sending \$6 for two sittings, I will send the Standard of Excellence, as revised at Buffalo.

"THE BEST IS THE CHEAPEST."

Why it is believed my White Leghorns are superior to all others: From the fact that my stock has been awarded Fifty-four Prizes in 1872-73, and that the committee, in revising the standard, used and carefully examined a cockerel bred by me, and reported accordingly.

I can now fill orders for EGGS from my Selected Breeding Stock, on receipt of price,

\$5 PER DOZEN,

Cash or P. O. order on New Haven.

J. BOARDMAN SMITH,
P. O. Box 28, North Haven, Conn.

I now offer for sale Eggs from the following varieties of Fowls, that took first premiums of all the varieties mentioned, namely: White Cochins, White Polish, Golden and Silver-spangled Polish, and White Crest Black Polish, Golden and Silver-spangled Hamburgs, and Brown Leghorns. A few pairs or trios of fine Fowls for sale at reasonable rates.

Also, very choice Pigeons of 55 varieties. 31 first premiums, 13 second, and 4 specials, at Buffalo, N. Y.; 25 first, 12 second, and 6 specials, at Pennsylvania Exhibition at Philadelphia. Send a green stamp, stating what you want. Also, three Bloodhound Pups for sale.

R. M. GRIFFITH, Belper Cottage, Wilmington, Del.

PURE BRED STOCK, AND WHERE TO GET THEM!

RIVERSIDE STOCK AND POULTRY YARDS.

WM. WRIGHT, AND S. BUTTERFIELD, Proprietors.

We shall sell a limited number of sittings of Eggs, at \$5 per sitting, from Light and Dark Brahmas, Buff and Partridge Cochins. Our Light Brahmas are Williams' strain, pure. Yard No. 1—Cock Young Alexis, is mated with six prize Hens, all standard birds, and winners at Detroit and Buffalo Show. Yard No. 2—Cock Duke of Essex is also mated with standard birds, among them are the winners of 1st, at Detroit, for Chicks of 1873. Yard No. 3—Dark Brahmas, are our own direct importation of 1873, and are first-class birds of high merit, and we can safely recommend them to the fancier. Yard No. 4—Buff Cochins, imported from England, from Rev. Mr. Brooks' and Taylor's strains, and selected by our Mr. B. for breeding purposes. Yard No. 5—Imported Partridge Cochins; are standard birds, and mated with great care for breeding. We also make the importing and breeding of Lincoln and Cotswold Sheep, Suffolk, Essex, and Berkshire Pigs a specialty. Mr. S. Butterfield being personally acquainted with all the leading breeders in England, will leave on or about the middle of June to make a selection from the best pens of premium birds at the various shows in 1874. Any orders entrusted to him will be executed according to instructions, on commission or otherwise. All communications addressed with stamp, to

WM. WRIGHT,

Griswold St., Detroit, Mich.,

Or Riverside Stock Farm, Sandwich, Ontario, Canada.

100 COMMON AND ANGORA RABBITS—Also choice

Rouen Duck Eggs, Fancy Pigeons, &c.

JOHN THOMPSON, JR., Shoemakertown, Pa.

EGGS, PER SITTING—Ginger Red Game, Cryer strain, \$4; White-faced Spanish, Cryer strain, \$3; Penciled Silver Hamburg, Cryer strain, \$2. Trios, pairs, or single birds of the above for sale, at Grange Yards, Duffields, West Virginia, by

V. M. FIROE.

EGGS FROM CHOICE FOWLS.—I offer a few dozen Eggs from pure-bred White Leghorns (J. Boardman Smith's stock) and Light Brahmas (P. Williams' stock). Price, \$2 per sitting.

H. S. WILLIS, Warner, Merrimack Co., N. H.

EGGS, EGGS, EGGS.—I am prepared to furnish Eggs from my White Leghorns which took first and fourth prizes at the N. E. Show, at Worcester, in January; also first at Providence, in March. Eggs packed in the best of shape for \$3 per dozen. JOSEPH DART, Oxford, Mass.

PLYMOUTH ROCKS A SPECIALTY.—Eggs for hatching at \$2 per sitting. This season my birds have won—

1st premium on Fowls at Youngstown, Ohio.

1st premium on Chicks at Youngstown, Ohio.

1st premium at Myricks, Mass.

1st premium at Taunton, Mass.

1st premium on Fowls at Pittsburgh, Pa.

2d premium on Fowls at Boston, Mass.

2d premium on Chicks at Boston, Mass.

I have purchased the P. R. Cockerel that won 1st premium at the New England Fair, held at Worcester, Mass., which weighed 11 pounds when seven months old. For circular, address, with stamp,

E. R. HAYWARD, Easton, Mass.

GRAY DORKINGS.—Two trios, at \$10 per trio; also, one cock and four hens for \$15. These are good birds, and very cheap. Address Dorking, care of this office.

THOROUGH-BRED POULTRY.—The subscriber offers Eggs from Light Brahmas, Buff and White Cochins, Brown Leghorns, and Plymouth Rocks, at \$3 per sitting. The above fowls have received the leading premiums at first-class shows, thus characterizing them as birds of the highest merit.

MARK PITMAN, North Beverly, and 22 School St., Boston, Mass.

BREEDERS' AND GROWERS' DIRECTORY.

The most complete Directory of Breeders and Growers of every class ever published in this country, to be issued this season. For information, address early,

T. T. BACHELLER,

Editor N. W. Poultry Journal, Minneapolis, Minn.

Send 10 cents for sample of Poultry Journal, &c.

FOR SALE—Eggs for Hatching, from pure Dark Brahma Fowls. Fresh and true to name. Price, \$4 per sitting of 15 eggs. Cash must accompany each order. Address R. D. B., P. O. Box 306, Bridgeton, N. J.

Illustrated Circular

A. M. HALSTED,

Box 23, Rye, N. Y.

HAMBURG.—At the N. H. Exhibition I was awarded the Special Premium for best collection of Hamburgs, comprising: GOLDEN PENCILED of my own importation, from Henry Beldon's yards. The cock "John Bull" won first at two shows in England, and first and special at Buffalo, N. Y. Also, I was awarded first and special for best hen at Buffalo, and in trio have won at Massachusetts, first on Fowls and first on Chicks, and special for best Fowls and Chicks; at Nashua, first on Fowls and first on Chicks. Eggs, \$10 per dozen. SILVER PENCILED.—Received from Henry Beldon, March 27th, per "Republic," a trio of extra fine Silver Penciled, fully equal to my Golden Penciled; as good as any in America. A few dozen Eggs will be sold for \$10 per dozen. GOLDEN SPANGLED, Ongley's strain. Won at N. E., third; at N. H., first and special for best trio; at Nashua, first. Eggs, \$5 per dozen. Trio, \$25. BLACK, from Cutter's and Shedd's stocks. Won first at N. H. and first at Nashua. Eggs, \$2 per dozen. Trio, \$15. SILVER-SPANGLED.—Won third at N. E., second at N. H., first and second at Nashua. Eggs, \$2 per dozen. I can also furnish fresh eggs from other first premium varieties, at the annexed prices: Light and Dark Brahmas, White and Buff Cochins, White Leghorns, Plymouth Rocks, Dominiques, each, \$3 per dozen; Houdans, Black Spanish, \$2.50; Bronze Turkeys, \$5; Black-breasted Red, Blue Red, Red Pyle, and White Georgian Game, \$5. Everything warranted as represented. Cash must accompany orders. Nothing C. O. D. ANDREW J. TUCK, Box 602, Nashua, N. H.

EDGEWORTH POULTRY YARDS.—Eggs for Hatching: Dark Brahmas: Steel Gray hens mated with my selected imported cockerel "Wragg," at \$5 per 13. Light Brahmas: extra selected hens mated with very choice cockerel, at \$3 per sitting of 13.

R. F. SHANNON, P. O. Box 568, Pittsburgh, Pa.

LOCK HAVEN, PA.

CHOICE FOWLS.—After twenty years' experience in a private way, I have finally restocked my yards with choice Pedigree Fowls. Dark Brahmas, bred by and direct from W. H. Churchman and W. H. Todd. Light Brahmas, bred by and direct from Philander Williams and I. K. Felch, and have added fresh blood to my Golden-Spangled Hamburgs, from the importer, E. S. Ongley, whose stock I keep without mixture. A limited number of Eggs from the above at \$5 per doz. Send money in a safe way. Orders filled in rotation. Nothing C.O.D. WILLIAM ATWOOD, Big Flats, Chemung Co., N. Y.

BROWN LEGHORNS.—After six years of im-
proved breeding and study, I this year, for the first time, present my stock, and feel that they will greatly improve whatever flock or strain they may be added to. Their qualities for early market and profitable egg-producers are familiar to all.

BAKIES.—As I was the first to import into the United States the now famous *Bakies*, I have pleasure in again being the first to import the *Bakies*; they are very rare and choice in England; are in shape exactly like the *Creepers* that are now so often referred to by farmers as being the most profitable fowl they can remember; the *Bakies* are a black body, dark very short legs, comb and white ear-lobe like Brown Leghorns, and as they cannot do the mischief at large same as most fowls, present altogether a very desirable, handsome, profitable fowl. Imported by steamship Batavia, Liverpool to Boston, March, 1874.

C. CARROLL LORING, Boston or Dedham, Mass.

MOCKING-BIRD TO EXCHANGE for Brown Leghorn Pullets. Also, 20,000 live Trout for sale. Eggs—Light Brahmas, Houdans, White Cochins, \$1.50 per doz. Live Mink for Breeding. Partner wanted. SPRING GROVE TROUT WORKS, Ossipee, N. H.

H. N. WHEELER, Mystic River, Conn., Breeder of pure Brown Leghorns from the old Mystic River Stock, imported by Capt. Isaac Gates. Eggs, \$3 per dozen. Orders taken now.

NUMEROUS ENGRAVINGS ON WOOD.

Part I ready about April 20. For sale at this Office. Sent free by mail on receipt of price.

STANDARD OF EXCELLENCE,

AS REVISED AT THE

BUFFALO CONVENTION,

January, 1874. Price, \$1.00.

A COPY OF THE ABOVE WILL BE SENT FREE TO EVERY NEW SUBSCRIBER TO THE "FANCIERS' JOURNAL" who remits
\$2.50 BEFORE THE 1st OF MAY, 1874.

Address JOS. M. WADE, 39 NORTH NINTH STREET, PHILADELPHIA.

Completed in Twenty-five Parts.

THE ILLUSTRATED BOOK OF POULTRY,

By L. WRIGHT.

AUTHOR OF "THE PRACTICAL POULTRY KEEPER," "BRAHMA FOWL," &c., &c.

ILLUSTRATED WITH FIFTY COLORED PLATES OF CELEBRATED PRIZE BIRDS

OF EVERY BREED, PAINTED FROM LIFE, EXPRESSLY FOR THIS WORK,
AND WITH NUMEROUS ENGRAVINGS ON WOOD.

**NOW READY, FROM ONE TO TWENTY-FIVE, INCLUSIVE, AT FIFTY CENTS EACH,
OR COMPLETE IN ONE VOLUME, \$15.00.**

Address JOS. M. WADE, 39 NORTH NINTH STREET, PHILADELPHIA

WM. H. CHURCHMAN,

CLAYMONT, DELAWARE,

IS NOW BREEDING ONLY

LIGHT AND DARK BRAHMAS,

From the best Strains to be obtained in this or any other country.

A FEW CHOICE BIRDS TO SPARE, OF EACH COLORING.

As my yards are well protected, I shall be able to supply

EGGS FOR HATCHING,

WELL PACKED, VERY EARLY IN THE SEASON.

JOHN P. BUZZELL, Clinton, Mass., Breeder of Light and Dark Brahmas and Partridge Cochins. At the Great Show in Boston, 1873, my stock was awarded First Prize on Light Brahma Fowls; Fourth Prize on Light Brahma Chicks; Second Prize on Dark Brahma Chicks. A few Fowls of the above Stock for Sale. Also, Eggs from these prize-winning Cocks, mated with superior Hens.

EATON'S MATCHLESS PIGEON PORTRAITS, Life-Size. One pair Carrier and Pouter. Price \$5. The above Engravings are now out of print and seldom to be had at any price.

Address JOS. M. WADE, 39 N. Ninth St., Philadelphia.

W. H. TODD, VERMILION, OHIO.—High-class Poultry; Asia-tics a grand specialty. Over thirty varieties of Land and Water Fowls—winners of 854 prizes at great State and Poultry Shows in three years. Fowls to spare and Eggs for Hatching. Price List free. New Catalogue, large and splendid, describing forty breeds, with large life-like cuts of all the Brahmas and Cochins, and eighteen varieties of Land and Water Fowls, giving much valuable information, for 10 cents.

EGGS FOR SALE.—From all the principal varieties of Fowls, especially Polands, Hamburgs, Houdans, and Bantams.

THE AMERICAN POULTRY ASSOCIATION, AND THEIR (NEW) "STANDARD OF EXCELLENCE."

TO THE READERS OF THE POULTRY JOURNALS:

Noticing two or three articles lately appearing in the different poultry periodicals which appear to call for a reply from the Executive Committee of the Association, and, after consulting what few of the members I could readily reach, I would say that the Association deem it for their best interest that a free and full discussion should be had of their doings; therefore, the Association does hereby request that *at an early date*, any fancier, breeder, or other person, make known to us any and all omissions or errors that may have been made in this our *first* edition, to the end that such omissions or errors be corrected before printing the second edition. By so doing, they will confer a favor on the Association. Address all communications to

EDMUND S. RALPH,

Sec'y American Poultry Association.

BUFFALO, N. Y., April, 1874.

(Poultry papers please copy.)

(For Fanciers' Journal.)

THE STANDARD OF THE "AMERICAN POULTRY SOCIETY."

FRIEND WADE: Since I forwarded to the *Fanciers' Journal* my first suggestions upon the subject of the doings of the late Buffalo convention; and the issuing of the new American* (so-called) Standard of Excellence, I have met with numerous articles of sharp criticism, from all quarters, in the poultry journals, and am in receipt of sundry letters from breeders and fanciers in a dozen different states, all pointing in the same *adverse* direction, as to the merits, the propriety, the accuracy, the justice, or the usefulness of the pamphlet put forth by this "National" Association.

As one of the oldest breeders and importers of poultry in America, and one who has felt a deep interest in the welfare and improvement of poultry in this country so many years, I claim the right to present my opinion on this subject, with the rest of American fanciers; and as I have no "axe to grind"—having long ago ceased to be a competitor at fowl exhibitions, with my stock—I think my views will, at this time, be readily accepted; at least as being devoid of *personal* interest in this controversy.

That this proposed new standard is very defective, erroneous in principle, lamentably incomplete, and absolutely useless to the general interests of our fraternity, as well as offensive in its presumptuous authority and dictum, every one, who has examined it fairly, agrees. I therefore ask space in your columns for the following suggestions, in behalf of the many breeders who are sorely disappointed with the results of the doings of the late National Association; and especially having reference to their proposal of this new

"standard" for adoption by the State and County Poultry Societies of America, at large.

This nominal "Standard of the American Poultry Association," in the first place, has been hurried out without due consideration and consultation; and the committee upon points of quality were not given due time to properly examine into the details of the important duty assigned them, before they were required to submit their several reports.

Three or four days' stay at Buffalo was entirely insufficient for the proper accomplishment of this task, inasmuch as there were thousands of American fanciers directly interested in this matter who were not there; of which number there were hundreds of prominent breeders who might and ought to have been communicated with, for advice and counsel in the premises, prior to final decision.

The convention itself was *not* a "meeting of the poultry men of America," as it seemed to have been intended. The gentlemen who got up this standard did not fully represent even the poultry societies of the country. And, though so far as they went, in numbers, they were a respectable body, and did what *they* deemed to be about right, no doubt; yet there was not afforded opportunity for that full, fair, open expression of opinion on this important subject, by the mass of our fraternity, or their immediate representatives, that alone can give permanent value to desired conclusions. And the proof of this assertion is found in this last precious, poor *formula* for an "American Standard."

The consequence of this lack of foresight, remissness, poor judgment, indecent haste—or whatever it may be—is, that an imperfect, ridiculously faulty, incomplete, and useless pamphlet (at an unreasonable *cost*) is promulgated, by assumed authority, based upon the false principle of controlling the judgment of our exhibition arbiters; which disgusts many, and disappoints everybody who is interested in the future real weal of both societies and individual competitive breeders.

That there are a *few* men among the thousands of fanciers in this country who are content with this work, of course, is evident. But that this new "standard" is any improvement upon former discarded ones, that the large majority of poultry men are not satisfied with it, and that minor societies, generally, in the United States will neither accept it as law, or adopt it as a rule to govern them, in the future, is as clear to my vision as is the fact, that all prior "standards" similarly got up and in a like manner foisted upon us, have been ignored and thrown overboard, in the past.

I tell you, Mr. Editor, that in this free country it is too late in the day to make such a thing, as this nominal Standard of Excellence is, go down with American fanciers. There are too many of us, outside of all cliques or coteries, who have studied and experimented; who have written and read; who have become experienced in this calling, and have spent, time, money, and brains in helping the cause thus far along towards perfection in breeding poultry, to acquiesce

in this sort of dictation—which so manifestly points to centralization and power in the hands of a few managers. And so, I repeat, *it won't do!*

Upon the table before me I have letters from six prominent breeders, in different States—all members of this American Poultry Association—lately received, in which my sentiments are urgently approved and seconded. The poultry journals everywhere, through their correspondents from all directions, are criticising and condemning this standard without stint, as you cannot fail to observe. Good men, sound advisers, competent judges, careful breeders, lively competitors, known friends to *real* improvement in fowl raising, ambitious amateurs, and accomplished fanciers, far and near, have entered the lists in opposition to the acceptance of this standard—and it is very clear that we must have “a new deal” in this business.

We do not claim your indorsement of these views, but we desire, through your columns, to say simply to those interested in this matter, “Come, brethren, and let us reason together.” Let us inaugurate a new convention, as I have already suggested. Let all the poultry breeders, fanciers, and dealers, in the country, be invited to meet at some central point,—as Albany, Hartford, New York, Philadelphia, or elsewhere, during the coming summer—and at such a general meeting, which the members of the National Association should attend, in common with the rest, let us fully and freely reconsider this subject.

No more undue haste; no further clanning; no display of favoritism; no tame acquiescence in the poor ideas of former played-out standards; no partiality to men, or breeds, or crosses of fowls; no palpable omissions of known varieties in the lists; no secret star-chamber conferences; no charge of three dollars per head for permission to talk or vote in said convention; no Houdan “curved-up fifth-toe” nonsense; no stupid requirement that Light Brahmas shall not have “middle toes feathered,” while Dark Brahmas’ toes must be so feathered; and, above all, no dictation, and no foisting upon us of “Instructions to Judges” at our shows, in this convention.

On the contrary, let us meet where it may be most generally convenient to the mass of American poultry men; where we can have a free, fair interchange of our opinions, knowledge, theories, and practices in breeding. Let us then and there organize, and choose committees of honorable and competent men, who will take into consideration, at their leisure, the subjects embodied in framing a good standard of excellence. Preserve from the old standards what is acceptable; through your committees add to this what is new and desirable, after a full discussion; take time to all this, well and advisedly; receive from those who attend such convention (or by mail from volunteers who do not) a moderate sum—say one dollar, each—to defray expenses of hall rent, advertising, posting, postage, and the printing of your standard; to every man so contributing his dollar, require your Secretary to furnish one copy of said printed standard, *gratis*; to all breeders or others who want the book, afterwards supply them at not exceeding \$20 per hundred. (This can be done at a profit for \$15 per hundred, and at a less price per thousand.)

By such means, at such a general convention, the errors of the past can be corrected, and an acceptable and popular criterion for judges and societies can be decided upon, that shall be worthy the title of an “American Standard of Excellence;” and which will be readily adopted by all United

States associations, because it will be the mature work of the American poultry fraternity *at large*, and not the result of the hurried labors of the convoked few, who offer us their unfinished, erroneous, dictatorial, universally unacceptable, and misnamed “American” standard. These are the purely unselfish views of Yours, in the cause,

GEO. P. BURNHAM.

MELROSE, MASS., April 18, 1874.

(For Fanciers' Journal.)

THE REVISED STANDARD REVISED.

I HAVE purchased a copy of the *revised* “Standard,” which is sold at “*not less*” than one dollar per copy. I regret for the reputation of breeders that this unwise measure has been adopted. One dollar is but a dollar, yet it should purchase a well-bound book of moderate size—and it does, of course, except of the “Standard” style. Why the “Standard” is rated at one dollar I cannot comprehend. From my view of the matter, it ought to be sold at the *lowest* possible price, instead of the highest. The more the information it designs to afford is thoroughly disseminated, the greater the attention paid, and more careful breeding of poultry is the result. *It is the guide-board to keep from going astray.* If an honest farmer should now conclude to invest in an improved breed of poultry, in order to ascertain the standard of the kind he may purchase, and to become posted as to the requirements of the many pure breeds of poultry, he orders a copy of the “new revised edition of the Standard,” pays his “one dollar,” and anxiously awaits the coming of the book (?). It arrives, and to his surprise and disappointment, he finds it smaller than Buist’s Almanac, Vick’s Catalogue, and other annual publications sent him gratis every season by the publishers. He considers himself cheated, and concludes it to be wisdom on his part to be content with his “dunghills” lest he again becomes the victim of misplaced confidence. There are many who would not object to purchasing the “Standard” if placed at a reasonable price. Why lock up the contents with a copyright? If it is not (as Mr. Burnham says) for monopoly, then it is to compel the people to “come down” with that dollar. Whichever it is, as Shakspeare says, “There’s small choice in rotten apples.” There is evidently a screw loose somewhere, or else the American Poultry Association must be in training with the expectation of being elected to Congress. “Facts are stubborn things,” and if we are required to pay a dollar for a book (?), we want something “*standard*” with considerable “*excellence*” in it—at least about a dollar’s worth.

G. O. BROWN.

BROOKLANDVILLE, MD.

(For Fanciers' Journal.)

BUCKS COUNTY POULTRY ASSOCIATION.

JOS. M. WADE, Esq.

DEAR SIR: At a meeting of the Executive Committee of the Bucks County Poultry Association, held the 13th inst., a motion to adopt the *new* standard was lost by an overwhelming vote. Also, a motion to condemn the *new* standard, and that the adoption of the old standard by this Society until a better one could be procured and adopted in open council by the fanciers and breeders of the United States, was, with but one or two dissenting voices, carried.

Respectfully,

T. H. WALTON,
Corresponding Secretary.

DOYLESTOWN, PA., April 18, 1874.

POULTRY DEPARTMENT.

AYLESBURY DUCKS.

THESE ducks are noted for hardiness and early development to maturity. The plumage of pure specimens is invariably of a pure white. The drake differs from the duck only in size, and having curled tail feathers. The legs are of a bright orange color, while the beak should have a pale pinkish or shell-like appearance, which is obtained or preserved by allowing them frequent access to pure running water, having a gravel bed, in which they delight to sport and dip their beaks, thus keeping them clean and polished, while the birds are more healthy and vigorous. Unnecessary exposure to the sun, and impure water, produces a dull yellow color of the beak, which in England is considered a disqualification. In America, where the atmosphere is hotter and dryer, and less uniform, it is next to impossible to keep the bills pale and clear, excepting with the most careful provision of sufficient shade, water, and gravel. The young especially should in hot weather be let out for a couple of hours early in the morning before the heat of the sun becomes powerful. This is the best time for cleaning and littering the coops, which should be large and well ventilated, to produce and maintain the most desirable condition of health and plumage. For exhibition birds, these precautions, with quiet and undisturbed conditions, are necessary, though equally applicable to the welfare of the stock which we wish to fatten for market, with the exception of less frequent access to baths.

At maturity seven pounds is a fair average weight; they sometimes reach a weight of ten pounds. Caution should be maintained in reference to breeding and exhibition stock, as over-feeding, producing excessive fatness, causes sterility. Many choice fowls are spoiled by ignorant attendants. The best food to produce weight, without fat, is barley furnished with plenty of green cooling food, of which they are very fond. They are very prolific and early layers, and will lay a larger number of egg in the course of a year than any other breed having equal care. It is also said that a duck two or three years old will lay better than a yearling. The eggs vary in color from a white to a green or creamy shade, and are set under hens.

Several broods of ducklings may be intrusted to the care of one mother, if protected from drafts of air, as they do not require hovering like chickens in moderately warm weather. They should be fed regularly three times a day, the earliest food being hard-boiled eggs chopped fine and mixed with boiled rice or bread crumbs, and later in the season give them such grains and other food as you prepare for mature birds. They should have pure drinking water constantly before them, and prefer to eat their grain and raw vegetables from the same trough, in which gravel also should be placed to assist digestion and in cleaning their bills, which is quite necessary. Keep the apartments well ventilated, but inaccessible to rats, cats, and weasels. It is advisable to keep for breeding purposes about one drake to two ducks. Autumn is the best season to purchase them to begin with. If early birds, they will commence laying in February, or earlier, with proper care and favorable seasons. Let the drake be unrelated to the ducks, and change the blood every third or fourth year.

(For Fanciers' Journal.)

CARE OF SITTING HENS.

THE proper care of sitting hens is a matter of no small importance to the breeder of fine poultry.

The loss of a few dozens of eggs, more or less, is a matter of little consequence to him who breeds dunghills, and values his eggs at from 10 to 25 cents per dozen, and, indeed, it will not pay him to take extra care of the sitting hens; but when we pay from \$3 to \$6 per sitting for eggs, or value our own at these prices, it becomes an important question how we may obtain the most and best chicks possible from them.

Many of the failures in the hatching of eggs, which are charged to the dishonesty of the seller, or to the carelessness of express companies in their transportation, is really due to the want of proper care on the part of the buyer. If laying hens have access to the sitters, the eggs are not only apt to become broken, but the layer will sometimes take the nest while the sitter is off feeding, and when she returns, finding her nest occupied, she will, perhaps, take some vacant one, leaving her eggs to become chilled, and entirely ruined.

Neighbors have frequently got eggs from me of the same kind which I was setting, and from which I got ten or twelve chickens to the setting of thirteen, and they would often either fail entirely, or would get two or three feeble chicks. At the same time they were perfectly sure that it was not the fault of the hen, as, they affirmed, she sat finely; while at the same time, perhaps, they paid little attention to her, making only an occasional visit to the nest, at which times she appeared to be all right.

A good plan, especially for large, heavy hens, is to have nest boxes on the ground, and closed off, with the exception of one end, which should have a strip over the lower part of the open end, and high enough to prevent the eggs from rolling out. The nest should then be shaped with damp earth, and on the top of this ought to be placed fine hay or straw to the depth of about half an inch. Where it can be done it is best to have these boxes placed in a *sitting apartment*, with a good yard or run attached. In the morning, or at whatever time of day is most convenient, so that some uniformity is observed, the hens may be taken from the nests, and food and water placed before them. It is very important, also, that they have dry earth or coal ashes in which to dust themselves.

Some take off the hens only every second day, but I do not think this is best. The irregularity in evacuating often produces diarrhoea, and sometimes causes the loss of the hen, at others the entire destruction of the eggs. Some hens will not remain off the nest long enough to take sufficient exercise or to evacuate; such hens should have the nest covered up until they have remained off a sufficient length of time.

Where hens are procured from neighbors, or where they are changed from the laying to the sitting-room, they will sometimes require to be watched, and placed back on the nest after feeding. In a few days they will learn to return to the nest of their own accord. After all of the hens have returned to their nests, or have been placed upon them, all should be securely covered up, where they will be safe from all intrusion for the day. Sometimes hens will desert the nest before their broods are hatched; a little watchfulness and experience on the part of the breeder will enable him to detect this disposition a day or two before the hen actually leaves her eggs, when they can be placed under another hen. Many persons, for want of this precaution lose several sittings of eggs each season. If eggs become broken in the nest, as will often happen, the hen, in her endeavor to remove the pieces of shell which adhere to the sound ones, will break others, and the eggs will adhere together, so that the hen cannot turn them properly. Whenever an egg becomes broken the remaining ones should at once be washed with tepid water. A neighbor told me that he had a hen which was eating her eggs, and he feared he should be obliged to remove her from the nest. At my suggestion he washed the eggs and renewed the nest, when the trouble was at once ended. I find whole corn to be an excellent feed for *sitting* hens, though I give my *layers* but little of it.

When the chicks begin to come out of the shell they need considerable care. Often after the eggs are pipped they will become partially crushed by the uneasiness of the hen; unless the chicks have help they will become pasted fast to the shell, and will perish. A small portion of the broken shell and the thick skin under it should be removed near the bill of the chick, and if any sign of blood appears the egg should be replaced under the hen, and allowed to remain several hours, when it must again be examined. Whenever indication of blood appears all efforts to free the chick should cease for the time, but, if there is no appearance of blood, enough of the shell and thick skin may be removed to enable the chicken to free itself. I have in this way saved a number this year, which I should, otherwise, certainly have lost. I frequently find it convenient to give the hatch of two hens to one mother, and reset the other one, and I have never found a hen the worse for sitting six weeks, indeed, I have thought that a hen which has been hatching

six weeks will remain longer with her birds than one that has been on the nest but three weeks.

Many who read this will no doubt say "I knew all that before." I am well aware that I have advanced no new ideas, and, perhaps, the treatment which I have described is not even the best, but I have given the method pursued by myself, and one which I have found so successful that I felt safe in recommending it to others.

You have doubtless among your subscribers very many who are beginners in poultry breeding, and it is with the hope of interesting and benefiting them that I have written this article.

F. R. W.

MY DEAR FANCIERS' JOURNAL.

I have just received No. 16, and find it as attractive as the preceding numbers, and although when the enterprise began I was among those who doubted its expediency, I now see my mistake, and, also, believe the "F. J." to be what we have wanted for some time past. I look for your arrival every week with pleasure, which is not diminished when I read your columns of advice and happy ideas. I hope you will have the greatest success, as is certainly promised at present.

This, however, is hardly what I started to write about; my object in writing is to ask your readers, through your columns, if you see fit to give me space, for information (derived from experience) on the subject of Game Bantams, Black-breasted Reds particularly. I know that some of your readers have had that experience, and, as I am perpetuating this beautiful breed, I should like to hear from such men as Messrs. Simpson, Spaulding, or Howlett, and others, as to the selection of breeding-stock, what sort of sitters, mothers, and layers they make, &c. I daresay others might profit by the information thus given. It seems to me that it would be an excellent plan if those who have kept one or more breeds of poultry for years would give their experience, and the peculiarities of their flocks, so that amateurs could judge which breed to choose for themselves, by comparing their merits, and adapting them to their own individual circumstances; thus giving all a chance, spreading the news of "Fancy" far and wide, and bringing all to a realization of the merits of our domestic friends and companions, the "Chickens."

I remain yours truly,

BLACK RED.

NEW YORK, April 18, 1874.

(For Fanciers' Journal.)

Mr. Bicknell's roup experience (in *Journal* of April 16) corresponds somewhat with mine, though I cannot report the same favorable results from the use of powdered alum. Chickens are like "humans" in many respects, and require for the same diseases, different treatment in different localities; and I have found in many cases, that what would benefit one ailing chicken, would have no effect on another, though both were apparently suffering from the same cause.

I tried the powdered alum on the cockerel sores in the mouth, without effecting a cure. I burnt alum, mixed it with honey, and administered in the form of a pill. I used almost every poultry powder, paste and pills, and though from some of them I gained temporary relief for the fowls, none seemed to get at the root of the disease. Before last fall, I never had a case of roup amongst my chickens, and often congratulated myself at the good healthy appearance my fowls presented, and the entire freedom from the attacks

of this pestiferous disease. I hoped I might never form its acquaintance in any way in my own experience, but this was too much to hope for, and I have now learned what roup really is, and have seen how, when it has once taken hold of a victim, it will hang on like "grim death," and require very strong measures to banish it.

I give here the remedy I applied, and which I shall use if I ever am visited with the roup again. I read it in the *Practical Farmer*: Swab out the throat of the affected fowl with powdered borax; remove the scabs from the mouth, and touch the parts with a strong solution of nitrate of silver. The swabbing may be easily accomplished, by dipping a feather in water, to make the powder adhere to it, and using a feather or small brush, to apply the solution. Some fanciers in this neighborhood report that in addition to the usual symptoms of roup and canker in the mouth, that their chickens have sores all over their heads, resembling pock sores.

EBEN P. DAY.

HAZLETON, PA., April 17, 1874.

(For Fanciers' Journal.)

PROVINCIAL POULTRY EXHIBITION AND FORMATION OF A NEW SOCIETY.

MARCH, 1874.

During the Exhibition a meeting of the principal fanciers, breeders, and exhibitors was held for the purpose of eliciting their views to form a Poultry Association for Ontario. Mr. James Goldie occupied the chair, and Mr. George Murton acted as secretary. On motion of Rev. W. F. Clarke, seconded by Mr. Goebel, it was decided to establish such an association. The following office-bearers were elected: President, Rev. W. F. Clarke; First Vice-President, M. G. Roach; Second Vice-President, Mr. Goldie; Secretary-Treasurer, Mr. George Murton. It was resolved that the President, Messrs. Thomas, Buck, Bogue, and Morris be a committee to submit a list of Directors for the approval of the meeting to be held at the Secretary's office at 2 P.M. next day. The meeting then adjourned until the time and place above mentioned. Below we give the

PRIZE LIST.

CLASS 1, *Dorkings*.—Cock and Hen bred prior to 1873.—White—John Bogue; 3d, J. W. Moyes. Silver Gray—John Bogue; 2d, John Bogue; 3d, J. W. Buck. Dark—2d, F. W. Stone.

CLASS 2, *Dorkings*.—Cockerel and Pullet bred in 1873.—White—2d, J. Aldouse. Silver Gray—John Bogue, F. W. Stone; 3d, F. W. Stone. Dark—Daniel Allen, H. M. Thomas, F. W. Stone.

CLASS 3, *Cochins*.—Cock and Hen bred prior to 1873.—Buff—H. M. Thomas. White—P. Brieding, F. Sturdy, H. M. Thomas. Partridge—1st, 2d, and 3d, P. Brieding.

CLASS 4, *Cochins*.—Cockerel and Pullet bred in 1873.—Buff—Daniel Allen, H. M. Thomas, L. Dean. White—P. Brieding; 2d and 3d, J. W. Buck. Partridge—1st and 2d, H. M. Thomas; 3d, F. Sturdy.

CLASS 5, *Brahmas*.—Cock and Hen bred prior to 1873.—Dark—Joseph Fullerton; 2d and 3d, H. M. Thomas. Light—George Davidson, J. W. Buck, E. Morris.

CLASS 6, *Brahmas*.—Cockerel and Pullet bred in 1873.—Dark—H. M. Thomas, F. Sturdy, D. Allen. Light—J. W. Buck, P. Brieding, F. Sturdy.

CLASS 7, *Spanish*.—Cock and Hen bred prior to 1873.—Black—D. McR. Kay; 2d and 3d, F. Sturdy.

CLASS 8, *Spanish*.—Cockerel and Pullet bred in 1873.—Black—D. McR. Kay, D. Allen, F. Sturdy.

CLASS 9, *Leghorns*.—Cock and Hen bred prior to 1873.—White—2d, H. M. Thomas; 3d, James Anderson.

CLASS 10, *Leghorns*.—Cockerel and Pullet bred in 1873.—White—J. W. Moyes, L. Dean, J. Fullerton. Brown—2d, J. W. Moyes.

CLASS 11, *Games*.—Cock and Hen bred prior to 1873.—Black-breasted Red—D. Allen, H. M. Thomas, F. Sturdy. Brown Red—3d, J. Craig. Duckwing—D. Allen.

CLASS 12, *Games*.—Cockerel and Pullet bred in 1873.—Black-breasted Red—Daniel Allen, James Parker, H. M. Thomas. Brown Red—2d, R. Balkwell; 3d, James Craig. Duckwing—2d, Daniel Allen; 3d, John Bogue.

CLASS 13, *Polands*.—Cock and Hen bred prior to 1873.—White-crested Black—J. W. Buck. Golden Spangled—Daniel Allen, H. M. Thomas. Silver Spangled—H. W. Thomas, John Bogue, J. Aldouse. White—H. M. Thomas.

CLASS 14, *Polands*.—Cockerel and Pullet bred in 1873.—White-crested Black—H. M. Thomas. Golden Spangled—John Bogue, J. Brieding, J. Aldouse. Silver Spangled—2d, J. Bogue; 3d, H. M. Thomas. White—3d, J. Aldouse.

CLASS 15, *Hamburgs*.—Cock and Hen bred prior to 1873.—Golden Spangled—F. Sturdy, L. M. Day, F. Sturdy. Silver Spangled—J. Bogue, H. M. Thomas. Golden Penciled—D. McR. Kay, James Dobbie. Silver Penciled—2d, J. Bogue; 3d, H. M. Thomas. Black—D. McR. Kay.

CLASS 16, *Hamburgs*.—Cockerel and Pullet bred in 1873.—Golden Spangled—F. Sturdy, S. Shaw, H. M. Thomas. Silver Spangled—H. M. Thomas; 2d and 3d, J. Present. Golden Penciled—1st and 2d, James Dobbie; 3d, D. McR. Kay. Silver Penciled—2d, James Dobbie. Black—2d, D. McR. Kay, James Fullerton.

CLASS 17, *Houdans*.—Cock and Hen bred prior to 1873.—John Bogue, H. M. Thomas, L. Dean.

CLASS 18, *Houdans*.—Cockerel and Pullet bred in 1873.—L. Dean, J. Bogue, H. M. Thomas.

CLASS 19, *Crevecoeurs*.—Cock and Hen bred prior to 1873.—H. M. Thomas.

CLASS 20, *Crevecoeurs*.—Cockerel and Pullet bred in 1873.—J. Aldouse, H. M. Thomas.

CLASS 21, *Bantams*.—Cock and Hen, any age.—Golden Sebright—H. M. Thomas, J. W. Bussell, D. Allen. Silver Sebright—3d, R. Balkwell. Black-breasted Red Game—Daniel Allen, H. M. Thomas, D. Allen. Duckwing Game—D. Allen; 2d and 3d, D. McR. Kay.

CLASS 22, *Turkeys*.—Cock and Hen, any age.—Bronze—1st and 2d, J. W. Bussell; 3d, James Anderson. Black—C. Head.

CLASS 23, *Geese*.—Goose and Gander, any age.—Toulouse—F. Sturdy. Bremen—F. W. Stone, T. S. Henry, H. M. Thomas. China (small)—T. C. Henry; 3d, T. C. Henry. Wild—T. C. Henry.

CLASS 24, *Ducks*.—Drake and Duck, any age.—Aylesbury—John Bogue; 2d and 3d, F. Sturdy. Rouen—F. Sturdy, D. Allen (Galt), F. Sturdy.

CLASS 25, *Rabbits*, in pairs.—Angora—H. M. Thomas.

CLASS 26, *Pigeons*, in pairs.—White Pouters—A. Goebel (Mitchell), H. B. B. Alley. Blue Pied Pouters—A. Goebel, H. B. B. Alley. Almond Tumblers—Joseph McGrath (Toronto), H. B. B. Alley. Any other variety Tumblers—A. Goebel, H. B. B. Alley. White Fantails—T. S. Henry (Oshawa), Wesley Henry. Blue Fantails—A. Goebel. Jacobins—A. Goebel, H. B. B. Alley. Black Carriers—H. B. B. Alley, A. Goebel. Carriers, any other color—1st and 2d, A. Goebel.

CLASS 28, *Cock Birds*.—Cock Canary—George Bookless, W. Burgens. Hen Canary—1st and 2d, A. Suddaby. English Goldfinch—A. Suddaby, Joseph B. Allen.

CLASS 29, *Guinea Fowl*.—Cock and Hen, any age.—J. W. Bussell (Hornby).

CLASS 30.—One pair Black Cochins—2d, Philip Brieding (Berlin). Quail—2d, Robert Balkwell. American Grosbeak—2d, Robert Balkwell. White Top-knot Ducks—2d, John Fry. Pile Game Bantam Cock—D. Allen, highly commended. Black African Bantam—1st, D. Allen. Large White Geese—2d, P. H. Gibbs. Pair of Geese—3d, Samuel Barber. Buff Geese—2d, T. S. Henry. Colored Geese—1st, John Bogue.

EXTRAS.—Mr. A. Goebel, of Mitchell, was awarded first prizes for all of the following Pigeons, the last on the list being highly commended: Black Barbs, Checkered Pouters, Rice, Yellow Trumpeters, Blue-winged Turbits, Black Fantails, Calcutta Fantails, and Yellow Fantails.

PIGEON DEPARTMENT.

(For Fanciers' Journal.)

PRIESTS.

PRIESTS or Quakers are the pet toys of many fanciers; and here the old adage is very applicable, "Every one to his fancy." For myself, my fancy runs in a different channel, though I remember well with what happiness I carried home the first pair of Priests I ever owned. They were very ordinary birds, as judged in these days, but to me they were priceless. The rest of the afternoon was spent nailing boxes against the house-wall; and as the boxes were too heavy for a boy to handle, occasional tumbles of box, boy, and birds drew forth peals of laughter and merry shouts from our neighbor's daughters, before whose eyes I was always a shamefaced youth.

It may be that some experience was what ultimately caused me to dislike the Priests. Not that the young ladies were at all disliked; but what boy can stand his interest in his pigeons made a matter of amusement and yet preserve his equilibrium? As sure as I went into the garden to look up at my Quakers, so surely did those girls look out of the window and whistle "Hua, hua, hua." Many is the time they have driven me away with a forlorn smile on my lip and bitterness in my heart to wish my pigeons were dead. Ah, but I have had my revenge since those days. Both those girls have husbands, both have children, and both have pigeons. Pigeons in their garrets, in their stables, in their cellars. Yea, I saw this day a pair of cropped-winged birds upon the baby's crib, as I examined the oldest boy for the measles. His last words were, "When are you going to bring me the Quakers?" His mother's benediction was, "Doctor, if you bring any more pigeons here, you shall never enter my house again. It is all your fault, I cannot have a clean room to sit down in."

My readers, you cannot tell how well I felt as I drove home, knowing the merriment and whistling is all on my side now. That boy will be here after the Quakers as soon as he gets out; and every time I see his mamma it is only necessary to "hua, hua" once or twice to awaken the merriest memories of the past. The bitterness of my youthful days is gone, and we can afford to laugh amid our retrospection at what was then the most important object of our lives.

Now that we have reached a breathing-place, you may ask, what has this to do with Priests? Why, but for what has been written, no article on that variety would have followed, nor would I have impressed upon you how necessary it is that we should enter into the sympathies of the little people. They cannot understand us; therefore, to insure their happiness, try to understand them; the effort wonderfully repays us. If your boy wants pigeons, help him to fix up for them. Do not laugh his fancies to scorn, or you may chill all the feelings that bind him to his home; and recollect your fancies for your cigar, novel, or horse, are no more intense than his for his (to you) minor interests.

But enough of this. Let us to the Priests, as they are called in Germany, on account of their white cowl, and in contradistinction to the black veil of the Nun; or Quakers, as they are called in this country, by reason of their firm, sedate, and sombre appearance.

The Priest is about the size of the common, and the plain birds are not unlike it in shape, but the Starlings partake more of the shape of the Suabian or Archangel, to which they are nearly related. The Priest is a solid or whole colored bird, with the exception of the head, which is bald (or white). The line between the colors passes through the centres of the eyes, and along the inner and lower part of the hood, which must be free from any foul white feathers. The upper half of the beak is white, the lower dark. The eye is generally mixed, but I have seen them where the upper half was pearl; the lower half dark; thus partaking of the colors of the head and neck. The hood must be proportioned to the size of the bird, and in the ordinary colors it must be a perfect cup-edged hood; but in the Starling a point head is frequently seen, and does not detract from the beauty of the bird. The feet closely covered with short feathers, among which no whites are allowed, not even on the toes. The Starlings are clean-footed, and indeed ought hardly to be ranked with the Priests, as they more nearly approach the Suabians and Archangels. There are plain Priests, which signifies that the colors—black, red, blue, and yellow—are solid (except the Bald-head), without bars across the tail or wings; then there are barred Priests, in which the bars are allowed, and also white barred birds, in which white bars occupy the positions on the wings and tail, in place of the dark bars generally seen. Of these, the red and yellow birds with white bars, are rarest—the plain birds next. The Starling, or Star Quaker, is a black bird with white bars across the wings, and a crescent-shaped band of finely spangled iridescent, irradiating feathers about the throat, the upper border of which is straight across the neck, and distinctly marked; its head is bald, and feet clean. The following points may be useful to judge by:

1. Coloring. A colored bird with white head, the line of division passing through the centre of the eyes, within the base of the hood, and sloping at the corners of the mouth.
2. Eyes. The upper half pearl, the lower half dark.
3. Feet. Covered with short, close feathers, except the Starlings, which are clean.
4. Hood well proportioned; clear on the inside; the Starling sometimes point-headed.
5. Colors black, red, blue, yellow, and starling.

Sometimes the Priest degenerates, and loses nearly all the white of the head, excepting a spot near the base of the beak, then it is called a white spot.

DR. W. P. MORGAN.

DEATH OF A NATURALIST.—The venerable Lutheran pastor, John Bachman, distinguished as a naturalist, and life-long friend and co-laborer of Agassiz and Audubon, died at Charleston, S. C., last week, aged 85. In early life he was associated with Audubon, whom he assisted in the preparation of his celebrated work on Ornithology, and was the principal author of the illustrated work on the Quadrupeds of North America. He had been pastor of the German Lutheran Church in Charleston for about fifty years, and has published many works on the denomination with which he was connected.

Items Interesting and Amusing.

 The dairymen are discussing the question, "Is butter of the first rank good butter?" Strong arguments are made on both sides.

 The man who remarked that the Prince of Wales was born with a crown on his head, was not aware that all children are so born.—*Toledo Blade*.

 A Minnesota paper says that dysentery is raging among the bees in that section, and that a terrible mortality is the result. Why not give the little sufferers hot mustard baths, and dose them on hive syrup?

 Boarder—"What large chickens these are!"

Landlady—"Yes, chickens are larger than they used to be. Ten years ago we could not get chickens as large as these."

Boarder (with an innocent air)—"No, I suppose not; these must have grown a great deal in that time."

Landlady looks as if she had been misunderstood.

 St. Louis detectives have just solved a fearful mystery. A sickening odor was discovered issuing from a long-unoccupied room in a certain house, and, after great preparation, the door was burst open. A single trunk stood in the far corner, and it, too, was quickly forced open. Horrors! it was found to contain the mangled remains of the liveliest lot of Limburger cheese that ever the officers had set eyes on.

 A few months since, while Mr. Ezra Burton was spending a night in Newburyport, his dog was stolen from him, during the evening; the next day about four o'clock in the afternoon, the dog, having escaped from his new keeper, presented himself at Mr. Burton's home in South Lancaster, very tired and footsore; the distance from Newburyport to Lancaster is seventy miles, and the dog had never accompanied his master over the line.

 THE WRONG FLEA.—A performance of educated fleas is at the present time attracting much attention in Berlin. At a recent exhibition, one of the most accomplished of the insects, obeying a sudden impulse of its nature, sprung from the table, and took refuge on the person of an illustrious lady. The exhibitor was in despair, as the truant was his best performer, and said he would be ruined unless it could be recovered. The lady good-naturedly retired to an adjoining room, and, after a few minute's absence, returned with the flea between her thumb and forefinger. The exhibitor took it eagerly, gave one look at it, and then, with visible embarrassment, said: "Your Highness will pardon me, but this is not the right flea."

 POULTRY CONDIMENTS OR TONICS.—Mr. Mills, an apothecary in France, recommends from experience the following as an unfailing tonic or stimulant for debilitated fowls, and especially for young turkeys during the critical stage, when he says its effects are most marked and salutary. The prescription is copied from the French *Journal d'Agriculture Pratique*.—Take cassia bark in fine powder, three parts; ginger, ten parts; gentian, one part; anise seed, one part; carbonate of iron, five parts; mix thoroughly by sifting. A teaspoonful of the powder should be mingled with the dough for twenty turkeys, each morning and evening. It is of the greatest importance to begin the treatment a fortnight before the appearance of the red, and to continue it two or three weeks after.

 A Paladilhe writer relates that foxes are tormented by fleas, and when the infliction becomes unbearable they gather a mouthful of moss, and slowly walk backward into the nearest stream, until only the mouth is left above the surface of the water. The fleas meanwhile take refuge on the little island of moss, and when the fox is satisfied that they have all embarked, he opens his mouth, and the moss drifting away with its freight, the wily animal regains the bank evidently satisfied at his freedom from his tormentors.

 DECREASE OF THE MOOSE.—This noble animal is still found in moderate numbers in the State of Maine, although the great cold of the past winter, the unusual depth of snow, together with the rapacity of hunters, is supposed to have almost exterminated it in that region. According to the laws in that State, the animal cannot be hunted between the 15th of March and the first day of October, under the penalty of forty dollars for each moose killed. The average number captured during the past six years is estimated to be about one hundred per year, which are killed chiefly on the head waters of the Aroostook, Allegash, and Penobscot rivers. Numerous attempts have been made to domesticate it for use, but so far have been only partially successful. It has, however, been so far domesticated as to be harnessed to sleighs for purposes of travel. Its gait is a long stride or trot, a movement effected with apparently little effort, by which they get over the ground with wonderful speed. It never gallops or leaps. Although remarkably fleet, its motion is rather heavy, and when traveling, the large antlers lie back upon the shoulders, with the head and nose elevated and extended. In winter the moose frequents high regions, wooded hill-sides and mountains, assembling together in large numbers, when they are said to "yard." An abundant hardwood growth furnishes it with food, as it lives mainly on the twigs, branches, and bark of the trees.

 THE WORD "CANARD."—The origin of the word canard (French for duck), when employed to signify some unfounded story, is not generally known. The following are the terms in which M. Quetelet relates, in the *Annuaire de l'Academie*, the manner in which the word became used in its new sense: "To give a sky lift at the ridiculous pieces of intelligence which the journals are in the habit of publishing every morning, Cornelisson stated that an interesting experiment had just been made, calculated to prove the extraordinary voracity of ducks. Twenty of these animals had been placed together, and one of them having been killed and cut up into the smallest possible pieces, feathers and all, and thrown to the other nineteen, had been gluttonously gobbled up, in an exceedingly brief space of time. Another was taken from nineteen, and being chopped small like its predecessor, was served up to the eighteen and at once devoured like the other; and so on to the last, who was thus placed in the position of having eaten his nineteen companions in a wonderfully short time. All this, most pleasantly narrated, obtained a success which the writer was far from anticipating, for the story ran the rounds of all the journals in Europe. It then became almost forgotten for about a score of years, when it came back from America, with amplification which it did not boast of at the commencement, and with a regular certificate of the autopsy of the body of the surviving animal, whose œsophagus was declared to have been found seriously injured. Every one laughed at the history of the canard thus brought up again, but the word retains its novel signification."

Entered, according to Act of Congress, in the year 1873, by JOSEPH M. WADE, in the office of the Librarian of Congress, at Washington.

AMERICAN POULTRY ASSOCIATION.

WE have several articles this week bearing on the doings of the American Poultry Association concerning the revision of the Standard of Excellence at the Buffalo Convention, but in consequence of the writers withholding their names we shall not publish the articles at present. It is absolutely necessary that our contributors give their names, not for publication, but as a guarantee of good faith. As the doings of the American Poultry Association concern the interests of every fancier and breeder of fowls, it is but fair that an honest criticism should be allowed by those who could not be present at the Convention; but we hope it will be done in a generous and impartial manner, and, while criticising, not forgetting that it is also necessary to point out a remedy. The Convention was composed of good men, and we are satisfied that they came together, at much expense and loss of time, with a view of doing what they believed to be for the good of all fanciers. There may have been a few that were headstrong, but a large majority were well-meaning men and meant to do what was right. If they failed to do their duty, as it is understood by a majority of fanciers, they will cheerfully reconsider their doings at Buffalo and Boston. There is no necessity for secession, "breaking up the Association," or a new convention outside of the Association, which asks for a fair, honest criticism, so that its future acts may be more in keeping with the wishes of the poultry fanciers generally.

MAINE HEARD FROM.

We have just received the Premium List of the Maine Poultry Association, which is a book of 32 pages, and cover; well gotten up, and very complete. The first premium is three dollars; second, two dollars; third, diploma; fourth, highly commended. The society offers 61 specials, 54 of which are silver cups. The remaining 7 range from three dollars to ten dollars each. In addition to the above are 159 specials many of which are offered by leading fanciers

from different parts of the United States, amounting in all to \$1450 in cash, or its equivalent in fine fowls or other property. The early appearance of premium lists is what we have advocated for years. No breeder can find fault with this Association, for he has the premium list before him previous to the early hatching season. We hope every fancier likely to exhibit will send for a copy of this premium list, and render all the aid in his power to this young but energetic society. Entries for competition close January 9th, 1875. For further information, address Fred. Fox, Secretary, Portland, Maine.

POULTRY PEDIGREE BOOK.

THE *Poultry World* (American) for March, announces a Poultry Pedigree Book, resembling the stud or herd books of cattle breeders. It will, no doubt, pay the projectors well, each entry being charged twenty-five cents, and the notion being just consonant with present American ideas on the subject of poultry. The promoters are smart men, and probably understood this. We have no doubt that a couple of thousand dollars will be readily paid in this way, about which time it will be discovered that "pedigrees" of fowls are no good.—*Fanciers' Gazette*.

Correspondence.

(For Fanciers' Journal.)

MR. EDITOR.

I was pleased to see the proposition of your correspondent, G. P. Burnham, in your last number, in regard to holding a new convention upon the subject of fixing up a revised standard upon our poultry matters in this country.

I was greatly disappointed at the book just issued by the National Society at Buffalo, and I think we ought to get together *all* the friends of the poultry interest in a body at an early day, and adjust this long vexed question in a reasonable and satisfactory way, as applicable to the needs and tastes of American breeders and fanciers at large.

There are a great many errors to correct in this last new standard, and it was plainly got up altogether in too much of a hurry. It costs too high; also, I would like a hundred copies of a *good* standard to distribute among my patrons and friends. If it had been put at a fair price many others would have bought it with a similar view.

I do not like the monopoly of this thing either, any more than do others of your readers and correspondents, and I am glad our old breeders have taken hold of this mistake in earnest. Capt. Burnham's proposal is a good move. For one I say amen to it, and I believe such a convention as he advises would be just *the* thing to set us right.

Respectfully yours,

F. B. BRADFORD.

QUINCY, MASS.

(For Fanciers' Journal.)

MR. WADE.

I would like to inquire through the *Fanciers' Journal* whether Game hens are considered good sitters? I have tried them at different times, and have found them to be very inferior. But the principal fault was that of eating their eggs, some of which they attempted, having in them chickens nearly ready to hatch. Is it a frequent fault common to this breed, or is there some remedy?

WILLIAM D. ZELL.

(For Fanciers' Journal.)

MR. EDITOR.

My attention was arrested by an article in your *Fanciers' Journal* of this week, by Mr. Burnham, which proposes a universal convention of all the poultry people of the country to revise the American standard properly.

The changing and fixing of this standard has been many times attempted, but we have never yet got one that was worthy the name of an *American* standard, and I agree with Mr. Burnham and others of your writers that this *last* one, by the Buffalo folks, is worse than all. It is full of mistakes; and the compulsory instructions to our judges, in the opening of the book, which confines arbiters at our exhibitions to laid-down rules beforehand, makes this highly objectionable.

I hope the suggestion of Mr. Burnham will be carried out. There is need of it. This *last* "new standard" will not answer our turn anyhow. If we can get together, as B. suggests, at some central point—all hands—we could take hold of this thing fairly and understandingly, I fancy, and put out something that would be far more useful in the shape of a standard than this can ever be, and which will never be used in *this* State in its present imperfect form, I am confident.

Yours, &c.,
WEYMOUTH, MASS.

J. FRENCH, JR.

(For Fanciers' Journal.)

IMPORTATIONS.

DEAR JOURNAL.

I have just received, in fine condition, from Mr. George Pashby, the well-known Yorkshire judge of prize poultry, the following: One trio of magnificent White Cochins, one trio of Black Spanish, one trio of pure-bred Dorkings, and one trio of Golden Penciled Hamburgs. These birds are all cup and prize winners at first-class exhibitions the last season in England. Mr. Pashby says "They are the grandest lot of birds ever exported from the old country." I expect another importation next week from the celebrated yards of Mr. John Jurner, of Bath, England, and Mr. Henry Feast, Swansea.

I am yours truly, W. C. MUNROE, M.D.

APRIL 16, 1874.

(For Fanciers' Journal.)

JOS. M. WADE.

DEAR SIR: I received, per steamer "France," from London, a small blue Scotch Terrier bitch, which I consider one of the finest dogs of that breed ever imported to this country. She is three years old, and weighs seven pounds, and is "all dog."

Yours truly, H. A. BROWN.

NEW YORK, April 21, 1874.

P.S. I also expect from Liverpool a large invoice of Baldhead Tumblers, said to be very fine, and second to none before sent to me or sent to the United States.

(For Fanciers' Journal.)

FRIEND WADE.

Last week I received a coop of very fine Sumatra Game fowls direct from Angiers Point, Sumatra, by ship Mary Whitridge, Captain Ben. Cutler. They are fine birds, of beautiful plumage, and compare very favorably with my old stock (the original having been imported from same point some twenty years ago), having the invariable *pea-comb*, and in the cock *duplicate spur*, tail very full and carried well down, the ends dragging the ground.

Yours truly, E. S. RALPH.

BUFFALO, April 20, 1874.

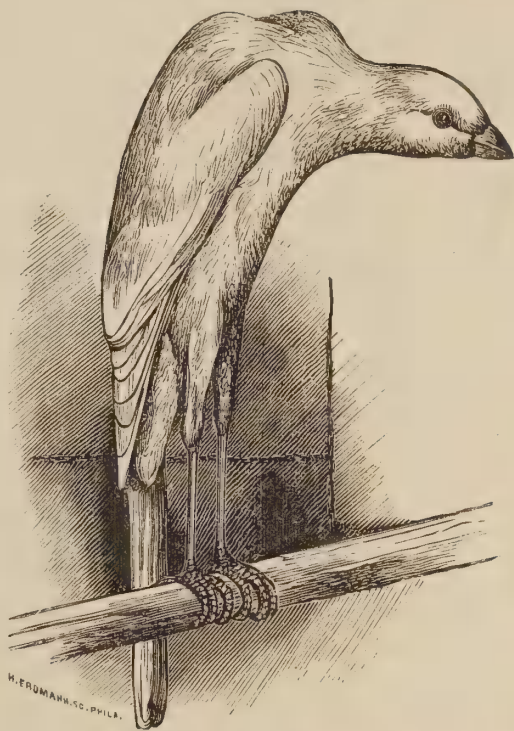

Bird and Small Pet Department.

All communications and contributions intended for this department should be addressed to HOWARD I. IRELAND, Concordville, Delaware County, Pa.

TO THE YOUNG READERS OF THE JOURNAL.

WITH this number of the *Journal* we accept the editorship of the BIRD AND SMALL PET DEPARTMENT, which hereafter will be devoted especially to the interests of the juvenile readers of the *Journal*. We have no doubt there are in the families of the subscribers to this magazine many boys, and girls, too, who are not yet "full-fledged" fanciers, and who amuse themselves by keeping minor pets—the boys, rabbits, guinea pigs, white mice, etc.; the girls, singing birds and gold fish. To the interests of these this corner will be reserved; and in order to make it an especial feature we solicit the aid, in the shape of contributions, of all our young friends. If you do not feel capable of writing an article yourself, ask the aid of your big brother or sister.

Your friend,

THE EDITOR
of the Bird and Small Pet Department.**BUFF BELGIAN COCK.**

THE Belgian canary is without doubt the most delicate and, at the same time, the most highly prized of any variety. They are truly noble birds, and any one who has ever possessed a pure-bred bird—not one of the so-called Belgian which are so often seen, shapeless animals without one of the characteristics of the true breed, but a bird with "thoroughbred" stamped all over him—will at once admit that having acquired a taste for the variety, all others are thought very little of. They will stand and look at you without flinching and draw near to you when you approach their cages; they seem to endeavor to show their gratitude for your kind care and attention—and this is the case with young birds, even from the nest they do not seem shy and never fly wildly about the cage every time the person in the habit of attending them comes near. They certainly require more care

and attention than the Norwich, but they amply repay this, as a really good, healthy Belgian canary, bred by one's self, is something to be proud of. There is quite as much difference between a Belgian and Norwich as between an Arab and a cart-horse. They are also birds of position, and are not judged for color, although it is of course an advantage when combined with other good points; and consequently, the Belgian exhibitor is not brought into contact with those people who exhibit artificially colored birds, and he has more chance of a fair award, although there are nefarious practices adopted even with Belgians to get them up for show. The bird depicted in the engraving is a buff cock, two years old. He was exhibited at the last Crystal Palace show by Mr. Heneage Gibbes, where he was awarded first prize, having previously taken first prize at Southampton. He is a very strong healthy bird, and is, with some others, the foundation of what it is hoped will prove a thorough strong healthy strain of English-bred Belgian canaries. There is every prospect of it at present, and with the mild climate of the south of England, there is little doubt of ultimate success.—*Poultry Review*.

(For Fanciers' Journal.)

BANTAMS.

Who does not admire the plucky little Bantam cock, strutting proudly around the narrow limits of his pen? And his crow? Jumping upon the highest object in his yard, he nearly falls backward in endeavoring to stand straighter, crow louder and longer than the Brahma cock in the neighboring pen.

We had in our possession a pair of common Bantams, which we allowed to run with a flock of Leghorns. The next day after the Bantam cock was set at liberty he had fought and conquered the Leghorn cock, and was leading the flock of hens around, like a full-bred Game cock, while their former lord, the Leghorn cock, was trembling in the distance. As we did not care to set any eggs from these Leghorn hens, we allowed the Bantam to play the lord and master over them. But this state of affairs did not last long, for one day the Leghorn cock gathered together the remnants of his courage, fought, and severely whipped the little Bantam, and took his place once again in the flock. So ended the brief but glorious career of the little Bantam. Ever after his defeat he kept shy of the victor, and remained in the society of his demure little mate; although when he caught a hen straying from the flock he would play the tyrant over her till the Leghorn cock came to her assistance, and then, thinking "discretion the better part of valor," he would invariably flee.

Bantams are not only ornamental, but useful; and families living in the city, not having yards of sufficient size to raise larger fowls, will find that a flock of Bantams will keep them in eggs and "spring chickens." Their flesh makes up in quality what it lacks in quantity. Their eggs, though small, are most excellent eating.

The different varieties of Bantams are numerous, some of which we give: White, Black, Black African, Golden Sebright, Silver Sebright, Black Red Game, Duckwing Game, Japan Bantams, &c.

For table use we would recommend the White, and for pets the Sebright Bantams, though some say the eggs from the latter variety are apt to prove unfertile—and so will every egg that has been dipped in hot water, shaken, or a

long needle pierced through it, as nine out of every dozen eggs you buy from some unprincipled dealers are served.

A house for Bantams on the same plan as that used for larger breeds, but smaller, will answer.

Feed them twice a day on crushed corn, wheat or oats, given alternately, with once a week oatmeal well seasoned with cayenne pepper. Fresh water costs nothing, and should be given every day, and oftener if possible.

PAUL LOGIC.

(For Fanciers' Journal.)

MEADOW MICE.

Boys residing in the country often catch meadow mice and confine them as pets. Indeed they do make nice pets. Their queer-shaped heads, their clumsy antics, and their funny little squeak, afford much innocent amusement.

An excellent cage for them may be made as follows: Inclose a plat of ground five feet square by wire netting. Roof this inclosure over with the same material, or your pets will climb up the sides of the cage and make their escape at the top. In the centre of this inclosed plat sink an empty dry-goods box to a level with the ground, and fill it with mellow soil. Board over all the open ground, so that they can burrow nowhere but in the box. Your cage is now ready to receive its occupants. During the first night of their captivity the mice will burrow in the box. Put in their cage some dry corn-silk, of which to make their nests.

Feed them solely upon corn grains, and be sure to give them fresh water at least once a day.

The same kind of a cage as the one described above will do in which to confine any kind of burrowing animal.

PHILO.

(For Fanciers' Journal.)

GOLD FISH IN A GLOBE.

FILL your globe one-tenth full of well-washed bar sand. Scatter a few small rocks about the bottom. Fasten to the largest rock a piece of "river weed." Fill the globe two-thirds full of water, and put in the gold fish. Feed them, once a week only, on wheat flour and milk mixed to the consistency of putty. If you live near a slaughter-house use blood in preference to milk. When the water needs changing the fish will rise to the surface and gasp. Never change the water until they do this.

I. H. MORRISON, Marlow, N. H.—Card. Pure-bred Fowls, Plymouth Rocks and White Leghorns, and price list of eggs.

THAT HATCHET.

BY W. A. CROFFERT.

"Dear! dear! who broke my favorite egg?"
Cried Biddy Bantam to her daughter;
"Some lazy cur, too proud to beg,
Has mashed it—and he hadn't ought ter."
The child gave one pathetic crow,
Her rueful tears began to thicken,
She sobbed aloud, "I broke it, ma—
This little person is my chicken.
Some albumen and lime I'll buy,
And make another one to match it.
Oh, ma, I cannot tell a lie,
I did it with my little hatch it."—*Graphic*.

BLACK-BREASTED BLACK RED GAMES,

WILLOW LEGS, BAY EYES,

FOR SALE.

I can spare two trios of above breed, very fine birds, matched for breeding, \$20.00 per trio; I will also sell B. R. Game Eggs, from my best fowls only, at \$3.00 per 13. I keep no other breed. Shall have a few chicks to spare next fall.
C. F. PERRY, Cuba, N. Y.

PARTRIDGE AND BUFF COCHINS A SPECIALTY.

Eggs from my thoroughbred Partridge and Buff Cochins, for hatching, \$3.00 per dozen. Terms, C. O. D. Address
DR. A. S. JORDAN, Riegelsville, Bucks County, Pa.

UNADILLA FORKS, OTSEGO CO., N. Y., March 31, 1874.

I have this day purchased of G. H. WARNER, New York Mills, N. Y., HIS ENTIRE STOCK OF FANCY POULTRY, including all his imported and premium stock of the following varieties: Dark Brahmas, Light Brahmas, Buff Cochins, Partridge Cochins, White Cochins, Black Cochins, La Fleche, Crevecoeurs, White Dorkings, Silver Gray Dorkings, Gray Dorkings, Duckwing Game Bantams, B. B. R. Game Bantams, Golden Sebright Bantams, Aylesbury Ducks, and Rouen Ducks.

The above fowls were exhibited at four shows the past winter, including that of the Central New York Agricultural Society, Central New York Poultry Association, Western New York Poultry Society, and the show at Macon, Ga. Mr. Warner made 121 entries and received 91 premiums, amounting to \$509.

I shall also continue to keep and breed the same varieties that I have bred for several years, namely, Houdans, S. S. Hamburgs, Golden S. Hamburgs, White Leghorns, Brown Leghorns, Golden Polands, W. F. Black Spanish, B. B. Red Game, Duckwing Game, Rumpless Brown Red Game Bantams, White-crested Ducks.

The above Fowls are all selected with great care and expense, and the two yards united will make the most complete yard of Fancy Fowls in the United States. Persons desirous of obtaining either Poultry or Eggs may rest assured that they will be dealt with in a square and honorable manner. Every order will receive my prompt and personal attention.

In order that the price may be within the reach of all, I shall reduce the price of Eggs to \$3 per dozen—two dozen for \$5. Eggs from the same stock that I breed from myself.

Thanking you for past favors, and asking for a continuation of the same, I am, yours very truly,

C. N. BROWN,
Unadilla Forks, Otsego Co., N. Y.

FOR SALE OR EXCHANGE.

—Two Duckwing Game Bantam Hens, four Hens and one Cock, Dark Brahmas, one trio B. R. G. Bantams, one pair Golden Polands, one pair Rouen Ducks, and one Black Carrier Cock. I want one pair Silver Sebright Bantams, one Carrier Hen, one Black Red Game Cock, and Owl Pigeons.
Address T. A. WINFIELD, Hubbard, Ohio.

EGGS FOR HATCHING.—From superior stock Dark Brahmas, Light Brahmas, Partridge Cochins (Todd's strain), White Leghorns, Black Spanish, White and Golden Sebright Bantams, Cayuga and Plata Ducks, White Holland and Bronze Turkeys. Address
DAVID W. BURNSIDE, Portland Mills, Parke Co., Ind.

NATIONAL BEE JOURNAL.—MRS. ELLEN S. TUPPER, Editor and Proprietor. Devoted exclusively to Bee culture. Two Dollars a Year. The *National Bee Journal* is issued on the 15th of each month, contains sixty-four pages, printed on fine paper, in neat, clean type, and for the year 1874 has been greatly improved. Mrs. Tupper, having purchased the *Journal*, has removed it to Des Moines, Iowa, where it will hereafter be published under her own supervision. She will write for no other publication but her own, and in that she will give the result of that long practical experience which has placed her among the best, if not the best, authorities in this country on the honey bee.

Arrangements have been made with prominent bee keepers in this and foreign countries, for timely articles each month, upon important topics. A special department has been assigned to "Notes and Queries," in which the various questions which arise in the practical experience of bee keepers each month, will be given, with pertinent answers by the editor. These will be condensed into the smallest possible space, and will be one of the most interesting features of the *Journal*.

The *Journal* will keep entirely clear of all entangling alliances with patent rights of whatever nature, and will be independent in the expression of its opinions. It will aim to be reliable, give only such information as will be of practical utility to its patrons, discarding theories and misleading propositions.

A limited space is devoted to advertising, which will be given to unobjectionable notices, at fair rates; and the large and rapidly increasing circulation of the *Journal* makes it a valuable advertising medium.

For circulars, containing club rates, premiums, advertising rates, etc., address MRS. E. S. TUPPER, Des Moines, Iowa.

BANTAMS.—14 varieties. 26 premiums at Massachusetts Exhibition, 1874.
W. B. ATKINSON, Box 530, Boston, Mass.

CHICKENS.—Orders now being booked for furnishing, in June and July, Young Chickens, in flocks of from eight to twelve each, with hen to mother them, from pure strains of Brahmas, Cochins, Leghorns, and Hamburgs (all varieties), and Dominiques, Plymouth Rocks, &c. Prices reasonable. Terms cash, one-half only in advance. Send stamp with letters of inquiry to
Order early.
T. T. BACHELLER, Minneapolis, Minn.

DOMINIQUE LEGHORNS.—Eggs from this variety supplied, in rotation as received, at \$3 per sitting (13 eggs). Also, Eggs or Poultry of all the leading varieties furnished at short notice by
JOHN DYER, JR., General Dealer and Breeder,
No. 39 Federal Street, Alleghany City, Pa.

EGGS, \$3 PER 13.

Fowls for sale after September 1st.

To persons sending me \$12 for four sittings of Eggs, I will send the *Fanciers' Journal* for one year.

To persons sending \$6 for two sittings, I will send the Standard of Excellence, as revised at Buffalo.

"THE BEST IS THE CHEAPEST."

Why it is believed my White Leghorns are superior to all others: From the fact that my stock has been awarded Fifty-four Prizes in 1872-73, and that the committee, in revising the standard, used and carefully examined a cockerel bred by me, and reported accordingly.

I can now fill orders for EGGS from my Selected Breeding Stock, on receipt of price,

\$5 PER DOZEN,

Cash or P. O. order on New Haven.

J. BOARDMAN SMITH,
P. O. Box 28, North Haven, Conn.

I now offer for sale Eggs from the following varieties of Fowls, that took first premiums of all the varieties mentioned, namely: White Cochins, White Polish, Golden and Silver-spangled Polish, and White Crest Black Polish, Golden and Silver-spangled Hamburgs, and Brown Leghorns. A few pairs or trios of fine Fowls for sale at reasonable rates.

Also, very choice Pigeons of 65 varieties. 31 first premiums, 13 second, and 4 specials, at Buffalo, N. Y.; 25 first, 12 second, and 6 specials, at Pennsylvania Exhibition at Philadelphia. Send a green stamp, stating what you want. Also, three Bloodhound Pups for sale.

R. M. GRIFFITH, Belper Cottage, Wilmington, Del.

PURE BRED STOCK, AND WHERE TO GET THEM! RIVERSIDE STOCK AND POULTRY YARDS.

WM. WRIGHT, and S. BUTTERFIELD, Proprietors.

We shall sell a limited number of sittings of Eggs, at \$5 per sitting, from Light and Dark Brahmas, Buff and Partridge Cochins. Our Light Brahmas are Williams' strain, pure. Yard No. 1—Cock Young Alexis, is mated with six prize Hens, all standard birds, and winners at Detroit and Buffalo Show. Yard No. 2—Cock Duke of Essex is also mated with standard birds, among them are the winners of 1st, at Detroit, for Chicks of 1873. Yard No. 3—Dark Brahmas; are our own direct importation of 1873, and are first-class birds of high merit, and we can safely recommend them to the fancier. Yard No. 4—Buff Cochins, imported from England, from Rev. Mr. Brooks' and Taylor's strains, and selected by our Mr. B. for breeding purposes. Yard No. 5—Imported Partridge Cochins; are standard birds, and mated with great care for breeding. We also make the importing and breeding of Lincoln and Cotswold Sheep, Suffolk, Essex, and Berkshire Pigs a specialty. Mr. S. Butterfield being personally acquainted with all the leading breeders in England, will leave on or about the middle of June to make a selection from the best pens of premium birds at the various shows in 1874. Any orders entrusted to him will be executed according to instructions, on commission or otherwise. All communications addressed with stamp, to

WM. WRIGHT,
Griswold St., Detroit, Mich.,
Or Riverside Stock Farm, Sandwich, Ontario, Canada.

100 COMMON AND ANGORA RABBITS—Also choice Rouen Duck Eggs, Fancy Pigeons, &c.

JOHN THOMPSON, JR., Shoemakertown, Pa.

EGGS, PER SITTING—Ginger Red Game, Cryer strain, \$4; White-faced Spanish, Cryer strain, \$3; Penciled Silver Hamburg, Cryer strain, \$2. Trios, pairs, or single birds of the above for sale, at Grange Yards, Duffields, West Virginia, by

V. M. FIROOR.

COLUMBUS POUTERS A SPECIALTY.—Fancy Pigeons of nearly every known variety at very low prices. Address

S. D. R. SMITH, Williamsport Columbarian,
Williamsport, Pa.

EGGS, EGGS, EGGS.—I am prepared to furnish Eggs from my White Leghorns which took first and fourth prizes at the N. E. Show, at Worcester, in January; also first at Providence, in March. Eggs packed in the best of shape for \$3 per dozen. JOSEPH DART, Oxford, Mass.

PLYMOUTH ROCKS A SPECIALTY.—Eggs for hatching at \$2 per sitting. This season my birds have won—

- 1st premium on Fowls at Youngstown, Ohio.
- 1st premium on Chicks at Youngstown, Ohio.
- 1st premium at Myricks, Mass.
- 1st premium at Taunton, Mass.
- 1st premium on Fowls at Pittsburgh, Pa.
- 2d premium on Fowls at Boston, Mass.
- 2d premium on Chicks at Boston, Mass.

I have purchased the P. R. Cockerel that won 1st premium at the New England Fair, held at Worcester, Mass., which weighed 11 pounds when seven months old. For circular, address, with stamp,

E. R. HAYWARD, Easton, Mass.

GRAY DORKINGS.—Two trios, at \$10 per trio; also, one cock and four hens for \$15. These are good birds, and very cheap. Address Dorking, care of this office.

THOROUGH-BRED POULTRY.—The subscriber offers Eggs from Light Brahmas, Buff and White Cochins, Brown Leghorns, and Plymouth Rocks, at \$3 per sitting. The above fowls have received the leading premiums at first-class shows, thus characterizing them as birds of the highest merit.

MARK PITMAN, North Beverly, and 22 School St., Boston, Mass.

BREEDERS' AND GROWERS' DIRECTORY.

The most complete Directory of Breeders and Growers of every class ever published in this country, to be issued this season. For information, address early,

T. T. BACHELER,

Editor N. W. Poultry Journal, Minneapolis, Minn.

Send 10 cents for sample of Poultry Journal, &c.

FOR SALE—Eggs for Hatching, from pure Dark Brama Fowls. Fresh and true to name. Price, \$4 per sitting of 15 eggs. Cash must accompany each order. Address R. D. B., P. O. Box 306, Bridgeton, N. J.

FANCIERS' JOURNAL

AND

POULTRY EXCHANGE.

VOL. I.

PHILADELPHIA, MAY 7, 1874.

No. 19.

(For Fanciers' Journal.)

THE NEW AMERICAN (?) STANDARD OF EXCELLENCE.

I have delayed criticising or commenting upon the work of the Buffalo Convention until now: first, because had I taken the initiative, it would have been asserted that I did it in malice; and second, because I wished to see whether American fanciers *could* and *would* swallow this abortion.

Had it proceeded from the "*masses of the fanciers*," as claimed by the President of this "*organization of prominent, solid, and active men of the United States and Canada*," perhaps, after repeated efforts, the outsiders might have been able to keep down the nauseous dose; but when it was apparent that the said "*masses*" consisted of less than one hundred persons all told (see list of members in No. 7 of *Fanciers' Journal*), and of this list of members only thirty were present and participated in the work of the revision committees, and that their work was to be further revised by a select committee, the pill was too large; although nicely coated with sugar, it would not go down.

I must here enter my protest, as chairman of the Committee on Black Spanish, against the select committee's work. In our report (of which I still have the minutes) we did *not* describe the plumage of the Black Spanish hen as "black, with a *reddish* metallic lustre on the back and wings." See the *New American Standard*, page 47, fourth line from bottom.

I do not propose to enter any protests for *other* committees, but I cannot believe that they reported their work as is recorded throughout this book. Briefly to note a few of the most prominent errors, see 31, last line, "*hardiness of plumage*" instead of "*hardness*." Page 45, sixth line from top, "marked all over as possible up to bill." Who can make sense out of that? Same page, in disqualifications, "*feathers on legs, or any color but bright yellow*." *What* is to be any color but bright yellow? feathers? It should be, "*or legs of any color*," &c. Page 46, see the arrangement of disqualifications in Spanish cock. Why? It is *not* so in the committee's report. Page 61, "Disqualifications. In White-Crested Black Polish, crooked backs, &c." Page 63, Golden and Silver Polish, disqualifications, "*crooked backs and wry tails*," should be "*crooked backs or wry tails*"—a vast difference in the meaning. Page 81, second line from top, "the top covered with a peak behind," &c., instead of, "the comb covered *with small points*, with a peak behind," &c. Page 82, disqualifications in Black Bantams, two very important items omitted entirely, viz.: "Legs not black or dark leaden blue; combs other than rose." Same page, third line from bottom, what does it mean? I cannot find anything about "*smallness of size*" in the description of Sebrights. On next page, 83, "combs other than rose" is again omitted in disqualifications in White Bantams.

These are but a few of the most glaring errors; they can be counted by the scores; and those of typography and

punctuation are legion. And yet, at the very opening of the work, we have the certificate of the Committee of Publication, that they "have compared this edition of the '*American Standard of Excellence*' with the official minutes," &c. In justice to two members of that committee, Messrs. Estes and Wade, I will here state, that neither of them ever compared this edition with the minutes; and further, that the publication of their names, as having done so, was entirely unauthorized by either of them.

The truth is, that the whole of the new *Standard of Excellence* has been copied as much as possible from the old Hartford edition, which was teeming with errors of all kinds. When I advertised the edition of *Standard of Excellence*, which I edited in 1871, as "*the only correct one*," I meant exactly what I stated. Not only the errors above quoted were to be found in the old Hartford edition, but dozens more even worse than these. And here we have them forced upon our fanciers again, and are *required* to pay *one dollar per copy* for an illiterate, incorrect pamphlet of one hundred pages, of poor flimsy paper; a pamphlet which can be issued at a *cost* of ten cents per copy in such numbers as it was proposed to print.

The views of a correspondent of a weekly paper, published in New York City, are so pertinent to this subject, that I quote them. He says:

"And when these delegates arrived at Buffalo, they were met by the members of this American Poultry Society, who invited them to step in, pay three dollars, and they might consider themselves members of the Society. Why was not the convention organized for the purpose for which it was called? It would then have been a convention of the '*poultry men of America*.' Why was it necessary for these delegates to pass through the vestibule of this Association to make or revise the standard? Those who were unwilling to part with their three dollars, or join the Association, were deprived of the privileges of a delegate, and their constituents were unrepresented. Was not the standard, by this piece of legerdemain, taken out of the hands of the poultry men of the country, and placed in the hands of a select body of men calling themselves the American Poultry Association? Therefore 'the standard' is not 'the American Standard of Excellence,' it is the standard of the American Poultry Association, and we are yet without an 'American' standard. . . . An imperfect and incomplete standard, published in pamphlet form, consisting of 102 pages, worth, if perfect, twenty-five cents, sold at the price of one dollar. This may be sharp practice, gentlemen, but not entirely consistent with the lofty character given by the President to members composing the Association."

Mr. Babcock, whom I have not the pleasure of knowing, either personally or by correspondence, hits the nail exactly on the head when he says, "This Association has nothing whatever in its organization, method of meeting, or results, that is worthy of the title American."

An American *Standard of Excellence* must be compiled, revised, and adopted in *open meeting*. Every man, woman or child, who is interested in the subject, should be allowed to have a voice in the discussion if they desire; and when the convention finally adopts a standard, it should not be

rushed through the printer's hands pell-mell, but carefully read, compared with official minutes, and re-read before it is issued from the press.

And now I must say a word about those who participated in the work at Buffalo in January last. As a whole they were a most intelligent and respectable body of men. Very many of them, however, were new hands in the business, and honestly stated that they came there to *learn*, not to teach. Many, like myself, went there with no intention of joining the Association, but found that unless they did they could have no seat in the convention; and I think I may add, on their behalf, that had they known with what consummate art resolution after resolution would be offered and passed (by a vote of not one-third of the members, the majority of them not voting because not seeing the drift of the resolutions), each one drawing tighter and tighter the coils of the "Ring," they would have returned home the first day of the convention rather than be identified with the proceedings which have brought so little credit to those who worked so hard and so faithfully, only to have their labors nullified by self-constituted mentors.

RYE, April 23, 1874.

A. M. HALSTED.

(For Fanciers' Journal.)

THE AMERICAN STANDARD OF EXCELLENCE.

"A member" in your issue of April 9th, seems to feel very unpleasant (with himself, I should say), perhaps because he paid out his money to become a member of the American Poultry Association. Certainly, because he paid for *two* copies of their standard at the price fixed by the Association at Buffalo, whereby the Association received a good profit. As it was estimated and hoped they would make enough out of the sales of their standard during the coming spring, summer, and fall, to warrant them in getting up a national, or rather an international show the coming winter, when more than the profits on publication of standard would be distributed among the fanciers and breeders of America, who had so willingly and kindly contributed their mite toward the great enterprise, whereby all the fraternity would be benefited—indirectly, if not directly—and it must be known by all, that the work is one that at best only a limited sale can be looked for, notwithstanding to quote "A member." "One hundred thousand standards are wanted." "And they contain really valuable matter, and a kind no poultry breeder can do without." If the Association dispose of, say eight to ten thousand copies within the year, they will do well, then the Association may feel like going in for a show; but if there are many, (and I have great reason to think they are few), that feel as benevolently towards them as "A member," it will be a long time before America can boast her grand exhibition.

Poultry has always been my hobby, but not the only one. I take a numismatic quarterly that costs three dollars per year, and has no more reading matter than is furnished for one dollar in the standard, and I would not be without either of them for *five times the cost*. I must therefore take exception to "A member," dubbing the standard a miserable little pamphlet; (I wonder what it would be if he owned it.) To those who have not seen it, I would say it is a work of over one hundred pages, gotten up in good type, on good paper, with good heavy paper covers; and as for the profits, they all go to the owner and publisher, who, "A member" knows, is the American Poultry Association; and one dollar is as low as they should be asked (under the circumstances), to sell it for at retail, and it is worth it to any one who has a half dozen fowls he thinks enough of to wish to improve them.

BUFFALO, N. Y.

E. S. RALPH.

(For Fanciers' Journal.)

"OLD" OR "NEW?"

MR. EDITOR.

Are we to be governed by the old standard or the new one? Or are we to have the valuable pages of our poultry journals continually taken up with discussions in regard to Churchman and Halsted, which is of no vital importance to the mass of poultry breeders? The important question is with most of us, Which shall be our standard? I would suggest that the executive committees of all the poultry associations in the United States vote at once on the new standard; then, if a majority of the associations vote for it, why, adopt it at once; on the other hand, if the majority of the poultry associations vote against its adoption, then publish the fact in the poultry magazines of the United States that the poultry associations of the country will be governed by the standard of 1871 until the time shall come when the poultry breeders of America will unite together in perfect harmony and adopt a standard which shall receive the hearty approval of all.

Respectfully,

W. T. ROGERS.

DOYLESTOWN, PA.

(For Fanciers' Journal.)

JOS. M. WADE, Esq.

I see in No. 16 of the *Fanciers' Journal* quite a lengthy article in regard to the new standard and another convention, etc., and it seems to me the writer has labored hard to bring into disrepute the men and their doings, without just cause. I do not think his arguments well put—for instance: He says that he "coincides with correspondent W. that there was no need of this (so-called) thorough revision of the previous American standard." But every one knows there was much dissatisfaction with it, and called it the one-man standard, and most everything else. Yet he thinks that another convention will be called because of dissatisfaction at the last revision adopted by a select few with closed doors, three dollars admission fee, etc. He had the same privilege as the "select few" to attend if he had availed himself of it. If admission fee is wrong, why is it not wrong to charge membership fees by State societies or entrance fees at shows—as one must pay or he cannot show his fowls, must buy a ticket or he cannot get in? A man can dance or not, as he pleases, but if he dances he must help pay the fiddlers. He compares this convention to "the mountain that has labored to bring forth a very small mouse." Only three days' labor spent in this revision, he says. I would ask if any one thinks men can spend all winter at a hen convention? I was one of those who did not give it any time, other business preventing; but men came from all parts of the United States and the Canadas—prominent breeders—as the list shows for itself. Now he would have another convention called, have it free to all, and the result would probably be, the town or city it was held in would have enough in the convention to rule it, and that lucky place would make the standard for this whole country. I admit that the standard is faulty, but for all that I do not go in for jumping out of the frying-pan into the fire. *We never shall see a perfect standard*; but if we could, some one would howl then, as there is such a variety of opinions in this free country, and plenty of men who, when they do not have their say, call it all wrong. These facts show that we need a standard, and one with fixed technical rules (which he complains of), so that breeders may know just what they must breed for to compete at the shows. He complains because Plymouth Rocks were put in the last standard. They are in the 1871 standard, "which needed no revision," he thinks. The fact is, it is all wrangle! wrangle!! wrangle!!!

C. A. PITKIN.

HARTFORD, CONN.

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

PLYMOUTH ROCKS.

THIS celebrated fowl, which is attracting so much attention of late from farmers and fanciers, is not, as is supposed by many, in any way related or connected with those of the same name originated about twenty-five years ago by Dr. J. C. Bennett.

The modern Plymouth Rock was originated on the farm of the late Joseph Spaulding, Esq., of Putnam, Conn., by a cross between the "Black Java" and "Dominique." Their color is dark steel gray all over, with distinct white bars across each feather; the cocks should be a little lighter colored. Legs a bright yellow, with a dark shade running down the front, and perfectly free from feathers. Combs single and standing erect, and should be perfectly straight,

with even serratures. They are very close feathered, having little superfluous fluff, and are very heavy for fowls that look so small compared with the Asiatics. Cocks weigh at maturity ten to twelve pounds, and hens eight to ten pounds. They are the best for table use of any fowl, except, perhaps, the Dorking, and as they become better known will stand in this country where the latter does

in England, at the head for a table fowl. They are perfectly hardy and mature early, making very good breeders at eight months old; flesh yellow, and very juicy.

G. P. Burnham, in one of his "Reminiscences of the Hen Fever" to the *Fanciers' Journal*, says of this fowl:

"Among the best stock shown at Boston, were the *new style* 'Plymouth Rocks.' This name for fowls originated twenty-five years since, with Dr. J. C. Bennett, who in his work on poultry, published by Phillips & Sampson a quarter of a century ago, describes this variety briefly thus: 'The Plymouth Rock fowl is produced from a Cochin China cock with a hen crossed between a fawn-colored Dorking, Malay, and Wild Indian.' The cocks were speckled red and dun, the hens dark brown, and some of them Dominique. I

never saw half a dozen *alike in color*, however, among the originals. They were first bred at Plymouth, Mass.

"The Plymouth Rocks of to-day are an entirely different bird. They are bred, I judge, from crossing the Dominique with the China fowl. In color they are uniformly Dominique, but are generally smooth-legged, and those exhibited this season were very fine, stately, showy birds. They are duly classed in the standard, are bred largely in Essex County, Mass., and have many admirers. It is claimed for this variety that the *new* strain mature earlier, are excellent layers, come to good size, the chicks are hardy, and altogether they are an acquisition to our American poultry, this last cross being a judicious one, as the good qualities of both the China and the Dominique fowl are well known. The name adopted by the originators of this late variety is a good one, but Dr. Bennett started it years ago for a very different kind of fowl.

"The 'Wild Indian' hen above alluded to (in Dr. Bennett's 'Plymouth Rocks'), was unquestionably a Malay fowl. The doctor procured her from a ship at Boston from Calcutta, and she was a very remarkable specimen; a genuine virago in temperament, and of most pugnacious qualities, fighting and vanquishing any other fowl in his yards, male or female, that came in her way. He produced a very superior strain of Games from this hen, crossing her to an Irish or Earl of Derby cock subsequently, to which he gave the name 'Wild Indian Games.' The old hen was finally sold for one hundred dollars to a Mr. Griggs, of South Carolina.

"The original 'Plymouth Rocks' run out long ago. The new variety is a better sized and shaped bird, and having only two distinct strains of true blood in their composition, promise fairly to prove a valuable addition to Americanized poultry. Though an acknowledged Yankee manufacture, I notice that they are recognized as a 'breed' in the new American standard."

SCIENTIFIC BREEDING OF LIGHT BRAHMAS FOR EXHIBITION.

ARTICLE VI.

CARE AND MANAGEMENT OF THE BREEDING STOCK AFTER THE CLOSE OF THE BREEDING SEASON, AND DURING THE MOULTING SEASON.

As soon as practicable, after the first of June, the cocks should either be given a separate run for each bird, or, as recommended in our last article, each one may be put in a yard with the young cockerels. The hens may all be put together in one yard; this should be done in the evening, and there will be less quarreling and fighting; otherwise some valuable birds may be ruined for the show-pen from losing an eye, or by being completely scalped, both of which are liable to happen, as we know to our sorrow, from hastily putting strange birds together in broad daylight. If put together at night they will rarely fight so savagely as to injure one another. All hens that are intended to be shown

at the different exhibitions the following winter should, as fast as they become broody, be allowed to sit and to hatch and rear a brood of chickens. If this is not desirable, they should be allowed to sit for six weeks on wooden or porcelain nest-eggs. If this latter plan is adopted, the hen should be taken off the nest once daily during the last three weeks, and fed with corn or buckwheat, to prevent her becoming too much reduced in flesh, as hatching and rearing their young is one of the strongest instincts of this breed. I think each hen should be allowed to hatch and rear one brood as soon after the first of June as she will take to the nest. This will give to her reproductive organs the much needed rest after a protracted season of continuous laying, as chicks that are hatched after June rarely make show birds, and require care through the following winter to bring them to full size. I think it best to let nature have her way. I have always found hens treated in the foregoing manner to get through the moulting season much sooner, and apparently much more vigorous and healthy, generally being in full feather and fit to be shown in December.

Although moulting is not a disease, it is a critical period, in which I think the fowls need extra care given them, especially those that are slow in shedding, and do not commence till late in the fall. *Under no circumstance should a cock be allowed with the hens when either is moulting.* They should be provided with an absolutely dry house or shed, in which they can seek shelter from cold or rain. They should be given plenty of stimulating food; meat of some kind ought to be fed to them once daily. A little hemp seed fed occasionally is very beneficial. A piece of rusty iron or a few nails should be kept in their drinking fountain; or, what is better, take a half pound sulphate of iron (copperas), and dissolve it in two quarts of water, add one half ounce sulphuric acid, put the mixture in a jug or bottle, and keep for use. Dose: To every pint of water that the drinking vessel holds put one teaspoonful of the mixture into it. This is the celebrated Douglas mixture for strengthening and invigorating fowls during the moulting season. The original recipe says two gallons of water, but I think two quarts is sufficient, the other making it too weak to be of much benefit. By pursuing the above method, I think the fancier will experience little difficulty in bringing his fowls safely through the moult in time for the early winter shows.

PLATA DUCKS.

MR. JOS. M. WADE.

DEAR SIR: I notice, in No. 15 of *Fanciers' Journal*, an inquiry from "E. W." regarding the difference between Muscovy and Plata Ducks. As I introduced the latter variety to public notice, I reply to your correspondent.

About 1864 or '65, Mr. J. T. Crooker, residing near me, brought a trio of this variety home with him from near Glen Cove, L. I. His account of them is as follows: The party from whom he procured them was a custom-house officer, who found several of these ducks on board of a ship that had just arrived from the Rio Plata, in Buenos Ayres, S. A. I purchased a trio of them of Mr. Crooker in the spring of 1866, and raised quite a flock of them. During the fall, Col. M. C. Weld, then associate editor of the *American Agriculturist*, visited me. After giving him a history of the ducks, I asked him what I should call them. My

flock being nearly all pure silvery white, he suggested "La Plata," and I shortly after advertised in the *Agriculturist* under the name of "*Plata Ducks*."

The original stock were mostly white, with some markings of a light lead color; by selection I got my flock nearly all pure white. While possessing many of the characteristics of the Muscovy, they were still essentially different. They had the same carunculated excrescences about the head and neck, the same peculiar hissing quack, and a musky smell perceivable in the old birds, but *not* in the young.

As to their points of difference, they never roosted on fences, trees, or buildings, which the Muscovys nearly always will; they were more fond of the water than the latter; they were most excellent eating, being tender, juicy, and fine flavored, which I cannot say of the Muscovys; and lastly, they were fully fifty per cent. larger. I have many times dressed young drakes for the table, which, at six months old, weighed sixteen pounds with head and feathers off. The old drake brought here by Mr. Crooker, I bought in 1868. We had some trouble in catching him, and as we put him in the box he threw himself over on his back, gave a few kicks and died; he had probably ruptured a blood-vessel in his struggles. We weighed him half an hour after, and he turned the scales at a little over twenty-two pounds. This was the largest duck of any variety I ever saw, and weighed fully eight pounds more than the heaviest Muscovy I ever owned or heard of.

The ducks are quite small compared with the drakes, the average weight being not over six pounds, although *apparently* much heavier. When young the ducks are almost as light on the wing as a pigeon. I have seen them fly half a mile down the brook and return without seeming to exert themselves at all. After one year old they fly but seldom, and then only short distances. The drakes never fly, being too heavy. In this they are totally different from the Muscovys, which fly at all times and all ages. I do not know where there are any Platas now that are pure; they have been crossed with the Muscovys until they have lost their distinctive traits.

Yours truly,

A. M. HALSTED.

(For Fanciers' Journal.)

SEX OF EGGS—A TEST.

MR. WADE.

SIR: I here give you the result of a hatching of thirteen eggs purchased of Mr. William J. Pyle. I requested him to select the eggs so as not to have more than one cock, and when hatched there were eleven pullets and one cock. They are now grown so that the sex can be distinguished readily. I now think his theory of testing the eggs is no humbug, but, on the contrary, really something worth knowing to poultry raisers. Yours, &c., JOHN W. FERRELL.

WEST CHESTER, April 22, 1874.

(For Fanciers' Journal.)

EGGS—LOSS OF WEIGHT DURING INCUBATION.

MR. WADE.

I send you another account of my experience with eggs relative to the difference of weight before and during incubation. I selected a fresh-laid egg of medium size, which weighed two ounces and five pennyweights. After standing on the small end twenty days it had evaporated one pennyweight. It was then put under a hen for hatching. At the end of seven days it had lost five pennyweights and twenty

grains more, and at fourteen days three pennyweights and eighteen grains more. At twenty-one days three pennyweights and twenty grains. It did not hatch until the twenty-fourth day. I weighed it again as the chick was ready to leave the shell, and it had lost twelve grains more during the last four days; amounting in all to *ten pennyweights or one-half an ounce*, leaving the chick and shell one and three-quarters ounces—showing that the egg when fresh is heavier than the chick.

(For Fanciers' Journal.)

A MARYLAND FOWL THIEF.

WAVERLY is a suburb of Baltimore, and is a thriving town, and, like other thriving towns, has an eccentric or characteristic individual. But in this case, instead of the residents, as is usual in such cases, boasting of their wonderful genius, this Waverly eccentric is considered a most "*fowl*" individual. For months past the residents have had frequent mysterious disappearances of their poultry. One gentleman lost seventy-five, another one hundred and fifty, among which were some valued at \$25 per pair, and many others were also losers. At last it got to be too much of a good thing, and the services of the city detectives were engaged; yet, notwithstanding their watchfulness, the depredations still continued. One Jas. Harker was suspected and watched. He was seen to leave his house *every* night, but was not seen to return. Finally some of the residents concluded to assist the detectives, and with them went on guard. Being secreted near Harker's house, after midnight, they saw him come out with a bag and a long jimmy. He was followed but soon lost sight of, but forming an ambuscade they waited his return. About 2 A.M. he came, whistling a lively tune. The surprise was complete. He was stopped by the party, who found in his possession five freshly killed hens, and a live game cock in the bag. His house was searched, and in a vacant room was found feathers which evidently were plucked from no less than five hundred fowls; some of the feathers being readily recognized as coming from blooded stock. The heads of over one hundred fowls were found in a partly finished building near Harker's house.

It is estimated that the fowls stolen cannot be replaced for \$1500. In one instance where Harker secured sixty fowls, he dispatched *two* valuable dogs with poison. Harker, about a year ago, kept a cock pit near Waverly, his establishment being known as the "McDonald House," but the sign bearing the name of a former wealthy and respected resident of the vicinity, he was compelled to remove it. This Harker now rests in the County jail. This is a fowl report from Maryland—who can beat it? Next.

G. O. B.

(For Fanciers' Journal.)

HEATHWOOD GAMES.

EDITOR FANCIERS' JOURNAL.

Agreeable to your request I send you a short history of the Heathwood Games:

In the winter of 1861 or 1862 Mr. Heathwood was the recipient of a young rooster and pullet from William Walton, and a Pile hen, an importation from Ireland. He soon after procured a Brown hen, having a remarkably high comb; to which stock he added a Claiborne rooster and two hens, bred by Mr. Stone for Mr. Claiborne, from whom he purchased them. He predicted that they could not be crossed to produce a fowl superior to themselves.

However, the result showed a better fowl. The Claiborne is as good a fowl as stands for game, but he is better fitted to fight with long heels than what is known as pit-heels. To the above varieties was added the son of an imported Derby; and from this combination the result was successful. The aim was to retain as much of the make-up of the Derby as possible. This progeny—the Heathwood—seldom if ever run, and generally win the battle. One of them fought half an hour after being coupled, and having both his eyes out was the winner in fighting against one of the Troy white tails. They have more propelling power, so to speak, than any other fowl. A well-built specimen has as much strength at five pounds as others at five and a half pounds. They are rapid and methodical fighters, and altogether they are the best stock I ever saw. When Mr. Heathwood left for Missouri he left with me four old hens, second to none. Both the cocks and hens have all passed through my hands at some time, and I know their qualities well, and claim that I have all there are this side of Missouri.

I will now describe a pair of Heathwoods as they generally run, yet, having come from different kinds, they do not breed very uniformly. A good male specimen I have before me. The back and upper part of wing are dark red; saddle feathers long and of a rich shade, a fine fluff; at root of tail a pure white; bar of steel-blue on the wing; the outside of the primary feathers a rich dark chestnut color; sickle feathers long, and edged with white; head medium, strong bill, eyes large, with a red circle about them; breast a rich greenish-black, with a slight touch of chestnut toward the shoulders; legs clear yellow; toes long and well spread; heels low on the leg, fine and sharp; body broad, and flat on the back; breast medium height; stands on legs firmly and straight; deep in the chest; neck strong; tail a little drooping. This is a general description of the Reds, which I prefer to the Pile Game. The hen has a back of fine partridge color; neck feathers of a deep yellowish color, penciled with black, shaded off near the head; breast brown or chestnut; wing primaries black, edged with chestnut; eyes and head like the cock; tail black; legs yellow, sometimes willow or hazel (but the cock always yellow). The pair I have described, and still in my possession, will weigh ten pounds. It is a fair outline of two as good fowls as exist of the Heathwood Game.

NEIL THOMPSON.

DRACUT, MASS.

(For Fanciers' Journal.)

WORDS OF COMFORT.

IN almost every number of every poultry paper that comes to hand, the *Journal* included, there is a large amount of correspondence from a class of persons who it appears were born to be "bit" by sharpers. These men are continually crying down low prices, and thus increasing their chances for getting "sold" at "fancy figures," for there are enough who are willing to "sell" them for a "good price" as soon or sooner than a low one.

I believe there are as honorable and as honest dealers who will sell fowls or eggs at a *reasonable* prices as those who ask such exorbitant prices, as many dealers do. I find those who are the victims of swindlers are the ones who pay a large price for their fowls and their experience. Poultry is often advertised at from ten to thirty dollars per pair that is not worth one farthing more than those which are to be had

for half the money; fowls that will not count as many points, often by one third, as the lower-priced birds.

These complaints give scoundrels one great advantage, which no doubt they are very glad of; it enables them to get a larger price for their fowls, thus enabling them to increase their business.

Again these complaints come from those who have fowls and eggs for sale at fancy figures. The public would do well to shun those parties, for there is reason to fear that they may get the progeny of this same stock that has caused such heavy blows to be aimed at some devoted head. I never buy of these. I want *better stock* than they possess. I am sure I always find it too. I don't wish to be understood to say that all the low-priced fowls are good—far from it; but the idea is this, the man who gives ten dollars for a trio of good fowls can reasonably be expected to sell both fowls and eggs at a lower figure than those who import their birds at a cost of forty to fifty dollars per trio, or even more. And good home-bred fowls are as good, or even better, than imported ones; they have the advantage of being acclimated here, which is worth considerable. I believe that when a man "humbugs" another in the poultry business the victim ought in justice to others take the first opportunity of publishing the "scamp" far and wide, and thus benefit the general public. So, my friends, when you do get "bit" let us know who did it. Another class are those who are always vilifying the judges at the poultry exhibitions because their fowls did not take the premiums (this is really the trouble). All the judges are a pack of idiots, or perhaps worse. Oh dear, what will the consequence be at last? I think the judges generally know their business, and, so far as my judgment goes, right loyally do they do it. I never shall allow such parties to run their stock off on me or my friends so long as I can prevent it. These continual insults to the judges are a disgrace to the men who make them.

As for judging the sex of eggs, I have experimented a number of years, and picking out eggs with pointed ends or air chamber in any particular position has always failed to give satisfaction. My rule is this: cockerels for cock chicks, cocks three years and upwards for pullets, which gives about as good results as any. Some pretend to say chicks are weakly from old cocks: it is all nonsense. I have chicks this season from a Black Spanish cock six years old that are as good and strong as any in the country. JOHN RUMBOLD.

FOWLING CREEK, April, 1874.

(For Fanciers' Journal.)

COLOR OF BRAHMA EGGS.

EDITOR FANCIERS' JOURNAL.

In reference to the remarks and inquiries of F. T. K. relative to the various colors of Brahma eggs, I believe that the egg of the Light Brahma, when purely bred, should be of a dark brown color or shade, and that those of other colors have a mixture of foreign blood, which has never been bred out, although the fowls may have counted and won a majority of "points" at exhibitions. Exhibiting fowls to show their purity amounts to nothing. I have bred White Leghorns for the past four years, and changed the cock every fall. I have one pullet with blue legs and one with yellow breast—quite buff. I never saw sports from them before. Their great-great-grandmother has no doubt been *foully* dealt with at some time, but her chicks never showed it until now. There is no cock about my place excepting the White Leghorn, and has not been for four years. There is nothing that will carry its kind and still retain the traces of another without showing it longer than a hen; but by

constant crossing with a non-related cock of her own kind, as pure as can be had, it will eventually bring them pure, but it takes many generations. By breeding this way the foreign blood is removed, and it shows it in the chicks by the appearance of "sports." I found the mother of the imperfect chicks, and off came her head, as well as those of the progeny. I also previously discovered this by closely examining the eggs, a portion of which were of a slightly pinkish white, while the others are a milk white. Unless good cocks are selected, as pure as can be found—and it takes many breedings or generations to make them so—there is no use in exhibiting them and saying they are pure, as we are not sure, although they are bred to feather and have other indications. So long as they are bred together they will breed alike; but change the cock, which will show you the bad blood, if there is any. It may be the fault of the hen, or both, but generally the former.

W. J. PYLE.

(For Fanciers' Journal.)

CONNECTICUT POULTRY NOTES.

THE State Poultry Society has elected officers for the ensuing year as follows: President, H. T. Sperry, Hartford, Vice-Presidents, G. W. Bradley, Hamden; C. H. Crosby, Danbury. Recording Secretary, Dr. George L. Parmele, Hartford. Corresponding Secretary, J. S. Gilman, Hartford. Attorney, Ex-Mayor Robinson, Hartford. Twenty Vice-Presidents are to be added at the next quarterly meeting. The next annual exhibition will be held in Hartford, December 15th to 18th. It is expected that the premium list will amount to over \$3000. The next quarterly meeting takes place in Hartford, Tuesday, May 12th.

Several gentlemen in Hartford interested in poultry fancying and the breeding of poultry and pet stock have organized a society under the name of the "Hartford Fanciers' Club," and in connection with the State Poultry Society have opened a room in one of the public buildings as general headquarters for both associations. The room is very handsomely furnished; its walls are decorated with paintings, engravings, and chromos of poultry and pet stock; and its tables are supplied with all the foreign and domestic publications relating to poultry and pet stock, as well as the leading agricultural journals. A library containing, every known work upon poultry and pet stock will soon be added to the other attractions; so that the room will furnish more information relating to these subjects than can be found in any other one place in the United States. Wednesday evening is known as "Discussion night," and that evening in each week is devoted to the discussion of some particular breed. The meetings are largely attended, and the discussions are exceedingly lively and interesting. This feature is doing much to strengthen the society. The farmers of the neighborhood attend the discussions, and are learning that the State Society is intended as much for the breeder of poultry for the market as for the fancier who breeds only for exhibition prizes.

The Connecticut fanciers are importing very largely this spring. Mr. Amos Whiting, of Hartford, has just received some very fine Bronze Turkeys and Sebright Bantams from England; Mr. P. W. Hudson, of South Manchester, six trios of Games from Ireland and England; Mr. C. A. Pitkin, of East Hartford, several trios of Leghorns from Italy; Mr. C. H. Crosby, of Danbury, seven trios of Game Bantams from Ireland and England; Mr. H. T. Sperry, of Hartford, a flock of White-crested Polish from Holland; and Mr. A. W. Warner, of Hartford, a flock of Muffed Silver Spangled Polish from England.

A strenuous effort will be made in Hartford to secure the first exhibition of the National Society in that city. It is stated that Baltimore offers to raise \$3000 for premiums; and it is thought that Hartford will go \$2000 better, and so get the exhibition.

Fanciers and breeders will do well to send their cards and circulars to Dr. George L. Parmele, Recording Secretary of the Connecticut State Society, who will see that they are filed in the society's club-room.

PIGEON DEPARTMENT.

MOORE'S WORK ON PIGEONS.

[OWING to these pages being nearly out of print, very few of our readers have had the opportunity of perusing this most original and meritorious work on Pigeons, published in the year 1735. The author was a leader, in this fancy, of later writers, who have gained some note for merit by merely following his rare and original ideas. We will republish a few pages occasionally of Moore's work until it is completed, and thus give our readers an opportunity of judging of its merits for themselves.]

THE PIGEON-HOUSE:

BEING

AN INTRODUCTION

TO A

NATURAL HISTORY

OF

TAME PIGEONS,

GIVING AN

ACCOUNT OF THE SEVERAL SPECIES KNOWN IN ENGLAND,
WITH THE METHOD OF BREEDING THEM, THEIR
DISTEMPERS AND CURES.

The two chief advantages which a real acquaintance with Nature brings to our minds, are first, by instructing our understandings and gratifying our curiosities; and next by exciting and cherishing our devotion.

BOYLE'S EXPERIMENTAL PHILOSOPHY, p. 2.

BY JOHN MOORE.

LONDON:

Printed for J. WILFORD, behind the Chapter-House in St. Paul's Church-Yard.

1735.

DEDICATION.

TO

SIR WILLIAM STAPLETON, BARONET.

SIR: If either Philosophy or Novelty have any allurements, the following performance, I flatter myself, will afford you some entertainment.

Many subjects the naturalists seem to have exhausted. Horses and dogs, and most of the animals that serve for the conveniences or amusements of life, have undergone the nicest inquiries; while the pigeon, that contributes in some measure to both, a domestic as it were of ours, has been totally neglected.

With a partiality usually shown to the victor, the hawk has engaged the pen of many a writer; but his prey, that seems to fly to us for protection, has scarce met with that, which even the wisdom of the legislature has allowed it.

I have endeavored therefore in the following sheets to do some justice to this bird, and have prescribed the best methods, which long experience has furnished me with, for its propagation and preservation.

I have wisely learnt from it to seek a proper refuge against any ill-natured censures. To this purpose I beg leave to prefix your name to this work, and to assure the world that you who have purchased pigeons at very considerable prices, don't think the subject below your regard, and that the author is,

Your most obedient and most humble servant,

J. MOORE.

THE PREFACE.

THOUGH the History of Birds in general has been given us by many hands, and in some parts in a very accurate manner, yet the study of this genus of birds seems in a great measure to be neglected by most of our naturalists, who have given us but very short cursory descriptions of some of the species, in which notwithstanding they have been guilty of many great mistakes, and entirely left out many others in their lists. It has amazed me to see so great an indolence on this particular branch spread itself in such an universal manner through all our ornithologists, especially considering the vast opportunities they have had, or might have had, to have given their readers the utmost satisfaction by the most exact and ample descriptions. It is notorious to all mankind, what vast numbers of these birds in all the species have been and are still kept in this kingdom, not only by persons in a lower rank of life, but even by persons of the greatest distinction and the first degrees of quality, who have held these birds in so great esteem, that they have endeavored to attain at least an experimental knowledge of them, purchasing, at a great expense, as many of the distinct sorts as they could hear of, and cultivating them in their own houses. Richard Atherton, Esq., of Atherton Hall, in Lancashire, who was a gentleman both of will and ability to prosecute his fancy in this branch of natural history, was building a stately house in Lancashire, on the top of which he designed to have four turrets, in which his pigeons were to be disposed according to the nearness of relation between the different species, but death put an end to the undertaking in the year 1726, to the immense grief of all those gentlemen

(To be continued.)

A LIBERAL OFFER.

FRIEND WADE.

Not to be outdone by any one in the desire to disseminate a healthy interest in profitable poultry, I make the following offer: To every one ordering eggs from my yards to the amount of \$5 only, or fowls to the amount of \$10, I will present a year's subscription to the *Fanciers' Journal*, FREE! Also, to every one sending you three subscriptions to the *Fanciers' Journal* I will send a nest of choice eggs, FREE! And to all sending stamps to pay postage I will furnish sample copies of the *Journal*, FREE!

I will say in conclusion that I am greatly pleased with the *Journal*, and consider that it has placed itself in the front rank of the journals devoted to poultry interests, both as an advertising medium and as an educator of those who desire to improve the poultry interests of the country. Of one hundred and sixty letters that I received in March, over one hundred mentioned *Fanciers' Journal*.

Very truly yours,

J. F. FERRIS.

STAMFORD, CONN.

J. F. FERRIS, Stamford, Conn., the wide-awake fancier, has purchased of Charles H. Crosby, Danbury, Conn., his extensive breeding stock of Buff and Partridge Cochin Fowls. See his advertisement elsewhere.

To those desiring fine Games and Game Bantams, also Black Rose-comb Bantams, we would call attention to the advertisement, in this number, of William B. Atkinson.

BEST BOOK FOR EVERYBODY.—“The new illustrated edition of Webster's Dictionary, containing three thousand engravings, is the best book for everybody that the press has produced in the present century, and should be regarded as indispensable to the well-regulated home, reading-room, library, and place of business.”

Correspondence.

(For Fanciers' Journal.)

MR. EDITOR.

V. M. F., in No. 17 of the *Fanciers' Journal*, page 261, describes a disease which affected two of his fowls, which I think is apoplexy, from a description of the disease given by Dr. P. Gardner in the *Poultry World* for March, Volume III, page 38, where he also gives his mode of treatment, viz.: Bromide of potash, in ten-grain doses, three times a day. I have tried the above-named remedy, and think it good.

K. G. E.

(For Fanciers' Journal.)

JOS. M. WADE, Esq.

DEAR SIR: The location of our room was printed wrong in your issue of the 20th. It should have been located at 217 Westminster Street, Room 6, in place of 207 Westminster Street. By making the correction you will oblige.

Yours truly,

J. T. PECKHAM.

PROVIDENCE, April 25, 1874.

(For Fanciers' Journal.)

GRAYLING.

FANCIERS' JOURNAL.

I have returned from the Au Sable River, Michigan, with live Grayling for breeders. This is the first lot caught for that purpose, and the only ones at present in private ponds. This fish does not spawn until May (this year at least), notwithstanding all writers say their breeding season is in February and March. It is possible that mine may not spawn at all, on account of change, rough usage, etc., when so near spawning. I have sent some dead ones to the Smithsonian Institute to make plaster casts from. They are the most beautiful fish short of the tropics.

FRED. MATHER.

(For Fanciers' Journal.)

JOS. M. WADE, Esq.

DEAR SIR: You will see by the report I sent you a few days ago, speaking of the Black-breasted Red Game with yellow legs, that they were ruled out by the committee in awarding premiums. This was a mistake. The following is a list of premiums awarded to this class:

Black-breasted Red Game—Fowls—2d, George W. Adams, Providence. Chicks—1st, J. H. Hammitt, Newport, R. I.; 2d, L. E. Gray, Foxlow, Mass.; 3d, T. A. Todd, New Haven, Conn.

Brown Red Game—Fowls—1st, L. E. Gray, Foxlow, Mass.

Ginger Red Game—Chicks—1st, Geo. W. Adams, Providence; 2d and 3d, T. A. Todd, New Haven.

Yellow Duckwing Game—Fowls—3d, Otis Monroe, Bristol, R. I. Chicks—2d, J. H. Hammitt, Newport, R. I.

Black Game—Chicks—1st, L. P. Bullas.

White Game—Chicks—2d and 3d, J. G. Moffit, Pawtucket, R. I.

Pile Game—Chicks—1st, 2d, and 3d, T. A. Todd.

C. G. SANFORD,

Assistant Recording Secretary.

PROVIDENCE, R. I., April 17, 1874.

(For Fanciers' Journal.)

SMALL EGGS.

J. M. WADE.

I send you by this mail a box containing two diminutive eggs, laid by a Spangled Bantam pullet belonging to John H. Long, of this place. They are the average size; one

weighs eighty-two grains, and measures nine-tenths of an inch in length; the other weighs ninety-eight grains, and measures one and one-tenth inches in length. The other pullet lays an egg about the same size as that of a Guinea fowl.

I find your paper a welcome visitor, and should feel that I had lost a friend if it should cease coming. Full of interest and instruction, it is worth much more than its subscription price.

Respectfully yours,

GEORGE W. BELL.

SALISBURY, Md., April 24, 1874.

[The eggs arrived safely, and having doubts about them being perfect, we opened the larger one, and found it to contain nothing but the tread. They are what some people call "cock's eggs," and are not at all uncommon. We have had the largest Brahmas lay them occasionally.—ED.]

Items Interesting and Amusing.

A Hyde Park man has slaughtered 150 rabbits the past winter.

A woman in Manchester, England, was recently choked to death by an oyster.

A woman at Bolton, England, was bitten by a cat, and shortly afterwards symptoms of hydrophobia showed themselves, resulting in death.

The United States of Colombia have an immense source of revenue in the cancho trees, which grow thickly in Darien. One forest is worth a million dollars.

An undescribed monster is said to have appeared in Lake Harney, Fla. Twenty feet of it was seen by the passengers on the steamboat Lollie Boy, and it spouted water like a whale.

A large gondola was launched at Belfast, Me., the other day, that was built five miles back in the country, and hauled to salt water on shores by a team of 14 yoke of oxen and two span of horses.

Major Pease of Bozeman, Montana, having failed as a civilizer of Indians, is domesticating buffalo, elk, moose, and other animals. He is breaking elk to harness, and is driving them before a sledge.

A correspondent of the Cincinnati Commercial says that there is no better fishing ground than at Kenawha Falls, West Virginia. They take there catfish, black bass, and pike as well as trout, mud cat, and eels.

In Lancaster County, recently, a boy named John Rhoads, while driving a pair of horses attached to a field roller, slipped from his seat, and falling in front of the roller, it passed over him, crushing him to death.

The Massachusetts Anglers' Association having become convinced, from the result of their investigations, that smelt during the spawning season are not healthy food, since they then are full of parasites, have procured the passage of a law to prevent taking them at that time.

At Lansing, Michigan, a cat recently saved a family of five children from being burned to death. They were asleep at the time the fire occurred, no other person being in the house, when the cat, by clawing the faces of the children, roused them in time for them to escape the threatened danger.

Boston expects that the grand stallion race for the championship of the United States, to be trotted at Mystic Park, September 15, will be the turf event of the season. The purse is \$10,000, and four gold medals will be offered.

Sturgeon fishing in the Delaware is unusually good, and the fishermen are doing a profitable business. Two dollars is the average price of a sturgeon, without the roes, which are removed and retained to be converted into caviare at one dollar each fish, by the manufacturers along the river.

Bird and Small Pet Department.

All communications and contributions intended for this department should be addressed to HOWARD I. IRELAND, Concordville, Delaware County, Pa.

GUINEA PIGS vs. RATS.

SEEING some remarks upon this subject, I wish to state that a friend informs me that when he kept Rabbits in a place much infested by rats, he employed Guinea pigs for the protection of his young stock, knowing that there were some traditions on the subject. He had frequent opportunities of noticing the results. As soon as a rat showed itself in the neighborhood they at once gave battle *en masse*, upon the principle that *l'union fait la force*. Single encounters, however, were by no means rare; in this case the Guinea pig would go about his work in a business-like manner, following the tactics of a ferret, and if he did not kill his foe would drive him bleeding from the field. Certainly, if we examine a fine buck Guinea pig, he seems perfectly capable of coping with any animal of his size, his strength and agility being remarkable. My own experience is as follows:—I used to keep Rabbits rather extensively in a large, dry, and well-ventilated cellar or basement, in which I had frequently seen rats. A portion of this was railed off for the use of newly-weaned Rabbits, a rat's peculiar weakness, as fanciers know well, taking the precaution to allow two or three Guinea pigs to keep them company; and during the whole time (some two or three years) I never had a single one killed, and never saw the nose of a rat in my rabbitry, though there were plenty in the other cellars, and even holes communicating with the one I used. Whether their peculiar odor was the deterrent or not I cannot say. I think that these cases show that the idea is not quite such a delusion as our worthy editors suppose.

Guinea pigs, in my opinion, have not as a rule received their due from naturalists and writers upon the subject. They are generally dismissed as being pretty and so forth, but destitute of intelligence and other attributes necessary for qualification as "pets." One writer (I believe the Rev. J. G. Wood), says they "make little noise." If this be the rule all mine have been distinguished exceptions; the irrepressible little creatures knew the step of their feeder as well as their friends and companions the Rabbits, and would set up such a chorus of squeaking as quite to place them outside the category of dumb animals. They resemble the housewife's "black beetles" in the inappropriateness of their name, inasmuch as the former are not beetles, and their color is by no means black (it is sometimes white), and our little friends are not pigs, and do not come from Guinea. To such an extent is their restlessness carried that their young run about and eat on the very day they are born, the precocious little animals boasting as good a coat and eyesight as their parents. I will not trespass upon your space further than to say that I have found them as intelligent and interesting, apart from their usefulness as "scarecrows," as any of the numerous pets I have kept, but this, I imagine, was more owing to a little kindness and good treatment, which brought out their good qualities, than to any special happiness in the choice of specimens; nevertheless, I have never yet seen one to equal my original little friends, Toby and his spouse Topsy.

—*Journal of Horticulture.*

(For the Fanciers' Journal).

THE AQUARIUM.

OF all the ornamental and instructive additions to a drawing-room the aquarium takes the lead. Unlike many other pets, the fish of an aquarium never sleep. They are always visible; for, dwelling in a house with glass walls, they are allowed no place for concealment. Nothing can be more amusing than watching a newt and a young catfish fighting over a worm; the shiner darting hither and thither like a flash of silver light, searching for food; and the more sober sunfish standing under a piece of stone, or, if there be none, in the centre of the tank amidst whatever of plant life may have been used in making this artificial home of these little oviparous creatures.

Being such a truly aquatic arrangement, having aqueous soil, aquatic plants, and aquatic inhabitants, we recommend, as a new idea, that all aquarium adornments be henceforth sacred to Aquarius, the water-bearer of the skies; and all who desire to learn the habits of aquatic animals and insects, shall seek out in the Zodiac the time and place of the great aquarium of the starry palor.

There are several forms of aquariums, the globe and tank form being the most common. We give the following directions for arranging and stocking an aquarium:

Fill the bottom of the globe or tank with bar-sand to the depth of several inches. On the top of this place quite a number of middling sized pebbles; the pebbles and sand should be thoroughly washed before used, so that any saline or other impure matter secreted in them may be dissolved.

The next thing in order is to obtain plants for supplying the animal life in the aquarium with oxygen for respiration. These plants you can get from the nearest brook; the smaller they are the better they answer the purpose. Plant them in the sand, fill the aquarium one-fourth full of water, and put in the rock work. A very nice kind may be made as

follows: Take two flat pieces of stone about four inches in length; set these firmly in the sand, at equal distances from each side of the tank or globe; upon them place a large flat stone, so as to make a bridge. Rocks scattered about the bottom, so as to form little caverns, &c., will greatly enhance the beauty of the aquarium.

Now, let the tank or globe remain undisturbed for a week; at the end of this time, if the vegetation flourishes, the glass will be covered with a green scum. To destroy this, introduce a number of water snails; get these from brooks and ponds, as river snails are so ravenous that they will destroy, not only the green scum, but the plants also. If snails cannot be procured, fresh water mollusca of any kind, except large muscels, will answer equally well. As soon as these little scavengers have devoured the impurities, remove them all, except two or three to keep the water clear and fresh after the fish have been introduced. The aquarium is now ready to receive its occupants.

FISH.—Shiners can be found in any little running brook; sunfish delight in deep still pools, and there also young perch and roach are generally to be found; young catfish abound in muddy ponds, near and connected with a river or creek; stickle-backs lurk under stones and river-weed; young pike are in the shoal water, near the shore of a mill pond; minnows may be found in any stream of running water; by probing among the stones of a rivulet you will occasionally come across a redfish; gold and silver fish you will have to purchase.

REPTILES.—Newts and a large species of pollywog make their home in most every duck pond; water lizard are generally found under a clod of damp earth, near a brook, while a smaller kind lurk under the stones of any tiny stream.

INSECTS AND CRUSTACEA.—The water beetle and cramp bug are indispensable additions, as is also the fresh water shrimp and the brook lobster.

If a large number of fish, &c., are desirable, they should be introduced into the aquarium one at a time, and at long intervals. If the fish seem not well supplied with oxygen, that is, if they rise to the surface of the water and gasp, some of them should be immediately removed, as this condition is caused by overcrowding. The water should be changed only when it assumes a turbid appearance.

The best food for the fish is small balls of flour and water, or, better still, milk, mixed to the consistency of putty, with an occasional angle worm. Feed once or twice a week, not oftener. A great treat to them is little black tadpoles or pollywogs; these they will devour with great relish. The great fault of beginners is *overfeeding*. Always remove from the water the scraps they do not devour.

PAUL LOGIC.

(For Fanciers' Journal.)

TO TRAP OLD BIRDS WITH YOUNG.

AFTER you have found a nest containing young birds, put them, nest and all, within a common "figure-four trap;" set this at the foot of the tree in which you found the nest, with the bait-stick directly over the nest and its contents. The old birds, attracted by the cries of their young, will enter the box, perch upon the bait-stick, and, of course, spring the trap. When you have caught one parent bird remove it, and set the trap in the same manner for the other. The old birds and their young had better at first be placed in a room and allowed their liberty for a few weeks, until,

becoming accustomed to confinement, they can be placed in a cage. The above plan for trapping old birds with young will invariably prove successful. JOHN F. YARNALL.

BRYN MAWR, PA.

(For Fanciers' Journal.)

A CURIOUS BIRD-BOX.

AN old shoe or a boot nailed against the outside of a barn or out-house, with a hole cut in the side for entrance, will, if put up early enough in the spring, be soon tenanted by a pair of wrens or blue birds, while the elegant twenty dollar bird-house in the front yard remains uninhabited.

DAVID L. TROTH.

Catalogues, Circulars, and Cards of Breeders Received.

FRANK T. KIMBALL, 341 West Eighth Street, Erie, Pa.—Circular and price list. Breeder and dealer in Light Brahmas.

H. M. THOMAS, Brooklin, Ontario, Canada.—Circular and price list of Fowls from stock imported by himself. 24 varieties. Also, Ducks, Geese, Pigeons, Rabbits, &c.

BURR HOLLIS, Cold Springs, Hornellsville, N. Y.—Price list of Fancy Land and Water Fowls. 42 varieties. Also, Dogs and Ferrets.

W. J. WHEELER, Worcester, Mass.—Card. Breeder of Brown and White Leghorns, Dark and Light Brahmas, White-crested Fantail Pigeons, and Eggs in season.

COL. JOS. LEFFEL, Springfield, Ohio.—Card. Price list of Fancy Pigeons, Rabbits, Fancy Poultry, and Eggs.

C. M. BOYNTON, Concord, N. H.—Circular and price list of Cochins, Brahma, and Leghorn Fowls and Eggs.

Maine Poultry Association. Portland, January 12, 13, 14, and 15. Fred. Fox, Secretary, Portland, Maine.

Western New York Poultry Society, Buffalo, New York. February 10th to the 17th. Geo. W. White, Secretary.

Exchange Column.

ADVERTISEMENTS IN THIS COLUMN, OF FIVE LINES, OR FORTY-EIGHT WORDS, DESCRIBING AND OFFERING FOR EXCHANGE ONLY, WILL BE ALLOWED AT 25 CENTS FOR EACH AND EVERY INSERTION.

HONEOYE FALLS, N. Y., April 25, 1874.

EDITOR FANCIERS' JOURNAL.

A few weeks ago I put an "ad" in your exchange column offering to exchange a ferret for toy pigeons; I had fourteen applications in one week, and still they come, so please say for me that I will have no more ferrets until fall. I expect a few litters soon, but when I want to swap I know that a "quarter" is well spent in that column."

FRED MATHER.

A CHOICE PAIR DARK BRAHMAS, two years old this spring; cock has solid black breast. Will exchange for a good Silver Hunting-Case Watch, or A-No. 1 Silver Mounted Revolver.

A. C. HUNSBERGER, Portland, Pa.

WANTED in exchange for Fancy Pigeons, at wholesale prices, Harper's Magazine for 1865 to 1873, inclusive. Any one having the above or part of same, will find a bargain by addressing

J. A., Box 255, Johnstown, N. Y.

TO EXCHANGE.—Anyone having a good set of standard Books, who wishes to exchange for Fancy Pigeons or Poultry, can find a good bargain by addressing

J. A., Box 255, Johnstown, N. Y.

WILL EXCHANGE.—An Imported Partridge Cochins, for the most liberal offer of Eggs for hatching, consisting of not less than three sittings, from the following varieties: D. or L. Brahmas, W. or Brown Leghorns, W. or Buff Cochins, Plymouth Rock or Sebright Bantams.

W. H. HUGHES, Marshallton, Pa.

WILL EXCHANGE.—One pair first-class Black Barb, Silver Dun Antwerps, or Guinea Fowls, for pure White-face, Black Spanish, White Leghorn, or Black African Bantam Hens.

Address

P. O. Box 44, Lawrence, Mass.

WILL EXCHANGE for Lt. or Dk. Brahmas, and Bk. B. R. Game Bantams (\$10 birds wanted), one double "laminated-barreled" Shot Gun, \$40; Smith & Wesson's \$15 Revolver; coin silver, \$14 Watch Chain, weight, 3¼ oz.; Seward's Travels Around the World, \$6, and Choice Groceries.

T. D. ADAMS, Lock Box 61, Franklin, Pa.

EVERGREENS, FLOWERS, FRUITS.—Will exchange for Eggs or Fowls of Light Brahmas, Toulouse Geese, or Rouen Ducks, or Wright's New Book of Poultry (bound), or Cash. Send for our catalogue. None but first-class stock offered or wanted. Address

BLACK-BREASTED BLACK RED GAMES,

WILLOW LEGS, BAY EYES,

FOR SALE.

I can spare two trios of above breed, very fine birds, matched for breeding, \$20.00 per trio; I will also sell B. B. R. Game Eggs, from my best fowls only, at \$3.00 per 13. I keep no other breed. Shall have a few chicks to spare next fall.
C. F. PERRY, Cuba, N. Y.

PARTRIDGE AND BUFF COCHINS A SPECIALTY.

Eggs from my thoroughbred Partridge and Buff Cochins, for hatching, \$3.00 per dozen. Terms, C. O. D. Address
DR. A. S. JORDAN, Riegelsville, Bucks County, Pa.

UNADILLA FORKS, OTSEGO CO., N. Y., March 31, 1874.

I have this day purchased of G. H. WARNER, New York Mills, N. Y., HIS ENTIRE STOCK OF FANCY POULTRY, including all his imported and premium stock of the following varieties: Dark Brahmas, Light Brahmas, Buff Cochins, Partridge Cochins, White Cochins, Black Cochins, La Fleche, Crevecoeurs, White Dorkings, Silver Gray Dorkings, Gray Dorkings, Duckwing Game Bantams, B. B. R. Game Bantams, Golden Sebright Bantams, Aylesbury Ducks, and Rouen Ducks.

The above fowls were exhibited at four shows the past winter, including that of the Central New York Agricultural Society, Central New York Poultry Association, Western New York Poultry Society, and the show at Macon, Ga. Mr. Warner made 121 entries and received 91 premiums, amounting to \$509.

I shall also continue to keep and breed the same varieties that I have bred for several years, namely, Houdans, S. S. Hamburgs, Golden S. Hamburgs, White Leghorns, Brown Leghorns, Golden Polands, W. F. Black Spanish, B. B. Red Game, Duckwing Game, Rumpless Brown Red Game Bantams, White-crested Ducks.

The above Fowls are all selected with great care and expense, and the two yards united will make the most complete yard of Fancy Fowls in the United States. Persons desirous of obtaining either Poultry or Eggs may rest assured that they will be dealt with in a square and honorable manner. Every order will receive my prompt and personal attention.

In order that the price may be within the reach of all, I shall reduce the price of Eggs to \$3 per dozen—two dozen for \$5. Eggs from the same stock that I breed from myself.

Thanking you for past favors, and asking for a continuation of the same, I am, yours very truly,
C. N. BROWN,
Unadilla Forks, Otsego Co., N. Y.

EGGS FOR HATCHING.—From superior stock Dark Brahmas, Light Brahmas, Partridge Cochins (Todd's strain), White Leghorns, Black Spanish, White and Golden Sebright Bantams, Cayuga and Plata Ducks, White Holland and Bronze Turkeys. Address

Am. Dominique, W. H. Lockwood.....	3 00 "
Brown Leghorns, W. E. Bonney.....	3 00 "
White Leghorns, J. B. Smith.....	3 00 "
Address.....	GEO. W. WOOD, Ithaca, N. Y.

GRAY DORKINGS.—Two trios, at \$10 per trio; also, one cock and four hens for \$15. These are good birds, and very cheap. Address Dorking, care of this office.

"THE BEST IS THE CHEAPEST."

Why it is believed my White Leghorns are superior to all others: From the fact that my stock has been awarded Fifty-four Prizes in 1872-73, and that the committee, in revising the standard, used and carefully examined a cockerel bred by me, and reported accordingly.

I can now fill orders for EGGS from my Selected Breeding Stock, on receipt of price,

\$5 PER DOZEN,

Cash or P. O. order on New Haven.

J. BOARDMAN SMITH,

P. O. Box 28, North Haven, Conn.

CASCADILLA POULTRY YARDS,

ITHACA, N. Y.,

C. V. FOWLES, PROPRIETOR.

Breeder and Dealer in the following Breeds:

B. B. R. GAMES, HOUDANS, W. C. W. POLISH, WHITE LEGHORNS.
EGGS, \$3 PER 13.

Fowls for sale after September 1st.

To persons sending me \$12 for four sittings of Eggs, I will send the *Fanciers' Journal* for one year.

To persons sending \$6 for two sittings, I will send the Standard of Excellence, as revised at Buffalo.

PURE BRED STOCK, AND WHERE TO GET THEM!

RIVERSIDE STOCK AND POULTRY YARDS.

WM. WRIGHT, AND S. BUTTERFIELD, Proprietors.

We shall sell a limited number of sittings of Eggs, at \$5 per sitting, from Light and Dark Brahmas, Buff and Partridge Cochins. Our Light Brahmas are Williams' strain, pure. Yard No. 1—Cock Young Alexis, is mated with six prize Hens, all standard birds, and winners at Detroit and Buffalo Show. Yard No. 2—Cock Duke of Essex is also mated with standard birds, among them are the winners of 1st, at Detroit, for Chicks of 1873. Yard No. 3—Dark Brahmas; are our own direct importation of 1873, and are first-class birds of high merit, and we can safely recommend them to the fancier. Yard No. 4—Buff Cochins, imported from England, from Rev. Mr. Brooks' and Taylor's strains, and selected by our Mr. B. for breeding purposes. Yard No. 5—Imported Partridge Cochins; are standard birds, and mated with great care for breeding. We also make the importing and breeding of Lincoln and Cotswold Sheep, Suffolk, Essex, and Berkshire Pigs a specialty. Mr. S. Butterfield being personally acquainted with all the leading breeders in England, will leave on or about the middle of June to make a selection from the best pens of premium birds at the various shows in 1874. Any orders entrusted to him will be executed according to instructions, on commission or otherwise. All communications addressed with stamp, to

WM. WRIGHT,
Griswold St., Detroit, Mich.,

Or Riverside Stock Farm, Sandwich, Ontario, Canada.

I now offer for sale Eggs from the following varieties of Fowls, that took first premiums of all the varieties mentioned, namely: White Cochins, White Polish, Golden and Silver-spangled Polish, and White Crest Black Polish, Golden and Silver-spangled Hamburgs, and Brown Leghorns. A few pairs or trios of fine Fowls for sale at reasonable rates.

Also, very choice Pigeons of 65 varieties. 31 first premiums, 13 second, and 4 specials, at Buffalo, N. Y.; 25 first, 12 second, and 6 specials, at Pennsylvania Exhibition at Philadelphia. Send a green stamp, stating what you want. Also, three Bloodhound Pups for sale.

R. M. GRIFFITH, Belper Cottage, Wilmington, Del.

EGGS, PER SITTING—Ginger Red Game, Cryer strain, \$4; White-faced Spanish, Cryer strain, \$3; Penciled Silver Hamburg, Cryer strain, \$2. Trios, pairs, or single birds of the above for sale, at Grange Yards, Duffields, West Virginia, by
V. M. FIOR.

DOMINIQUE LEGHORNS.—Eggs from this variety supplied, in rotation as received, at \$3 per sitting (13 eggs). Also, Eggs or Poultry of all the leading varieties furnished at short notice by

JOHN DYER, JR., General Dealer and Breeder,
No. 39 Federal Street, Alleghany City, Pa.

THOROUGH-BRED POULTRY.—The subscriber offers Eggs from Light Brahmas, Buff and White Cochins, Brown Leghorns, and Plymouth Rocks, at \$3 per sitting. The above fowls have received the leading premiums at first-class shows, thus characterizing them as birds of the highest merit.

MARK PITMAN, North Beverly, and 22 School St., Boston, Mass.

Box 23, Rye, N. Y.

HAMBURG.—At the N. H. Exhibition I was awarded the Special Premium for best collection of Hamburgs, comprising: GOLDEN PENCILED of my own importation, from Henry Beldon's yards. The cock "John Bull" won first at two shows in England, and first and special at Buffalo, N. Y. Also, I was awarded first and special for best hen at Buffalo, and in trio have won at Massachusetts, first on Fowls and first on Chicks; at Rhode Island, first on Fowls; at N. H., first on Fowls and first on Chicks, and special for best Fowls and Chicks; at Nashua, first on Fowls and first on Chicks. Eggs, \$10 per dozen. SILVER PENCILED.—Received from Henry Beldon, March 27th, per "Republic," a trio of extra fine Silver Penciled, fully equal to my Golden Penciled; as good as any in America. A few dozen Eggs will be sold for \$10 per dozen. GOLDEN SPANGLED, Ongley's strain. Won at N. E., third; at N. H., first and special for best trio; at Nashua, first. Eggs, \$5 per dozen. Trio, \$25. BLACK, from Cutter's and Shedd's stocks. Won first at N. H. and first at Nashua. Eggs, \$2 per dozen. Trio, \$15. SILVER-SPANGLED.—Won third at N. E., second at N. H., first and second at Nashua. Eggs, \$2 per dozen. I can also furnish fresh eggs from other first premium varieties, at the annexed prices: Light and Dark Brahmas, White and Buff Cochins, White Leghorns, Plymouth Rocks, Dominiques, each, \$3 per dozen; Houdans, Black Spanish, \$2.50; Bronze Turkeys, \$5; Black-breasted Red, Blue Red, Red Pyle, and White Georgian Game, \$5. Everything warranted as represented. Cash must accompany orders. Nothing C. O. D. ANDREW J. TUCK, Box 602, Nashua, N. H.

FANCY PIGEONS, Owls, Turbits, Jacobins, Magpies, Nuns, Tumblers, Plain and Starling Quakers, all fine birds. I want White and Blue Jacobins. Address, with stamp,

No. 20.

(For the Fanciers' Journal.)

A. P. A. vs. A. M. HALSTED.

I AM not the champion of the rights of the American Poultry Association, neither of those of Mr. Halsted. The question at issue, however, is one in which we are all interested, inasmuch as the individual rights of every member of that Association, either present or prospective, is involved in the action of the adjourned meeting held at Boston.

I do not pretend from the *records* to understand the case, and, I confess, I write this short article as much for the purpose of getting some light on the question for all of us, as for any other.

In the first place I remark, therefore, that "for ways that are dark," the action of the Association at Boston in this particular case, beats the "Heathen Chinese" all to pieces. Whether Mr. Halsted did, or did not, introduce a member under an assumed name is to the public not known; but the question in the public mind is: What object could Mr. Halsted have in so introducing any one? Why should he strive to introduce one to the presence of "the most dignified body of men ever assembled together for any honorable purpose" under a false name? Here is where the records are dark. Those of us who were not at Boston can't find out any of the facts of the case; neither who the member was, nor why he was so introduced. If we had the facts we might form a more intelligent judgment on the matter.

But, secondly, no court, in a republic like ours, ever convicts a man without a trial. I am extremely sorry that the movers in this action did not give Mr. Halsted a chance to come before them, and at least plead "not guilty." This is where they have betrayed great weakness, if Mr. Halsted was not heard in his own defence. From the records we can't tell whether he was present or not, nor whether he was invited to be present after having been made acquainted with the specific charges against him; nor can we even tell whether he was ever made acquainted with the charges against him previous to expulsion. If not, the Association has certainly, in the calm judgment of every man, done itself much dishonor, and its members, particularly Mr. Halsted, a great wrong.

Now, I confess, to me this is a bad showing for "the most dignified and honorable," &c.; or, are we to understand that the President had just read Mark Antony's oration over the dead body of Cæsar, and was perpetrating a grim joke at the expense of the Association when he used that phrase? Antony said of the assassins of Cæsar: "These are all honorable men."

I have not a bit of doubt as to the integrity and honor of the members of the American Poultry Association. Many of them are my personal friends, but they will agree with me that that part which took action at Boston either did it in undue haste or they have covered some evidence which the public has not had a chance to hear. Now, in justice to

themselves, and in justice to Mr. Halsted, this evidence should be forthcoming at once.

But, on the other side, if Mr. Halsted's statement is true, as published, and neither the American Poultry Association nor any one else has ever publicly denied it, and, besides, it seems entirely fair on the face, what then? Simply this, that some of the members have proved themselves hot-headed, and repulsed and driven away many who were anxious to become members from offering their names to the Association.

If Mr. Halsted's statement is correct the Association should not lose a moment in reversing its action. In fact, if it is correct, the mover of that resolution owes it to him to publish a proper apology in every paper in which the resolution for expulsion was published. If not correct, and the mover of the resolution has the evidence, it is due to him and the Association, and the public, that it is brought to light. Let us know at once whether this is mere persecution, or whether the accused has been guilty of an offence which would warrant his expulsion.

A. N. R.

(For Fanciers' Journal.)

THE LAST REVISION OF THE STANDARD.

TO WM. H. CHURCHMAN, ESQ.,

President American Poultry Association, Claymont, Del.

DEAR SIR: The universal dissatisfaction exhibited among American poultry breeders and fanciers with the results of the hastily concluded Convention held at Buffalo in January —of which you were presiding officer—prompts me to address you directly, for the purpose of presenting to you officially my views, already communicated publicly through two of our leading poultry journals.

Personally, I have no especial interest in the matter of a "Standard of Excellence" for adoption at American poultry exhibitions, because I long since ceased to be a contributor of my stock to our public shows—after a successful career for years among sharp competitors with my Chinese fowls, which proved (at least to me) of the most flattering and remunerative character; but, feeling the same lively interest in the welfare of my brother fanciers at large that I have indulged for over a quarter of a century, and believing that I know something about this subject (or ought to) through past long experience, I desire to call your attention, and, through you, the notice also of the officers and members of the new "American Poultry Association" to my views, and to this end I respectfully present the following specific objections to the "standard" just issued under your auspices, which is offered to the poultry societies of the United States *as law*, to govern their conduct at future public fowl exhibitions. These objections to, and my opinion of this proposed "standard," are in part as follows:

First. The phraseology in this work is unwisely and unnecessarily arbitrary in its general character, and alto-

gether offensive, especially through the mandatory dictum embodied in its badly framed "instructions to judges."

Second. Said "instructions" cannot be made practicable or useful, since their subjugative and imperative wording must inevitably have the effect of preventing any independent, competent, honorable man, from accepting the always-thankless post of a judge at our shows, under the compulsory rules thus prescribed to control his own opinion.

Third. In my judgment, no such gratuitous manacles should be provided for fair honest judges; and I am not ready to admit that any "association" or set of men, through their simple *ipse dixit*, have the right to impose such regulations either upon Show judges, or any other state, county, or town association.

Fourth. I am convinced, through numerous adverse letters latterly received, and by free oral communication with scores of American fanciers, that this work, in its present highly objectionable form, can never be adopted to any extent by poultry societies in this country as a standard, and that it is for this reason comparatively worthless for its intended purpose as a rule.

Fifth. The standard, as published, was evidently made up in too hurried a manner at the best, and, though the intents of its framers may have been good, it fails in details, in many respects, to meet the needs and the views of the American poultry fraternity generally, who find this but a rehash of former ignored similar works.

Sixth. I believe it will be condemned likewise on account of its incompleteness, its apparent partiality, its palpable omissions, and in several instances (as I look at it), the paradoxical nonsense of its stated requirements and declarations as to "disqualifications" in certain breeds.

Seventh. In this connection, I cite for example the bald inconsistency in this standard, regarding the prize requisites for "Brahma" fowls. The *Light* Brahmas must have "legs strong, and well feathered to tips of outer toes." . . . The *Dark* Brahmas must have "legs strong, well feathered outside, to the ends of outer and middle toes." In points, symmetry counts ten in the *Light* Brahmas, and the same quality in the *Dark* Brahmas counts fifteen, according to this standard. Why should this difference in the same qualification be thus rated, and why should there be required this difference of "feathering on the toes," upon two colors of the same birds? Can anything be sillier than these two assumptions?

In the "Game Bantam" list, on page 32, but 95 points (instead of 100) are set down for judges to "strictly adhere to" in deciding upon this class. As to the "Cochins" (see page 16, in the list of qualifications), this standard declares "vulture hocks objectionable, but not a disqualification." On pages 18, 20, 21, same chapter, in the list of disqualifications for Partridge, White, Buff, and Black Cochins in each variety, your standard declares separately, "vulture hocks are particularly objectionable." What are we to understand by these flat contradictions, uttered in the same breath; and how are judges under your positive instructions to "adhere strictly to your rules" on page 3 and 4, to decide this point?

Eighth. In the case of "Houdans," your new standard requires (*vide* page 67), that "the toes shall be five in number, the fifth claw turned upward;" and "the absence of the fifth toe is a disqualification." Now it is notorious that the fifth toe belongs rightfully only to the Dorking fowl (originally), and also that seven out of ten of our best Hou-

dan breeders recognize only four toes for this variety, in its French purity.

Ninth. In the classification of "Games," more than half a dozen known established varieties are omitted in the new lists entirely—as the Irish Grays, the Shawl Games, the Spangled, Birchin Duck, Blues, Red Duns, Brass Back, Blue Reds, etc., no one of which varieties do I find alluded to, even in this "revised" new standard; but *all* of which are largely bred in America, by such fanciers as Van Winkle, N. J.; Col. Meacham, Mass.; Bestor, Conn.; Bicknell, N. Y.; Hancock, Mass., and others.

Tenth. No mention is made in this work of several other distinct, well known, and long bred varieties of fowls, which are far more familiar to Eastern breeders, than are those last named—and the query is often put, upon examining this "American standard"—How are we to get our birds into future shows? To wit—the "Black Javas," the "Guilanderlands," the "Bolton Grays," the Marsh, the Forbes, the Bailies' Shanghais, etc. Why are all these varieties which we have bred for years and years, thus left out in the cold?

The formal presentation of these ten cogent reasons is made without argument, and simply in the shape of *facts*. I deem them, Mr. President, of sufficient consequence to arrest the attention of yourself, and that of your official associates, and to warrant your society in attempting a complete correction of the errors herein complained of.

I desire that this communication may be received in the spirit in which it is written; but I submit, in view of the premises, that this new American Standard of Excellence, as revised under the auspices of the American Poultry Association at Buffalo, is not what the poultry fanciers and our breeders in this country want—what they need—what they expected—and what they are bound to have—sooner or later; and that is an improvement upon all former abortive and ill-planned attempts in this direction.

I could urge upon your consideration, further, the fact that your new standard is not put forth at a popular price—one dollar being at least eight times the cost of this pamphlet. I could point out what I deem grave mistakes in your admission of known cross-bred fowls in this standard's lists, as recognized varieties. I could reiterate remarks that are oft repeated among New England breeders, to the effect that all these faults of omission and commission point indubitably to a purpose, on the part of a few managers, at the expense of the many poultry men in this country, but I forbear to enlarge for the present.

As I have publicly suggested, I repeat it—the fanciers and breeders of America demand "a new deal" in this standard matter. Will it be agreeable to you and your associates to call another Convention of *all* interested in this subject, at a conveniently early day, and at a central place, where we may come together *en masse*, and in open meeting discuss and vote upon this subject of a *final* revision of the American standard, where *all* parties may have the opportunity to hear and be heard, without being compelled to pay three dollars for the privilege?

Through such means, the standard that we all want, and need, may be properly and appropriately arranged, and we may thus get, in my opinion, a reliable work, which every fancier in America will thankfully accept as authority, and which every Society will immediately adopt as a useful, practical, applicable, and acceptable "American Standard of Excellence."

I am respectfully yours,

MELROSE, MASS., May, 1874.

GEO. P. BURNHAM.

(For Fanciers' Journal.)

A SENSIBLE PROPOSAL.

J. M. WADE, Esq.

Your *Fanciers' Journal*, through its contributor, Mr. Burnham, has taken the initiative in a matter of the greatest importance to poultry interests, and I was pleased to see, in a recent number of your admirable weekly, his ideas of the new National American Standard and its projectors. Mr. Burnham is a veteran in poultry breeding, and his advice on this subject of properly revising our standard is well-timed. If such a convention as he suggests could be held this summer, it would undoubtedly be attended by our poultry men generally; and in an open, fair meeting, where all could be heard, a good many new ideas and valuable hints as to what we ought to have in an American standard would be brought out to manifest general advantage. Whatever may be done, one thing is evident, and that is that this last "revision" of the standard is no advance on former efforts of the kind, and cannot answer the purpose or fulfil the expectations of American poulterers. To say nothing of its mistakes, omissions, inconsistencies, and glaring contradictions, the rules laid down at its commencement, *controlling our judges at exhibitions*, are strikingly in bad taste, and to my mind altogether superfluous. I hope a new convention will be held, and I trust that such meeting will be fully attended. In this way, I think, we may not only correct the errors of this almost useless work, but manage to get out a good American standard. C. H. E.

BOSTON, April, 1874.

(For Fanciers' Journal.)

MR. SECRETARY RALPH'S CARD.

EDITOR FANCIERS' JOURNAL.

Will you allow me a few lines of space in your columns on the subject of the proposed new "standard," to say that the card published in No. 18 of your paper by Edmund S. Ralph, Esq., Secretary of the American Poultry Association, is very fair and courteous, as well as prompt in response to the published criticisms of the work in question? But, at the same time, I would like to ask what are we who have bought "the incomplete and erroneous first edition" he alludes to, to do with it? How, when it is corrected and again "revised," shall we get the proposed second edition? Must we invest another dollar each for this last attempt? Will that be final, if arranged by the Executive Committee aforesaid only? Before printing any more editions of this work any way, I think we had better have the "free and full discussion" he suggests, in open convention somewhere, where all American poultry men can be heard and consulted with as to what this "second edition" should contain. It is immaterial *who* calls this convention. If the National Association choose to do so, well and good. But do not let us have any more editions of *this* work till "the back counties shall have been heard from," as suggested by half a dozen of your correspondents lately.

Respectfully,

RIGHT.

(For Fanciers' Journal.)

OMISSIONS IN THE NEW STANDARD.

EDITOR FANCIERS' JOURNAL.

I can't do it—I wish I could—but I am quite "disqualified" to put the question so cleverly to the point as your spicy, well-posted, and experienced correspondent, Mr. G. P. Burnham, of Massachusetts, has accomplished it.

I have read all of this trenchant writer's published books on poultry matters, his funny record of the "history of the hen fever" included; and what he don't know about fowl raising in America, is not worth knowing. I fancy he writes ably as well as pleasantly, and I peruse his contributions to the *Fanciers' Journal* and elsewhere with great pleasure. In this actively controverted matter of the new Standard of Excellence, among the well known varieties of domestic birds that are not alluded to in the official lists, I am acquainted with three or four distinct breeds, which, it strikes me, ought to find a place in any complete American Standard. There are the "Sumatra Game," the "Dominique Game," and the famous "Dun Games;" also, the "Bolton Grays" or "Cradle fowls," these last being better known in many quarters than several more modern breeds, and a beautiful bird they are, altogether—called sometimes Dutch or everlasting layers, from their noted prolificness in this respect.

It strikes me that the "American Poultry Association" are bound to call a new convention for their own credit. I agree with Mr. Burnham that a convention ought to be called by somebody, and I coincide with you that there does not seem to be need for such call outside of the present existing national society, the officers of which, generally, must have discovered ere this that the new standard they have thrown together so carelessly, is not what was anticipated at their hands, and that it cannot come into use among State poultry societies as it now stands.

In the first part of this little book, the chapter of "directions to judges" is very objectionable, and to my view is simply impracticable, taken in connection with the contradictory particulars that erroneously appear in the body of the standard; besides this, as several of your writers suggest, these directions or positive instructions are quite unnecessary, and by their dogmatical wording are rendered absolutely nugatory, as well as presumptuous.

If a new convention be held, I hope it will be fully attended by poultry men from all the States; and I trust that the next attempts to fix up a good American standard will be more successful in the end. I have so far failed to find a single article in our poultry journals in favor of this one-dollar pamphlet. Has it got no friends?

Respectfully yours,

S. T. HOWELL.

BROOKLYN, N. Y.

(For Fanciers' Journal.)

THE PROPOSED NEW CONVENTION.

YOUR leading editorial in No. 18 is very judicious in its recommendations as to the calling of another convention, to revise the last revised standard. No one will object to your mode; i.e., that such convention be called by the American Poultry Association, whose officers ask for a fair, honest criticism of their doings, etc.

This is just as it should be. If this society choose to call a new convention, and will make their invitation broad enough to admit all classes of poultry men who may be permitted to take part in the deliberations, without being obliged to pay \$3 for the chance (unless they choose to donate this sum), everybody will be satisfied with the arrangement, and ought to be so. Such a meeting would be very largely attended, no doubt. Those who could not, or would not attend, must make themselves content with the doings of such a convention; for, if they absent them-

selves, it is their fault if things are not settled exactly to their liking; at least all societies and all interests may easily be represented there by delegates, friends, or neighbors of necessary absentees.

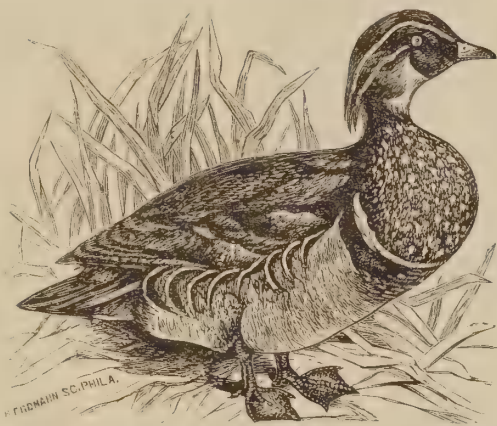

Let us have a Convention called. The Executive Committee of the American Association is composed of but twenty men, and a "baker's dozen" could hardly be got together at once out of this score of gentlemen, scattered as they are from Maine to California; and these dozen men ought not to be asked to revise this standard by themselves. It is the people's work to do, and the masses should meet and complete it rightfully, in concert with this Association. No one can justly object to this plan. B.

POULTRY DEPARTMENT.

(For Fanciers' Journal.)

THE WOOD DUCK.

THIS is a most beautiful specimen of the web-footed tribe, differing from most other sorts by the habit of constructing its nest in the hollow or decayed portions of trees, and sometimes by laying sticks across the forked branches, from which the young drop into the water. They only remain in this latitude through the summer, and at the approach of cold weather emigrate to a warmer clime; hence it is sometimes called the "Summer or Carolina Duck," which closely resembles in appearance the Chinese Mandarin. It is known in the United States from the northern to the southern limits, as well as an inhabitant of Mexico and the West India Islands.

They are often seen in quantities in the New York and Philadelphia markets, though the flesh is said to be inferior to the Blue-winged Teal. Its food consists of seeds, wild oats, insects, and aquatic plants.

In this State the female usually lays, early in May, eggs

of an oval shape, resembling polished ivory in color. Incubation lasts twenty-five days. When they are hatched some distance from the water the mother carries the young from the nest in the tree to it, where a flock of them skimming about is very ornamental. They may be domesticated by setting the eggs under a hen or tame duck, and approaching the young quite frequently until they become familiar, never allowing them to become suddenly or unnecessarily frightened. As they become domesticated they increase in size, and if the birds are properly moulted, by attention and proper food, their crests become more and more developed, and the plumage more brilliant, but they will not breed in confinement until they become accustomed to their abode and contented therein.

Their great beauty renders thorough domestication so desirable that no prejudice in favor of small size should be allowed to interpose, as no poultry show is complete in their absence. The adult drake has a red bill, margined with black, and having a black spot between the nostrils, and a sort of hooked projection at the end. The irides of the eye are orange-red. Crown of head and crest pendant of a rich glossy bronze-green, and beautifully marked with a line of pure white running over the eye and another behind it, producing a very striking appearance. Chin, throat, and color round the neck pure white. Breast dark violet brown, marked with spots of white, increasing in size until they spread into the white of the belly. Sides under the wings thickly and beautifully marked with fine, undulating, parallel lines of black on a ground of yellowish-drab. Tail coverts long, of a hair-like texture at the sides, over which they droop, and are of a deep greenish-black. Back dusty brown.

The female has a smaller crest on the head, with a crown of dark purple, a bar of white behind the eye, white chin and throat; neck drab, breast dusky brown, with gold and greenish reflections. Tail is shorter, and the hair-like coverts of the male wanting. Altogether their plumage is splendid and attractive.

(For Fanciers' Journal.)

ABOUT BLACK RUSSIANS.

BELIEVING it is well that we should know as much as possible about the different breeds of fowls, and believing that the economic value of fowls particularly should be well understood by those at least who breed them for profit, I venture in this short article to offer a word of protest against the praise which has been lavished on the particular breed known as Black Russians.

I was first led to think favorably of them through a circular forwarded me several years ago by one who was at the time breeding them. I corresponded for some time with this breeder with the intention of testing the fowls, but the replies I got were not altogether satisfactory.

It will be recollected by many of my readers that some eighteen months ago an illustrated article appeared in the *Poultry World*, giving a brief description of the fowls. The writer cautiously says: "They appear to have useful economical qualities, prodigious reports having been made of their laying qualities, &c." Believing that the writer of the article was deceived, like myself, I have nothing to say and lay no blame to him. The truth is I believed too implicitly in the representations of several who were interested in the breed, and bought some of these fowls. I do not find

them at all as represented. Finding that I had been misled, I wrote, several weeks ago, to the gentleman of whom I bought them, giving my opinion of the breed in general, and asking whether his experience agreed with mine or not, as I wished to know whether I was the exception to the rule. His reply was this: "I must confess I think you are right about Black Russians; like yourself, I was deceived by the misrepresentations made by others." This gentleman, it should be mentioned here, was entirely honorable in the transaction, and when he sent the fowls he particularly requested that if I was not satisfied with them I should fix my own price. It being a fair business transaction and no fault of his, I paid what I promised.

But to the economic value of these fowls. Does anybody know any good of them? I expected to sell a few dozen eggs, and so advertised, but I have been a little disappointed. I have three hens. One has laid two clutches of eggs, one clutch four in number, and the other two; another hen has laid one clutch of egg, one in number. Thus from my three hens I have received seven eggs in as many weeks. Now that is a "prodigious report," but it is true, and the best I can make.

I find the fowls small, though one hen is at least a year old. In size they do not compare favorably with ordinary barnyard stock; and as egg producers, I should as soon think of keeping a flock of canary birds to keep me in custards and omelets. I hope those who are breeding them more extensively will be able to say something good in their favor, and I beg their pardon for the apparently strong language I may use, but a more arrant humbug in feathers than Black Russian fowls has never come to my notice.

I feel all the more free to write this article since I have not sold my fowls. My opinion of them can be no more strongly expressed than by stating that I have turned them out with some barnyard fowls, and still I get no eggs from them. They are still for sale to any one who wants that class of stock. They cost me something over twelve dollars, but it will not be a safe operation for any one to offer me half that sum if he does not want the fowls. It may be that they will lay some time, but I shall not wait any longer. Under the circumstances, of course, I have no eggs to sell at present, hence I hope I shall not be ungenerously accused of advertising my stock. The only axe I have to grind is the one which will soon take their heads off. I would, however, like to have enough of eggs to pay for the corn and wheat they have eaten.

I have not written this without fear that I may be doing some one an injury unconsciously, and yet I feel that if my experience is not an exceptional one, it is but right and proper that the public should know the economic value, not only of this breed of fowls, but of every other, and that if their defects are great they should be known to all.

(For Fanciers' Journal.)

HEREDITARY FANCIES.

FRIEND WADE.

After being out among my fowls, or studying the published pedigrees, reading the numerous advertisements, or pouring over again and again the many interesting articles in the poultry papers, I sometimes talk in the presence of

my family with no little enthusiasm upon the subject and matter in which I find so much interest, and not unfrequently our only daughter will exclaim, "Now, Pa, you surely are chicken crazy!" And yet she ardently loves her Sebrights and canary, and would welcome to the line a pair of pigeons also. But, because of her earnest exclamations with so much seeming astonishment, I ask myself, "Why is it thus with me? and why can some see the finest points in a fowl and cannot discover a serious blemish in a horse?" There must be a legitimate cause for all this, and I have been led to look for it in my own case, as I frequently look after the track and developments in breeding stock. Now, sir, it must be *blood*. All this in me could not be the result of mere education, for my father never really had the hen fever in his life; even the slight symptoms were succeeded with a chill that left its mark; so that I could not have inherited or have been educated by him to a fancy for poultry. Only a few years ago I sent him the finest trio of Light Brahmas I could select from my flock, and he soon lost interest in them, and is now spending the leisure hours of his old age in a greenhouse, whilst I anticipate one of the felicities of advanced years to be an excellent henhouse and the finest lot of poultry in the world. The dreams of my childhood were haunted with the appearance of exquisitely-marked chickens; and why may not life be made serene in the actual indulgence of an early fancy? But there was one thing I never engaged in for a moment: cock fighting, even in the excitable period of youth, was repulsive to me.

But to the question, where did I get this fancy for poultry, loving such pets more ardently than the other domesticated animals with which our homes are made agreeable and pleasant, adding to their comfort and enjoyment? I will tell you, as I believe, I inherited it—in a measure at least—although I have not enlisted to write an essay on the transmission of quality. As I am credibly informed, my great-grandmother, in her early pioneer life, took eggs with her to her far-off rural home, surrounded at the time with dense forests. The eggs were of but little use but for food; at least they alone were a faint encouragement for a brood of chickens. Without some mode of hatching, what could she do, for there were none but wild fowls in the vast woods that surrounded their new home? But her ingenuity supplied the deficiency, and her perseverance brought out the desired brood, from which, in after days, she had to fight away the foxes and hawks. The mode of incubation was novel indeed to us moderns, who rush things by steam when nature's processes are too slow. This ancient lady actually hatched out the chicks, with which the farm was stocked with poultry, by folding the eggs carefully in cotton, and carrying them in her bosom by day and committing them to the warm hearthstone by night, so that the brood was brought out successfully. And this one fact alone, if there was no other in the history of my ancestors, leads me to suppose that I have inherited something of my tastes with their blood.

I also discover a moral in this, and would speak from the standpoint of experience, and say to parents, if your child evinces a bent of mind and a desire for a lawful, honorable pursuit, *cultivate it*; for I apprehend that many a good farmer, merchant, and mechanic has been spoiled in the attempt to make a poor minister, lawyer, or doctor; and *vice versa* is equally true. I now call to mind the case of a young man, heir to a large estate, whose desire was to be

an intelligent practical farmer, but his ambitious father wanted him to take a profession, and he said to me one day: "What would you do with the boy; for he is constantly urging me to order such or such blooded stock or improved tools and machinery, the history of which he learns and gives in his letters?" My answer was: "Let him come back to this home; bring to this library the best agricultural books in the world; instruct him to study the several parts, and then go out upon the farm to superintend their practical operation." But before that father died he sorely regretted that he had urged the boy against his inclination, although it had all been done in true Christian kindness. Yet the son broke down, and, instead of occupying for a home one of the finest farms in the State, he is now the care of two fond sisters, whereas, as I view it, he might have been their support; but now even trips to Europe are unavailing, and the last I heard from them the sisters were bending beneath their load of care, being overtaken with anxiety and care on account of a much-loved brother. I know that it is a delicate and critical charge we have, to hold the minds intrusted to our training in the persons of our children into the right way of living; therefore we need great wisdom and carefulness in order to properly adjust their plastic and elastic spirits to circumstances that they make the most of an earthly existence. There is admonition in the fact that ardent pet-loving children rarely, if ever, become criminals.

But I find I have let my pen run over considerable paper, and I will quit, committing all that I have said to you. If you use it my only hope is that it do good to some of your numerous and intelligent readers.

WILLIAM ATWOOD.

(For Fanciers' Journal.)

TAILLESS FOWLS.

FRIEND WADE.

I notice in a late issue of your *Journal*, inquiries concerning tailless fowls. Perhaps I can give some information on that subject. Forty years ago I was on a visit to the coast of Ayrshire, in Scotland,—even then I was a fancier. There I saw the "Rumpies," as they named them. On inquiry, I was told that they came from Arreen, a large island in the Firth of Clyde, which is opposite Ardessan, a very wild rocky place. Years after I saw them in Ayrshire, where they were not preserved as any particular breed. I saw them of different colors, but they were all called by the same name—"Rumpies." They were not more plenty there than in Ayrshire. As to whether nature was originally so niggardly as to afford them scarce a stump instead of a respectable tail, or whether like Labans cattle "in y e olden time" the breeding stock is so susceptible as to be guided by *sight of patterns* in the formation of progeny, I cannot say, as nature may be forcibly perverted, and yet be nature still; but these thoughts will, if indulged, lead us to the inopportune, but important study of "stirpiculture," and I will return to the facts which I wish to present for your consideration, "like produces like." In the highlands of Scotland the women who have the care of the fowls, consider it a sure sign of a careless keeper, when the fowls are seen with long tails, and they are sure to *pull them out*; so would my mother do whenever she could catch my Games in those days. Now is it not possible that such a *practice* is the original cause of the progeny eventually appearing minus tail. It is well enough understood by Game breeders, that

if they breed from fowls that have been out for fighting, that the chickens will preserve the likeness, or prove deficient in similar respects; so firmly is this believed by the best breeders in England, that when they select their breeding stock, they never even cut their combs. In the acceptance or rejection of these ideas, of course you may use your own judgment. I presume the effect which I have described in regard to the "Rumpies," may have been owing to a *long course of treatment*, by pulling out the original tails.

I continue to regard your *Journal* as a very valuable and important adjunct to fanciers literature, and to the advertising necessities of breeders and dealers, owing to its frequent visits, and I will gladly contribute for dissemination through its columns, any information which I may possess.

Truly yours,

DRACUT, MASS., April, 1874.

NEIL THOMPSON.

(For Fanciers' Journal.)

"WHAT I KNOW ABOUT ROUP."

HAVING read with much interest the article from the pen of T. F. Lamb, in No. 1, and also the one from J. Y. Bicknell's in No. 16, under the above caption, it may not be amiss for me to give my experience with the affection. I rather incline to agree with Mr. Lamb, that it is the result of cold—perhaps not always—but I believe nine times out of ten it is produced by cold. Some time ago I had occasion to move my Silver Spangled Hamburgs; the day was pleasant with a cold wind from the north, that I had to face, and although I had not half a mile to go, yet before I reached home some of them showed signs of roup; this was in the morning, and by evening two-thirds of them had it bad. They were perfectly well when I went after them, and never had any symptoms of the affection before. They could not have been exposed to the disease, as that was impossible. Again, a shutter was blown open from the window of the house, containing Brahmas; the next day some of them were affected with the disease. I find the affection much easier managed among the Asiatics, than the more delicate kinds; in fact, I have no fears of it with Brahmas or Cochins, but with the more tender kinds I find it more troublesome, although I have not lost one in two years, or since I adopted the following treatment; nor do I even remove the affected one from the rest, unless the house is crowded, and then only for the benefit of the patient.

I take alum pulverized, and dissolve all that I can in a given amount of water (say an ounce), and give the patient a teaspoonful at a dose, once, twice, or four times a day, according to the severity of attack. If canker shows itself in the mouth or throat, I then pulverize chlorate of potassa, say half a teaspoonful in the alum water, and give as above. This treatment in my hands has had the happiest results.

MARLBORO, OHIO.

W. H. PARDEE.

The other day in San Francisco, at the foot of one of the wharves, a sinister-looking individual appeared with a sack in his hand. His mysterious movements excited suspicion, and he was watched. When, as he supposed, not observed, he quietly slipped the sack into the water, and it immediately disappeared, the man rapidly making his way up town. The watchers, supposing that some mysterious tragedy had been enacted, dragged the mud, recovered the sack, and discovered within it—five suffocated kittens.

PIGEON DEPARTMENT.

MOORE'S WORK ON PIGEONS.

(Continued from page 295.)

of the Fancy who had the honor of his acquaintance. He was a very complete judge of a pigeon, and would spare neither cost nor trouble to procure the best. He had one pouting cock which he valued at five pound, and a very choice collection of many other kinds. The same methods have been taken in most other countries as well as England, to gain this experimental knowledge, as in Holland, France, Spain, Germany, Turkey, Persia, and Morocco. In the three last of which places, the monarchs themselves have officers, called keepers of the pigeons. Having thus mentioned the King of Morocco, give me leave to entertain you with the following story out of the *Sieur. Mouette* in his travels through that kingdom.
